THE
ILLUSTRATED HISTORY
OF
THE WAR AGAINST RUSSIA.

*Edwards
Henry* BY
E. H. NOLAN, Ph.D., LL.D.

"Now all the youth of England are on fire,
And silken dalliance in the wardrobe lies;
Now thrive the armourers; and honour's thought
Reigns solely in the breast of every man.

* * * * *

* O, England! model to thy inward greatness,
Like little body with a mighty heart,
What mightst thou do, that honour would thee do?"

SHAKSPERE. *Henry V.*

V.1

AUG 9 1857 CURRY

TO THE GENERAL, HIS ROYAL HIGHNESS

PRINCE GEORGE WILLIAM FREDERIC CHARLES,
DUKE OF CAMBRIDGE;

EARL OF TIPPERARY, BARON CULLODEN, KNIGHT OF THE GARTER, KNIGHT OF ST. PATRICK,
KNIGHT GRAND CROSS OF THE BATH, GRAND MASTER OF THE ORDER OF
ST. MICHAEL AND ST. GEORGE, KNIGHT GRAND CROSS OF THE
ROYAL HANOVERIAN GUELPHIC ORDER, ETC., ETC.,
AND COMMANDER-IN-CHIEF OF HER
MAJESTY'S LAND FORCES.

THERE is a peculiar propriety in dedicating to your Royal Highness a History of the late War against Russia. No individual beneath the throne is so popular in the Army, especially among the poor and gallant soldiers, as your Royal Highness.

You are at the head of that Army, not only by the appointment of Her Gracious Majesty, but by the desire of the Nation.

Your heroic conduct at Alma, and, if possible, still more especially in the greater perils of Inkerman, have made Queen and Country proud of your name.

The ambition, therefore, to dedicate this Work to your Royal Highness was as natural as your permission is condescending and gracious.

That your Royal Highness may be long spared to govern the Army with the capacity, zeal, and consideration for the soldier so characteristic of your command, is the fervent desire of

Your Royal Highness's

Most obliged, and obedient Servant,

EDWARD H. NOLAN.

LONDON, JULY, 1857.

PREFACE.

THE celebrated aphorism of D'Israeli, that "War is the natural condition of man," however it may shock our moral sensibility, has a certain truth in it which forces itself upon our convictions. We know that man was originally endowed with a nature in harmony with all the conditions of his existence; his abode was Paradise, and peace reigned within and around him: as the unruffled waters reflect unbroken the heaven which smiles upon them, so man, in his primæval state, reflected the sublime tranquillity of God. But that which estranged him from his Maker confused his social relations: selfishness became his master-passion, and brought into play envy, hatred, and revenge. In the first family blood was shed; and never, during the long line of centuries in which the race has trodden its way through time, has its footsteps been free from the stain. A history of war would be a history of the species. There is not a coral rock on the Pacific, above which man has formed a dwelling, where the club has not been brandished; there is not a prairie in the Western world, or a dark forest within its recesses, where the war-cry has not been raised, and where the wild strife of men has not left its impress. On the trackless deserts, where the Arab only is a wanderer, he is also a combatant; the Boschman lifts his puny arm in conflict; and the lowest tribes of mankind, the aborigines of Australia—inventive in nothing besides—can cast, with murderous skill, the adroit *boomerang*. Civilization does not destroy this tendency of the race, but trains it, and invests it with more perfect aptitudes. Rome, in the greatness of her government, was greatest in arms; as Greece, before her in renown, united to the matchless delicacy of her taste and subtlety of her intellect a genius for battle, and an ambition for military fame. The most civilized countries of modern Europe have, unhappily, illustrated this truth:—France, the *exemplar* of modern refinement, worships military glory; and even our England, amidst the progress of her material greatness, social melioration, and religious zeal, sings triumphantly of

"The flag that's braved a thousand years
The battle and the breeze!"

Yet are we bold to say, that the tendency of civilization is to make war both undesirable and impossible. There may exist an advanced civilization of circumstance, in the enjoyment of which commerce flourishes and wealth abounds, and there may exist also a civilization of mind conducing to much refinement of manners and cultivation of the arts,—and yet the nations so distinguished may be ambitious of military ascendancy, and wish to mingle the laurel with every wreath of beauty which they cull.

Commercial and cultivated nations have been aggressively warlike. But the civilization which is based upon high moral principle must curb national ambitions by its restraints, assuage national animosities by its charity, and dissipate the prejudices of caste, and race, and nation, by its intelligence. We are conscious of no invidious nationality, when we say that Great Britain has attained to this civilization more than has any other country,—not even excepting the United States; and therefore the reluctance to engage in the war which is now raging. That reluctance has been the theme of conversation in all intelligent circles on the continent of Europe and in America; and eloquent sarcasms upon our country, in the newspaper-press of Berlin, Brussels, and New York, have received their poignancy from the fact that England openly deprecated war. It is not only because our vast commerce makes peace our interest that we have been unwilling to mingle in the conflict, but because there is principle enough in England to cause war to be regarded as in itself an evil of incalculable magnitude. The military virtues of the British people, which they have retained through a long lineage of heroes, were never more potent. If the passion for war slumber in the nation's heart, the honour of the warrior is wakeful and sensitive there. The very errors of diplomacy and administration have evoked such a protest from the public voice, as shows the intelligence, generosity, practical talent, and vigour of the people at large. It is no new thing for war to call up the greatest qualities of individuals or nations. Although in itself so great an evil, Providence overrules it for good in this and in many other ways. The old Hebrew philosophy is still true, although bearing upon it the age of so many centuries: "Our God will turn the curse into a blessing." The career of conquest has often been the career of civilization; and the sword which scattered nations also quelled barbarous feuds, and cut in sunder the bonds of many servitudes. The breath of the trumpets which shook down the walls of Jericho preluded many a similar catastrophe, when tyranny found no security within its ramparts from the challenge of the brave and free. We have the changes rung every day upon the hackneyed words, "Peace hath its victories," so that men begin to forget, amidst the clangour of their peals, that war also has its *moral* victories; and that the march, the bivouac, the camp, the citadel, the battle, and the hospital, call for qualities rich in the noblest traits of human character. The heroism of Hampden in the field, is not less resplendent than the policy of Hampden in the senate—both sprung from the same patriotism; and that was animated in all its deeds by the same principles of truth and duty. It is not always true that war, by throwing around the victor the halo of a false glory, creates fictitious honour, and cheats us of our admiration; for often the warrior seems noblest in defeat, and he is a sublime spectacle in the very hour of his ruin.

" The soldier's hope, the patriot's zeal,
For ever dimm'd, for ever crost :
Oh ! who shall say what heroes feel,
When all but life and honour's lost !"

War has its literature : it is rich in the descriptive, rich in anecdote, and in biography. Never was war so prolific of literature as this. Our soldiers are authors; their

touching stories of personal endurance,—their exciting narratives of daring,—their varied relations of adventure, not only prove the loyalty and patriotism of the people from whom they went forth, but show, in a manner Lord Brougham never contemplated when he uttered the memorable expression, that “the schoolmaster is abroad.” We shall place before our readers original letters creditable alike to the head and heart of the humble heroes by whom they were written. The military history of the private soldier, as well as of his chief, is frequently full of eventful life; we shall cherish the laurels of our humblest brave, whether overshadowing their graves, or blooming for the acknowledgment of their victories.

England is still proud of her navy. In this war she has to witness the gallantry of her Jack-tars on shore, or in hazarding ship and life against stone-built batteries, behind which the coward navy of the foe has sheltered. But our sailors never showed more constancy, skill, and devotion, than they have in this war, especially in treading the intricate and sinuous channels of the Sea of Azoff, and of the Gulfs of Bothnia and Finland. We shall detail the heroism of every arm of the service, and endeavour to show our readers what our enemies already feel—that whatever our mismanagement or mistakes, it is as Lord Hardinge testified before the Sebastopol Committee, that England never was better prepared for war, by sea or land, than she is now.

In depicting the scenes and recording the incidents in which our forces have been engaged, we shall not omit the part taken by our Allies. The bravery of the Turks and the wisdom of Omar Pasha are eminently worthy of a place in history. The defence of the Danube and of Silistria, which, by the skilful tactics of the Turkish commander-in-chief and the intrepidity of his troops, inflicted such disaster upon the Russian armies, and offered so effectual an obstruction to Russian designs, will long occupy an honourable prominence in military annals. We shall lay before our readers the successive plans of the Russian strategists, from the opening of the campaign until the raising of the siege of Silistria; and we shall describe the comprehensive arrangements by which all these plans were baulked, and the prestige of the Russian army damaged, if not destroyed. The heroic courage of the French on the Alma and before Sebastopol furnishes numerous deeds of exciting interest to all who can admire gallantry; while the cordiality of the co-operation between the two armies, as well as of the alliance between the two nations, gave rise to incidents sometimes deeply pathetic, and at other times amusing and grotesque. Anecdotes and letters illustrating the spirit and character of the French, Turkish, and Egyptian armies, will give zest to our narrative.

Our sketches of Russian and Turkish history are drawn from the very best sources; and if we make them short, it is because of our desire to bring our readers—as soon as is compatible with the dignity and efficiency of a history—to the moment when the Turkish flag was flaunted in the face of the enemy, and the first shock of war was heard through Europe. We shall, however, not fail to weave into our story, as we proceed, such accounts of the wild Circassian and Georgian, Greek and Albanian, as will place these nations to the life before our readers; and we shall especially introduce to them the intrepid Schamyl, the prophet-warrior of the Caucasus, whose

struggles, so full of romance and vicissitude, are but little known to the English public.

[L Our great aim will be to avoid such dry detail as can give no instruction or entertainment to the great body of the people; and yet to afford such an insight to the intrigues of Russia, the cabals of the Divan, the policy of the Western Cabinets, the counsels of the military chiefs, and the operations of armies, as will increase the solid information of those who peruse our book, and at the same time furnish them with reading more pleasurable than can be supplied by the unreal stories of the novel or romance. Truth is not only stranger than fiction, it is also more interesting, in proportion as the minds are earnest and intelligent before whom it is placed. Truth is, however, only partly told when in any narrative of facts it is divested of the lights and colours which were originally blended with them, and only presented to the reader with bare and unsoftened outline: it will be our task to portray the events of this war as they were, in all their many-coloured habiliments, and strange and peculiar associations. We shall be better enabled to accomplish our purpose in this respect by pictorial aid. This age has been termed "the age of the pen," and the expression has received an almost universal acceptance: we might with almost equal appropriateness call it "the age of the pencil;" for whatever may be the influence of great painters in this, as compared with any past period, never before was the taste and talent of the artist brought into requisition so extensively for the instruction and pleasure of the general public, and never did the mass of readers patronize illustration as they do now. We shall do homage to this excellent fashion of the times, and depict the scenes which were formed by the events which we relate:—the tented field, the bivouac-fire, the vigilant and lonely sentinel,—the skirmish, as the wild Tartar and Cossack, the Rifle and Zouave, advance or recede in the flow and ebb of combat,—the review, the march, the charge, when—

"With fetlock deep in blood
The fierce dragoon, through battle's flood,
Dash'd the hot war-horse on,—"

the contested trench,—the height crowned with battery and redoubt, dealing murderous cannonade upon the ascending and assailing line—all these will be *illustrated*.

The sea will afford many scenes:—the sun-lit Bosphorus, the tideless Euxine, the ice-bound Baltic,—the calm, the tempest, the wreck, the chase, the capture, the bombarding fleet. Representations of such will enable us to impress upon our readers the beautiful or terrible realities our pen will describe.

Engravings of the men who have been the chief actors in the great drama will constitute not the least valuable contributions of art to our history. A laudable curiosity exists in most minds to behold the men by whom great actions have been performed, and where that cannot be gratified their likenesses afford especial interest. We have original and peculiar means of satisfying this feeling. Ours shall really be an *Illustrated History of the War*.

THE ILLUSTRATED HISTORY

OF THE PRESENT

WAR AGAINST RUSSIA.

CHAPTER I.

RUSSIA.

"His Liberty is full of threats to all."—SHAKSPERE.

A HISTORY, or even a good description of the Russian Empire, is still a desideratum. Travellers from Bell to De Custine have conveyed only partial glimpses of Russian life and manners. Far more is known historically and socially of Russia's once great rival, whom she now seeks to make her vassal. Russia is better understood in the capitals of the North and in Vienna than in London. In Paris, of late years, much pains have been taken to acquire a more complete knowledge of her social condition, her policy, and her resources. Her empire is the largest in the world, and, next to that of China and of England, is also the most populous.

Within the bounds of her far-spread dominions vast resources are undeveloped; and it only requires a glance at the writings of such men as Humboldt and Lyell to perceive that, stored up for future generations, untold riches await the industry and enterprise of the future Russia. Her history, too, is fertile in events: it is intimately associated with the most prominent annals of the Eastern Empire, and of that strange dominion which, erected upon its ruins, is itself in turn now sinking in decay. No nation has had more frequent vicissitudes; and its forms of government, from the ancient republic of Novgorod to the unmitigated despotism founded by Peter, have passed through strange and varied revolutions. The fortune of war was not always on her side; but whether Fin, Northman, Tartar, or Cossack, triumphed, the Slavonic element has continually formed the substratum of the population; and it never ceased to encroach upon bordering races and territories, until, as a tide spreading onward as it rises, the Slavonic Russ has extended his influence over an eighth portion of the globe: from the Baltic to the Black Sea, from the icy circle to the sunny shores of the Caspian,

the chief of this peculiar race now has his authority acknowledged and his ukase obeyed.

GEOGRAPHICAL POSITION. — EXTENT. — CLIMATES AND GENERAL SUPERFICIAL CHARACTER.

Russia includes a great portion of the Eastern hemisphere, extending from 18° to 180° of east longitude, and upon the 60th degree of latitude embracing about 6000 miles of territory. From north to south it stretches from the 38th degree to the 78th north. Its area can now scarcely be less than 8,500,000 square miles. It is bounded on the north by the Arctic Ocean for 1000 miles of coast. Its southern limits are the Black Sea, the Danube, the Pruth, the Austrian Empire, Turkey in Asia, the Caspian Sea, Tartary, and the Chinese Empire. On the east its bounds are the Pacific Ocean and Behring Straits. On the west Sweden, Denmark, and Prussia, limit its territory.

It is computed that the Russian dominions include an extent of land equal to the moon. Of this great territory the greater part is in Northern Asia, comprising some 6,000,000 square miles. Asiatic Russia is divided into several governments, each large enough to constitute an empire. European Russia comprises 2,000,000 square miles, including Great, Little, and New Russia, and ranging from the Caucasus westward to the Gulf of Finland; covering the regions which were once known as the abodes of independent nations, under the names of Tartars, Cossacks, Poles, Volkinians, Lithuanians, Esthonians, Fins, &c. American Russia is a tract of 500,000 square miles upon the extreme north-west of the American continent, which brings Russia into juxtaposition with the territory of the Hudson's Bay Company and Northern Oregon. According to McCulloch, the latest estimate in geographical miles

of this vast empire is that of M. Kœppen, of the Petersburg Academy of Sciences, and he states it thus:—

Russia in Europe, including the portions of the governments of Perm, Orenburg, and Viatka, that extend into Asia	MILES. 90,117
Northern Asiatic Russia, or Siberia	223,780
Southern Asiatic Russia, or Transcaucasian Provinces	3,123
Grand Duchy of Finland	6,400
Kingdom of Poland	2,320
American colonies	17,500
Grand Total	343,240

Of course the climates over such an expanse of country are many, but that which prevails may be easily imagined from such high latitudes. Even in Southern Russia, upon the shores of the Caspian and the Euxine, the otherwise genial year suffers through a considerable portion of its progress from the cold winds which sweep from the pole, and which are felt far beyond the southern bounds of the empire, even to the sunny slopes of the Bosphorus. The characteristic features of the greater part of this country possess, notwithstanding its extent, much similarity. Thus, both in Asiatic and European Russia there is, however diverse the productions, the same prevailing aspect of forest scenery. Between Petersburg and Moscow, and upon either range of the acclivities of the Ural Mountains, all appears to be one vast sea of foliage. The steppes are as characteristic as the forests. In the governments of Astracan and Omsk, wide sandy deserts stretch away in apparently interminable desolation. The Crimea realises both these features of Russian scenery. The southern part blooms with flowers and foliage as richly as any spot of equal area in the world; while its northern portion is one wide steppe, nourishing upon its bleak bosom neither fruit nor flower. In the extreme north of the empire the climate and aspects of the country are of course peculiar, except so far as Scandinavia is a participator. Mr. Laing, in his Norwegian tour, catches something of the spirit of this scenery; but by no author have we met with a description which realises it so well as that of De Custine. "In approaching these northern regions you seem to be climbing the platform of a chain of glaciers; the nearer you advance the more perfect is the illusion realised. The globe itself seems to be the mountain you are ascending. The moment you ascend this large alp you experience what is felt less vividly in ascending other alps: the rocks sink, the precipices crumble away, population recedes, the earth is beneath your feet, you touch the pole. Viewed from such elevation the earth appears diminished, but the sea rises around you, and forms a vaguely defined circle; you continue as though mounting to

the summit of a dome—a dome which is the world, and whose architect is God. From thence the eye extends over frozen seas and crystal fields. On entering these whitened deserts, a poetic terror takes possession of the soul. You pause affrighted on the threshold of the palace of winter. As you advance amid abodes of cold illusion, of visions brilliant, though with a silver rather than with a golden light, an undefinable species of sadness takes possession of the heart; the failing imagination ceases to create, or its feeble conceptions resemble only the undefined forms of the wanly glittering clouds that meet the eye."

Perhaps the lakes of Russia should be classed among the characteristics of its scenery. In the conquered province of Finland lakes are all but innumerable: they are of all dimensions, and stud the entire country. In various other portions of the empire this peculiarity also exists, and on a scale of such magnitude as to defy all European comparison. Still they add little to the beauty of the regions where they are found; and, sometimes, by the flatness of their shores and the murky hue of their waters, they spread an air of desolation around them.

While the Russian Empire presents to the traveller so many wide unbroken plains, there are some mountains of considerable elevation. The Ural Mountains, stretching from the Caspian Sea N.N.E. to the Arctic Ocean, rise in some points to 6500 feet above the level of that sea; and the Caucasian range, between the Caspian and Euxine, forms many bold, rugged, and elevated mountain scenes. Within this range there are deep ravines, covered with primeval forests; and bold masses of rock, towering up into the heaven, exhibiting a lonely grandeur, such as may well impress with brave and lofty sentiment the tribes who make their homes in these fastnesses.

The rivers of Russia are classed according to their embouchures. Some of them find their exit in the Arctic Ocean, and are frozen along a greater part of their course nearly the year through. A few fall into the Baltic; the chief of which is the Neva, ennobled by flowing through the capital. The chief river of Russia—the Volga—is not so honoured; its disembogement is in the Caspian; it is twice the length of the tortuous Danube, so generally esteemed the greatest river in Europe. Several empty themselves into the Black Sea; and as long as Russia holds any authority upon its waters they must prove to her sources of wealth and power.

The productions of the empire are of course as varied as its surface, geological structure, and climate. Many regions teem with fertility, especially in Southern Russia; but these form but a small proportion of the whole. Most extensive countries to the north of the

empire are utterly unproductive, the rigour of the climate and the character of the soil allowing of neither pastoral nor agricultural industry. But even here there are mineral treasures. Some progress has been made in mining enterprise, both by the government and private persons; and the gold mines of the Ural Mountains and the washings of Siberian rivers have lately yielded nearly three and a half millions sterling annually. The principal productions of Russia and the main articles of her commerce are corn, tallow, timber, hemp, flax, and hides. She imports British manufactures principally through Germany; and the furs of the Hudson's Bay Company are in great request. Her orders in England for cotton, twist, and machinery, are considerable; and the import of salt, from various quarters, is very extensive. England is her best customer; and chiefly for those articles which she has most abundantly at her disposal: corn from the Black Sea and from the Baltic, tallow, hemp, flax, hides, and timber. The protective commercial system which she so inveterately maintains, and the continual drain upon all the countries within the imperial circle of government, caused by a huge standing army and an aggressive policy, greatly repress industrial enterprise and retard material prosperity.

POPULATION AND GOVERNMENT.

The population of the empire is about 65,000,000. Of these more than 40,000,000 are of the Slavonic race; the remaining 25,000,000 comprise Fins, Germans, Cossacks, Tartars, Jews, Gipsies, Greeks, Circassians, Georgians, and even Turks.

The government is despotic, resting entirely upon the will of the czar, which is promulgated by ukases, and is feared and obeyed to the remotest limits of his empire. The origin of the term czar has been much discussed, some deriving it from the title of the Roman emperors; but we concur with those who assign to it an older derivation. The words *caesar*, *kasir* (the title of the Austrian emperor), and *czar*, having a common origin, as old as the language and Empire of Babylon. The word is of Chaldee origin, and signifies a ruler; we see it as an element in the formation of such names as Nebuchadnezzar, Beltashazzar, and others of the rulers of "the Golden Empire." The late czar was very desirous to exchange this title for that of emperor, although the first possessor of it was the head of the house of Romanoff, elected by the voice of the liberated Russians, when, with the Duke of Moscow at their head, they had finally defeated the Tartars, and delivered their country from the Mohammedan yoke. The czardom never assumed so absolute a form as under the sceptre of its late possessor. Even Peter the Great

recognised the influence of "the Colleges;" and the Emperor Alexander I. invited their remonstrance against his own ukases when they disapproved of them; but Nicholas grasped the sceptre with the hand of an autocrat, and lifted czardom to the acme of its tyranny, pretension, and blasphemy. The Count de Garowski said of Nicholas: "Once the czar recognised the idea of the supremacy of the law. This was something—it was the recognition of the *persona juris* in his subjects; but now the law is himself. Thus he is the only *person* in the empire; others are in reality merely things, and persons so long as his will allows them to be such—so long as they submit to move within the iron limits of his whims. Intellectual life—even physical life—can be allowed to exist only so far as they assimilate themselves to, and support the control exercised by, czarism." The forms of certain media of legislation, however, still exist. There is the Imperial Council, consisting of a president and an indefinite number of members, of which the ministers are a part *ex officio*. It is divided into several departments; such as the affairs of Poland, the finance, legislation, war, and religion. The internal affairs of the empire are ostensibly committed to it. The Senate is a distinct body from this, and is so far flattered that the emperor allows it to be thought the most important department of the state; like our House of Lords, the highest court of judicature. Its members are nominated by the emperor, and are not hereditary. There is, too, a certain publicity connected with this body, for every month it publishes a report, or *quasi* report, of its doings in the *Gazette*. The College of the Holy Synod is a third body in the state; but although its province is exclusively religious it is more watched by the emperor than any other, and can neither originate nor effect anything without his direct sanction. There is a fourth college, called the Ministerial Committee, corresponding to our cabinet, but responsible only to the emperor. The real business of the empire rests with the *chancellerie particulière*, which immediately communicates with the emperor. The operation of this government is disastrous to liberty, justice, and material advancement. The spirit with which M'Culloch, in his Dictionary, glosses over the blighting influences of this despotism upon the people of all the Russias, but too well harmonises with the indulgence with which the czar and his government have been regarded by the courts and cabinets of Europe, our own included. We hesitate not to say that all human interests, whether for time or eternity, perish in the grasp of this tyranny; and that its whole system of government is based upon fraud, falsehood, and hypocrisy.

SOCIAL AND RELIGIOUS CONDITION OF THE PEOPLE.

Of the 65,000,000 of Russians scarcely one fifth, exclusive of the army, can be said to be free; the rest are serfs bought and sold with the soil, and subject, under certain partial restraints, to the caprices of their lords, as the nobles are to the czar. Their material comforts are necessarily very contracted; and although there is a minister of education and a public-school system, they are sunk in the most barbarous ignorance, from which it is not the policy of emperor or priest to redeem them. Accordingly they are coarse, sensual, servile, deceitful, and revengeful. They will spend their last rouble in intoxication; and all, from the serf to the noble, glory in that vice. They will betray the man who serves them even into the hands from which his generosity delivered them. They will rob their benefactors. They hug their chains. They will lie and overreach where truth and plain dealing would as well serve them, for these vices have sunk into the heart and soul of the whole people. Intellectually they are without vigour or originality, yet no nation so "dextrous of fence" in matters of low cunning; and they are capable of conducting an intrigue with any other race—Peter the Great made it his boast that one Russian was a match for three Jews. Yet degraded as this picture is—and it is, alas! in this respect but too faithful—there are redeeming qualities in the Russian character. They are capable of much kindness, are hospitable, and naturally polite. The imitative arts they acquire with a readiness not surpassed by any other people. They have a national love of music, and like all men so characterised they are patriotic and brave. Thompson says—"Nature hesitated whether to make them a nation of warriors or musicians, and in her hesitation made them both." In religion they are besotted and furious fanatics, hating all other forms of Christianity, and all other religions to their professors. Their most active resentments are directed to Mohammedans and Roman Catholics. Their religion is the Russo-Greek Church, which differs little from the Latin, but enough to exasperate the schism into one of furious animosity. On the doctrines of purgatory, and the union of the divine and human natures in Christ, the keeping of Easter, the celibacy of the clergy, and some minor points, the difference is maintained with the keenest controversy. The Greek Church is also iconoclastic, but pictures are revered. The czar is the head of the church, and claims the vicarage and vicegerency of God as boldly and sternly as the Roman pontiff. All evangelical religion is dreaded and detested

by the czar, the nobility, and the officials. Sermons are seldom heard in the Russian churches, and in some of the forms of worship there is less of God than of the emperor. Yet the tyranny of czarism over religion is a matter of faith with the whole people; they regard him as God's representative, and would die in attestation of the sincerity of this belief. The consequence of all this is that in the communion of the Greek Church there is much superstition and very little religion. But in the Russian Empire all religions are to a certain extent tolerated. In Finland and along the shores of the Baltic, the Lutheran Church is protected and endowed; but while the Greek priests are busy throughout Esthonia, Livonia, and Courland, in proselyting the Lutherans, their ministers are forbidden all discussion of the peculiarities of the imperial faith, and to proselyte one of its disciples is an offence against the laws. In Poland, Roman Catholicism is suffered to exist, but not to spread; and even the Polish disciples of Mohammed,—a class concerning whom the friends of Poland in this country do not seem to be informed,—are allowed without any active persecution to retain the profession of Islamism. The Jews of Russia are numerous, and less tolerated than any other sect. Thus Greek and Latin, Jew and Ghebar, Lutheran and Reformed, Mussulman and even Buddhist, populate this strange empire; and, paradoxical although it may sound, it can in strict correctness be said that all are tolerated and all persecuted.

SKETCH OF RUSSIAN HISTORY.

We have no way of tracing this people beyond the eighth century, when from all we can gather they were more civilized than they are now. To the republic of Novgorod may be referred the origin of the nation. For ages it would appear that that republic enjoyed a large measure of freedom and happiness; but, inviting the aid and protection of certain Scandinavian chiefs, these rude Northmen there, as everywhere,—except in the land of their origin,—superinduced feudalism, before which the liberties of the primitive and simple people gradually disappeared. It is with the Russia of to-day rather than of past ages with which, in this book, the reader has to do; and therefore he will not be conducted through the struggles of princely feuds and tribal contests and civil embroilments, from the days of Ruric, the primitive chief of the nation, to his recent and really more barbarous successors. Russia passed through the usual changes of nations: she suffered slavery and inflicted it, she was the invaded and the invader. Her forms of government were modified by the changes through which she passed, or by her voluntary choice of bad government, for which her people seem to have had a fatal taste in all

ages. Gradually, from being a small state in a remote region of Northern Europe, she has extended herself to contiguity with the fairest realms and oldest governments. Christianity was introduced at the close of the tenth century. There is reason to believe that it had made some secret way before that time, but it was then publicly professed and enforced by a remorseless tyrant called Vladimir, who married a sister of the Greek emperor, and from motives of policy and pride and caprice strangely mingled, established the religion she professed within the barbarous circles of his dominions. Until the time of Peter the Great, the Patriarch of Moscow presided over the church; but that great barbarian wrested from him this dignity, which has since become one of the most valued privileges and instruments of the czars. The constitution of the empire as it is was framed by Peter, and the policy which has now armed the world for war has been too faithfully observed by his successors. It is in brief—by fraud or force to lay hold upon all surrounding territory, advancing on all hands, but especially east and south, to the possession of Constantinople, and thence to the easy conquest of the world. Treaties are made without any intention to keep them, and alliances are formed to be broken when convenient. Gold is unsparingly used to foment disputes in other countries, and arms intervene to assist the section of the distracted country most likely to subserve the interests of its faithless protector. Transparent as this policy is, such is the national faculty for intricate negotiation and unprincipled intrigue, that, however in want of generals, Russia can always be well served by her diplomatists; and even when beaten in war, can by this means reap the fruits of victory upon the fields of disaster and disgrace. Russia never had an enemy from whom she did not suffer defeat, and from whom she did not ultimately wrest all the rewards of conquest.

It is the peculiarity of Russian history that it repeats itself in cycles. Only a few years since, and she made a show of magnanimity in accepting the treaty of Adrianople, and refusing to march upon the Turkish capital. Many centuries ago a Russian chief hung up his shield over the gates of Constantinople, as a memento of his magnanimity in sparing it. It was not in 1854 that Russia first lost a campaign at Silistria: the Czar Sviatoslof, just nine hundred years ago, was beaten by the then ruler of Constantinople at that city. Nor was it in 1829 that Russia first captured that stronghold: she had there previously known victory as well as defeat. The insolence of Prince Menschikoff at Constantinople was both in its utterance and in its effects very similar to that which was resented and punished by the Greek emperor, John Zimiscees, long before

England yielded to the arms of William of Normandy. The insurrection now raging in the Ukraine is only a repetition of what occurred there 150 years ago. It would be foreign to the purpose of this book to give even a sketch of the aggressions, reigns, and projects of the Russian rulers since the death of Peter. The decease of the late emperor and author of the present war, renders any notice of his history or character in this place unnecessary. He who now holds the sceptre is not reputed to be his equal in either counsel or force of character, and is supposed to be free from the national and sectarian fanaticism and personal ambition, by which his unhappy sire was deprived of life in the glory of his strength and the crisis of his character and his empire.

MILITARY STRENGTH, FINANCE, &c.

It is the almost universal opinion of military men, that while Russia is all-powerful for defence she is not a first-rate power for offensive warfare. Yet she has carried armies over vast and all but impracticable marches, and often have her ancient chiefs showed their less adventurous sons the way to the beautiful Byzantium. On the other hand, in every stage of her progress she has been successfully invaded. The Tartar held her for ages under tribute, and she trembled at the shaking of the Mongol lance. Sweden once seriously thought of annexing Russia—a project justified by the success of her arms. Moscow was burned in the presence of invaders before the great Napoleon looked from the Kremlin upon its conflagration. In the opinion of competent Russian military authorities Russia must have fallen before Napoleon, but for adventitious circumstances. The battles fought in apparent resistance of his advance were only risked to afford opportunity for the union of both the armies which defended her, lest they should be beaten in detail. To the elements, not to arms, Alexander I. owed his throne; and, even independent of such succour, he must have lost it had Napoleon tampered with the serfs, or proclaimed the nationality of Poland. Vain of being a king, and despising the people, in the vain-gloriousness of his imperial and royal connexions and friendships, Napoleon desired only to conquer the alliance of Alexander—he never contemplated the conquest of Russia and the liberation of her oppressed serfs. We do not believe that Russia was then unconquerable, neither do we believe her to be now invincible, in defence any more than in attack. Still, for either aggressive or defensive war, Russia is powerful. Ever since the days of Peter the Great, the whole strength of the empire has been devoted to the maintenance of armaments; large standing armies have been maintained, fortresses erected on all salient positions, and naval equip-

ments indefatigably increased. The ambitious dreams of the emperors, the church, the nobles, and the people, were the same—the conquest of the Eastern Empire and the universal dominancy of the Greek Church; and to effect this purpose all were willing to submit to the greatest sacrifices.

The naval strength of Russia at the breaking out of the present war comprised about forty sail of the line, twelve frigates, as many brigs, and about twenty war-steamers. This naval force was about equally divided between the Baltic and the Black Sea. Besides, there were the Caspian flotilla, consisting of ten small steamers and a few schooners,—the former at Astracan, the latter at Ashoorhada; also the Kamschatka flotilla, consisting of a few steamers and schooners, and a considerable number of gun-boats. Just before the breaking out of the war, a large fleet of gun-boats were armed at Cronstadt, Helsingfors, and Revel. On the shores of those seas vast arsenals, impregnable to attacks from sea, and all but impregnable from the land side, had been prepared as harbours of refuge for those fleets, and bases of operation in any aggressive wars in which Russia might engage. Sebastopol, upon the Black Sea, and the three great Baltic arsenals above-named, have become notorious in this struggle; and accurate descriptions of them will be given in the proper place during the progress of this history.

The army was brought to a higher state of perfection by the late emperor than ever it had attained before, even under the auspices of his predecessor, so anxious for its efficient organisation. In the course of the narrative occasion will be taken to describe the peculiar organisation of the Russian army, which probably exceeds a million of men. This statement will by many be supposed to be an exaggeration, because the list of a Russian army upon paper differs so largely from the actual muster; but there is good reason for the estimate. The army is recruited partly by voluntary enlistment, partly by adopting the sons of soldiers and illegitimate children, but mainly by conscription. The Russian soldiery

are brave, and submissive to discipline; but physically, mentally, and morally, greatly inferior to the British and French. They are in general badly officered, although of late years prodigious efforts have been made to secure efficiency in this respect. The artillery and engineer departments are the best, as upon them especially the Emperor Nicholas lavished his care. The cavalry stands next in reputation; but we are of opinion that it is inferior to the infantry, although, for outpost duty, or harassing the rear of a retiring enemy, it is more expert and vigilant than any cavalry in the world. The Cossacks and Baschkirs are good for nothing else; but for such services they are unrivalled. The Russian army is the worst paid in the world; and notwithstanding the national ambition for conquest, the service is unpopular even among the serfs, although every serf becoming a soldier is thereby made free for life. In consequence of her extended frontier, and the disaffection of many of the provinces,—such as Poland, Finland, the Crimea, and the Ukraine,—Russia can seldom transport beyond her frontier very large armies, except they are made to subsist by the plunder of the people, foes or allies, in the provinces they occupy. Such large garrisons must be retained at home, the financial resources of the empire are so inadequate, and the revenue collected upon such erroneous principles, that, unless in alliance with some richer nation, she can never, even for the subjugation of Turkey, send forth an army of 300,000 men. She is, however, always dangerous to contiguous nations, from her treacherous and furtive policy, and the facility she possesses of suddenly occupying important positions beyond her own frontiers, and within those of her neighbours.

The revenue is about 20,000,000 sterling a-year, and the debt about 80,000,000 sterling.

Such is the empire with which we are now at war; and having thus presented its main characteristics before our readers, they will be enabled to comprehend more easily the different stages of the struggle as we proceed in the narrative.

CHAPTER II.

TURKEY.

“Inter arma silent leges.”

ONLY a century ago, and Turkey was deemed the greatest empire in the world; three centuries past, in the days of Solymán the Magnificent, it was the most powerful and gorgeous which had ever dazzled the imagination, scarcely excepting that of Rome. She is now the ally of England in a war which, end as it

may, must enfeeble her. It is necessary that those who do battle for her integrity should study her position, character, and resources.

GEOGRAPHICAL AND PHYSICAL ASPECT.

It is difficult to define the limits of the Turkish Empire, because of its disjointed state.

It is partly in South-Eastern Europe, partly in Western Asia, and ranges along the African shores of the Mediterranean. Turkey in Europe is bounded on the west by Hungary and the Gulf of Venice; on the east by the Black Sea; on the north by Hungary, Transylvania, and the Russian frontier; and on the south by Greece, the Archipelago, and the Sea of Marmora. Turkey in Asia includes vast regions—Asia Minor, Syria, Armenia, and Kurdistan. It is bounded on the east by Persia and Georgia; on the west by the Archipelago and the Mediterranean; on the north by the Black Sea; and on the south by Arabia. The African portion of the empire consists exclusively of tributary states—such as Tunis, Tripoli, Egypt, and Arabia. The former boundaries of the empire were far beyond the limits thus defined. What may now be termed European Turkey extends from 39° to $48\frac{1}{2}^{\circ}$ N. lat., and from $15\frac{1}{2}^{\circ}$ to $29\frac{1}{2}^{\circ}$ E. long., and comprises probably, at the lowest computation, 200,000 square miles. Turkey in Asia is situated between 26° and 45° E. long., and 29° and 45° N. lat. It contains at the most recent computation 450,000 square miles.

The capital of the empire is the ancient Byzantium, so long the metropolis of the eastern Roman dominion, the harbour of which is the finest in the world; and the city, built upon seven hills, like its once great rival Rome, is more picturesque as to site and exterior appearance than any city now existing, and probably than any which has ever existed. In noticing the occupation of it by the allies, a more suitable occasion will arise for its description, and at the same time avert the necessity of detaining the reader from the great object of the history by topographical accounts, however interesting in themselves or pertinent to the subject.

The physical aspect of an empire so extensive must in the nature of things be very diverse. The Trans-Danubian provinces can be supposed to bear little resemblance to the shores of the Mediterranean or the confines of Arabia. As a large portion of the classic regions of the old eastern empire are comprehended under its government, we cannot be ignorant of their conformation. The promontories which stretch into the Ægean and Mediterranean are as rugged and bold as in the days when Greece and Rome, proud of their incipient navies, navigated with difficulty those seas. The classic mountains, so often the theme of Grecian song, still lift their monumental heads into the azure of a clear and brilliant atmosphere. Those wide and fertile plains, celebrated in classic story, and the scenes where men and gods were said to war and love, are still rich in soil, and teeming with the products of such genial realms. In the Lacha, Platamona, and Liakoura of the Turk, we trace the Olympus, Thermopylæ, and

Parnassus, around which our schoolboy fancies conjured so many visions of beauty and of glory; and which history and poetry have alike consecrated for the reverence of taste and genius to the remotest time. Not a rock, or fountain, or vale, or wood, or softly undulating landscape, that has not been visited by our educated youth in the day-dreams of their early aspirations; and in manhood, the scholar, in his hours of meditation, wanders away to the classic shore, the sunlit fountain, the stream still vocal with its ancient harmonies, the rock on which Fame has inscribed so many deathless stories, and the spots, dearer than all, where patriotism struggled in vain, or triumphed as it bled. The remark of the Rev. James Godkin, in his *History of Greece*, applies to the ancient Greek provinces, now forming part of Turkey, as well as to those of the present little kingdom misruled by Otho:—"Nowhere does territory count for so much, morally and historically, as in Greece. In other parts of the world, immense regions, thickly peopled for centuries, and covered with cities, are memorable for nothing. But here there is scarcely a spot of ground that is not sacred to heroism, to poetry, to philosophy, to the arts, or to patriotism." The Turk has no sympathy with those local associations; they belong to a civilisation which he cannot understand, and to a religion which it was his mission to destroy; but he has nevertheless a keen eye for the beauties of nature, and there is no spot of loveliness, from the soft shores of the Gulf of Venice or the sea of Marmora, to the lofty grandeur of the Balkan or the Caucasus, to the beauty or sublimity of which he is indifferent; and there are few descriptions of landscape to be found in any region which his own beautiful lands do not possess.

Turkey is marked by several mountain ranges, the most noted of which from the events of modern history are those of the Balkan, which separate Roumelia from Bulgaria and Servia.

Taken as a whole, Turkey is a mountainous region, rendering access from one part of the empire to another very difficult, and offering points of defence against invading armies in almost every direction. The greatest altitude reached by any elevation in these ranges is that of Mount Scardus, 10,000 feet; and Scamius and Pindus are each about 9000 feet. None of the other elevations quite reach 8000 feet, and few ascend to above half that measurement. From the mountainous configuration of these countries they are all well watered, and many rivers irrigate it and subserve its commerce: as the Danube, the Save, the Unna, Verba, Bosna, Drin, Morava, Timok, Schyl, Isker, Aluta, Jalomniza, Sereth, Pruth, Maritza, Tondja; the Kara-su, Struma, Vardar, Selebria, Narenta, Vojutza. The students

of classic geography will identify many of these by their ancient names: such as the Hebrus, Tonzus, Cypsela, Nestus, Strymon, Axius, Peneus, Aous.

CLIMATE AND RESOURCES.

So various are its geological and geographical features, that it must of necessity have many climates. Turkey in Europe has generally long and severe winters, excepting only in its least exposed situations and lowest latitudes. The Russians in their campaigns across the Danube have declared that they felt the cold as severely as in Southern and even Central Russia. The great elevation of so large a portion of European Turkey, and the relentlessly bitter blasts from Russia sweeping across the Pruth, the Sereth, the Danube, and the plains of the provinces, as well as over the Black Sea, direct upon the Bosphorus and the Sea of Marmora, cause the country to be colder than other European countries on the same line of latitude. In Asiatic Turkey the cold is often excessive from the same causes. The high table-lands of Armenia are often covered with snow until the end of April, while the severe weather sets in as early as September. The penetrating blasts from the snow-clad Caucasus and from the Russian steppes across the Crimea and the Black Sea, reach to the very centre of Asiatic Turkey; while from the Armenian highlands the cold winds fall as if in showers upon Kurdistan. In summer these countries are all subject to searching heats, which are not of long continuance in Turkey in Europe, but in Syria they are frequently both long and excessive; and there, and over all Caramania, arid winds are as blighting in summer as the northern blasts are in winter. Still the general climate of both European and Asiatic Turkey is healthy; and on the shores and in the islands of the Ægean and Mediterranean, the most balmy and luxurious climates of either hemisphere are to be enjoyed.

The productions of these countries are diversified with the climate. Thessaly blooms with the flora of Italy, and all the delicious fruits of Southern Spain and the Italian peninsula are produced there in the richest abundance: the olive only seems forbidden to this delightful province, as if significant of the absence of that peace which can make happy the possessors of ungrateful soils, and without which the Thessaleans in vain gather the clusters of the vine, or pluck the mellow fruit-bearing tree. In this fertile province the most valued agricultural materials of commerce are munificently bestowed by Providence: wine and oil, tobacco and cotton, figs, oranges, pomegranates, and citrons, are only limited in their abundance by the carelessness or contests of the people. South of the Balkan range the

whole country is fragrant with roses, lilac, jessamine, and innumerable flowering and odoriferous shrubs; the vineyard and the orchard are by every man's door; and fine forests of stately and magnificent trees adorn with their dignified forms and many-tinted foliage the prospect wherever the traveller turns.

Along the shores of Albania the atmosphere has the same light and joyous influence upon the spirits, and brings the same sense of exquisite enjoyment which one feels upon the opposite Italian shores. Here too you may gather the same flowers as in Italy, and taste the same fruits,—however the traveller may miss the superior associations he has left, or feel a new charm in the more picturesque appearance of the Albanian people. In Asiatic Turkey, south of the Taurus, all the productions of tropical and temperate climates flourish together. There the traveller meets with the date, the banana, and the sugar-cane; and indigo of as excellent a commercial quality as is cultivated in India.

The animal productions are as various as the vegetable. Thessaly is as famed for horses now as in the days when Greece and Rome drew upon its resources for their cavalry. The camel is the beast of burden in the Asiatic provinces, and there the beautiful gazelle may be seen in its graceful progress, or the huge ostrich striding awkwardly over its native wastes.

POPULATION AND GOVERNMENT.

It is impossible to state with any approach to accuracy the number of inhabitants. There was a rough census in 1844, which returned the population at 31,000,000; 15,000,000 of which are in Europe, and 16,000,000 in Asia. The most reliable statistics to which we have access are those of M. Ubicini, to whom Professor Creasy refers in terms of eulogy for his general correctness. In his *Lettres sur la Turquie*, t. i. p. 21, he gives tables from which we deduce that Turkey in Europe contains 14,000,000, and Turkey in Asia 15,500,000. In Europe only 2,100,000 are Ottomans; the rest are Greeks, Armenians, Slaves, Jews, and Gipsies. In Asia nearly 11,000,000 are Ottomans, 1,000,000 Kurds, 1,000,000 Arabs, 2,000,000 Armenians; the remaining population is made up of Tartars, Turkomans, Druses, Greeks, and Jews.

The form of government has been often described very improperly as “a despotism tempered by rebellions.” It is a tempered despotism, but the tempering element has rarely been rebellions. On the contrary, insurrections have been generally on the side of oppression. Several of the sultans lost their lives in the attempt to mollify their own despotism. The murderous Janissaries, and the not less mur-

derous ecclesiastics, were ever ready to depose the sultan if he attempted to meliorate the condition of his people by liberal measures, or a liberal interpretation of the institutions of the empire. The sultan is, however, an absolute monarch—he rules by the *jus divinum*, but that is according to the Koran, or book of the prophet, and there he reads the limitations of his rights. His chief minister is the vizier, a name corresponding to that of vicar—he acts as it were in the sultan's stead. The sultan and his vizier are assisted by a counsel of ministers called the Divan. The government is designated “the Porte;” the meaning of which word is *gate*—the gate in oriental countries from time immemorial being the place of judgment where magistrates and princes sat to administer justice. Thus in scripture history the term is frequently found in connexion with that usage; and the Jewish Temple itself,—as containing the *sanctum sanctorum*, where the mercy-seat or throne of God was erected,—is called “the gate of the Lord.”

The absolute power of the emperor is not only tempered by the constitution of the monarchy, so to speak, as laid down in the Koran, but by various other circumstances. The Turks retain throughout the empire municipal institutions, the privileges of which the sultan or his government seldom invade. Mr. Urquhart has given the most detailed account extant of these municipal *quasi* republics; and it is evident from even the most suspicious perusal of his account, that they exert a powerful influence in curbing the exorbitant power of the throne.

The immunities of the Christian sects are also a restriction, although the supreme authority is seldom stretched except in their behalf. The Greek and Armenian patriarchs are in fact delegated sovereigns, and rule the members of either “rite” pretty much as they please, within certain limitations. This power is often dangerous to the government—it is an *imperium in imperio*; which however would hardly ever cause the Porte anxiety but for the designs of foreign governments,—as the post of primacy or the permission to hold it, is purchasable, and the price paid for it is therefore a pledge for the good behaviour of the prelate who assumes the dignity of the patriarchate.

Practically the decree or firman of the sultan is law, and he deposes all officers at his will. It is not in theory allowable for him to do so by the chief dignitary of the Mohammedan Church, but late sultans have not scrupled to extend the sceptre thus far; and the people, astonished and scandalised for the hour, have quietly submitted.

A more comprehensive account of the origin, the offices, or the forms of government is not here necessary; suffice it to say it is based upon the

religion of the empire, and must stand or fall with it.

RELIGION AND SOCIAL CONDITION OF THE PEOPLE.

The religion of Turkey is Mohammedanism; it is summed up in this sentence: “There is one God, and Mohammed is his prophet.” Early in the seventh century an Arabian enthusiast conceived the idea of a reformation among his pagan countrymen. It appears that he was moved by patriotic and conscientious motives. In his inquiries and reflections he became tolerably acquainted with the Christian and Jewish scriptures, the inspiration of which he did not fully recognise, or formed only vague notions of its nature and character. To the Jews he took an aversion on account of their venality, intolerance, and pride of race. The Christians did not exemplify their religion any better than the Jews did theirs; and as he became estranged from the idolatry of his fathers, he was increasingly shocked by the idolatry of the Christians, and concluded that theirs could not be the ultimate faith of the servants of God in this world. Thus reasoning, he became as zealous to overthrow the idolatry of the Christian altars as that of the pagan, which once he served; and finding some to sympathise with him in his views of the simplicity of worship and the unity of God, he conceived the idea of a great reformation. So plain did the amount of truth he had gathered appear to him, that he could not believe in any sincere resistance to it; and reasoning like other bigots before and since, that he who opposed truth opposed God, and ought to be punished, the doctrine of force became an essential part of his system. He soon found obstacles from pagans, Jews, and Christians, not to be surmounted without address; and he resorted to policy and pious frauds akin to such as he perceived to be so successful in the hands of pagan and Christian priests, and Jewish rabbis. Here the faithful historian becomes baffled in his attempts to discover where sincerity ends and imposture begins, and where the strong man's mental vision becomes itself deranged in the tumults of his imaginations, his projects, and his sufferings. And as success crowned his deeds and misdeeds, his sincere iconoclasm, love of justice, and earnest promulgation of fundamental religious truth, become more inextricably mingled with signs of mental aberration, all-devouring ambition, and cunning imposture.

It is the habit of writers to treat of the life of Mohammed with as much of the *odium theologicum* as would season the keenest ecclesiastical controversy; and he is praised, and the Koran which he professed to give by inspiration is lauded as a literary and ethical

miracle, or he is denounced as an unmitigated impostor, and his book as a farago of nonsense and fraud. Sometimes, as in the instance of Dr. Cooke Taylor, we find the man defended, or at all events his errors extenuated, while the absurdities of the book are unsparingly exposed. The book, however, was very much in character with the man—with a man of strong mind, of ambitious enterprise,—a religious reformer in a dark age, ignorant of the Gospel, willing to do a supposed good by deceptive means, feigning an inspiration he did not feel, and fancying an inspiration that was not real. Thus constituted and actuated he propounded, as the book of a prophet, that which was only the dream or the device of a fanatic. It is likely that Jewish and Christian aid were afforded him in its composition, and that aid none of the best. He succeeded among an imaginative people by the overwhelming force of his imagination, among a simple people by the amazing directness of his object, among a brave people by his unexampled intrepidity, amongst a roving people by his passion for adventure, and in a superstitious and ignorant age by the display of superior knowledge and more sacred pretensions than other men, and withal by a deep sympathy with the current prejudices of his race and of humanity. He taught that Moses was a prophet, the forerunner of Christ, and Christ a prophet, the forerunner of himself; he supposed, or affected to believe, that he was the promised Comforter—the Paraclete foretold by Christ as the teacher of all things, and the consummator of divine revelation.

A detail of his doctrines is not suitable to this history; but as his religion and faith in his mission have so much to do with the antecedents of the war, the mode in which our oriental allies may wage it, the policy essential to our efficient co-operation with them, and the terms on which peace can be established, this notice of Islamism and its founder is desirable to a complete introduction of the events so soon to be recorded.

The ecclesiastical system of Turkey is simple. Other religions are tolerated, this is established. It is a religion without a priesthood; no sacrifices bleed within its temples, and no altars are reared. Its ministers are rulers and doctors; they govern the faithful according to the Koran, and offer prayer and instruct. Within the mosque all believers may offer prayers, even aloud, but only believers must enter. To proselyte to the true faith is a virtue, if disdain for the infidel does not operate as a bar to the effort. To abandon the true faith is sacrilege, and its penalty death. Even the proselyte who apostatizes, dies.

The social condition of the people is formed by their religion and their political institutions.

Indeed this is the case with all nations; and the religious belief creates the political institutions, or, finding such in operation, modifies them more or less rapidly into harmony with itself. The laws of property, and of the occupancy of land, are much inveighed against by Mr. McCulloch, because there is not an hereditary aristocracy to give the landlord a permanent interest in the estate; but on the whole property is well secured in Turkey, partly by the intervention of the church, and partly by prescriptive rights which check the power of the government.

The character of the people is not industrious; the love of ease has acted as an opiate upon the national heart; there is no vigorous life in Turkey, unless it be among the street porters and boatmen of Stamboul and Smyrna. The true Turk will smoke his pipe and sip his coffee, whether allies swarm in numberless ships to the Golden Horn, or barbarous enemies feel their way through the gloomy passes of the Balkan. The redeeming features of their character are truth, honesty, and abstinence from intoxication by alcohol—we wish we could add, or by opium. The eating and smoking of opium, however, is extreme.

Their worst social evils are slavery and polygamy. Constantinople has its slave-market, where none but the faithful are admitted; although, of course, the ubiquitous English and Americans have obtruded even there. Girls from swarthy Abyssinia, and beautiful virgins from far-famed and fair Circassia and Georgia, crowd this bazaar of dishonour and oppression. The late Emperor of Russia, for political reasons, prohibited this export from all the regions of the Caucasus. Polygamy is the curse of Turkey. By it woman is degraded, population lessened, and the endearing and tender friendship of the original institution of marriage made impossible.

In sobriety and integrity, in faithfulness to his word, and personal generosity, the Turk is superior to the Jew and the Christian settled beside him. He is, in fact, a contrast to the Greeks, so guileful and dishonest, and who are only somewhat worse than the other Christians. Amongst the Armenians, notwithstanding their general venality and servility, there is often a high morality, and a growing disposition to receive religious truth. This favourable change is owing to the devoted and intelligent labours of American missionaries, which always excited the utmost jealousy of the Emperor Nicholas, who instigated Greek opposition, and supported the hostile measures of the chiefs of the Armenian Church; but the vigilance and firmness of the representatives of the American government thwarted these cabals, and secured the continued existence of the auspicious movement.

MILITARY AND FINANCIAL STRENGTH.

Until within a few months the Christian and Jewish subjects of the Porte were not liable to serve in the army—that honour was reserved for the faithful. Policy also dictated such a course—it was not deemed safe, so large a proportion of the population being Christian. What effect the recent change will have upon the fortunes of Turkey remains to be seen; it is probably the real “beginning of the end,” the removal of the key-stone; time will do the rest; and the structure of the Osman ascendancy rapidly fall into irretrievable ruin. Turkey can be great when the Osmans cease to be, or the people cease to be Mohammedans; but an army of Greeks and Franks to defend Islamism is an impossibility. The Greek is as ambitious to oppress the Mohammedan, as the latter is bent upon proudly maintaining his ascendancy. It is not in human wisdom to reconcile these aims, or amalgamate these elements.

The oldest standing army in Europe is that of Turkey, contrary to the general opinion which attributes it to France. The soldier of the sultan’s army was called *Yani-tscheri*, corrupted in Western Europe into Janissary. That formidable soldiery was the terror of this hemisphere. Its existence gave rise to the other standing armies of the European nations. Even our military music has such an origin. The fife and drum, discordant like oriental music generally, are Turkish. Their sound often struck terror in the camps of the Hungarians, and Austrians, and Italians, before Christian Europe beat a drum or blew a fife to gather or inspire her battalions. These Janissaries were as dangerous to the sultan as to his enemies. They deposed and exalted successive occupants of the throne, and ultimately becoming incompetent, with their old tactics and inferior arms, to cope with the advancing military science of the surrounding nations, they were uniformly beaten, and contributed to the decay of the empire. In 1826, the father of the present sultan, by as bold and bloody an exploit as that of Peter the Great, of Russia, when he destroyed the *streletz*, or imperial guard, put an end for ever to this military corporation. Gradually since then the sultans have proceeded, upon the principles of European organisation, to create and discipline an army; and, before the breaking out of this war, an army consisting of the *nizam*, or regular force, to the amount of 150,000 men, and the *redif*, or reserve, of equal number, and of contingents and volunteers to about the same number as each of the former classes, constituting altogether a force of 450,000 men, were nominally at the command of the sultan. The state of the exchequer, the extent of the empire, the disaffection of provinces, all limit

the proportion of this force available for foreign assault, or for concentrated domestic defence. The system is French. The provision and care of the soldier, when within reach of the imperial resources, is good. The army is in a much better condition than the navy. Once that navy was the terror of the Mediterranean, and Venice was mainly crushed by her prodigious efforts against it; but it never recovered the disaster of Navarino, when the fleets of England, France, and Russia, all but destroyed it. At the beginning of this war, a show of naval resistance was made by Turkey, but the surprise and attack at Sinope extinguished for the present the maritime strength of the Porte.

The revenue of the country does not exceed seven millions sterling, a tenth perhaps of which is tribute from Egypt and the principalities of the Danube. It is a revenue totally inadequate to the maintenance of the state, in face of so many dangers as now confront it. About a tenth part also is derivable from the customs, which are laid, not for the purpose of “protection,” but simply for revenue. The commercial principle adopted is free-trade, in which Turkey, not England, set the nations of Europe the example. The maritime commerce of the country is mainly in the hands of the Greeks; the banking and monetary transactions in those of the Armenians; and the internal commerce conducted by Armenians and Jews. There is no public debt in Turkey. The imports are to a great extent, according to Mr. Cobden and other authorities, sent across the empire to Persia, Armenia, and Kurdistan.

SKETCH OF TURKISH HISTORY.

The Turks are an ancient race, who claim direct lineage from a distinguished contemporary of Abraham; but only a particular tribe of that race places itself before us as the supplanters of the Eastern Empire. The proper designation of this tribe is Osmanlis. The name is derived from Osman, who first led them into extensive conquest. The founder of their influence was Ertoghrul, who, under the Sultan of Iconium, ruled over a principality upon the frontiers of Bithynia. Orchan, the successor of Osman, first led them into Europe; and in the year 1453 Mahomet II. conquered Constantinople. Thence, to the time of Solymán the Magnificent, the Turkish arms seemed miraculously to conquer; and the vulture, the proper emblem historically and locally of the race, fattened upon the slain of all Christian nations: so that Persia to the east, and Austria and Hungary to the north, became tributary to the Porte, and the world was awed by its power.

The decline of the empire is generally dated from this season of its exceeding greatness; but there does not appear any other ground for this

than that the luxury and ease thence indulged by the court may be said to have undermined its ambition, and that certain laws promulgated by Solyman tended in the same direction. Selim II., who succeeded Solyman, was sufficiently degenerate for his reign to form the epoch for the recession of Turkish power; but in the reign of his successor, Amurath III., the decline was rapid. Corruption and military insubordination loosened the hand of authority at the seat of government, and the sceptre rested unequally upon the various outlying provinces. Thence, to the accession of Amurath IV., murder, insurrection, official bribery, and perverted law, did their work around the throne of the sultans; and when Amurath ascended it he found the empire truly wretched. He restored order, but severity and cruelty were his instruments; he ruled with a stronger hand than his immediate predecessors, but was himself no better than they were. The empire has continued its downward course to the present; for although the reign of the father of the present sultan began an era of improvement, which his successor has nobly pursued, yet political events have counteracted these auspicious symptoms, and now the empire is engaged in the greatest, although so far not the most dangerous, war of its whole history. Mahmoud, as already related, reformed the military system by the destruction of the Janissaries; and showed such toleration to the Christians as had not previously been experienced. The revolt of the Greeks, whose independence was secured by the treaty of London, in 1829, and the revolt of his powerful vassal, Mehemet Ali, Pasha of Egypt, together with a Russian invasion, and various insurrections in his provinces, occupied the strong head and valiant hand of Mahmoud in a way alien to his desires, and all but fatal to his plans of reform.

The present sultan ascended the throne on the 1st July, 1839, when only sixteen years of age. His title is Abdul-Medjid. He has now reigned sixteen years. His appearance is gentle and unassuming, characterised also by a strangely blended expression of coldness and tenderness. His eyes are large and beautiful, possessing nothing of the repulsive fire so often characteristic of the large dark eye of the East; there is a soft and quiet voluptuousness in its light, which even when most animated or angry always tempers it. He does not inspire enthusiasm, but the gentle love him. He is eminently a man of peace; and so far as his disposition is concerned is in no way responsible for this war. The law of Turkish polygamy allows four wives to each believer; but the sultan is an exception from the operation of this law: he is allowed no wives, and the harem is therefore supplied with slaves; these are Circassians and Georgians principally, but Abyssinians and women of various other nations are to be found among them. The sultana may therefore have been a dancing-girl or a waiting-woman, *and is always a slave*. The sultan himself is always the son of a slave. A recent writer says that "the seraglio is always recruited from Georgians, Malays, and Abyssinians;" but other Caucasians besides those of Georgia are more frequently inmates of the *harem*. The word *seraglio*, in the above sentence, expresses an error into which writers commonly fall; it is not to be confounded with harem. The former is properly the *palace* of the sultan; the latter the abode of his women. Every Turkish house has its *harem*, the seraglio is one only, the *castle* of the sultan. The present sultan has already four sons and five daughters; and the sultana is a beautiful Circassian. He has one brother, and one sister who is married to a principal officer and minister.

CHAPTER III.

RUSSIAN AGGRESSIONS UPON TURKEY.

"The Muscovite is the hereditary enemy of all free people."—SIGISMUND, KING OF POLAND.

Among the causes of the decline of the Turkish power was the imperfect subjugation of the conquered countries. As Israel in the land of Canaan found the tributary Canaanites causes of continued weakness, so the Turks in the European moiety of their territory have experienced the injurious policy of leaving the vanquished too strong for the permanent security of the conqueror. Mr. McCulloch dwells much upon this in reference to the whole of the empire; but it has only been the case in Turkey in Europe, for in Asia, as Professor

Creasy describes, "They paused over each subdued province, till by assimilation of civil and military institutions it was fully blended into the general nationality. They thus gradually moulded in Asia Minor an homogeneous and stable power, instead of precipitately heaping together a motley mass of ill-arranged provinces and discordant populations. To this policy the long endurance of the Ottoman Empire, compared with other oriental empires of both ancient and modern times, is greatly to be ascribed."

In the foregoing sketches of Russian and Turkish history but little notice was taken of the past relations of the two powers; this was reserved in order that a separate and more distinct view might be laid before the reader than could have been given if mixed up with the general history of either country.

It was not likely that Russia, having adopted a policy of aggression toward all her other neighbours, should regard uncoveted the provinces of Turkey. It would have been the more strange, when it is remembered how often Russia brought fire and sword to the gates of Byzantium when the Greek emperors reigned there in their imperial splendour. Accordingly, no sooner had the Tartar yoke been shaken off than Russia came into collision with Turkey. Sokolli, the great minister of the feeble and corrupt Sultan Selim, conceived the idea of connecting the Don and the Volga, and thereby the Sea of Azoff with the Caspian. The object of the vizier was to facilitate the conquest of Persia, for he still regarded the Russians as tributary to the Tartars, themselves tributary to his master. In furtherance of this plan a small army was dispatched to Astracan, and another to Azoff, and the Crim-Tartars were ordered to support the operations thus intended to take place. The lieutenants of the Russian czar (Ivan) attacked both armies with success, and succeeded also in dispersing the supporting Tartars. The Russians fought in those battles precisely as they did at Inkerman, coming on in close and crowded columns, pressing one another forward as cloud piles itself upon cloud in the stormy sky. The Turks did not withstand the shock; and although the Russian loss must have been less heavy than if exposed in such masses to modern resistance, they suffered much even as conquerors. The Russians, however, seem to have been alarmed by their own progress, and sent an embassy to the Porte, entreating peace and amity. This was conceded in 1570, just a year after their victories; and so distant then was any likelihood of Russian dominancy, that they accepted peace from Selim in terms the most contemptuous, and resorted to means of obtaining it the most mean and deceitful. And within a single year of that peace a Tartar incursion was attended with disastrous results, for Moscow itself was laid in ashes. For more than one hundred years Russia was checked by this catastrophe; but her strength was inherent, and, as the blossom ripening to the fruit, so her incipient life must needs develop and mature itself in agreement with its own nature. Accordingly, as soon as Peter the Great began to feel conscious of his true position and power, he sent an embassy to the Porte, and negotiated the treaty of Azoff. The Porte was not in a condition to resist demands, while the treaty of

Carlowicz, wrung from it by Austria, Poland, and Venice, was still fresh in its effects. The treaty of Azoff was conceded to Peter, by which the hordes of Crim-Tartary were forbidden to molest Russia; and the Russian boundary was drawn from Azoff to Or. In 1711, Peter considered himself powerful enough to defy the Porte, elated by his victory over Charles XII. rather less than two years previously at Pultowa. By the victory of Pultowa Peter was placed in a position to Sweden, the Baltic nations, and all western Europe, which was calculated to lift him above any fear of defeat from any quarter. Sir De Lacey Evans, in a pamphlet published some years ago, called attention to the designs of Russia as marked from that moment too plainly for any statesman not corrupt or blind to be ignorant of them; and he justly says that "the effects of the Russian victory of Pultowa is felt in Europe to this day." The treachery of Peter was, however, rewarded by signal defeat. There was a poetical justice in the miseries and sufferings of himself and his armies in this campaign; and he was finally surrounded by the victorious Turks, and nothing remained for him and his army but annihilation or captivity. Catherine, to whom he was privately married, exhibited at this juncture a masculine vigour of understanding and an address which proved her equal to any emergency. She succeeded in bribing the Turkish minister and commander, and securing the freedom of her husband and the safety of his army. The Turks, with that lofty generosity which has always attended them in conquest, forgave his treachery, spared his army, and did not retain him as a captive, but entered into a new treaty with him, known since as *the treaty of the Pruth*. This treaty was of course less favourable to Peter than that which he had violated; and it guaranteed the throne of Sweden to the vanquished Charles. Azoff and the adjoining territory were to be restored to the Porte, several forts were to be razed, and the Russian artillery surrendered, more as a sign and trophy of victory than from any desire to enfeeble the czar. The treaty put a stop to the encroachments of Russia upon the Cossacks; and no Russian, except for purposes of commerce, should be permitted to reside in Constantinople. All these pledges of faith were broken by Russia. It is hard to say whether Peter ever intended to observe them. He was so strified by his defeat at the Pruth, that he had no faculty to speculate as to his future policy when signing the treaty which secured his present deliverance.

When Catherine ascended the throne, she began to intrigue against the Porte. She soon attacked Poland, which had been guaranteed by treaty; and sent monks into Georgia and

Montenegro, to foment disturbances among the Christian populations, and shake their loyalty to the Turkish government. The immediate object of Catherine was, however, not Turkey but Poland, a country upon which the Turkish government had also ambitious designs. It was felt at Constantinople as well as at St. Petersburg that a powerful and independent Poland stood in the way of encroachment upon Europe. So strongly was this felt at the Porte that secret negotiations had been previously opened with Vienna, and a partition of Poland between the two powers proposed. Whether from policy or virtue, Austria on the occasion refused to be a sharer with the Porte in the dismemberment of Poland; and it is likely that by way of Vienna Russia was made acquainted with these overtures, and that Catherine, however willing to plunder any neighbour for the plunder's sake, was quickened to assail Poland in this instance by so well authenticated an assurance of the sultan's designs. These views of the origin of a war so disastrous to Turkey as that was, are contrary to those generally entertained; and yet Hammer and other German writers give the secret correspondence, so as to leave no doubt of the ambition of the Turk and the jealousy of Austria in favour of Poland. Under such circumstances the probability almost amounts to certainty that Catherine, indignant with those projects, resolved to be beforehand with the Grand Seigneur, and to wipe out the disgrace of the treaty of the Pruth by destroying the treaty itself. The conduct of Austria was uncertain in all these negotiations, for while feeling or affecting a jealousy for Polish independence in her diplomacy with Turkey, she united with Russia in a war which could not end otherwise than disastrously to Poland. So early as 1737, she allied herself with Russia in an invasion of the Turkish provinces, in which her arms were humiliated by Turkish bravery, and she was forced out of the alliance, forsaking Russia in the hour of her need with a treachery and selfishness in keeping with her bearing throughout all the previous transactions. Instead of gaining anything she lost to Turkey the provinces she had wrested from her, in conjunction with Venice, in the earlier part of the century: Servia, Belgrade, and Little Wallachia, were again consigned to the sovereignty of their previous master. Russia held on the war with obstinacy, and by sheer endurance and perseverance so harassed her enemy as, without any brilliant deed of arms, to reap advantage.

Later in the century, Turkey was again anxious to unite with Austria in a selfish policy towards Poland, and again unsuccessful; and war between Osman and Catherine raged with redoubled fury. The Russians were everywhere successful. From the Dneiper to the

Danube the double-headed eagle looked every way, as if sure of a prey to whichever quarter his flight might be directed. The Crimea was overrun. The English sympathized with Russia, and afforded officers of distinction to both the fleets and armies of Catherine. Greece rose in arms, and Servia was in successful revolt. The English admirals led the Russian fleet into the Mediterranean, and the Turkish navy was annihilated. During the last campaign of that war the Balkan was passed, and the road to the capital occupied by the invaders. The Porte sued for peace. The result was the treaty of Kuchuck Kainardgi, signed 1774. The stipulations were: That Russia should have the free navigation of the Ottoman seas. Her ships of commerce might pass through the straits of the Bosphorus and Dardanelles, but only one ship of war should remain at any time within the waters closed by these straits. Azoff, so long coveted, was conceded to Russia, with Taganrog and Kertch. The Crimea was declared independent—the first step to a protectorate occupation by Russia. The two ka-kardas in the Caucasus, the independence of which had been secured by agreement in 1739, were now surrendered. Certain guarantees were given as to the administration of Wallachia and Moldavia. The right of the Russian sovereign to protect the Greek rite in certain particulars was also with great simplicity conceded. Bessarabia as well as the Crimea was declared independent. The effect of this treaty upon Turkey was permanent and ruinous. It enabled Russia, by interference with the Greek patriarchs and by the media of Greek priests, to stir up discontent amongst the majority of the subjects of the Porte,—a restless, bigotted, and perfidious race, ever ready to engage in plots, and hating the government of the Turk with quenchless animosity: a race too upon whom many provocations had been unwisely heaped, and who were still likely to be subjected to persecution. It enabled Russia to swoop down with her ships from the Sea of Azoff upon the Black Sea, and carry destruction along its shores before Turkey could do anything for their defence. It enabled Russia, from her new frontier of Kertch, to form a point of support from which armies might be hurled upon the Turkish empire so suddenly as to wrest from her new and severer terms, more valuable cessions of territory, or even independence itself. By the joint protectorate of the Wallachian provinces, Russia had always a ground of interference, and might at any time, *without a declaration of war*, seize upon a “material guarantee” for the concession of any other demand.

Yet all this did not satisfy Russia. Czar and czarina were alike faithless and aggrandizing. The moderation of others only whetted

the appetite of their ambition. Almost immediately Russian intrigue played its congenial part upon the lately constituted independent territory. The khans were deposed or set up as they were favourable or otherwise to Russia; and it was soon determined that the illustrious house of the Gheris should, without provocation on their part, be humbled and plundered. Partly by force and partly by policy the khan of Crim-Tartary was induced to cede to Russia a reversionary interest in the sovereignty (a scheme resembling that by which the emperor has lately become heir of the throne of Denmark). Stung to the heart, the sultan resolved upon the hopeless task of stopping the further progress of Russia. It was as if the old shattered tree had shaken its branches in menace of the rising storm. But the tempest may strengthen the tree while it strips it of its weaker branches: Russian war strikes at the vitality of rival forces with a keen energy of discriminating hatred. On this occasion Austria was the selfish ally of Russia; her real object being to participate in the dismemberment of the Osman dominions. They were desirous to secure France in this arrangement by giving her Egypt for her spoil. Sweden boldly resisted these projects, but was compelled to make a separate treaty with Russia. Prussia marched an army into her own department of Poland, and menaced the Russian and Austrian frontiers; this she did being secure of a diversion on the side of Sweden, and the support of Holland and the northern German states—not then connected with Russia by marriage-bonds or political sympathies, as afterwards became the case; but still Prussia only negotiated when she should have struck. Her decided attitude, however, assumed consistency from the support of England, and ultimately the treaty of Jassy was signed, in 1792; as Russia became much exhausted by the war, and dreaded a confederation of England, Prussia, Sweden, Holland, and Turkey against her. She had besides further designs upon Poland and Persia of more easy execution, and which peace with Turkey would leave her at leisure to prosecute. By this treaty the Crimea and part of Bessarabia became Russian soil.

During the complications of the first Napoleon's reign, Turkey was involved in the universal embroilment, and had her full share of the universal suffering. Turkey showing some disposition to an alliance with France, with which England was at war, and Russia being then an ally of the latter, both made demonstrations against her. England pursued the policy which she adopted towards Denmark, and which was carried out towards the latter country at the battle of Copenhagen. She demanded the direction of the Ottoman fleets

and the command of the Dardanelles. Russia, having the moral support of England, occupied the provinces. These Napoleon compelled her to surrender, but again allowed her to occupy them, which she did until the peace of 1812; when, by the treaty of Bucharest, she acquired the remaining portion of Bessarabia, part of Moldavia, and the mouths of the Danube. Thus the present positions of Russia on the Pruth and the Danube were gained by the moral support of England, and by an English fleet storming the castles of the Dardanelles, and menacing the sultan in his seraglio.

Some years later the Greek insurrection brought Russia again into the field. England and France, without seconding her policy, but really with the intention of thwarting it, played into her hands. In order to prevent Russia alone effecting the liberation of the Greek race, and the consequent destruction of the Porte, the Western powers pretended to aid her in gaining independence for ancient Greece. Russia saw through this, but also saw that she must either have the Western powers for allies in accomplishing *something* of her own objects, or as enemies altogether against her projects. She of course chose the former alternative, and a petty kingdom was carved out of the Greek territory, over which King Otho now unworthily reigns—a kingdom too small to be powerful for itself, and just large enough to be a thorn in the side of Turkey, and the centre of Russian cabal among the Greek race. The weakest portion of the allied policy was the destruction of the Turco-Egyptian fleet at Navarino. That "untoward event," as the British ministry afterwards called it, left Russia nothing to fear upon the Black Sea if a future invasion by Russia should become opportune. It soon did so. Upon the pretext—a most transparent pretext at the time—of Turkish oppression in the principalities, Russia declared war against Turkey, crossed the Danube, occupied the Dobrudscha, captured Silistria, and not for the first time in her history crossed the Balkan, and arrived at Adrianople, having struck terror to the heart of all, except the intrepid sultan. The Russian army owed these great successes to several concurrent causes. The sultan had only two years before destroyed his Janissaries, and his new army, organised on European principles, had not time to become efficient. Russia, influenced by that circumstance, chose her moment. She was, no doubt, also influenced by a consideration of the amity of the British government. The Earl of Aberdeen, unfortunately for this country, then held the seals of the Foreign-office. He was the friend of the Emperor Nicholas. The Duke of Wellington was head of affairs, and regarded Nicholas as the bulwark of European conservatism. The duke was friendly to the Holy

Alliance, and Nicholas was its incarnate genius. The duke was a man of stern truth and honour; he could not believe that the great ruler of a great people would deign to be otherwise, and he trusted in the word of Nicholas that the war should not be one of aggrandizement, and that he merely sought for a confirmation of the rights of the provinces. The events undeceived the duke, whose laconic apology for his diplomatic simplicity is said to have been—"I could never have supposed the fellow (Nicholas) had been such a liar." Secure of a friend at the Foreign-office, and a confiding, honourable man—the last to doubt the word of any other "gentleman"—at the head of the English administration, Nicholas launched his armies beyond the Danube; and by the genius of his lieutenant, Diebitch, the disorganisation of the Turkish hosts, the cowardice of their leaders, and the prestige of his own name and army, he burst his way through the Balkan, and the fate of Turkey seemed to depend upon his ukase. The result was the treaty of Adrianople, in 1829. This treaty secured the sultan's recognition of the independence of Greece, an object with which the Western powers sympathised. Servia ceased to be in any sense an integral part of Turkey, and became simply tributary. Moldavia and Wallachia obtained independent administrations. Turkey was to pay the expenses of the two campaigns. Some of the most important territorial concessions were also made to Russia; thus falsifying all the professions which the emperor had made to the British government. This was the more nefarious, as but for the influence of Lord Aberdeen the sultan would have defended the capital, and with every chance of driving the Russians back through the Balkan, if indeed their army should escape at all. Hosts were rushing down from Asia to the sultan's aid, and the Russian army was utterly unable to maintain itself; wasted in numerical and physical strength by battle, marches, and disease, they must have perished, had not Lord Aberdeen and the British ambassador saved them, by persuading the sultan to throw himself upon the generosity of a conqueror whose conquests had conducted him, broken in strength, to the strongest resources of his enemy. When the terms of the treaty became known in Western Europe, there was one loud burst of indignation at the treachery of the czar, who professed to have waged the war for the liberties of the Christian nationalities, but who ended it by a treaty securing new accessions of power to himself. Lord Aberdeen was compelled by public opinion, and perhaps a sense of shame for the way in which he had been himself befooled, to write a despatch which amounted to a protest, but which is expressed in terms nevertheless of "whispering humbleness." The greatness and sacredness of

the czar seem far more to pervade the mind of the writer, than the dissimulation and avarice of power which that potentate had so cleverly practised.

Much has been written in praise of this despatch, and Lord Aberdeen repeatedly referred to it during his late administration as a vindication of his anti-Russian principles; but the despatch itself is only a respectful and feeble, although well composed, remonstrance, after the incapacity and Russian leanings of the writer had left it in his own power to do no more than remonstrate. What the professions of the emperor had been we may judge from this extract:—"He (*i. e.* the emperor) renounced all projects of conquest and ambition, and frequently repeated that, so far from desiring the destruction of the Turkish Empire, he was most anxious for its preservation; and that in his own solemn promises should be found the best pledges of his moderation." The noble secretary afterwards asks, "Does the treaty of Adrianople place the Porte in a situation corresponding with the expectations raised by such assurances?" Again, he says, "The cession of the Asiatic fortresses, with their neighbouring districts, not only secures to Russia the uninterrupted occupation of the eastern coasts of the Black Sea, but places her in a situation so commanding as to enable her to control at her pleasure the destinies of Asia Minor. Prominently advanced into the centre of Armenia, in the midst of a Christian population, Russia holds the keys both of the Turkish and the Persian provinces." Lord Aberdeen exposes eloquently the mischievous tendency of every stipulation in the treaty, but *expresses great confidence in the justice and generosity of his imperial majesty!* How a man so imposed upon could express such confidence passes most other men's acquaintance with the philosophy of credulity, and how the same man could, in 1853 and 1854, run in the same track of credulous imbecility, when the very same "imperial majesty" was renewing the game, is inconceivable upon the principles of any philosophy. Ever since this unfortunate treaty Russia considered Turkey her own, and acted accordingly. When Mehemet Ali revolted, Russia and the Western powers came to the aid of the Porte, but Russia alone profited by the aid rendered. A new treaty bound down the Porte still more to the footstool of the czar—the treaty of Unkier Skelessi. This was concluded in secrecy, and was another act of treachery to the West. It was signed in 1840, and by it Turkey was engaged to close the Dardanelles against all vessels of war belonging to nations at war with Russia. This virtually made Russia the protector of Turkey.

When, in 1849, the whole of Europe was

convulsed, Russia fomented as usual disputes in the northern provinces of Turkey, which enabled her to interfere, and exact from Turkey the recognition of a new mode of electing the hospodars, and the joint right of occupying the provinces. This is called the convention of

Balta Lima; and there remained nothing as a preparative for the final conquest of Turkey except the pseudo protection of the Greek Christians, by which the czar could at any time throw the whole Greek population into revolt, and make an easy prey of the distracted realms.

CHAPTER IV.

CAUSES OF THE WAR.—OCCUPATION OF THE PROVINCES.

“Call me what instrument you will, though you can fret me, you cannot play upon me.”—SHAKSPEARE.

FROM the facts given in the previous chapter, it is evident that Russia was bent upon the destruction of the Ottoman Empire. The *modus operandi* would depend upon events. France gave her the occasion she required. The President of the French Republic, now Emperor of the French, adopted the policy which proved so fatal in the long run to his predecessors—his great uncle, the elder Bourbons, and the Orleanists alike—that of upholding abroad, by diplomacy and force, the ascendancy of the Roman Catholic religion. To this policy the liberties of Rome had been just sacrificed; and the idea of ascendancy for the Latin Church in the East having become revived in all the European Roman Catholic nations, Louis Napoleon wished to strengthen himself for his contemplated *coup-d'état* by flattering this feeling. M. Lavallette was sent to Constantinople to demand the restitution, or original possession, it is difficult to say which, of the key of the grand porch of the Holy Sepulchre, into the possession of which the Greeks had been somehow inducted: also to demand the restoration to its place of some star-cross, in the Church of the Holy Virgin, which, because of its bearing a Latin inscription, the Greeks had removed.

The newspapers of London made very merry about this diplomacy of holy keys and sacred stars, and the more so as the opposition of the Greeks became earnest. The spirit of either the Latin or Greek Church was so little understood at home, that no danger was apprehended from these wars of the pilgrims. The Porte was unwilling to offend the Greeks, and refused the demands of the French ambassador. The latter, in a tone as arrogant and insolent as ever was adopted to the government of an independent nation, threatened to order the French fleet from the Mediterranean to enter the Dardanelles; and showed such tokens of meaning what he said, that the alarmed sultan gave way, and the French demands were satisfied. The indignation of the whole Greek world was soon at its height. The Emperor of Russia could not entertain a more indignant anger than that which animated his subjects; and not

only them, but the 12,000,000 of Greek subjects of the Porte, the inhabitants of independent Greece, and the Greek traders and residents of every country. No person could have access to the society of respectable Greek merchants in England or France at that time without perceiving that they laboured under a sense of wrong; and unhappily also entertained a bigotted rivalry to the Latins, which nothing but ascendancy could assuage. The Emperor Nicholas took advantage of a feeling thus made ready for his projects, and sent Prince Menschikoff to demand the restitution of the disputed key, and a renewed declaration on the part of the Porte in favour of the privileges of Greek Christianity. After much negotiation, the first part of the demand was settled by concessions on the part of the French government, and by the good offices of the British ambassador. The second part of the demand was such, and made in such terms, as it was impossible for the Porte to comply with.

It is here desirable to say that while the arrogance of France furnished the Russian emperor with the occasion for his demands, he had been contemplating some such method of pushing his influence and authority over the subjects of the Porte for some time before. Disturbances had been got up in Montenegro by the influence of Austria, and at the instigation of Russia. The Montenegrins threw forth predatory bands over the Turkish borders, and surprised and murdered great numbers of the inhabitants. Turkey resented these outbreaks, and Omar Pasha was ordered to conduct an army upon Montenegro. Austria interfered under threat of a declaration of war, and the march of Omar Pasha was countermanded. She took, however, the opportunity to ask for a protectorate of her own, which surprised all the ambassadors, and none more than the representative of Russia, who, after denouncing the injustice and arrogance of the Austrian minister, suddenly, by command from St. Petersburg, gave him his support. The unhappy sultan was of course forced to yield. Had nothing occurred on the part of France, this conduct of Austria would have sufficed for

a precedent for Russia; but Austria had not yet fully performed the part assigned to her, when France, opportunely for Russia, did all that she could have desired. That Austria was the instrument of Russia in the Montenegrin affair may be new to the public generally, but the facts are capable of proof. Austrian officers assisted in disciplining the bands of the insurgents, and afterwards received decorations from their own government for the services thus rendered.

That Russia had all this time been preparing for an invasion of Turkey, *in conjunction with Austria*, was subsequently made plain by the diplomatic correspondence of Sir Hamilton Seymour, the British minister at St. Petersburg. On February 21st, 1853, he thus wrote: "The sovereign who thus insists upon the impending fall of a neighbouring state must have settled in his own mind that the hour, if not of its dissolution, yet for its dissolution, is at hand. This assumption would hardly be ventured unless some intimate understanding existed between Russia and Austria." March 9th, Sir Hamilton again writes: "These points appear to me to be fully established by the imperial memorandum—the existence of some distinct understanding between the two courts upon the subject of Turkey. . . . Assuming as a certain and now acknowledged fact, the existence of an understanding or compact between the two emperors as to Turkish affairs, it becomes of the deepest importance to know the extent of the engagements entered into between them. . . . Its basis was no doubt laid at some of the meetings which took place between the sovereigns in the autumn; and the scheme has probably been worked out since, under the management of Baron Mayendorf, the Russian envoy at the Austrian court, who has been passing the winter at St. Petersburg, and is still here." From these quotations it is beyond doubt, when we recollect the sources of Sir H. Seymour's information, that Austria was implicated with Russia in the way above described, and that Russia would have made demands about the protection of the Greek Church, grounded upon the concessions made to Austria in the case of Montenegro, had not France furnished her with a better pretext. In violation of the conventions of July, 1840, and July, 1841, the Russian ambassador extraordinary at Constantinople demanded a secret treaty with the Porte, the main item of which should be the protection of the orthodox Greek Church, and thus virtually the sovereignty of a moiety of the Porte's subjects. The sultan, alarmed at this demand and the menaces by which it was accompanied, sought the advice of the ministers of the other powers. Advice was at first promptly given by the French and British ministers to refuse any

secret treaty and to resist such demands. The British minister, Lord Stratford, was absent during a portion of these discussions, when Colonel Rose displayed both intelligence and promptitude, which had they been followed up might have averted war; but the governments of France and England vacillated, the French minister for foreign affairs and the English premier were both much under the influence of Austria—the accomplice of Russia in the whole affair; and the English premier was besides the personal friend of the Emperor Nicholas, and the open abettor of that system of policy which regarded the preponderating power of Russia as a necessary element in the European balance, and the surest support of anti-revolutionary and of conservative politics. For although England had refused to enter the Holy Alliance after the peace of 1815, there was always a powerful English party favourable to that confederacy, which rested mainly upon Russia, and Lord Aberdeen made no secret of his sympathy in that direction. In no other way can we account for the utter neglect of all Sir H. Seymour's warnings, and of the warnings previously afforded by the base betrayal of Lord Aberdeen himself by the Emperor Nicholas, in the matter of the treaty of Adrianople. Perhaps all the members of Lord Aberdeen's cabinet shared in some measure this pro-Russian feeling; but so much more did the Aberdeen section maintain it, that jealousy of the Russell section pervaded all their councils. This state of feeling in the British cabinet, and the pro-Austrian feeling of the French Minister of foreign affairs, were the main causes of so much fruitless diplomacy, and such submission to the guidance of Austria, not only at the outset of the quarrel, but through every successive step of negotiation.

The conduct of Russia in its demands, and of Turkey in its refusal of those demands, may be best represented by a perusal of the "*final*" ultimatum of Prince Menschikoff, a draft of which the minister of the sultan was of course to sign, or the plenipotentiary would leave Constantinople in eight days. This was on the 21st of May, 1853.

"The Sublime Porte, after a most attentive and earnest examination of the demands which form the object of the extraordinary mission confided to the Ambassador of Russia, the Prince Menschikoff, and after submitting the result of that examination to his Majesty the Sultan, makes it its duty to notify, by these presents to his highness the Ambassador, the following imperial decision:—

"His Majesty the Sultan, desirous of giving his august ally and friend, the Emperor of Russia, a fresh proof of his most sincere friendship and desire to consolidate the ancient

relations of good neighbourhood and cordial understanding which exist between the two countries, and, at the same time, placing an implicit confidence in the constantly benevolent intentions of his Imperial Majesty towards the maintenance of the integrity and independence of the Ottoman empire, has deigned to appreciate and take into his serious consideration the candid and cordial representations of which the ambassador of Russia has been the organ, in favour of the orthodox religion of the East, which is professed by his august ally, and by the majority of both their subjects.

"The undersigned has consequently received the order to give the imperial government of Russia, represented by his highness the Prince Menschikoff, by this present note, the solemn assurance of the unchanging solicitude, and the generous and tolerant sentiments which animate his Majesty the Sultan, for the prosperity and security of the clergy, the churches, and religious establishments of the Christian religion in the East.

"To render these assurances still more explicit, to define in a formal manner the principal objects of this high solicitude, and to corroborate by supplementary explanations, necessitated by the progress of time, the sense of certain articles which, in former treaties concluded between the two powers, have referred to religious questions, and to prevent, for all time to come, even the shadow of a misunderstanding on this subject, the undersigned is authorised by his Majesty the Sultan to make the following declarations:—

"1. The orthodox religion of the East, its clergy, churches, possessions, and religious establishments, shall for the future enjoy, under the ægis of his Majesty the Sultan, the privileges and immunities which were assured to them from of old, or which have been granted to them from time to time by the imperial favour, and from a high principle of equity; they shall participate in the advantages awarded to the other Christian sects, as well as to the legations accredited to the Sublime Porte, by convention or special disposition.

"2. His Majesty the Sultan, having thought it necessary and equitable to corroborate and explain his sovereign firman of the 15th day of the month of *Rebbi-Ulakhir*, 1268 (16th February, 1852), by his firman of this date, and to ordain, moreover, by another firman of this date, the reparation of the cupola of the Holy Sepulchre, these two firmans shall be textually executed and faithfully observed, to the maintenance, for all time to come, of the existing conditions of the sanctuaries possessed by the Greeks exclusively, or in common with the members of other sects.

"It is understood that this promise extends equally to the maintenance of all these rights

and immunities which have been enjoyed from the beginning by the orthodox church and its clergy, within the walls of Jerusalem and without, without any prejudice to the other Christian communities.

"3. In case the imperial court of Russia should demand it, a convenient locality shall be assigned, in the city of Jerusalem or its vicinity, for the construction of a church devoted to the celebration of divine service by Russian ecclesiastics, and of an hospital for poor and distressed pilgrims: and such foundations shall be under the special *surveillance* of the Consul-general of Russia in Syria and Palestine.

"4. The necessary firmans and orders shall be given to those who have a right to ask for them, and to the Greek patriarchs for the execution of those sovereign decisions; and a further understanding will be come to in the regulation of other details, which have neither found a place in the firmans respecting the Holy Places, nor in the present notification."

→ This ultimatum was declined by the Porte, and Prince Menschikoff withdrew from Constantinople. During these negotiations the Russian armies were concentrated upon the Bessarabian frontier, and made ready to cross the Pruth in vast force; and at the same time the Emperor Nicholas was sounding Sir H. Seymour at St. Petersburg, and virtually proposing that Russia, Austria, and Prussia, should share with England in event of the breaking up of the Turkish empire. In these celebrated conversations Sir Hamilton represents the emperor as saying, "That in case of the dissolution of the Turkish empire, he thought it might be less difficult to arrive at a satisfactory territorial arrangement than many imagined. The principalities are an independent state under my protection, this might so continue; Servia might receive the same form of government. So again with Bulgaria. There seems to be no reason why this province should not form an independent state. As to Egypt, I quite understand the importance to England of that territory. If you should take possession of Egypt, I should have no objection to offer. I would say the same thing of Candia; that island might suit you, and I do not know why it should not become an English possession." His general views as to what he would not permit in case of a dissolution of the Ottoman states were thus expressed:—"I will not tolerate the permanent occupation of Constantinople by the Russians; having said this I will say that it never shall be held by the French, English, or any other great nation. Again, I never will permit an attempt at the reconstruction of a Byzantine empire; or such an extension of Greece as would render her a

powerful state; still less will I permit the breaking up of Turkey into little republics— asylums for the Kossuths and Mazzinis, and other revolutionists of Europe: rather than submit to any of these arrangements I would go to war, and so long as I have a man or a musket left would carry it on.” These conversations were accompanied by despatches and protestations that the emperor would not, in the quarrel then pending, attempt any territorial occupation. But Odessa and Sebastopol were filled with naval and military preparation, and the Russian army was massing upon the Pruth, ready at a moment’s notice to invade the principalities. The moment at last came. Prince Metternich and Count Nesselrode, the Russian minister for foreign affairs, baffled in their intrigues by the resolution of the sultan, gave place to other and more decisive performers. Prince Gortschakoff crossed the Pruth on the 25th of June, at the head of a numerous army, organized to the highest efficiency on the Russian principle, and attended by a most powerful artillery and *materiel* of war. Contemporaneous with the advance of his armies, the autocrat published a manifesto which left his motives and objects no longer in disguise, and which no persons could misapprehend, except those whom the disclosures of Sir H. Seymour had failed to enlighten:—

“By the grace of God we, Nicholas I., Emperor and Autocrat of all the Russias, &c. Making known to our faithful and well-beloved subjects, that from time immemorial our glorious predecessors took the vow to defend the orthodox faith.

“From the moment that it pleased divine Providence to transmit to us the hereditary throne, the observation of those sacred duties which are inseparable from it has constantly been the subject of our cares and solicitude. Based on the glorious treaty of Kainardgi, confirmed by the solemn transactions concluded afterwards by the Ottoman Porte, those cares and solitudes have always had for their object to guarantee the rights of the orthodox church. But to our profound affliction, notwithstanding all our efforts to defend the integrity and the rights of our orthodox church, latterly numerous arbitrary acts of the Ottoman Porte attacked those rights, and threatened finally to destroy the whole order of things sanctioned by centuries, and so dear to the orthodox faith.

“Our efforts to dissuade the Porte from such acts have been fruitless, and even the solemn word which the Sultan had given to us on the occasion has been violated.

“Having exhausted all the means of persuasion, and all the means of obtaining in a friendly manner the satisfaction due to our just reclamation, we have deemed it indis-

pensable to order our troops to enter the principalities, to show the Porte to how far its obstinacy may lead it. Nevertheless, even now it is not our intention to commence war. By the occupation of the principalities we wish to have in our hand a pledge which will guarantee to us in every respect the re-establishment of our rights.

“We do not seek conquests. Russia does not need them. We demand satisfaction for a legitimate right openly infringed. We are ready even now to stop the movement of our troops, if the Ottoman Porte engages to observe religiously the integrity of the privileges of the orthodox church. But if obstruction and blindness obstinately desire the contrary, then, invoking God to our aid, we will leave to his care to decide our difference; and placing our full hope in his all-powerful hand, we will march to the defence of the orthodox faith. Given at Peterhoff, the 14th (26th) of the month of June, 1853, in the twenty-eighth year of our reign. (Signed) “NICHOLAS.”

The foregoing tissue of falsehood and hypocrisy was intended to act upon the fanaticism of his own people and of his soldiers, who were taught to regard their invasion of the provinces as a crusade. Other means were taken to reassure the Western governments that no conquest was intended. Count Nesselrode wrote diplomatic circulars to the Russian ambassadors and consuls at the various courts and capitals; M. Druhyn de L’Huys, the French minister of foreign affairs, and our own foreign minister, wrote counter-circulars; and time was bootlessly expended by the Western governments that ought to have been given to the preparation of armaments. The Russians lost no time. Having advanced upon Wallachia by way of Leova, and upon Moldavia by way of Skouliany, they rapidly penetrated to the capitals of the provinces, where the clergy of the Greek Church, and the leading officials also of that communion, gave them public welcome. *Te Deum* was sung in the churches, and the Russian armies acted as if on conquered territory. It was on the 3rd of July that the Pruth was crossed; on the 8th Prince Gortschakoff assisted in the ceremonies of the Church of St. Spiridion, at Jassy; on the 29th he received the compliments of the assembled bishops of the Greek Church of the provinces at Bucharest, 150 miles nearer to the Danube. By this date the Russian army had greatly increased; Gortschakoff, Dannenberg, and Luders, had at their disposal nearly 20,000 cavalry, 144 pieces of cannon, of a larger calibre than had ever before been brought into the field by any army, and a force of infantry not so large in proportion to these arms of the service, but the precise number of which it is

impossible, amidst so many conflicting statements, to verify. General Osten-Sacken remained within the Russian frontier with powerful reserves, and reinforcements were pouring along in unbroken streams from the great centres of Russian military power. The fierce Cossack from the Don and the Dneister, the Tartar from the Ukraine, the beetle-browed and predatory Baschkir, with all their variety of wild uniform, and "helm and blade" glancing in the summer's sun, crowded on the great military thoroughfares, while fresh supplies of well-appointed and formidable artillery were carefully transmitted. The foundries of Russia were blazing in the manufacture of warlike weapons; and the workshops of Belgium were ransacked for the musket and rifle. The shores of the Sea of Azoff and of the Black Sea were alive with craft of every size, bearing military resources to the points destined to receive them. By shore and river in the occupied cities of the provinces, and far off in the cities of imperial Russia, the din of ceaseless preparation was heard; and it was evident to all men—still only excepting our government and the diplomatists—that Russia was preparing for a struggle against whatever forces might be brought against her, and was resolved to peril her empire upon one desperate effort to humble Europe, and grasp from Turkey some of her richest provinces or compel the formal admission of her vassalage.

The Russian armies crowded down to the sweeps of the Danube, occupying every strategical position, and fortifying themselves by entrenchments and other defences as occasion seemed to require; the Russian leaders the while consolidating their hold upon the provinces thus occupied by deposing the hospodars, levying taxes and rations for the troops, taking the direction of the militia and municipalities, and when payments were made for anything giving only Russian paper, which it was never intended to redeem. Vast quantities of corn were accumulating upon the Danube and at Odessa, which could not be exported. The Russian armies must be fed; and it was a part of the policy of the occupation to detain these stores for any emergency that might arise. With all these evils pressing down the unfortunate Wallachians and Moldavians, forced enlistment was resorted to; and the boyards who refused complicity with the treasonable hospodars were placed in the Russian ranks. To crown all the horrors which filled with fear these wasted and tortured lands, cholera, which broke out in the corps of General Luders, communicated itself to the people of the country, and every town and many districts, from the windings of the Danube to the confines of Podolia, were swept

by the cold hand of the unseen messenger of woe. As statements of all these calamities reached Western Europe, the people of England were indignant; and although the desire for peace was intense, the increasing indignation of the British people was loudly expressed. None of these things moved their government—their faith was in protocols and protests, both very gentle and harmless; and the Western powers literally did nothing effective during the summer and autumn until the 10th September, when the French ambassador, as if in sudden alarm, and without any orders from his government or concert with his colleague of the British embassy, ordered three frigates to ascend the Sea of Marmora and anchor in the Bosphorus. The English minister, after much importunity, adopted a similar measure; but pains were taken to make Russia and the world believe that this measure was intended to protect the Porte from its own subjects, and not from Russia. Indeed, the allies seemed to name Russia with "bated breath;" while Russia was filling the world with boasting, fabricating reports of successes over the tribes of Central Asia, pushing a force even to Bokhara, and menacing and wheedling Persia by turns. The *Petersburg Gazette* threatened that if England went to war, peace should be dictated to her from Calcutta; she was treated by the emperor and his subjects with utter disdain.

The Turkish government took example from Russia rather than from the allies; she made prodigious efforts to meet the exigency. Her first care was wisely *not* in the direction of the Danube. She knew that, numerous as were the Russian legions, they could not force the passage of the Balkan, and meet her in defence of her capital upon the plains of Roumelia, before the allied fleets and allied troops would secure it. She had another and more urgent danger: that pointed out by Lord Aberdeen in his despatch upon the treaty of Adrianople, referred to in a foregoing page. Russia might penetrate through Armenia into Asia Minor; she might, from the southern shores of the Black Sea, pour down new hosts, overrun provinces comparatively unprotected, and by another route reach the Dardanelles, and menace not only Constantinople, but the allied fleets within its waters. The divan accordingly organised an army of Asia, and with it occupied Anatolia. Selim Pasha was appointed as commander-in-chief and seraskier of the province. Had he possessed the genius of Omar Pasha, to whom the army of the Danube was committed, he might, as events have since proved, have driven the Russians from Georgia and Circassia, and freed the Caucasus from their presence. He was wholly unfit to command a division, much less an army. The Asiatic danger provided against, Omar was

sent to collect and organise an army in Bulgaria, and strong reinforcements were promised and partly provided at Adrianople. Two conscriptions of 80,000 men each were made before the end of September; and Russia replied to these demonstrations by two enormous levies.

Thus the note of preparation sounded through all the vast empire of the sultan—from Kurdistan to the Bosphorus, and thence to the Danube; and the turban and fez, with all the picturesque and varied costume of the wild warriors from the remotest provinces, gave a strange animation to the various cities in which a rendezvous was appointed for each mustering host. Such was the state of things in the sultan's dominions just before his proclamation of war.

Let us now trace the allies in their tempestuous course during the same interval.

At the juncture when the Russian armies entered the provinces, the allied fleets had made no demonstration; and they continued their "reserve" until, as recorded above, a few frigates of each fleet, with dubious object, moored in the Bosphorus. The allies occupied the whole summer and early autumn with "notes." A conference was opened at Vienna, and a "note" was drawn up under the inspiration of Austria, which received the sanction of all the representatives, and was transmitted to St. Petersburg for the emperor's approval, who signified his acceptance of it. This he might well do, for it conceded everything which Menschikoff had demanded. It may probably be for ever impossible to learn whether it was composed with a sincere desire to secure peace by causing the Porte to make concessions which the framers of the note thought of no ultimate consequence, and which would flatter and appease the Emperor Nicholas, or whether it was a trick of Austria, with the connivance of the British minister more especially, to sacrifice the Porte to a future danger and secure a present peace. At all events the Russian cabinet, after scanning closely its contents, and weighing every word of doubtful or double import, saw in it a concession of all that was required. The Porte, however, refused to sign the note. The divan, as well as the Russian cabinet, saw through it. If there were a combined attempt to impose upon the Turkish government, it failed. If the French and British ministers and cabinets were imposed upon, the divan comprised some more sagacious statesmen. The whole diplomatic world was thrown into confusion, indignation, and astonishment by this act of vigilance and force; but as they could not see, or affected an inability to see any great importance in the alterations suggested by the Porte, they adopted them, and the altered note was sent to St. Petersburg. It was refused: Count Nesselrode reminding the Austrian minister that the note originally sent

was accepted on condition that it should undergo no modification, and that as it was their own, the conference should abide by it and compel Turkey to do so. Count Nesselrode's remonstrances and despatches proved that the divan was right, that the construction it perceived as possible, as probable, on the part of the Russian chancellery, was really put upon it; and of course the diplomatists had to retrace their steps, to approve of the prescience and decision of the Turk, to wonder at their own dulness, and cast about them as to what to do next. The question arose, which ought to have arisen at the beginning, *why should Turkey send any note?* The diplomatists found that they had been wrong in principle, when they also discovered that they had blundered in detail.

It is unnecessary to publish the Vienna note to show the merits of the quarrel. In it the sultan was made to recognise that in previous treaties the czar had received a title to a certain amount of protection over the Greek Church: in the correction the sultan throws himself upon the actual stipulations of former treaties—that *he*, not the czar, was bound to protect the "Christian worship." Here are two ideas insinuated by the czar—the Greek Church to be protected, and he to be the protector; the sultan corrects these ideas by referring to the true terms of these treaties—that the Christian *worship* was to be protected, and that it had been stipulated that *he, the sultan*, was to protect it. Can it be possible that the diplomatists were themselves ignorant of these treaties? The treaty of Kainardgi—that which was made to originate the czar's claim—refers to religion in its 7th, 8th, and 14th articles, and in no other; and none of these articles furnish a shadow of such claims as the czar thus fraudulently put forth.

The other passage of the Vienna note was still more objectionable: it made the sultan to concede to the members of the orthodox Greek Church all privileges possessed, by especial convention or otherwise, by all other Christians in his dominions. To this the Porte offered the alteration of "Ottoman subjects." The demand desired that the Greek subjects of the Porte should have the same rights as Latins or Protestants, who were foreigners, and under the protection of their respective governments; the result of which concession would be, that the whole Greek population would be placed under the protection of the Emperor of Russia, he would in fact (taking the concession in connexion with previous treaties, which, it must be allowed, gave him virtually some right to interfere) be the recognised sovereign of half the subjects of the sultan! The sultan was willing to concede to Greek subjects anything conceded or to be conceded to Armenians, Jews,

Franks, or Protestants—willing to accord to the Greeks, who were foreigners, all privileges “accorded or to be accorded to other religious communities,” who were also foreigners. The lucid justice of this could not be made a matter of doubt or discussion.

After a world of red-tapeism all negotiation failed, and the emperor made one more effort to gain his point without war, and the conferences of Olmutz resulted. Nicholas was evidently uneasy lest Austria should not preserve her neutrality; and he arranged a personal interview with the Emperor Francis Joseph there. For some time it became the focus of intrigue, and the probability is that the subsequent course of Austria was there

agreed upon by secret treaty. Many circumstances tend to establish this opinion; and as previous pages of this history reveal, Sir H. Seymour arrived at that conclusion, upon data unknown to the British government at the time, in the spring of 1854. At the breaking up of the conferences of Olmutz it suited Russia and Austria to make the world believe that the interview of the emperors settled nothing, and that Nicholas departed in chagrin and defeat. This version of it was accepted generally then, it is almost as generally discredited now. Thus terminated all hope of accommodation, and there remained nothing for the safety of Turkey but war.

CHAPTER V.

DECLARATION OF WAR BY TURKEY.—CAMPAIGN ON THE DANUBE.—MASSACRE AT SINOPE.

“The big wars
That make ambition virtue.”—SHAKSPERE.

THE sultan had now no alternative to war but abdication. The spirit of his people was everywhere roused, and he would have been considered a traitor to his country and his creed had he any longer hesitated. The Ulemahs—ecclesiastical officers sacred in the eyes of all true Mussulmen—made known to the sultan their official judgment that war with Russia became his immediate duty as their sultan and padishaw. On the 26th of September the council pronounced for war, and the sultan, delaying a few days (perhaps to save the appearance of unfettered sovereignty, and probably also to make available the New-year's-day of the Turks, which is the 4th of October), put forth a declaration of war against Russia, setting forth all the grievances already related as constituting a *casus belli*. It opens with this sentence, which justifies the omission of so lengthily a document from these pages:—“In the present state of circumstances it would be superfluous to take up from its very commencement the explanation of the difference which has arisen between the Sublime Porte and Russia, to enter anew into the divers phases which this difference has gone through, or to reproduce the opinions and judgments of the government of his Majesty the Sultan, which have been made public by the official documents promulgated from time to time.” The concluding paragraphs set forth the intentions of the sultan in reference to his manifesto:—“It notifies then officially, that the government of his Majesty the Sultan finds itself obliged to declare war, that it has given most precise instructions to his excellency Omar Pasha to demand from Prince Gortschakoff the evacuation of the princi-

palities, and to commence hostilities if, after fifteen days from the arrival of his despatch at the Russian head-quarters, an answer in the negative should be returned. It is distinctly understood that should the reply of Prince Gortschakoff be negative, the Russians are to quit the Ottoman states, and that the commercial relations of the respective subjects of the two governments shall be broken off. At the same time the Sublime Porte will not consider it just to lay an embargo upon Russian merchant vessels, as has been the practice. Moreover, the Ottoman government, being unwilling to place hindrances in the way of commercial intercourse between the subjects of friendly powers, will, during the war, leave the straits open to their mercantile marine.” Immediately upon the issue of this declaration, Omar Pasha gave formal notice to the Russian commander, who replied in the following terms:—“My master is not at war with Turkey; but I have orders not to leave the principalities until the Porte shall have given to the emperor the moral satisfaction he demands. When this point has been obtained, I will evacuate the principalities immediately, whatever the time or the season. If I am attacked by the Turkish army, I will confine myself to the defensive.”

At the same time the emperor Nicholas put forth a manifesto about his zeal for the orthodox faith in the East, and calling upon his beloved Russia, in the usual religious cant of all the emperor's public documents, to aid him in the holy war. Count Nesselrode as usual sent his “circular note” to the ambassadors, consuls, and agents of Russia. To the character of this document it will be necessary presently

to refer. Four days after the declaration of war, the sultan made a formal demand for the allied fleets to enter the Dardanelles. The demand was complied with, and the ministers of the Western powers presented the admirals with great "pomp and circumstance" to the sultan. The further request of the sultan that the fleets or a portion of them should pass also the straits of the Bosphorus was refused by the ambassadors, on the ground that *the Western powers were not at war with Russia*. In vain the foreign minister of the sultan urged the danger to which his ships and coasts were exposed in the Black Sea. The answer was, that Prince Gortschakoff had promised to make the war on the part of Russia strictly defensive; and that Count Nesselrode, in his circular despatch (above referred to), had repeated that promise. There was, in the opinion of the ambassadors, no reason for doubting the good faith of the Russian government; and they would not, by a demonstration so hostile as that of sending the fleets into the Euxine, provoke Russia to change the character of the war, and make it one of offensive operation. The reply of the Turkish minister was, that Russia could not make the war offensive upon the shores of the Black Sea if the fleets were to cruise there; and that the only chance of her being able to convert the war upon the Danube into one of active offensive operations, was her having command of the Black Sea for the easy transport of stores of all kinds to the vicinity of the armies. This reasoning, irrefutable although it obviously was, and most important as it soon and fatally proved itself to be, was met by the reply that the ambassadors had no instructions for any demonstration more active than the assemblage of the fleets for the protection of Stamboul. Again the Turkish minister pressed upon the ambassadors and admirals the exposed situation of the coasts of the Black Sea, and the Turkish squadron within its waters; and showed that, for the present, there was no necessity for the allied fleets in the Sea of Marmora; that the sultan, in calling them through the Dardanelles, contemplated their further progress through the other straits; that the Russians could not endanger the capital until they had forced the Danube, captured Schumla and Sophia, forced the passes of the Balkan, and were victors at Adrianople; or, from the eastern frontier, had pushed a victorious campaign from the Caucasus through Asia Minor. It was, however, in vain that the enlightened men then in the Turkish Foreign-office demonstrated that if the fleets were sent to defend Turkey, the Black Sea was their appropriate sphere of action: the admirals had no orders, and the ambassadors would give them none, and pleaded the absence of any discretionary power.

While the fleets spread the tricolor and the

union-jack upon the gentle breezes of the Bosphorus, Omar Pasha, with frame of iron and intellect of light, seemed to do everything as well as direct everything upon the northern frontier of Bulgaria; and only just allowed the fifteen days "notice to quit" to expire, before he showed Russia and the world that the Turks had a general, and that with a general they were still soldiers, as when the blazing scimitar of Orchan first flashed upon Europe, or Byzantium shook before the thunder of the artillery of Mohammed II. They were still worthy of their father Osman, the "Bone-breaker;" and, in hand to hand combat, an overmatch for the boors of Russia both in courage and strength. It must be said, to their disadvantage, that they were not very precise concerning the declaration of war; for on the very day it was declared, and without the knowledge of their chief, a semi-brigade hurried over the river, fell upon a Russian detachment, routed it, seized a considerable booty, and, like true Bashi-bazaks, were away again upon their own side before the foray could be chastised.

With the end of October, the time granted to Prince Gortschakoff by Omar Pasha expired; by whom strong detachments were immediately expedited to the Russian side of the disputed river. Crossing at once in several places, they were soon established in some force upon the frontier of Wallachia, and pushing forward a strong advance-guard upon the Russians, the latter skirmished, refused battle, and slowly and sullenly retreated upon Slatina. To understand this movement of the Turks, or any of their subsequent operations, a clear view of Omar Pasha's position and plan of campaign must be had. The basis of his operations was Schumla, somewhat more than thirty English miles distant to the south of the river. Schumla was well fortified, and the general established facile communication between it and Varna on the sea, so as to be able to derive supplies thence. The right flank of his army rested on those places, and was secure therefore from being turned by the Russian left. His left flank was thrown out diagonally to a great extent—an extent not in keeping with the rules of war, but which in his hands was a safe arrangement; for, if attacked by a superior force, he could draw it gradually and diagonally back upon itself towards his centre, so that as it retired its strength would accumulate, and just in proportion as the attacking force would become attenuated. The Russians would hardly venture to turn Omar Pasha's left, as in doing so they must from its elastic action experience considerable obstruction; while it retiring gradually in the mode described above would escape punishment, and, if outflanked, the

Russians would arrive at the Balkan still annoyed by this supple left wing, and having behind them the whole force of Omar Pasha and almost impregnable fortifications, while the passes of the Balkan would be alive with bristling bayonets, and every crag covered with artillery and rifles. It has sometimes been good strategy to leave a fortified place in the rear of an advancing army. Napoleon and Wellington practised it with success, and the Russians themselves under Diebitch, in 1829, did so with some impunity, but at tremendous risk. With such an army as that of Omar Pasha, occupying such a position as Schumla, and with such a general, and the allied fleets already in the Turkish waters, the attempt to outflank Omar Pasha's left would be madness; so that while he had secured his right, he used this left wing, if we may use so rude an illustration, pretty much as a skilful pugilist will "plant" his blows with rapidity, while he at the same time makes good his guard. Omar's chief difficulty was not the Russians, he had to discipline his troops while they fought; he was often but indifferently supplied with shoes, horses, and instruments of carriage; and he was sometimes tortured with instructions from the cabinet at Constantinople, issued by those who knew nothing of the affairs they presumed to direct. At the outset he was ordered to break down all the bridges, and to keep upon the defensive on his own side of the river. He of course paid no attention to these orders. He knew that to defend shores washed by a deep and circuitous river, it would be often advantageous to make the enemy's shores the barrier rather than his own, and by perpetually crossing and recrossing to harass the enemy by the uncertainty of his action; while at the same time he never deviated from his plan, but shortened or elongated the active wing (the left) of his army as the positions of the enemy tempted, or the necessities of his own position constrained. Should the enemy cross the river in strength, which Omar Pasha could not certainly prevent, unless indeed by harassing him on his own side, then the line of defence taken enabled the Turkish general to give battle with effect, and if outflanked on his left, to place the enemy between two fires, that which Omar could still throw upon his rear, and that with which the reserves from behind the Balkan would assail him in front—a position from which the whole force which Russia had in the provinces could never return, they must either perish in the passes, die of hunger before them, or become captives to the force hanging upon their rear. In the execution of the plan above noticed, Omar Pasha hurried what troops were at his disposal for such a purpose with an apparently desultory, but really circumspect and systematic

rapidity across the Danube. Marches and countermarches, concentration and extension, followed on the part of the Russians, they were confused by the boldness and suddenness of the movement. At first they supposed he had crossed in strength, and there was much disorganised hurrying to and fro to ascertain the quarter upon which the blow was meditated. Finding that a large army had not anywhere gained the Wallachian side of the river, the Russians concluded that it was a mere predatory expedition, and while very desirous to punish it, treated it with characteristic disdain. The Russians excel most armies in their expertness in gaining information of the movements of an enemy. A Russian officer is in his element in the character of a spy. Omar was too much for them in this instance—he knew the country better, and had at his disposal agents and instruments every way adapted to his purpose. He was perfectly acquainted with the disposition of the Russian forces. As he threw the first bodies of men across the Danube, he seized an island between Widdin and Kalafat, where the troops who took possession entrenched themselves. Prince Gortschakoff was at Slatina, upon the Aluta, whither the Russian advanced posts had retired, conveying the intelligence of these very unexpected doings of the Turks. At the same time about 3000 Turks entrenched themselves at Giurgevo, having passed the river in perfect order by a fleet of gun-boats, and offering a very formidable appearance. To dislodge these seemed to the Russian commander the first necessity, although the cost of doing so must be considerable, from their equipment and strength; while if a very large force were brought against them, they could retire in the same gun-boats, and thus distract the Russian plans, weaken other portions of the already scattered and extended line, and fatigue the Russian troops by marches and countermarches, while performing their own operations so as to leave them fresh to maintain their post, or abandon it for some other similar expedition. Meanwhile a body of 3000 Turks forced their way over from Turtukai to Oltenitza, and there occurred the first battle of the war, a battle glorious for the cause of national independence and international justice.

THE BATTLES AT OLTENITZA.

Turtukai is about 1150 yards from the Wallachian side of the Danube, and it rises to the height of 600 feet above the river. The island which we described as taken possession of by the Turks in crossing is 600 yards from Turtukai, and a considerably less distance from the opposite side, the river being there narrower than in the immediate vicinity,

and the island itself occupying some width. The island is higher than the northern margin of the river, and Turtukai commands both from its superior elevation. The moment the Turks took possession of the island, they put in position a powerful battery. This battery might possibly have fired with safety over the heads of the Turks, had they landed opposite to the island; they however were wisely directed to land a little lower down the river, so that the battery should protect their left, and prevent them from being enfiladed by the guns of the enemy, while the enemy would be enfiladed by the guns of the battery. The right of the embarking force was similarly protected by a battery of heavy guns upon the heights of Turtukai. Nothing could be more skilful than the whole plan of disembarkation; and whether the general was completely informed as to the peculiarities of the ground, or that chance determined it in his favour, what might in this respect have proved a difficulty became available for the more facile accomplishment of the purpose of occupation. The river Argish, if its waters may be dignified by the name, here runs parallel with the Danube, seeking lower ground for its confluence. This course continues but a short distance, but it was sufficiently long both to add to the danger and subserve the security of the party landing, for they crossed the Argish, and so deployed that their left and rear were necessarily upon it. Before their left and left centre a thick copse covered the ground, their right was unmasked by any wood or inequalities of ground. Here they entrenched themselves, and the whole landing and entrenching was accomplished about two hours after daylight. This memorable day was November 2nd, 1853. The Cossacks appeared in crowds upon their right and right centre in the open ground about an hour after they had secured their position. The Cossacks skirmished, advancing closely and firing, then wheeling about were succeeded by others; as this whirl of irregular cavalry maintained their desultory fire, they suffered considerably from the rifle carbine of the Turks, a weapon superior to any which their assailants used. The Turks had been accustomed to handle it, under the instruction of French officers, for some short time previously; and they gave good proof of having profited by their instructions. Many a bearded son of the Don was sent rolling upon the plain as he came up to fire, or wheeled round to give place to others. These skirmishers merely covered the advance of columns of infantry, supported by twenty pieces of cannon, both supported by a numerous body of cavalry, who, as the ground became better understood by the assailants, turned to their left, and formed upon the right of the

Turkish position, the only portion of it where cavalry could be brought into action. The total force, independent of artillery, brought against the 3000 Turks was 9000. The latter were repulsed with ease. Early in the action the cavalry were obliged to move out of range of the heavy guns on the heights of Turtukai. Nothing could be done on the other flank by either the infantry or artillery, so completely did the island battery protect it; the copsewood along one half of the Turkish line was so thick as to prevent guns from being brought up there, nor could infantry deploy with any hope of storming the entrenchments in that quarter. The brunt of the contest was borne by the Turkish right and right centre, who sustained the cannonade with coolness, and hurled back the infantry broken and discomfited by the terrible volleys poured from their minnie rifles. The Russians, after coolly confronting this fire again and again, were at last forced to draw off, and victory crowned the skill and steadiness of the Osmanlis. Upon the retirement of the Russians, the night was wisely occupied by the Turks both in their intrenchments and upon the southern side of the river; the position was greatly strengthened on the right of the former, and reinforcements crossed the river. These preparations were not unnecessary, for the Russians appeared next day in double strength, and again made an attack which was as nearly as possible a repetition of the former, and was precisely served the same way—the columns of assault were sent reeling back by the tremendous and certain fire of the assailed. The third day reinforcements having come up on the Russian side, so as to form an army of probably 27,000 men, it was determined by them to storm the works at whatever cost, and restore the courage of their own men and crush at once the hopes of the Turks. It was for moral as much as for physical ascendancy that the Russians fought that day. Omar Pasha had sent over during the previous night all the men he could spare, and the trenches were now guarded by 18,000 men—the odds were in their favour. Omar, seated upon the heights of Turtukai, watched with placidity and the assurance of genius the progress of his measures. The attack was again on the Turkish right, it was the only pregnable portion of the line, and here within a very small compass piles of dead soon attested the desperation of the struggle. The Russian infantry advanced in column, presenting a sure mark for the rifles of the Osmanlis along the line of entrenchment—their bullets could not miss; while numbers of the Russians were doomed to perish before they could deploy or return a single missile for those so unsparingly cutting through their masses. This day the artillery from the south side was more effective

than on either of the preceding, and the Russians had to pass under their range to receive the rifle volleys from the trenches. They did not flinch, but arrived at the breastworks scattered, and many of them wounded, when the Osmanlis leaped over their defences, and with the bayonet and the sword made repulse and slaughter a short work. The Russian infantry, or what was left of them, fled to the protection of their cavalry in utter disorder. The battle was over. The Turks did not lose fifty men. The Russians could not get at them, except when the former leaped the parapets of their works, and fell upon the shattered ranks that staggered thither through the appalling fire of artillery and musketry. The Russians acknowledged a loss of 1000 men, but the Turks found 600 upon the field around the entrenchments after the Russians had carried away many more. On the 11th of November other Russian troops were moved up, under General Englehardt, and a fourth attack was directed upon the entrenchments. On this occasion the Russians disposed themselves as if meditating an attack in flank upon the right, but the fire of the guns from Omar Pasha's side swept the approach. They endeavoured to get possession of the island, so as to open fire upon the position thence, and leave the Turks on the north side no choice but to lay down their arms. The very first arrangements for this enterprise showed its hopelessness; and had they succeeded in gaining the island, it was so dominated by the batteries at Turtukai as to render its detention impossible. The fourth day's fight was, therefore, from the necessities of the relative positions of assailants and assailed a repetition of the former combats; and the encore of the Turkish rifles and artillery was as soothing to Omar Pasha and his companion, the Spanish general, Prim, as it was disheartening to General Englehardt and those who so desperately but so uselessly attempted the execution of his commands.

After that the Turks acted on the offensive, surprising small parties of Russians, and not fearing to attack the irregular cavalry which watched them; and growing bold from their successes, they even sallied out upon the village of Oltenitza itself, where a body of Russians were posted, drove them from their quarters, burned the village, and returned in triumph to their impregnable defences. Other events on both sides of the river, to which the movements of both armies contributed, soon after obliged Omar Pasha to withdraw this force, in order to the concentration of his troops for a more effectual defence of the Bulgarian frontier against the increasing numbers of the enemy which were advancing upon the Danube.

While these events were taking place at Oltenitza, other portions of the Turkish line

were not inactive. They, as already noticed, had crossed the river from Rustchuk to the island of Giurgevo; their landing there was resisted, but they succeeded in occupying a position on the island, and immediately cannonaded the town. Several positions of lesser importance were rapidly occupied on the south—such as Rahova, Nicopolis, and Listova. But Ismail Pasha, afterwards so distinguished by his skill and intrepidity, crossed the river by way of Widdin, and seized Kalafat, which he occupied by two divisions; and, with amazing celerity and sound judgment, strengthened the place and threw out a brigade upon Kalarasch.

On the 26th November, Omar Pasha constructed a bridge of boats between the south shore and the island of Moukhan, not far from Giurgevo, and the day following assailed the Russians at that place; and for the two succeeding days continued their attacks. Retaining the islands of Moukhan and Ramhadan, they continued to strengthen themselves vigorously at Kalafat, while retiring generally from the northern bank of the river, and concentrating upon the southern shores as they retired. Pursuing these tactics, they abandoned Kalarasch and Giurgevo, but, nevertheless, held the Russians everywhere well in check upon that part of the line of defence; and, upon a distant quarter in the north of the Dobrudscha, opposite Brailau, fell upon the Russians at Matschin, and handled them with much severity.

When the news of these events reached Constantinople the joy was excessive—one general outburst of enthusiasm rang through the place; and the calm and quiet sultan himself caught the inspiration, and made such public demonstration of it as increased the loyalty of the old Osmanlis to his person, and silenced those who thought him to be, as they considered the allies, but half-hearted to the war. The sultan wrote a letter of congratulation to Omar Pasha; and sent him a present which is regarded as the highest compliment from the sultan to a successful general—his own favourite horse, splendidly caparisoned, and a magnificent sabre with jewelled handle. In Vienna the feeling upon these tidings was of undisguised alarm; the citizens, indeed, rejoiced as far as they dare, but the court, the aristocracy, and the army, could not suppress their dissatisfaction and apprehension. Always the focus of false intelligence, Vienna kept up its evil reputation in this instance, and sent through Europe tidings the most opposite and unlikely. These, with the true accounts, reached England together; and all Western Europe rejoiced that the military prestige of Russia was dissipated, and the old chivalry of the Osmans revived in so good a cause. It was not then understood that the very worst troops in the Russian service, excepting the artillery, was

in the occupation of the provinces; that, like all other oriental nations, Russia, as a system, sends forward her worst soldiers, holding the best troops in reserve until the seasons of greatest emergency. The joy was not to remain long without being overcast; the accounts of these feats of arms were speedily followed by intelligence of a nature to excite horror against Russia, and dissatisfaction the keenest with the dilatory policy of the Western governments. This intelligence was

THE MASSACRE AT SINOPE.

Sinope is a little town of some 12,000 inhabitants, situated on the Asiatic shores of the Black Sea. Considered in a military point of view its position is one of great importance. Captain Spencer, author of a work entitled *Turkey, Russia, the Black Sea, and Circassia*, visited it a few years since on behalf of the Turkish government, in order to furnish information as to its "capabilities of defence in case of a Russian attack upon that part of the Turkish Empire." He thus describes it:—"We were particularly struck with the position of Sinope, a town built on the isthmus of a peninsula running into the sea in the form of a promontory; a position which it might be seen at a glance was admirably adapted for becoming, in the hands of a clever military engineer, a second Gibraltar. It was also evident that a place directly opposite, and only 150 miles distant from, Sebastopol, protected by no better fortifications than an ill-constructed battery very much out of repair, and an old Byzantine castle in an equally ruinous state, would be certain to be attacked by a Russian fleet in the event of war; and if by any accident it fell into the hands of a clever power like Russia, it would enable her not only to command the whole of the Black Sea, but to cut off every communication between Constantinople and the Turkish pashalics of Erzerum, Kars, Turkish Armenia, &c. Plans of additional fortifications were accordingly executed, and a memorandum was drawn up impressing upon the government the necessity of putting a place so important into an efficient state of defence. It is scarcely necessary to say that the plans and the memorandum remained in the cabinet of the vizier entirely disregarded; and to this want of foresight may be attributed the disaster of Sinope."

From the site, as described by Captain Spencer, it may be easily conceived that the general aspect of the place is picturesque. The "old Byzantine castle" overlooks a considerable landscape, rich with the verdure of a well-watered soil, beneath a climate the most genial; thickly-wooded dells lie beneath its broken walls, and its almost insular position ensures great equality of temperature, the refreshing

sea-breezes tempering the summer heats. It suffers during a portion of the year from the biting blasts which sweep over the Russian steppes upon the Black Sea, and sometimes literally smite Sinope with a severity which penetrates everything. It is a little place of historic and classic interest, as well as of local beauty. Old Greek inscriptions and broken statues, the relics of a tasteful but departed civilisation, are everywhere to be met with. Here the great Mithridates, King of Pontus, once held his court; here Diogenes, of cynical celebrity, was born; and here the nymph Sinope rewarded, according to classic fable, the love of the unscrupulous Apollo, and gave to the place her name.

A Turkish squadron cruising in the Black Sea was obliged to put in here from stress of weather, November being generally a boisterous month upon the Euxine. They had no notion of being attacked, although opposite to the great Russian naval arsenal, because both the sultan and the emperor declared that the war was defensive. The latter proclaimed by Count Nesselrode's circular note, that he would confine himself to the defensive upon the Danubian frontier, and threw the responsibility upon the allies of widening by their interference the limits of a war which his imperial majesty wished to confine within so narrow a compass. The sultan had also declared that he would confine hostilities to the one object of expelling the Russian armies from his territories, and would not assail the territories of Russia. Possibly these mutual declarations influenced the Western powers to refrain from sending their fleets through the Bosphorus, and certainly caused a false security in the mind of Osman Pasha, the gallant admiral of the little fleet. Redschid Pasha, the sagacious foreign minister, had not such confidence, as was proved by the terms in which he demanded of the ambassadors to order the fleets of their sovereigns at once from the Golden Horn to the Euxine. Osman Pasha lay quietly under the dilapidated batteries of Sinope, the guns of which did not even command the range of the harbour, but were carelessly placed, as if Peace had herself made her throne in the old capital of the kings of Pontus. Admiral Nachimoff, who since fell at Sebastopol, saw his opportunity, and in the face of the naval truce that existed, and in falsification of the pledge of his imperial master, he determined to take advantage of it. He led into the quiet harbour a fleet consisting of three first-rate men-of-war, three large two-deckers similar to our old "seventy-fours," two frigates, and four steamers. Their approach was favoured by a fog, and they were not discovered until all hope of preparing for effectual defence, if that in any case might have been possible, was in vain. The

fire of the Russians opened upon them with overpowering weight, crushing the little squadron beneath it, and rendering fight or flight alike hopeless. The Turkish squadron consisted of no ships larger than a frigate, of which class there were seven vessels; there were also one steam-frigate, two schooners, and three transports. Two of the Turkish captains, seeing the certainty of capture or destruction, blew up their ships; and the brave admiral was about to fire his magazine, when a shot carried away his leg. Never in naval warfare was so horrifying a slaughter before witnessed; five thousand sailors perished; the whole squadron was blown into one mass of broken and burning timber, and blasted and bleeding human flesh. Yet amidst the floating timbers, blackened and blood-stained, the Russian ships fired grape and canister, lest any of the wrecked should swim ashore; and such as did make the harbour were shelled, and aim even directed upon the wounded. The town was on fire; the batteries, like the ships and their occupants, were blown into one heap of ruins; nor did the Russians pause in their bloody and barbarous work while there remained anything more to effect by mere murderous carnage. It was not war—it was massacre. It is a point of honour with naval men never to attack frigates with first-rates, unless first fired upon, and then only to inflict the injury necessary to disable sailing and effect capture. The bloody butcher Nachimoff offered no terms and gave no quarter; his end was a vast murder, and he achieved it. Oltenitza and Matschin were avenged.

An English steamer bravely made its way through showers of shot, and escaped considerably damaged to Constantinople, and was the bearer thither to the enraged Divan, and the abashed and humiliated admirals and ministers of the allies, of the first intelligence of the atrocity. Several steamers were sent with succour to the wounded and to the inhabitants. The scene their crews witnessed was heart-rending, and produced a feeling of disdain and hatred towards the Russian navy and nation that will not soon be obliterated. The Russian government might have saved appearances after the fashion of Austria, when its generals perform any disgraceful work, by disavowing the

deed and rebuking the admiral. Not so with Nicholas—*Te Deum* celebrated the glory of both. It was done in the interest of “the holy emperor and the orthodox church,” and that sanctified it in the eyes of the Russian government and people, and we fear we must in truth add, of nearly all Greek Christendom: revenge must be very sweet to satiate the soul of a Greek. The *Petersburg Gazette* recorded the achievement as one to be inscribed upon the rolls of fame; and the emperor, twelve days after its accomplishment, thus wrote:—“With hearty joy I request you to communicate to my brave seamen that I thank them for the success of the Russian flag, on behalf of the *glory* and *honour* of Russia.”

Upon the arrival of the news brought by the English steamer at the foreign embassies, Admiral Dundas suggested that the combined fleets go at once in pursuit of the Russian fleet, and attack and punish it before it could reach Sebastopol. Sinope and Sebastopol are about equi-distant from Constantinople, and the suggestion of Admiral Dundas was practicable, and would have succeeded, as Nachimoff remained in Sinope several days to repair the injuries inflicted upon his ships by the desperate resistance of the Turks. But the French ambassador, who had only recently arrived, and who knew the timid and pro-Austrian policy of the French minister of foreign affairs, warmly refused his co-operation. Indeed, General Baraguay d’Hilliers is an impracticable man everywhere but at the head of his troops, where he can dogmatise with undisputed authority. Nachimoff entered Sebastopol in triumph, bearing the gallant Osman Pasha as his prisoner, wounded and broken-hearted. Death soon put an end to his regrets and pains; the Russians did not, living or dead, do him the honour which the brave never fail to render the brave who have merited victory but incurred defeat.

Thus ended November upon the Danube and in the Turkish waters. There was but one month of war, and it was rich in such sacrifices as war exacts: it was glorious also to the honour and arms of Turkey, and it covered the Russian name with an infamy still deeper than the disgrace of her arms before the undisciplined soldiers of the Porte.

CHAPTER VI.

MILITARY TRANSACTIONS ON THE DANUBE.—ARRIVAL OF RUSSIAN REINFORCEMENTS.—STATE OF THE PROVINCES.—AGITATION OF THE CAPITAL.—DESPATCHES OF THE ALLIES CONSEQUENT UPON THE MASSACRE AT SINOPE.

"A multitude like which the populous North
 Pour'd never from her frozen loins, to pass
 Rhene or the Danau, when her barbarous sons
 Came like a deluge on the South." MILTON.

THE month of December opened favourably for the defenders of Turkey. Their army on the Danube was healthy, they were flushed with victory, and they had unlimited confidence in their chief, who, by an apparently desultory, but really well-planned and well-connected system of attacks, had better protected the frontier than if he had acted only upon the defensive, which would have left to the enemy his choice of time and place for conducting hostilities. The Russian army was surprised at the stand made by the Osmanlis, whom they had been taught to despise; and although anxious to retrieve their honour by some signal victory, they had learned to respect the men over whom they sought to achieve it. The incapacity of Prince Gortschakoff had become patent to all—he had been outgeneralled by the renegade Croat, as he had termed Omar Pasha; his plan of campaign, thrice changed within a month, had been penetrated by his rival, and met by countervailing stratagem; his posts had been surprised, and his soldiers beaten. They had suffered much fatigue; disease had broken out among them, so that thousands were in the hospitals; food became scarce, and both civil and military functionaries robbed the suffering soldiery, as well as the unfortunate inhabitants of the provinces. Omar Pasha had learned in Bosnia and in Albania the necessity of restraining the troops from plunder; and although his undisciplined Asiatic volunteers continued to commit terrible depredations upon the people, he took measures which were of slow but sure operation in restraining them. The people of Bulgaria regarded him as their benefactor and saviour, and omitted no sacrifices to insure the comfort of his troops. His popularity also enabled him, even from the Greeks (who as a class hated him, but whom he conciliated personally), to gain timely information of the movements of the Russians, so that one of Prince Gortschakoff's staff suggested to his chief that Omar Pasha must have some alliance with Satan, the greatest reputed foe of the orthodox church, or he never could acquire such an intimate knowledge of the intentions of the Russian commander. When this was communicated to Omar, he made the *naïve* reply, "that certainly the medium suggested would be one

very available for an intimate acquaintance with Russian policy." The Turkish forces were at the same time cheered by the accounts which reached them from a distance. In the capital the war spirit was at its highest, and rumour ascribed to the sultan himself a desire to "flesh his maiden sword." The Turkomans and other Asiatic tribes sent offers of men; and the Armenians, and even Jews, a class not esteemed so rich in Turkey as elsewhere, offered money. The Greeks too in many cases simulated loyalty, and made offers of loans and armed service; and certain of the superior Greek clergy, who regard the Russo-Greek Church as schismatical and heterodox, and who well understood that the policy of the czar was ultimately to usurp supremacy over the "orthodox church of the East," presented most dutiful addresses to the sultan, and professed the most sincere and cordial loyalty to his throne.

Tidings of these things were borne to the Danube with a rapidity second only to that of the electric telegraph, and which were as disheartening to the Russians as they were encouraging to the Turks. The "four powers" had also just signed a collective note, in which they declared that "the existence of Turkey in the limits assigned to her by treaty is one of the necessary conditions of the balance of power in Europe, and that the existing war cannot in any case lead to modifications in the territorial boundaries of the two empires, which might be calculated to alter the state of possession in the East, which has been established for a length of time, and which is equally necessary for the tranquillity of all the other powers." This inspired the assurance at Constantinople that Turkey would, if necessary, receive active support from "the powers;" and the assured feeling at the seat of government diffused itself to the limits of the empire, and increased the courage of those who were battling for its integrity and honour.

The war on the Asiatic frontier had opened prosperously, although it had proceeded with chequered fortune; but the Danube, if not a more important sphere of contest, yet attracted in Europe more general attention. It is desirable, in order to avoid the complications which would arise by attempting to record contemporaneously the transactions on two such dis-

tant scenes, that a notice of the events upon the Bulgarian and Wallachian frontiers should be first brought down to the close of 1853.

A favourable opening in the story here presents itself for some account of the person and history of the Turkish general. Omar Pasha is frequently represented as an Austrian. He was indeed born an Austrian subject, in that part of Croatia which once appertained to the crown of Hungary. The little village of Ulaski, and the first year of this century, had the honour of being associated with the birth of Omar, whose original name was Lattas, and who was the son of a Greek priest. Lattas was himself brought up for the military profession, and entered the Austrian service, to which he never was cordially attached,—his heart being Hungarian, and his opinions too liberal for either the military or civil régime of Austria. He served for some years in an Austrian regiment of chasseurs, and having been unjustly treated by his commanding officer, he left the service, and entered that of Turkey. He apostatized from the Greek faith, assumed the profession of Islam, and grew in favour with the Turkish government. Khosshrew Pasha had sagacity to see the solid qualities of the young adventurer, and patronised him. He took the name of Omar, and in everything conformed himself to Turkish customs and identified himself with Turkish nationality. Khosshrew Pasha made him his aide-de-camp, and gave him in marriage his ward, a lady of personal attraction and of great wealth. Thus Omar became a Turk to all intents and purposes. His military reputation rose steadily; but it was in 1848 that he was first appointed to an important command. The army of the Danubian provinces was placed under his control, and with very happy results: he repressed sedition, and caused the sultan's authority to be respected; he gained the goodwill of the inhabitants, with whose religious prejudices his own religious history had made him familiar, and the soldiers under his command were subordinate. He then acquired that local knowledge which he turned to such good account in the campaign, the history of which is here written; and it is said that he then became acquainted with the peculiarities of the Russian army, and studied attentively its whole system. He had not previously indicated any prejudice towards Russia, but rather respected that power; he then became averse to Russia, and the determined enemy of its aggrandizement and ambition.

In 1851 the Bosnian chiefs, at the instigation of Austria, revolted against the "Tangimat," or new constitution of the empire, and Omar Pasha was commissioned by the Porte to suppress the revolt. This he did with such energy and skill as to acquire fresh military

reputation, and yet with such justice and forbearance to the people, and such decisive discipline to his own soldiers, especially the intractable Albanians, as rendered important services to the people, the army, and the government. He has the faculty of attaching to him the brave and unfortunate; and the Poles and Hungarians regard him, as a man, a soldier, and a politician, with much devotion. It was chiefly under his influence that the sultan took so decisive a stand, on the subject of the refugees, against the reclamation of Austria and Russia at the termination of the Hungarian war; and that circumstance, and the sagacity displayed by him in suppressing the insurrection in Bosnia, have made for him the deadly enmity of Austria and Russia. A writer in the *United Service Magazine* for June, 1855, not over anxious to commend him, nevertheless admits that he is a brave and skilful officer, worthy of success. "Military men of the higher class are not usually very enthusiastic admirers of Omar Pasha. The renegade general is not indeed one of those great soldier statesmen who have from time to time appeared in history as chiefs of the Ottoman armies of Constantinople. He is not an Achmet or an Omar, a Payazid or an Orchan; he is not a Brandenbergh or a Mehemet Pasha. But he is nevertheless a man of wonderful phlegm and perseverance, always ready in time of danger, and of very respectable abilities as a commander. It is possible that under happier auspices he might have done better, but it is by no means certain." This sentence is quite in keeping with the jealous and disparaging way in which military writers, at heart unfavourable to the cause of Turkey, write of its best general: yet they cannot point out how he could, in his circumstances, have more completely answered the great ends of his command. The writer above quoted gives a very exact description of the difficulties which the general had to surmount. "He was assailed by every art which could be devised by the most ungenerous and determined enmity. He was reproached as a renegade and a Christian still at heart. His careful conduct in public life, the extreme caution and prudence which pervaded the most private arrangements of his household, were dwelt upon and envenomed by slanderous tongues as so many proofs of his hypocrisy. The powerful ulema, or priesthood, were against him to a man; and every venal fanatic endeavoured to push his own base fortunes at the expense of the soldier who was already fighting a desperate battle for their very existence. He was systematically left without money or supplies, with a commissariat compared with the incapacity of which the inefficiency of our own was perfect excellence. It must have been something

more than good fortune which surmounted all these difficulties, and Omar Pasha did surmount them." Such was the man who won for Turkey the first month of combats on the Danube, and who was now withdrawing his troops from the advanced positions they occupied and concentrating them, in order to provide a sure defence against the increasing hosts advancing against him. In person he is agreeable, although somewhat rough of countenance and coarsely formed; he is considerably below the middle stature, of dark complexion, grave expression, even to austerity; but his smile is sweet, and he has the address to conciliate the affections of children;—his little daughter regards him with singular attachment. He is a man of strong domestic feelings. Intellectually he is not so much distinguished for brilliancy or rapidity of conception as for clearness, consecutiveness, and patience of thought. He is a shrewd politician, and is governed and would govern by principle rather than by expediency.

In returning to the December operations on the Danube, it is proper to notice the bravery and successful exploits of a Russian naval officer, the captain of the war-steamer *Vladimir*. On the 20th of November this ship appeared on the Bulgarian coast, along which for the remainder of the month it spread terror, notwithstanding that the weather was tempestuous, and Turkish cruisers were on the alert. Having fired upon some of the coast defences, and chased, captured, and destroyed several merchantmen, she attacked and took an Egyptian war-steamer of ten guns, and only retired from her cruise when there was no prospect of doing further mischief. This exploit of the *Vladimir* was a pretty fair indication of the inefficiency of the Turkish navy, and of the supineness and total want of vigilance which exposed it afterwards to the disaster at Sinope.

During the whole month of December, Omar Pasha slowly and with care pursued his system of concentration. His troops fortified themselves on their own side of the Danube in Rahova and Nicopolis, and still more especially at Widdin, one of the most important strategic positions occupied by them. After the repulse of the Russians at Matschin, in the Dobrudscha, they retired behind Trajan's wall, a barrier memorable in classic association, from which the barbarians of past ages were hurled back upon their forests or dreary steppes. It was not the intention of Omar to occupy the Dobrudscha, but rather by retiring upon Trajan's wall, and fixing his head-quarters at Rustchuck, to tempt the Russians to follow in that direction, and thus entangle them in the great morass so often fatal to armies campaigning on the Danube. Omar did not altogether give up the system of desultory attack by his left,

while his right wing was thus cautiously retreating upon the line of the classic barrier above described, for on the 20th of December a detachment was dispatched from Kalarasch against Karakal upon the Aluta, which post they gallantly stormed, and, still acting upon the same prudent as well as spirited policy, abandoned the conquest so gallantly made. At Kalafat the Turks had by the end of December placed themselves in an attitude of strength which caused the Russians very great uneasiness. The works were of great extent, and, although so rapidly constructed, were durable. As Kalafat became the centre of important operations subsequently, it will throw light upon the importance it assumed to give a more exact description of its defences. Previous to the military occupation of it by Omar Pasha, its protection was three awkwardly constructed redoubts, placed on as many hillocks, commanding the approaches to the place. Sami Pasha, the Governor of Widdin, on the opposite bank of the river, ordered it to be occupied and fortified by a circumvallation of breastworks and bastions of earth mounted with cannon of long range and large calibre. To Ismail Pasha was committed the performance of these orders, he partaking of the qualities of his chief (Omar Pasha), prudence and daring, crossed, attended only by five men, to an island opposite the place, and there reconnoitred. He immediately sent to Widdin for several battalions of infantry and some guns, which were promptly dispatched by the governor. Having entrenched upon the island, so as to make it a *point d'appui*, he crossed over with his brigade, and found no Russians to oppose him—the nearest Russian troops having been alarmed when he crossed to the island by the rumour of a Turkish army landing upon their side of the river, and fearing to be cut off, they retired upon Krajova. In less than a fortnight from the landing of Ismail Pasha, the defences were in such a state as to defy 10,000 Russians. The works were continued with goodwill to the end of the month, when the place assumed an attitude of defensive power formidable even to an army. The breastwork glacis was in every part swept in traverse by the cannon of the earthwork redoubts. A strong and prominent fort upon the Danube commanded the approach from Krajova; and in the breastworks to the right, openings were cut, from which cavalry could debouch upon any infantry force attempting to storm in that direction. Long shed barracks were constructed by digging the earth and roofing it over, and these were formed so skillfully as to be a dry and healthful shelter, as well as to offer considerable security. European engineering lent its aid to Ismail Pasha in this exploit. Thus fortified, he awaited in

defiance the menaces of Russia, which were now so pompously sounded forth through all the capitals of Europe. While Ismail was thus busy at Kalafat, Sami Pasha took careful measures at Widdin to prevent the interruption of Ismail's work. He intercepted all communication with the disaffected Servians, whose spies infested Widdin. He detected the Austrian Consul in efforts to send by certain Greeks and Servians messages to General Luders, informing him of what was going on. In vain the Austrian threatened the thunders of his government: he was literally shut up, and all his communications intercepted, until Ismail had done his work on the other side of the river, and Kalafat became an entrenched camp and a fortified place of formidable dimensions and power.

Scarcely had this been effected when the new Russian plan of procedure developed itself. The forces already in Wallachia spread themselves in an incomprehensible manner from Orsova almost to Cronstadt, on the Transylvanian frontier. If the Prince Gortschakoff intended to facilitate the strategy of Omar, he could not have more effectually accomplished such an object; by this extravaganza of military tactics he opened up to Ismail Pasha the chance so promptly and gloriously made available of striking a heavy blow at Citate. The Russian reinforcements came fast flowing down from Moldavia and Bessarabia; and they advanced in three separate *corps d'armée*. One was to occupy Karakal, which the Turks had evacuated after their gallant and sudden little feat of arms there; a second was to move down the river Aluta to Turna; and the third was to attack Kalafat, whence, they boastingly announced before their arrival, they would drive the Turks into the Danube. Indeed, if they had succeeded in driving them out of their works, the Danube must have received them; for although a bridge of boats connected Kalafat with the island where Ismail first threw up his entrenchments, the passage for a fugitive host of probably 20,000 men would be inadequate and unsafe, and the island itself an insecure retreat.

Meanwhile Prince Gortschakoff was busy in person at Bucharest constructing entrenchments: an absurd rumour had made its way through Europe, after the combats at Oltenitza, that the Turks had advanced upon that capital, driven the Russians through it, and set it on fire in three places. It would appear that these rumours alarmed the Russian commander; and he took measures to make their realization at any future time less likely, when he ought to have been directing a more connected and vigilant series of operations upon the shores of the Danube. He had, however, much to distract him; his orders were to storm the whole line of

the Danube and enter Bulgaria, *coûte qui coûte*, when he was obliged to content himself with menacing proclamations, boasting addresses to assemblies of the boyards, and an endless *gobe-moucherie* which disgusted the Wallachian capital, and excited the ridicule of his staff and even of his soldiers. He was obliged to disband several militia regiments; and the men supposing it to be his intention to draft them into the Russian line, deserted, or stubbornly refused to obey orders, and were taken out and shot. One body of Wallachian light horse was ordered to march upon the Danube—they were about 1600 in number, equal in force to a British cavalry brigade; the order was given to them in the evening, and when the hour for morning muster arrived not one man was to be found: they had all deserted in the night, favoured by the people and the militia in their flight.

At this juncture a report was made to the emperor of the losses sustained by his armies in the principalities, stating them to amount to 35,000 men. This report, which was far beneath the truth, maddened the autocrat; and led him to send the most stinging reproaches to his generals, accompanied by the highest commendations of his troops.

Probably these reverses, so wounding to Russian pride, account for the prodigious efforts made in Russia, towards the close of 1853, to enable the emperor to direct the resources of the war with effect. From all the governments in the empire large subscriptions poured in, amounting to 150,000,000 of silver roubles. The clergy alone presented to the treasury a sum of not less than 60,000,000 of silver roubles, in addition to what was contributed by "the governments." The conscription was enforced with severity where previously indulgences were shown; and a sort of foray was made upon the coachmen, footmen, and other servants of the gentry who happened to be in St. Petersburg, and they were drafted off to Poland to the army of reserve.

The month was remarkable also for a partial insurrection in the Crimea. The Tartars very prematurely declared themselves for the sultan; and with no other result than that large numbers of them were driven into the interior by Prince Menschikoff, many sent on board the fleet, and some sent into Bessarabia, to be enrolled in the reserves occupying that province.

Notwithstanding the tragedy at Sinope, a Turkish squadron was again in the Black Sea; a Russian brig of war was captured off the Bulgarian coast, and another ship of larger size attacked and considerably damaged. By the end of December the whole Russian fleet of the Black Sea was in the harbour of Sebastopol. It was rumoured that a British squadron

had passed the Bosphorus a fortnight before that event took place, and the Russian navy were as anxious to avoid the British, however much the odds might be in their favour, as they were desirous to encounter the Turks.

While the events recorded above were hurrying along and creating their incidents for future story, the capitals of "the powers" were in commotion at their occurrence. Western Europe was deeply agitated by the sanguinary onslaught at Sinope; and an impulse was given to the friendship of France and England for the Porte. Austria and Prussia were evidently well satisfied with that "naval victory," for not only did their ministers join in the "*Te Deum*" at St. Petersburg, but in the Greek churches at Paris and Brussels the representatives of these powers had the audacity to take a part in the thanksgiving offered for that "success." When the sultan proclaimed war, the ministers of the German powers left Constantinople; and in the coteries about the court at Vienna and at Berlin undisguised joy followed the intelligence of Sinope. Early in December a report gained circulation at Constantinople, that the Porte, awed by the destruction of its fleet, and pressed by new "notes" from the allies, was willing to accept "peace at any price;" and the ulemahs and softas harangued the people at the mosques, and instigated multitudes of infuriated fanatics, who demanded the resignation of the ministry and the abdication of the sultan. The ambassadors and admirals of France and England offered the assistance of the fleets to protect the government and quell the tumult; but the sultan nobly replied that sooner than use foreign force against his people he would resign his throne. The promptitude of the government in offering explanations to the people and arresting the ringleaders soon restored order; and the tidings from the Danube encouraged alike the people and the divan.

Indications of trouble upon the Servian frontier harassed the government to the end of 1853. The Bosnians raised a contingent of 12,000 men to aid the sultan; and when contemplating their march through Servia to join the army of Omar Pasha, the prince or hospodar refused permission, on the ground of his neutrality, thereby renouncing the suzerainty of the sultan. The Bosnians proceeded by force to reach their destination, and the Turkish garrisons on the Servian frontier were strengthened, and acted with an unusual license. The interference of Austria prevented a mutual recourse to arms; but the adjustment of the dispute was unfavourable to the sultan's authority.

It was upon the 12th of December, and by way of Berlin, that the news from Sinope reached London. The British premier was as much surprised as if he had never written the

memorable despatch respecting the treaty of Adrianople, or as if the traitor of 1829 and the butcher of Sinope were not the same. What appeared to the noble earl at the head of British affairs a proof of great vigour was upon due consultation soon adopted; instructions were sent to the fleet to enter the Black Sea, and, will it be credited by posterity, the instructions also enjoined upon the admiral in command to *salute* the Russian navy! That any honourable man could continue to allow the Emperor Nicholas to call him friend without disclaiming the relation, after the perfidy and dishonour of that imperial traitor in the affair of the treaty of Adrianople, is strange; that this *friend* should continue to be believed and trusted, when he had all but given notice of his intention to play the same game over again, as the czar did in his conversations with Sir Hamilton Seymour ten months before, is passing strange; but when, after seizing the first opportunity of violating his word, his proclamations, and the despatches of his ministry, by as base, cowardly, and bloody a transaction as ever dishonoured civilised man, the fleets that were his barbarous instruments in the treachery and massacre should be made the objects of studied courtesy and respect by the fleets they had insulted by that act of barbarity, justified the general public in believing that the fear of Russia or the love of Russia had deadened every manly and patriotic sensibility in the heart of the men from whom such orders could proceed. When these directions to the fleet were announced to the public, the dissatisfaction was marked by every ordinary demonstration of popular displeasure. From that moment the British ministry lost the confidence of the public, although it remained for other events to precipitate their fall.

While the Admiralty was giving its orders for the due observance of civility to the murderers of Sinope, the Foreign-office was busy with despatches more worthy of British reputation. On the 27th December, a despatch was addressed to the British minister at St. Petersburg, as follows:—

"SIR,—Authentic information, dated the 9th instant, from Constantinople, has reached her majesty's government, that on the 30th ult. a Turkish squadron, at anchor in the harbour of Sinope, was completely destroyed by an overwhelming force; that 4000 Turks perished; and that the survivors, not exceeding in numbers more than 400, who have been brought away by English and French vessels, were all more or less wounded. The feelings of horror which this dreadful carnage could not fail to create have been general throughout all ranks and classes of her majesty's subjects in this country. The object with which the com-

bined fleets were sent to Constantinople was not to attack Russia, but to defend Turkey; and the English and French ambassadors were informed that the fleets were not to assume an aggressive position, but that they were to protect the Turkish territory from attack. The Russian admiral, however, must have acted upon the orders of his government, which government was well aware of the instructions which were to guide the British and French admirals; and her majesty's government, therefore, are compelled to consider that it was not the Turkish squadron alone that was deliberately attacked in the harbour of Sinope. That in order to prevent the recurrence of such disasters as that of Sinope, the combined fleets will require, and, if necessary, compel Russian ships of war to return to Sebastopol, or the nearest port.

(Signed) "CLARENDON."

So strong was the desire of peace on the part of the Western governments and of the Porte, that fresh conferences took place with this object; and Vienna, to which the sultan had strong objections as the theatre of negotiations, was selected as the most appropriate place. A second Vienna note was drawn up, which has been since so frequently referred to in diplomatic discussions and discussions about diplomatic affairs, as "the note of the 5th of December." This was presented, ten days afterwards, to the Turkish government by the ambassadors of the Western and German powers.

"The undersigned, in accord with the representatives of the allied powers, have the honour to make known to the Sublime Porte that their governments, having still reason to believe that the Emperor of Russia does not regard the thread of the negotiations as being broken by the declaration of war, and the facts which have been the consequence of it; knowing, moreover, from the declaration of his Imperial Majesty, that he only desires to see secured a perfect equality of rights and immunities granted by the Sultan and his ancestors to the Christian communities, subjects of the Sublime Porte; but, on its side, the Sublime Porte, replying to that declaration by the declaration that it regards it as being for its honour to continue to maintain the said rights and immunities, and that it is constantly disposed to put an end to the differences which have arisen between the two empires—the negotiations to be followed shall be based:—1st. On the evacuation of the principalities as promptly as possible. 2nd. On the renewal of the treaties. 3. On the communication of the firman relative to the spiritual advantages granted by the Sublime Porte to all its non-Mussulman subjects: a communication which,

when made to the powers, shall be accompanied by suitable allowances given to each of them: the arrangements already made to complete the accord relative to the holy places, and to the religious establishments at Jerusalem, shall be definitively adopted. The Porte shall declare to the representatives of the four powers that it is ready to name a plenipotentiary to establish armistices, and to negotiate on the basis above-mentioned, with the concurrence of the powers, and in a neutral city which shall be suitable to them. The declarations made in the preamble of the 13th July, 1841, shall be solemnly confirmed by the same powers, in the interest of the independence and the integrity of the Ottoman empire, and that of the European courts; and the Sublime Porte, on its side, shall declare, in the same interest, its firm resolution to more effectually develop, by its administrative system, the internal ameliorations which may satisfy the wants and the just expectations of its subjects of all classes.

"REDCLIFFE.

"BARAGUAY D'HILLIERS.

"L. DE WILDERBRUCK,

"DE BRUCK."

Upon receiving this note, the sultan was inspired with the hope of peace, and requesting a delay of forty-eight hours, he summoned the national council. This council is composed of the ministers of state, the ulemahs, and such other persons of distinction, ecclesiastical, civil, and military, as the sultan chooses, or finds it convenient to call to his presence. After two days of most anxious deliberation, they came to the following decision:—"The Porte will accept the collective note of the four powers; it will nominate a plenipotentiary to treat for peace in any town except Vienna; it will accept the declaration of the four powers, that the evacuation of the principalities shall be considered as a conclusive *sine quâ non* of the negotiations; and that the war shall not change the territorial condition of Turkey. The Porte declares, at the same time, that it will not renew the treaties which existed before the war between it and Russia."

The ambassadors were anxious to make better terms for Russia, and remonstrated against the determination of the council to break with Russia in respect to the treaties of Adrianople and Kainardgi. Incredible as it may appear to unsophisticated minds, the ambassador of England pleaded, on behalf of Russia, for the recognition by Turkey of that very treaty which the czar by a disgraceful *ruse* accomplished and maintained against the protest of the very same minister from whom the British ambassador now received his instructions; and not only against the protest of that

minister, founded upon the injustice of the deed, but founded also upon the violation of the emperor's personal assurances. The treaties of Adrianople and of Kainardgi cannot co-exist with the integrity and independence of the Ottoman empire; a perusal of the third chapter of this history must make that truth clear to its readers. Yet the men whose duty it was to insist upon terms of peace consonant with that integrity and independence, became the advocates of the czar in respect to both! Had Turkey followed the advice of either France or England, she was lost. To the clear-sighted policy of her own divan she was indebted for guidance when the counsels of her allies were obscure, inconsistent, contradictory, or ruinous. Either the representative of England was unequal to his position, or he was fettered by instructions wholly irreconcilable with any real intention to baulk Russia of

her prey. The government of Turkey firmly and finally proclaimed to the world that these two humiliating and unjust treaties, wrung from her by Russia when deserted or ill-advised by the other European powers, should never be renewed. Redschid Pasha, to his discredit, counselled the concession; but the general feeling of the great counsellors of the divan was, that now war had commenced, they would rather be driven from Europe, sword in hand, as their fathers entered it, or perish in the defence of Constantinople, than ever again revive those injurious and dishonouring acknowledgments of past defeat. Thus ended European diplomacy for 1853. While all these things were transacting in Europe, Asia was the scene of scarcely less exciting events; and within that theatre a more picturesque and romantic drama occupied the stage, a description of which we reserve for another chapter.

CHAPTER VII.

THE WAR IN ASIA.—RUSSIAN ENCROACHMENTS UPON TURKEY, PERSIA, AND THE CAUCASIAN TRIBES.—SCHAMYL, THE SULTAN AND PROPHET OF THE CAUCASUS.

"Sampson hath quit himself like Sampson,
Heroically." MILTON.

To assist the reader to a just conception of the military and naval operations of the Turks upon the Asiatic frontiers of Russia, it is necessary to sketch the previous progress of Russia in that direction. For at least three-quarters of a century, arms and artifice had been accomplishing her designs, both upon the Turkish and Persian territories. Sometimes art without force availed; and sometimes, even when force failed, craft was sufficient to repair disaster, and of itself effect conquests. There can be no doubt of the consummate ability of the whole Russian people in affairs requiring nice and dextrous management; and this, more than the education of her diplomatists, aids the success of the ministers and ambassadors of Russia. Perhaps no people in the world's history, excepting only the Greeks, were ever so much given to lying as the Slavonic section of the Russians. In this particular, the czars and their diplomatists were always most accomplished. Never were the arts of evasion, equivocation, and verbal fraud so unscrupulously resorted to, or so keenly cultivated, as by the agents of Russian political affairs. Hence we never hear of a treaty between Russia and any other power, in which the former has not contrived to obtain a cession of territory. In 1731, the Khirgish Tartars ceded to her territory which comprised 31,000 square miles. In 1732, there was a further Tartar cession of 15,000 square miles. Catherine wrested and wheedled from Turkey about 2500 square

miles, partly on the Asiatic and partly on the European frontier. She also obtained the protectorate of Georgia, guaranteeing to the royal family the crown—a guarantee which, of course, was never intended to be observed. By the treaty of Azoff, Peter gained a footing upon the sea of that name; and ever since the ambition of Russia has been eagerly directed both to the eastern and western shores of the Black Sea, until Nicholas, by the treaty of Adrianople, 1829, robbed the sultan of the Delta of the Danube, and the Asiatic coast of the Black Sea, from Anapa to Poti, a distance of 200 miles, and part of the pachalic of Ahalzie. Having, in our third chapter, given a summary of the history of Russian aggression upon Turkey, it is here only necessary to say that from Persia she has taken Dhages-tan, Schinean, Ghilan, Menzenderan, Astabad, and other territory, containing about 18,000 square miles. Some of these acquisitions were made without firing a shot; and most of them, as well as others especially in Europe, were made by the help of allies whose blood and treasure she liberally employed, but to whom she never allowed any advantage to accrue. Mr. Man, in his *Encroachments of Russia*, has given a brief and very complete summary of her successes in this way. He writes:—"It is by diplomacy that Russia has so egregiously overreached the governments of Europe. By an alliance with Austria and Prussia, she was enabled to tear Poland to

pieces, England, France, and Sweden looking quietly on. By an alliance with France and Austria, Catherine II. was enabled to seize the Crimea, and push her outposts towards Persia, India, and Constantinople. By an alliance with France, in Napoleon's time, she was enabled to wrest Finland from Sweden, all the other powers being quiescent. By another alliance with Napoleon, Alexander invaded and annexed large portions of the Turkish territory, in 1806, while Napoleon himself invaded Spain. By alliances with England, by the aid of whose ships the Turkish fleet was blown to pieces at Navarino, Nicholas was enabled to invade Turkey, and set up claims to the 'Protectorate' of the Danubian provinces; and England further aided Russia by detaching Greece from Turkey, and setting up a sham Greek kingdom—in reality but an outpost of Russia. By England's connivance, Russia poured her armies into Hungary but a few years ago, and crushed the gallant Magyars in their struggle for freedom,—the modern rôle of Russia being to play the conservative in propping up the falling dynasties of Europe! Thus have all the great nations of Europe helped Russia by turns, until at length they found out—when it was all but too late—that they had been jointly contributing to establish a power in Europe, the further progress of which must inevitably prove their own destruction."

Following her old policy, Russia sought an alliance with Persia when meditating the present war with Turkey. Offers of partition were made at Teheran; efforts to ferment disputes, on religious grounds, were made by Russian agents there and upon the frontiers of the two Mohammedan powers; military expeditions were pushed into Asia from the Caspian and the Sea of Arakal, and the ambassadors of the czar announced haughtily to the khans of Khiva and Bokhera, the approach of armies to subjugate their territories, unless they entered into alliance with him, for the purpose of any immediate demonstration against Persia, or ultimate demonstration against Afghanistan and India, which he might project. Persia had felt the might of a czar's arm already too frequently not to fear it; and she besides cherished towards Turkey a rivalry, and a schismatical hostility, which is as bitter among the followers of Mohammed as among professing Christians. But the shah had a wholesome fear of England, with whom the Affghans on his own frontier were forming alliance, and who, since the occupation of Aden, on the Persian Gulf, has always been a terror to the government of Teheran. Persia could not alone wage an aggressive war upon Turkey; her population does not exceed 8,000,000, and her regular army is not more than 35,000 men:

an irregular force, principally cavalry, of twice that number, is said to be always ready for the service of the shah. The revenue is collected in a way more oppressive and less efficient than that of any other state perhaps in the world, scarcely excepting those petty Indian principalities which are partly or wholly under British protection: the amount fluctuates from £1,500,000 to twice that sum. Thus has Persia fallen from the glory which once was hers, when the mistress of a gorgeous empire, and armies were sent forth by her more numerous than ever were marshalled in the history of war. She is still rich in fertility and resources; but, poor in intellect, these resources are not available; and she sits in the pride of a barbaric splendour, fearing and despising the other powers of the world with which commerce or contiguity brings her into connexion. During the summer and fall of 1853, she committed several aggressions upon Turkey, which issued at last in the cessation of all diplomatic connexion, and a war with that state imminently threatened to add to the difficulties of Turkey. Some injuries upon British subjects gave occasion for the English *chargé-d'affaires*, Mr. Thompson, to demand satisfaction, which, being contemptuously refused, at the instigation of the Russian envoy-extraordinary, Prince Dalgrouki, Mr. Thompson suspended his relations with the Persian court. This so terrified the shah and the chief minister, that reparation was made, and at the same time assurances given that Persia would maintain a strict neutrality in the war. A Persian force, commanded by Russian and mercenary officers, might operate with much effect upon Erzerum, or along the confines of Asia Minor; and at the least create such a diversion in favour of Russia, as would enable the latter to penetrate into the heart of Turkey in Asia. Had Mr. Tayleur Thompson been of the class of diplomatists who at the same time figured in Constantinople and Vienna, the Persian difficulty might have created a wilderness of protocols; but he understood the oriental character, and took at once bold and vigorous measures. The menace of a double attack upon Persia, by way of Afghanistan and Aden, indirectly conveyed by Mr. Thompson, was of more avail than if the way from Constantinople to Teheran had been strewn with conciliatory and persuasive despatches from all the ministers of all the powers.

At the breaking out of the war, the sultan found an ally in Schamyl, the world-celebrated Circassian chief, who had waged a long and bloody conflict with Russia, for the independence of his mountain land, and the religious liberty of his people; and in the desperate and unequal struggle, deeds of daring were achieved by him and his followers never excelled in the

wars of chivairy. By consulting a good map, the reader will perceive that from the Cuban River, near to the Sea of Azoff, along the north-eastern shores of the Black Sea, and stretching away to the western shores of the Caspian, the mountain ranges of the Caucasus constitute a natural barrier between Russia and Asia Minor. Russia, in her aggressive progress, has out-flanked this barrier line on the sides both of the Caspian and the Sea of Azoff, and has established her dominion to the south of the Caucasian range, along the shores of the Black Sea and of the Caspian. But from Anapa to Soukhoukale, the native tribes dispute the borders of the Black Sea, and from Kapyt to Georgievsk, they dispute the northern slopes of the mountains. Also, nearer to the Caspian Sea,—a considerable district sloping from the mountains down to where the river Terek bends northward in its course to the Caspian,—the sovereignty of the czar is resisted. Over the people of Circassia Proper, the dominancy of Russia is more complete than over the country of Daghestan, which is the theatre of the renowned exploits of the warrior-chief Schamyl.

Before giving any account of Schamyl, and the wars so successfully urged by him against the Russians, some further notice of the progress of Russia in the neighbourhood of the Caucasus is necessary; and it is also desirable to give some information concerning the climate and population.

By the treaty of Goolistan, Persia resigned to Russia, Georgia, Imeritia, Mingrelia, Derbend, Badkoo, Persian Daghestan, Sheerwan, Shekkee, Ganga, Karabagh, and parts of Maghan and Tablish. The first three of these territories were inhabited by Christians of the Georgian and Armenian churches; one other (Karabagh) was partly inhabited by Armenian and Greek Christians, and partly by Mohammedans; all the rest by Mohammedans only. All these countries had maintained a rude independence, but were tributary and nominally subject to the Persian shah. The nature of their relations to the shah did not allow of his ceding their territories; and this was well known to Russia, who, seeking a pretext for invasion and robbery, with the peculiar hypocrisy of her character, induced the formal cession of the lands by a sovereign who did not own them, although he had a sort of feudal right to the services of their chiefs in war. Russia, with the pious pretence of settling disputes, preventing anarchy, or converting the people, according to the peculiar character of the district and the population, entered upon her work of subjugation, and with all the usual results—oppression, robbery, and bloodshed. The people of the Georgian districts submitted too tamely, being influenced by the Greek priests, emissaries of Russia, or

by their own native priests of the Greek Church, who were taken into the pay of Russia, although the money so employed was appropriated out of the revenues of Georgia. The districts inhabited by the Armenians were even more tamely submissive than those of Georgia, for the Armenians became useful to Russia because of their sagacity in commerce, and were encouraged to an extent which somewhat counterbalanced the despotism politically maintained over them. The Mussulman population never really submitted, and no means were adopted to conciliate them. Every insult that could be devised was offered to them by the native Christians, with the connivance and sometimes at the instigation of the Russian officials; and at last the oppressions and insults of the latter were such, as if it were their policy to exasperate the people into open insurrection, in order to find occasion for the more entire destruction of their liberties. Mosques were turned into taverns, wine-cellars, and stables, and “the prophet” was mocked in various ways tantalizing to the people. The pilgrims of the Mohammedan religion carried tidings of these things on their way; and all around the shores of the Black Sea and the Caspian, the name of the czar became as hated as that of “Shatan,” and whatever tended to check his power was, in popular estimation, holy. The mountaineers of the Caucasus maintained still their independence. They had never surrendered to either the sultan or the shah, although they had nominally embraced Mohammedanism, and were, like the rest of the Mohammedan world, divided into the sects of Ali and Omar, which Turkey and Persia respectively embrace. Mingled with their doctrines of Islamism were many traditionary notions of Paganism, and some opinions and practices older than either Mohammedanism or Paganism, and cherished amidst these fastnesses ever since the regions of the Caucasus became the cradle of the second population of the world. Different tribes differed somewhat in race, and somewhat more in religion, and jealousies on the part of their chiefs kept them divided; still, each hated Russia with an animosity embittered by distinction of race and of religion, and, above all, by love of country. The treaty of Goolistan did not define the line of frontier between Persia and Russia with sufficient distinctness, and this uncertainty was preserved by various political tricks on the part of Russia. Sometimes she induced the Georgians to object; sometimes the political agent or commissioner on the spot pleaded guilty to a violation of his instructions; sometimes the Russian envoy at Teheran exceeded his authority, and thus disputes were kept alive, and adjustment rendered more difficult; while Russian pickets, on various pre-

tences, spread themselves beyond the borders, and gradually encroached upon territory which had not previously been comprehended in the debated line. Upon the accession to the throne of the Emperor Nicholas, Russia pursued a not less cunning, but a still more vigorous policy than during the reign of Alexander. Prince Menschikoff, the chief mover of all aggression and mischief during the late reign, appeared as the emperor's representative in Persia. The shah, in terms of moderation and even deference, requested the surrender by Russia of the violated territory, and his demands, so obviously just, were met by the prince in a manner similar to that which he since employed at Constantinople. The minds of the Persians were inflamed with an incurable resentment, and, as in the case of the present sultan of Turkey, the shah had his choice of abdication, or a peremptory dismissal of the Russian envoy. He chose the latter, the result was war; and Nicholas, whose accession to the imperial throne at St. Petersburg had been resisted with bloodshed, became at once popular with all classes, even of the capital, when it was known that he had entered into a fresh crusade for the extension of Russian dominion. The war raged on for some time, the Persians everywhere giving way before the system of European warfare which the Russians opposed to them; and the result was the acknowledgment of Russian ascendancy from the Caspian to what is now called Russian Armenia.

In February, 1828, these series of wars with Persia terminated by the treaty of Turcomanchai; and Russia, protesting that she wished for no territory, but had indeed too much, nevertheless, to prevent all cause of future war with Persia, arising from an ill-defined boundary, declared herself compelled to seize the line of the Araxes. Persia, besides paying the expenses of the war—a proviso which Russia never omits when successful—had to surrender most valuable territory. The splendid provinces of Erivan and Nukchivan, including various fortresses, especially that of Erivan, were surrendered; and although Russia laid down as the basis of the treaty of peace, the possession as a boundary of the river Araxes, she, in the course of the negotiations, seized upon provinces beyond the Araxes; and, in reply to the remonstrances provoked by this treachery, threatened to break off the negotiations and recommence war. Baffled and beaten, Persia surrendered to her avaricious, tyrannical, and most unprincipled victor; and thus Russia became dominant in a position from which the powers of Turkey and Persia could be always menaced, and whence she might gradually push her way to Teheran, on the one hand, and Constantinople on the other. The possession of the fortress of Abbasabad, which a

former shah had constructed under the direction of a distinguished French engineer, might be said to command the line of communication between Turkey and Persia. This fortress is north of the Araxes, the line which Russia had herself chosen as separating the territories of the contending empires; but she pretended that, to complete the defensive utility of the fortifications, a *tête du pont* on the *opposite side* was essential, with an esplanade, for which she required a segment of a circle with a radius of two miles: all this was ceded by Persia. Finally, what Russia had already by force secured for herself—the exclusive navigation of the Caspian—this treaty formally recognised; so that, from the Caspian on the east, and from the Sea of Azoff on the west, Russia could always pour her troops and supplies undisturbed upon the country between the Caucasus and the Cuban, and carry out her long-projected desire of including the whole Caucasian range within her boundaries. The treaty of Adrianople with Turkey, framed so soon after the treaty of Turcomanchia with Persia, stipulated the surrender by Turkey of the Caucasian shores of the Black Sea, and of the territory contiguous to that of Persia bordering upon that sea; and although the Caucasian range was not subject to either Persia or Turkey, by the treaties above-named, Russia wrung from both a recognition of her sovereignty there, so as to forbid their aid thence after to the efforts of the wild mountaineers to maintain their freedom. Through all the transactions of battle and treaty, war and peace, between Russia and the two great Mohammedan empires, these brave mountain men held their own, regardless of the policy of the empires which claimed or conceded the right to subject them. The Russian troops were attacked in all the posts which they had established nearest to the mountains. Every stray soldier was picked off; detachments were waylaid and destroyed. Russian officers of distinction fell by the dagger of the Lesghai within their own lines. Russian battalions were more than once discomfited by *women* in the mountain defiles. The Russians erected fortified posts along the whole line of the Caucasus, as points of support for the razzias by which they contemplated wearing out the Caucasians: the forts were entered as if by enchantment, and every soul fell beneath the heavy swords of the Chechenes, Lesghis, and Circassians. The lines of road from the western shores of the Caspian, and from that sea to the straits of Tamen, were impassable by any but large bodies of troops attended by a powerful artillery, as bodies of cavalry comprising from one to five thousand men would swoop down with the speed of the falcon, and through the least opening dash across the line of march,

throw into confusion both front and rear of the marching columns, and, after cutting many to pieces, again disappear with the same celerity. Sometimes these bands of horsemen would not lose a single man, while the road for miles would be strewn with the bodies of their foes. The Russians are slow in forming to receive cavalry, and were some years ago still less prompt in this manœuvre, and the tactics of the mountaineers being altogether different from regular European horse, and their arms and mounting of the very best, they were a terror to the Russian infantry, and the Cossacks and other Russian irregular cavalry seldom dared to meet the shock of their charge. The irregular Cossacks of the Cuban were much superior to their brethren of the Don in combating with the Caucasians, as they understood their mode of warfare, and were often as well mounted. These have been the only really efficient troops in the Russian service throughout the long wars hitherto waged against the liberties of the Caucasian people.

Since the Russians erected forts upon the Black Sea, the tribes have frequently descended the southern slopes of their mountains with the suddenness and force of a mountain-storm, and swept the coast of the invaders. Communications between the forts by land were cut off, the forts themselves stormed, or the Russian troops shut up, ill-provisioned, and harassed by a desultory and deadly warfare in the most unhealthy situations, until, under the bullet of the Circassian marksman, and the malaria of the marshes and lagunes, they melted away. In vain was garrison succeeded by garrison, and expedition by expedition; thirty thousand Russian soldiers were in vain sacrificed yearly. Up to the breaking out of the present war, the population of the Caucasian districts had actually increased, their mode of warfare improved, their combination become more complete, and, at last, under a chief possessing a military and legislative genius, and a moral ascendancy previously unknown amongst these free tribes, they are more formidable than ever. Of all services the invasion of a mountain country is the least suitable to the Russian soldier. He is brave and obedient, but he is slow and unwieldy. He is—at all events has been in the Caucasus—ill-fed and most inappropriately clothed and armed; and, brought up upon the steppe, he is entirely incapacitated by all previous habit from any enterprise in a country of unequal surface, more especially where, as in the Caucasus, mountains tower up to the regions of eternal snows. History tells us how easily the Swiss preserved their liberties against armies superior to any which Russia has ever introduced to the regions of which we write; and what are the Alps to the Caucasus—what a height of 7000 feet to

one of 17,000—what the highest alp to the Elb Rous, which dominates the whole Caucasian range, and seems to wear the heavens for its crown? The incompetency of the Russian soldier for campaigns in such a country may be more readily conceived from the following graphic sketch of him by “the Roving Englishman:”—“He is a sulky, sullen, stupid-looking fellow, with a pale blue complexion, like that produced by what the doctors call ‘the administration’ of nitrate of silver in cases of disease. Poor wretch! he looks like a felon, for he has been treated all his life as a hound. He has a short, straight nose, the nostrils of which are turned upwards, and seem like two small holes in his face. He has little round eyes; but he is too stupified by ill-treatment to have any expression in them, though he is in the first flush of youth and strength. His hair is of a rusty bay or reddish brown: it does not dare to curl or wave, and sticks out in points and notches, as though in despair of doing right, turn which way it will. He is a square-built, powerful man, but he is listless, silent, and awkward. He appears susceptible of neither pain nor pleasure; to have no respect or love for himself. He seems to have neither reason nor instinct. He is a machine ready to obey a touch of the impelling hand, or to have something within him which hears and acts at the hoarse shout of command, but of himself he does nothing. He has no will, no energy, no pride of craft. If you speak to him suddenly he starts and takes an attitude of drilled attention. He will not flinch or stir for a blow, but his eyes darken and his thick lips close. He is dirty in his person and habits, but not untidy or slovenly; for he seems always on parade. God only knows what thoughts pass through his mind, for he never utters any. He appears profoundly impressed with his own insignificance and inferiority to every one who wears a good coat, and he bows down abjectly before a bit of gold lace and a sword, whoever wears them. He has no soldierly love of pleasure. He loves drink, indeed, and he will sit silently soaking raw spirits as long as he can get any, but the liquor has no brightening effect upon him; he is as impassive in his cups as when sober. He may drink himself blind, deaf, motionless, speechless, but he cannot drink himself gay. If an officer told him to walk down a precipice, or drink a glass of speedy poison, the idea of remonstrance or disobedience would never occur to him. He would do either as merely a part of his allotted task in life, the object for which he was born. He has been told that the French and English are impious heretics, a sort of plausible devils in human shape; he believes it devoutly, for he has no reasoning powers, no opinions. He believes that he will incur

Divine wrath by holding communion with them; that they will poison him if he eats their food; that they will torture instead of healing him if he be wounded; that their medicines are death in disguise, their benefits a mockery, their kindness a device of the Evil One. He does not think these things distinctly, and one after the other, but such is the general confused impression on his abject mind.

"His clothes are ill-made and scanty, they are so thin that they seem all outside; a broad white band is slung over his right shoulder and descends on his left hip; this sustains his sword—it is not a very good one. The mass of the Russian army are of course badly armed, from the organised system of peculation which exists in every department. Indeed, the Russian soldier has perhaps never had a full meal in his lifetime. He was robbed before he was born, and he has been robbed ever since: first, by the baron and the disponent; since, by every one who has had to do with him. In the army he has had to digest the last sublimated essence of robbery; for in Russia the commander-in-chief robs the generals, and the generals after their degree rob the colonels, and the colonels rob the majors, and the majors rob the captains, and the captains rob the lieutenants, but all rob the soldier together. Russia presents, perhaps, the only example in history of a country governed by a military despotism, and in which the soldiers have been kept in the same state of slavery as the rest of the community."

Such a soldiery will, at the word of command, ascend the mountain steeps as far as it suits the purpose of the defenders to allow them, sure that the issue will be their destruction. Still, up they clamber from "aoul" to "aoul," burning the cottages, wasting the fields, cutting down the vines, and sparing neither woman nor child, until at last they reach a point where their superiority of numbers no longer avails them, and they are sent rolling back in blood and destruction to the mountain's foot.

The country thus fiercely contended for is worth the contest. It is one of political importance, from its position at the head of the Black Sea. Historically no country, scarcely excepting Palestine, has more sacred associations. Upon Mount Ararat, in Armenia, the ark rested, and thence Noah and his offspring went forth to colonise the world. A tradition which prevails over all these countries, from the Cimmerian Bosphorus to Erzerum, affirms that before the ark settled on Ararat it rested on the Elb Rous. On the shores of these fine regions the immediate descendants of Noah formed their first settlements, and there the first altars of a pure patriarchal worship were reared. From those regions westward the sons of Japhet made their way to Eastern Europe, and round to the Mediterranean, thence spread-

ing by Spain and Gaul over Western Europe. From this cradle of humanity the children of Shem encircled the eastern shore of the Euxine, and penetrated to Asia Minor and the shores of the Mediterranean to central Asia, Persia, India, and the farthest east; and the unfortunate descendants of Ham had a home in these provinces before they crossed to Arabia and Egypt, and penetrated the dark continent where they have for thousands of years slumbered in ignorance and slavery. When classic history opens its pages upon these lands, we perceive Greece sending thither her expeditions and her colonies, and recording the importance, beauty, and fame of these fine realms. In Mingrelia a vast plain still bears the name of Argo, the son of Phryxus, by whom Sinope was founded, when Mithridates once reigned in his glory. Jason built Idessa, in Georgia. Imeritia, Mingrelia, and Gourial, constituted the Greek Colchis. The followers of Castor and Pollux built the far-famed Dioscurios. All along the inland sea called the Caspian, perhaps to its northern shores, the Greeks had colonies. The tribes called Iberians and Albanians claim a Grecian origin.

The resources of these countries are rich and various. In the days of Strabo, if we credit his testimony, the soil of Imeritia and Mingrelia produced four crops annually, and troops were furnished for the services of the kings of Pontus more in number than the population which those provinces could now sustain. Where now vast marshes stretch away in miserable monotony, sending up the deadly marsh malaria upon the country beyond, rich corn-fields and orchards once flourished. The baleful Crescent first spread its blight over these healthful and fertile lands; and since, the dreary despotism of Russia perpetuates the ruin. Traces of public works for drainage and other useful purposes are to be met with in various directions, showing the superiority of former generations of inhabitants to the Turk, Persian, and Muscovite, by whom the country has been overrun. Conquest has sometimes civilised, but it is far more generally a curse to the moral and physical condition of the conquered nations. Whatever may be the blessing or the value of peace, liberty is still dearer even amidst the din of arms and the sacrifices which war entails. War brings many evils, but the loss of liberty is generally the loss of all good. The nation that knows not how to combat can soon be taught to forget all other things; the nation that forgets not the use of arms, and the legitimate occasion for their employment, may learn every other lesson in security, and is most likely to realize the blessing of peace withal. The independence of these fine countries must first be won, and then once more, from the Bosphorus to the Cimmerian Bosphorus,

along the whole Asiatic coast of the Euxine, towns shall flourish, agriculture pour forth its teeming treasures, wealth give power and stability to new states, and civilisation spread those blessings which no other hand can scatter, and which she never bestows but upon the free. The countries which enriched the commerce of Athens, her trade with which laid the foundation of her maritime glory; the countries associated with the most brilliant annals of mighty Greece, and mightier Rome; the shores studded with the ruins of a glorious antiquity, and crowned with the loftiest grandeur of majestic nature,—where cities smiled in the security of peace, and were decorated with the chaste architecture and glorious sculpture of Grecian genius, and where every refinement that could adorn life, to use the language of the great Edmund Burke, “from poetry up to eloquence,” was cultivated, even as in classic Corinth or imperial Rome,—must not be trodden down by the rude foot of the Muscovite, the enemy of all freedom, honour, and truth. This is no wild dream. The Caucasus is the great natural barrier to invaders either from the south or north. Neither Turk nor Persian has been able to conquer it. The renowned Mithridates, the hero and conqueror of all the adjacent shores, failed to surmount it. Rome, in the elevation of her military pre-eminence, was here foiled; and the great Alexander was rolled back from it, as the waters of the Euxine subside at its feet when the storm ceases to urge them against its shores. We will not recount the defeats of Russia while at the same time invading its southern and northern slopes; every crag has been drenched in the blood of assailant and defender, every ravine has been a grave for a Russian band; the vulture and the eagle have feasted upon hosts of the stricken Russ, who fell beneath the sabre or the bullet, the malaria, fatigue, and hunger, but Circassia is still free:—

“For oh! the great God never plann’d,
For slumbering slaves a home so grand.”

The country is everywhere lovely. In Syria and in Switzerland there are many rival scenes, and especially amidst the lake-scenery of the latter—a description of beauty in which the Caucasus is very deficient, although some lovely exceptions to this deficiency are to be met. The vicinity of the Black Sea, the Caspian, and the Sea of Azoff afford, however, according to the point of prospect, many magnificent spectacles, especially when seen from the more elevated mountain shelves, commanding as they do such a vast variety of view, of crag, and cliff, and verdant slope, and forest, and corn-field, until the eye rests upon the silver light of the distant waters. There is no grandeur in the Alps to be compared with what is to be seen all over the Caucasus. The climate is also

superior—indeed, there are many climates, from the sultry plains of the Cuban and Leman, to the snow-clad breasts of the more lofty elevations. Yet nowhere is the climate a bad one; the shores of the rivers just mentioned, or of the Caspian, are only sultry in certain seasons; and in the highest lands, amongst the glacier and snow-peak, it is said that vast sheltered valleys, rich in corn-fields and orchards, are the homes of the beautiful races that love them so dearly and defend them so well.

The Circassians are certainly the finest race in the world. They are celebrated for their beauty, and the celebrity is deserved. Of all the numerous tribes inhabiting the mountains they are the handsomest. They are probably the aborigines. When they mix with other races, by the emigration of the females to other countries, this beauty is imparted to their offspring. The Turks have, since the introduction of Circassian slaves to their harems, physically become a much superior people to what they had previously been; the Cuban Cossacks and neighbouring Tartars were in like manner improved; and a perceptible improvement among the Russian colonists has been observed, since the adoption of Caucasian wives by both soldiery and officials. The Circassians are not so large as many other races, but are beautiful in form and countenance, and in fine proportions excel all other people. Perhaps few Englishmen have had equal advantages with Captain Spencer for observing the habits and personal characteristics of the people. In his visit to the Asiatic shores of the Black Sea with Prince Woronzof, while the latter was the Russian governor of the Caucasus, he attended the great summer fair of Redout Kaleh, and thus describes its visitors:—“It afforded us an opportunity of seeing specimens of all the various races who inhabit the neighbourhood. In addition to Mingrelians and Imeritians, there were Georgians and Persians, Circassians, Lesghians, and Armenians, together with Jews, Turks, Tartars, and Turkomans—a curious *mélange*, each habited in their separate costume, and exhibiting in their features and manners their characteristic peculiarities. There was the stately Georgian, in his becoming costume—a blue cloth blouse with the sleeves open to the elbow, the whole neatly braided; wide shawls confined at the knees, and a high cap of black Astracan lamb-skin. In features he might be taken for an Armenian or a Persian; the only weapon he carried was a large poinard with an ivory handle, stuck in a red silk sash. The Mingrelians and the Imeritians in their costume and features somewhat resembled the Circassians, except that they were much inferior in personal appearance, and wanted the bright sparkling eye and bold independence of

manner which distinguish that people. These peasants were all well armed, with poinard, pistols, and gun, slung across the shoulder; and carried hanging from the shoulder the same species of black mantle, made from plaited goat's hair, as the Circassians are accustomed to use. But by far the most interesting among the assembled multitude were the inhabitants of the higher alps, the Souanians of Souanethia, a territory where the winter, it is said, lasts eight or nine months in the year. These gigantic mountaineers were all armed to the teeth, and looked as fierce and savage as if they had never before mingled with civilized men. Instead of the becoming blouse worn by their countrymen on the coast of Circassia, they were habited in long sheep-skin coats, ornamented in front with the usual red leather patron pocket of a Circassian mountaineer, sheep-skin caps with the wool plaited in ringlets, while their bare legs were encased in a sort of sandal made of untanned leather, and fastened with thongs. Besides these there were other tribes from the remote districts of the Caucasus equally interesting."

Such is the country, such are the people, and such the leading historical events connected with both up to the period when the present hero of these mountains, the intrepid Schamyl, found a fitting theatre for his genius and courage. He has organised most of the tribes, combined them in a great league against the common enemy, and assumed the direction of the whole, guiding and dictating their enterprises, governing them as a prince, and instructing them as a prophet. He has not the merit of originating either the opposition to Russia, or the present plan of warfare, nor has the idea originated with him of making religious enthusiasm subserve national independence. The struggle commenced before he was born; he found it raging, became an humble soldier in the cause, and a devoted enthusiast in the faith, and rose to direct both.

Soon after the middle of the last century, a chieftain named Mansur Bey, a native of Daghestan, and a zealous Mohammedan, became a preacher of the Koran throughout these mountains. Many of the chiefs and people were pagans, or inherited, perhaps from patriarchal times, a recognition of the Supreme Being, whom they worshipped in groves, offering animal sacrifices, the heads of families and clans being the priests and prophets. In the lowlands a mere nominal Christianity obtained, which was defaced by pagan traditions, which were commingled with its observances. The Dervish Mohammed, as Mansur was first called, persuaded by his eloquence many of all these classes to embrace Islamism. He did much to unite the tribes in their common defence; and his authority as an apostle of the great prophet

enabled him to use this union for purposes of formidable demonstration against the enemies of the independence of the Caucasus. Others succeeded him when his career was finished; but one only rivalled him in power before Schamyl surpassed them all.

One Kasi Mullah exceeded Mansur both in a reputation for sanctity and in the skill of government. F. Bodenstedt, a German writer, describes him as of small eyes, after the Russian type, a face seamed with smallpox, beardless, of very low stature, but thickset and strong. He was a travelling scribe, by which he had an opportunity of learning the family circumstances and the tribal feuds of the whole country. He gained by his doctrines, sagacity, and the enthusiasm which he had the faculty of exciting, many followers of his opinions, who ultimately became followers of his person; and soon after Russia had—by her treaties with Persia and Turkey, above described—fancied herself sure of the Caucasus, Kasi Mullah raised the standard of a holy war. In the beginning of 1830 he suddenly appeared, attended by a sacred band, sworn upon the Koran to be true to him as their chief and prophet, to give up everything for the freedom of their religion and the independence of their country, and never to be at peace with Russia until she was no longer in a condition to invade it. His sacred band he called *murids*. Many were the daring feats of Kasi Mullah and his *murids*, among whom was one distinguished for religious fervour above all the rest, and as distinguished for his bravery and skill—that one was Schamyl.

In 1832, when Himri, a mountain fort, was stormed by the Russians, Kasi Mullah perished in the breach. His chief companion on that occasion was Schamyl, who, after performing prodigies of valour, escaped marvellously, to appear elsewhere, not as a simple murid or guard of a prophet, but as a prophet. The mantle of Mullah was supposed to descend on the shoulders of Schamyl.

It was at this *avoul*, or village, of Himri that the new chief had been born some thirty-five years before. His early life was remarkable for reserve and piety, his long abstinences, his severe vigils, his enduring prayers; while even in his boyhood he was, although the most delicate of all his companions, the bravest of the brave. He is below the middle stature, of perfect symmetry of form, with large and beautiful eyes, and genuine Circassian contour, although himself a Lesghian, a race less beautiful. He has small feet, of which, like the great Emperor Napoleon, he is—especially when on horseback—very vain. He is, like the same exemplar, still more vain of the beauty of his hand, which is small and fair. He wears a large beard, which is very red; and he is said to be not less vain of this hirsute

appendage, more especially of its colour than he is of the other personal peculiarities which in Western Europe would be more generally considered graces. Taciturn, calm, collected, possessing much personal endurance strangely associated with considerable delicacy, he is of the most active physical habit and mental genius; and both to friends and foes seems as if endowed with ubiquity. He is the most splendid of all the Circassian horsemen, although they are the first in the world, not excepting the Arabs; his rifle takes the most deadly aim when the rocks are ringing with the volleys directed upon the foe; and high above the battle the slender arm of Schamyl waves the scimitar where danger is thickest, and the most adventurous enemies press on.

Like the founder of his religion, Mohammed, Schamyl is sincere in believing that he is chosen of God to effect a great and glorious work; but like him also, he adds to the hallucinations under which from fanaticism he labours, a cunning leaven of religious imposture. In his far off mountains he adopts the policy, so prevalent in Europe, of making religion subservient to politics and ambition. While the Emperor Nicholas was telling the nations on the shores of the Caspian that God had predestinated him to spread there the "Orthodox Church," Schamyl was telling the Mohammedan sections of those populations that the prophet Mohammed appeared to him in trances, and that in exterminating the Giaours he was acting as the anointed of Allah. The giant of St. Petersburg and the genius of the Caucasus were both playing the same game, both intoxicated and intoxicating others with a cup brimming with mingled fanaticism and imposture. There is this difference—the hero of the Caucasus is not a hypocrite, the bully of St. Petersburg was; Schamyl has a creed in his heart, Nicholas believed in himself and his ambition. Intellectually, Schamyl is well qualified for his self-imposed task. He never loses his presence of mind; his moral courage never fails; his sagacity in selecting his agents and officers is wonderful; his power of penetrating the designs of the enemy, both in a political and military point of view, prove him to be one of nature's great statesmen and generals; but the gift in which he excels most is that of eloquence. He is nature's orator as well as legislator and hero. When fear and hope, gifts and war, have failed to decide a dubious tribe, or reconcile a refractory one, a single oration of Schamyl has accomplished everything, and brought them willing captives to his feet. His sarcasm is withering, and his power of repartee, such as would cause Lords Derby and Brougham, Mr. D'Israeli and Mr. Bright, considerable uneasiness for their wreaths, were he to enter the lists of parlia-

mentary competition with the same command of their language which he has of his own. His fertility of resource, copiousness of illustration, softness of persuasion, and vehemence of passion, are all alike extraordinary. No man ever united in public address the *suaviter in modo* and the *fortiter in re* as perfectly as he does. As the shadows and sunbeams passing in rapid transition over the many-tinted foliage of the Caucasian forest, so his anger and his encouragement pass in gloom or brightness over the hosts that move responsive to his ever varying but ever effective oratory. Thus gifted, his mission to the tribes was like a message along the electric wire, it flashed intelligence and impulse to all. The murids of his predecessor gathered around him; he greatly added to their number, made more stringent the rules which discipline them, and the laws which keep them to their fealty; and with this desperate and devoted body-guard he went on conquering and to conquer, like some warrior of prophetic vision, and like such also a mystery. Many deeds attributed to him are no doubt exaggerated, and many have had no existence but in the oriental imagination of his followers; we shall only attempt to satisfy the popular interest awakened in this country concerning him, by a relation of a few of the more notable and well-authenticated feats of his history. The people of the Caucasus say of him—"Mohammed was Allah's first prophet, Schamyl is his second;" and this saying betrays the great secret of the enthusiasm upon which he works so well, which, united to the powerful *amor patriæ*, so characteristic of the mountaineers, is a sufficient motive power to enlist in his service all the oppressed races from the southern shores of the Caspian to the lofty eyrie of Souathania.

When the Emperor Nicholas committed the war in Daghestan to the charge of the German general, Willeminoff (and it is curious, by the way, to notice that the most ferocious executors of Russian policy in the Caucasus have been Germans), he gave strict charge that certain fortresses, the eagles' nests of Kasi Mullah, Schamyl's predecessor, should be scaled and stormed. This was accomplished with incalculable bloodshed, and Himri, the birth-place of Schamyl, was the last stronghold of the chief Kasi Mullah: thither he retreated, attended by his murids, the desperate body-guards, of whom Schamyl was the most distinguished. By incredible labour the Russians, under the German general, Rosen, to whom Willeminoff committed the enterprise, brought up their artillery, and opened a heavy cannonade upon the mud walls and irregular defences of the place. Breaches were soon made, but there was no way of reaching them, except by single file, along paths only partially sheltered

by overhanging rocks and foliage; it is needless to say that the advancing Russians were "picked off" long before they could reach the breach, if such the chasm made by the artillery in these peculiar defences could be called. When the chief path of access for the besiegers was literally choked by their dead, the attempt to enter the breach was given up, and the cannon again resorted to until the place was levelled, and the very rocks brought crumbling about the heads of the besieged. The cannon was carried nearer on men's shoulders, although many fell dead beneath the load, under the bullets of the besieged, and the fatigue of the undertaking, still General Rosen ordered up fresh men, and the guns opened with grape and canister upon the ruins, the defenders making every particle of cover available to take certain aim. Thinned by this wasting fire, the besieged still dauntlessly held by their forlorn post until, unable to offer to the Russians a fire so prompt and rapid as before, the latter crowded over their dead and dying comrades to the place, and put to the bayonet the hapless garrison. All perished, and Kasi Mullah and his faithful Schamyl, the last to fall, were hurled by the Russians over the precipices into the Koi-son beneath. Any others in whom life was detected were consigned also to the abyss, and wolves and vultures began their feast ere yet the smoke of the battle had rolled from the cliffs. The fate of Kasi Mullah and of Schamyl was placed beyond all doubt, and their memory was mournfully sung by the bards of Daghestan, when once more the natives of the district flew to arms against Russia.

Two years had elapsed since the storm of Himri, when again upon its eagle-rock a body of Daghestans were assembled in desperate contest, resolved to emulate the gallant deaths of Kasi Mullah and Schamyl. The Russians again swarmed up the rocks in multitudes, using scaling-ladders to ascend the almost perpendicular faces of the cliffs, at the base of which the Koi-son winded its rapid and boisterous course. Just as all hope for the brave Daghestans had vanished, and the martyrdom to creed and country, of which they aspired to make themselves worthy, was about to be attained, a chosen band, led by Schamyl, and guided through unknown tracks, fell upon the flank of the besiegers with a fierce cry, which the Russian officers describe as thrilling through every heart, and to which the very rocks might have vibrated; volley after volley sped amidst the confounded Russians, and then the garrison and the brave band who came to their rescue attacked the Russians with the sabre, or flung them over the precipices, with that strength and agility by which the mountaineers are characterised. The women of the garrison

hurled large fragments of rock upon them, and even used the firelocks of their husbands with rapidity and skill. The Russians were utterly routed, leaving several pieces of cannon in the hands of Schamyl, the first artillery ever possessed by the mountaineers; muskets, pistols, Russian sabres, and a great store of powder also fell into the hands of the victors. There could be no doubt of the identity of their deliverer on the part of the garrison; but how the warrior who two years before had perished on that spot, and had become the food of the wild dog or the eagle, could then appear so suddenly as a conqueror, was an enigma which they could not solve. It was equally a mystery to the Russians. Schamyl attributed it to Allah and his prophet, but how either had intervened remains still a secret; neither Schamyl nor any other son of the mountain has told the story. From the remotest eastern to the remotest western mountain of the Caucasus, the tale spread that Schamyl had returned from the dead, sent by Mohammed in pity to the faithful, and to punish the presumption and cruelty of the Giaour. Even the common Russian soldiery were awed by "the miracle," and began to think that God was fighting against them. The name of Schamyl became terrible to friend and foe; to the one it had the terror of awful sanction and of a divine authority, to the other of superhuman wisdom and bravery, or satanic alliance.

Thence Schamyl began a system of more complete organisation, the more easy of accomplishment as none dared to dispute his will. He introduced a system of revenue, orders of honour, rewards, provisions for the disabled and widows and children of the fallen, and established gradually a regular government. It was, however, his fortune to be again hemmed in by the Russian armies. He skilfully retired upon his fortresses; they this time as skilfully drew their *cordon* around him. Every defile was guarded, every commanding position secured; a possible retreat was provided for by having guns placed in position and detached bodies of rifles, so that the pursuing Daghestans could not assail the army in flank. Onward and upward the dark tide of Russian soldiery surged, as if a sea of vengeful life rising to overwhelm the barriers of freedom for ever. Schamyl was driven to his last resting-place, the fort of Akhoulga. It was strong by nature, and strengthened not only by native art, but some rude conceptions of European fortification entered into the plans of defence. It was well provisioned, and some captured guns, of small calibre and in bad condition, gave a new feature to the defensive preparations of the mountaineers. The place held out with wonderful tenacity; it seemed as if its walls were animated with the spirit of resistance

which manned them. The Russians fell in multitudes before it; but it was ordered to be taken, and the order should be executed although Russian blood dripped from every rock. The moment for storming at last came, and the scenes of Himri were renewed at Akhoulga—the whole garrison was put to the bayonet; and this time Schamyl, not last, but

“Foremost fighting, fell;”

he was struck by a rifle bullet in the breast, and afterwards repeatedly stabbed by the bayonets of the Russian soldiery as they entered. When the fire of the besieged was utterly quenched in blood, the dead were put aside in heaps, that the body of Schamyl, easily identified by his dress and the position in which he fell, might be separately disposed of; but it was sought for in vain—it had mysteriously disappeared!

Meanwhile the tidings of his destruction had been transmitted to the head-quarters of the Russian army, and thence to St. Petersburg, where the *Te Deum* swelled through the Russian churches for the removal of the great impediment to Russian conquest in the East. Scarcely had these songs of thanksgiving and glory died away, than the tidings reached the palaces of the czar that Schamyl, at the head not of a band, but of an army, was laying waste the property of the tribes subject to Russia, and with numerous hordes of irresistible cavalry was sweeping over the adjacent plains, cutting off detachments, charging columns, capturing artillery, and seizing convoys! If miracle only accounted for the preservation of his life on the former occasion, how much more must the explanation of his escape this time resolve itself into the supernatural! His authority rose still higher, and his fear haunted the superstitious Russian soldier, causing the lonely sentinel to quail with terror at the supposed apparition of the satanic chief; and diffusing through the Russian ranks the idea that valour was thrown away in such a war, when the enemy was commanded not by an ordinary man, but by an enchanter or a fiend.

Yet Schamyl had another escape, scarcely inferior to these. Once more shut up by Russian military skill and perseverance, and by the reckless expenditure of the soldier's life, characteristic of the conduct of the war in the Caucasus, the Russians were preparing to storm the mountain-fortress where, with a few of his murids, he had found a retreat, when a deserter, reaching the Russian lines, warned the general that, by a certain hour that night, Schamyl, appressed in female attire, would descend from the rock upon a certain sheep-walk, and escape, leaving the murids to defend the rock to the last extremity. Acting upon this information, a sufficient force was

placed in ambush, and at the hour foretold Schamyl was seen to descend, and bound along the path by which escape might be secured, had he not been betrayed; rifles rang out upon him, and a desperate pursuit commenced, the Russian officers being desirous of taking him alive. At last the fugitive fell under a shower of bullets, and the prize was seized; but lo! it was not Schamyl, but one of his faithful murids, who, with exulting lips, mocked the Giaours as he expired. The diversion purchased by the brave man's life was successful; the true Schamyl and his little garrison escaped in another direction. The deserter, like the pretended Schamyl, was devoting life to the safety of his chief and the service of the cause; upon him Russian vengeance was to be wreaked, he was ordered to be immediately hanged; but he also was gone, leaving his poinard buried in the heart of the Russian sentinel, in whose custody he was supposed to have been placed unarmed.

Sometime previous to the revival of the Caucasian war, in 1828, the Russians secured the son of a chief, took him to St. Petersburg, gave him a military education, and promoted him step by step to the rank of major-general. He was sent into the Caucasus, that, by his knowledge of the language and the instincts of the race, he might be more efficient than the Russian officers had been. He no sooner reached his native mountains, than, giving up all the honours and advantages of civilised life, military glory, and imperial favour, he deserted to his countrymen. He is now the right hand of Schamyl and his brother-in-law, Daniel Bey. To him the mountaineers are indebted for European discipline, which they are fast acquiring. Poles, and even Russians, deserters, are in considerable numbers among them, and act as artillerymen, engineers, and sappers; and as they generally marry native women, they become as eager in defence of their mountain liberty as those born to it.

Such was the condition of the Caucasus, and such was Schamyl, when, in 1853, the Sultan Abdul-Medjid formed an alliance with him, and instructed the commander of his army in Asia to co-operate with the chivalrous highland chief in the conduct of the war. Had the Turkish generals done their part as efficiently and gallantly as Schamyl did his, the Russian army of Asia had been annihilated before the close of 1853; but never in the history of armies were cowardice, folly, and peculation so conspicuous as with the Turkish commanders upon that theatre of the war.

We have already observed that the first care of the Porte was to provide against all contingencies on the Asiatic frontier. A rude force of militia, irregulars, and volunteers, amounting it was alleged to 50,000 men, was placed

on the Persian frontier, as reports had reached the sultan that Russia would allow Persia more time to pay the debt contracted by her—or rather the tribute imposed upon her—in the last war, on condition of her making certain aggressive movements against Turkey. Batoum was strengthened; and reinforcements, to the amount of 10,000 men, sent thither before the summons to Prince Gortschakoff was made by Omar Pasha. The corps stationed at Batoum was probably better organised than any other portion of the Turkish army, not excepting the guards; compared with it the troops placed under Omar Pasha's command were a mere rabble. Several officers of skill, experience, and spirit, were nominated to commands, most of them were from other European armies. The Irish general, Guyon, who arrived at such distinction in the Hungarian war, now known as Churshid Pasha, held the highest position amongst these. As a dashing horseman and brilliant *sabreur*, he would be more highly appreciated by the Turkish soldiery than for his superior attainments as a strategist and tactician. He seemed to unite all the qualities desirable for a general in such a command. If he failed subsequently to effect what was expected, the fault was not his: the corruption and incapacity of the Turkish pashas, and the intrigues of the divan, paralysed his efforts. His counsels were slighted, his orders counteracted, his remonstrances overruled at the seat of government. He did all a man under such circumstances could do, and more than most men would have attempted. Associated with him were Perchat Pasha (Stein), Osman Bey (Zashitzkey), Fehti Bey (Colman)—a German, a Pole, and an Irishman. There were European officers of minor rank, refugees, Poles and Hungarians, and a few Irish officers. All these proved subsequently to be capable and gallant officers; but their efforts, as well as those of their superiors, were rendered nugatory by the Turkish system, which they had no power to correct. Troops were actively poured through the Bosphorus into Asia from July until the massacre of Sinope: Kurds, Nestorians, a large force from the *corps d'armée* of Syria, and even a brigade from Tripoli, were ordered to that destination; and there seemed no reason to apprehend disaster in Asia.

The mountaineers of the Caucasus "opened the ball" in Asia. The Russian fortress of Tojnak Kaleh was taken by the Circassians by one of their sudden and daring movements, and they appear to have created with as much skill as bravery such diversions in favour of the Turks as were practicable; indeed, so it was acknowledged at Constantinople, for the government official organs thus described them:—"The Daghestans, Circassians, and other tribes, have advanced to the Black Sea, and

taken five Russian fortified posts, and razed the forts of Gostogajewskof and Tengainsky. In consequence of these disasters Russia has been necessitated to send reinforcements, which are already off the coast. Three Russian brigades have already advanced towards the frontiers at Tortun; and Adi, the pasha of that place, and Selim Pasha of Batoum, are preparing to make a diversion, which would assist the inhabitants of Lasistam, the Kurds, Circassians, and people of Daghestan, to relieve their brave brethren of the Crimea from a foreign yoke." The doings of the Turkish eastern army very little corresponded with the great words of the officials at Constantinople.

Meanwhile the Russians were not idle in these quarters: they formed an army of reserve at Redout Kaleh, on the Black Sea; on an island close to Astrabad, on the Caspian Sea, they landed a large force—it was said in Constantinople as many as 20,000 men; at Tiflis a regular *corps d'armée* was established, under General Ackoudinski Dolgoranki. Schamyl at this juncture harassed the Russians; he appeared suddenly at the head of nearly 20,000 men before Zahattali, but was promptly repulsed, after a short, but bloody and decisive battle, in which the Russians were superior in numbers and arms, the mountaineers in activity and bravery. By a well-concerted arrangement another force was prepared to fall upon Schamyl as he retired, but he effected his retreat without loss, carrying with him his wounded, and even many of his dead. It was reported at Tiflis that the Russian loss was not less than 3000 men. While the Russians were carrying out their plans to intercept the Daghestan chief, he not only made good his retreat, but burnt all the villages where Russian property was to be found in the surrounding district, and put many Russians and pro-Russians to the sword.

As upon the Danubian frontier, so upon the Asiatic, the Turkish soldiery did not await either the declaration of war or the orders of their officers, but made razzias across the line which separated the territories of the sultan and the emperor. In this respect the inferior officers were as impatient as the men. In July several severe skirmishes occurred, rather to the disadvantage of the Russians, who were not in expectation of these desultory attacks. Along the line of the river Arputsky especially these doubtful encounters occurred, as it gave opportunity for smart surprises and sudden attacks on the part of the Osmanlis. This description of warfare was put a stop to by the vigorous conduct of the Russian general. Meanwhile, Selim Pasha made demonstrations at Bayazid, in front of General Bubatoff, one of the most active and experienced of the Russian

generals, and suffered a prompt and decisive repulse. On the 4th August, Mustapha Zarif Pasha attacked General Bubatoff near Kars, and was repulsed. Next day Bubatoff assumed the offensive; and at Kurukdar, near Gumri, defeated Mustapha.

At this juncture General Guyon recommended a plan of operations to the general-in-chief, Selim Pasha, which, if carried into effect, would have probably been decisive of the campaign. Guyon, discovering that the Russian general Andronikoff (having, considerably to the right of Selim's army, driven in all the Turkish outposts) was turning the flank of Selim's line, and would get between him and Kars, advised an advance and sudden attack upon Bubatoff, and then to retire as suddenly and fall upon Andronikoff, and thus assailing the Russian forces in detail, in all probability destroy both corps. Selim had, however, some religious scruples against advancing that day, or the next, or the next—they were Turkish holidays; the result was that when the movement was attempted it was too late—the Russian spies had conveyed to Bubatoft a knowledge of the contemplated movement, so that when the Turks, by torchlight, made as they thought a surprise, the Russians, who were posted by the hills of Hadjivelekey, were well prepared to receive them, and repulsed them with severe slaughter. The first to set an example of cowardice, where there was but little valour displayed by any, was Selim himself. His generals all followed his example—Zarif Pasha especially. Riding about with terrified looks, he gave orders impossible of execution, inspiring alarm wherever he appeared, until, upon the first sign of repulse, he fled precipitately from the field. His generals either had not presence of mind to repair his errors, or had not themselves courage to supply his deficiency. They also refused obstinately to do anything recommended by Guyon or Stein, both of whom were present, and could have retrieved the fortunes of the hour if their advice had been heeded, or they had been allowed to assume command. Resul Pasha, who commanded the right flank, fled instantaneously. Vely Pasha had capacity enough to appreciate the advice of General Guyon, but his jealousy of that officer prevented his acting upon it. The men fought bravely enough for some time after the *bunbashis* and *murallais* (superior regimental officers) forsook them. One man displayed gallantry and skill throughout, and only one—Tahir Pasha, who commanded the Turkish artillery; wherever he was present the guns were well served, but except where he personally directed, even this portion of the force conducted itself badly. On some heights which commanded the Russian right he placed an excellent

mountain-battery, the fire of which could command their flank—this battery never discharged a shot. An American officer, Major Tevy, remonstrated and entreated, but with no effect, the officer in command would not be dictated to by an infidel foreigner. Finally, upwards of 30,000 Turks were routed by just half their number, and fled panic-struck in every direction.

Soon after this terrible disaster of the Turks, all the plans and successes of General Bubatoff were rendered nugatory by another incursion of Schamyl, which filled the mind of General Bubatoff with the utmost apprehensions concerning his communications, and prevented his undertaking anything worthy of his previous victories and great talents. Throughout September, Schamyl and several inferior chiefs not only cut off detachments, but stormed forts and attacked armies. They took Toprak Kaleh, and retained it. Djen was also captured by them; while the Russian general Orlianoff refused Schamyl battle, although at the head of 15,000 men, whose retreat was harassed, the rearguard suffering severely from Schamyl's cavalry.

In October, the Turks showed great spirit and energy in many points, so as to lead to a general suspicion that their previous defeat by General Bubatoff had been much exaggerated, and that the European officers, with Abdi Pasha, had lent themselves to the propagation of these exaggerated reports because disappointed in the commands and influence they had expected. Be that as it may, throughout October and November the spirit and gallantry of the Turks merited the eulogies which re-joining Europe conferred upon them. On the 14th October, the Russians having begun fortifications on the Tchouroukson, Selim Pasha crossed the river at several places simultaneously, and fell upon the Russians so rapidly that they, unprepared for the possibility of so large a body crossing to their side of the river, made an ill-arranged and desultory resistance, which ended in their being driven back with loss. They were pursued by Hassan Pasha as far as Orelli. In this attack and pursuit the Turks suffered little, and captured two of the enemy's guns, and 144 prisoners, principally of the artillery; 600 Russians were placed *hors de combat*. The Russian troops retreated upon Chenkedy, as it is called by the Turks, Fort St. Nicholas, as it is termed by the Russians. This is the border fortress upon the eastern shore of the Black Sea. Here they received reinforcements, but the Turks pursued their advantage, and forced another battle, which issued still more unfavourably to the Russians. The Turks attempted to storm the fort, but were repulsed; they again attempted a storm, and were a second time repulsed; but

the third effort was successful, as they were aided by a naval squadron, and the slaughter of the Russians was very great. Many prisoners also fell into the hands of the Turks, and large stores of provisions, gunpowder, and munitions of war. Nearly 2000 stand of arms, and, still more valuable at that juncture, 3000 sacks of flour were among the spoils. General Kloff, a Cossack hetman, was among the prisoners. Prince Woronzoff, the Russian general-in-chief of the forces in Asia, admitted in his despatch the full extent of this disaster. It is frequently desirable to consult the Russian despatches in the Asiatic war, for they are often truthful, although vaunting; and the facts are often correct when any misfortune is recorded, although the explanations offered consult Russian vanity and interests. Prince Woronzoff writes:—"It was judged necessary to keep the place as long as possible because of the provisions, but the detachment in the fortress could not do so, and fell fighting. Three officers and thirty soldiers were alone able to cut their way through the enemy's forces; but two pieces of artillery fell into the hands of the Turks, and the provisions were burnt.* It is painful for me to commence my report of the hostilities with the Turks by so unfortunate an event; but it is necessary for us to hope and to say, as in 1812, 'God will punish the aggressor.'" The pious fraud upon his own conscience, with which he closes the despatch, shows how all classes of Russian officials, even the highest, deemed it necessary, either to please the autocrat or to conciliate the spirit of the nation, to maintain a tone of hypocrisy. No one knew better than this distinguished prince that Russia was the aggressor, yet he resorts to this pseudo-piety of expression to do his part in keeping up the assumption of religious and spiritual motive, and of standing upon the defensive in this war, which the czar and his diplomatists so impudently put forth. The expression in the above despatch, that he regretted to have to *begin* his report with an account of so great a misfortune, has led several writers upon the war astray. Prince Woronzoff refers only to the operations upon the coast, which were conducted on the part of the Turks by Selim; while on the Georgian confines, Abdi Pasha conducted a separate series of operations, which issued in the contests above noticed, before the attack on Fort St. Nicholas.

The victory at Fort St. Nicholas took place on the 28th October; from that time until the 9th November, or as some accounts state the 17th November, the Russians made five different attempts to regain it, but without success. The Russian operations from the sea, designed

to assist these land attacks upon the fort, were still more disastrous. A Russian war-steamer, with troops on board, while endeavouring to land them, was fired upon from the fort and from a new battery just erected on the coast, and her machinery disabled; she, however, was drifted by the wind until, striking upon a rock close by Batoum, she went down, and out of her crew and 800 soldiers, twenty-five men only were saved and made prisoners by the crew of the Egyptian frigate the *Nile*. The English captain (Turkish admiral), Slade, called Mushawar Pasha (the advising or consulting pasha), rendered considerable service by landing arms and ammunition for the Circassians, and munitions of war at Fort St. Nicholas; he also made various captures of Russian ships, and not a fishing-boat manned by Russians could elude his vigilance. He conveyed to the Circassians Seffer Bey, who had, at the demand of Russia, been so long detained a prisoner at Constantinople. Russian and Polish deserters were also taken up by him from various parts of the coast, and conveyed to the army of Selim Pasha. Several transports from the Sea of Azoff were intercepted by him, and one Russian brig-of-war; another and larger vessel (a war-steamer, laden with arms, ammunition, and provisions, and having troops on board), in order to escape him made for Sebastopol, but was overtaken by a storm, driven on a dangerous part of the coast of the Crimea and lost, every soul on board perishing. On the 17th November, 1200 Russians were landed near to Chevetil (Fort St. Nicholas), for the purpose of co-operating with certain troops designed to attack that so frequently contested stronghold; but the Turks attacked them, and compelled them to re-embark. In this affair the loss of the Russians was proportionately enormous; 400 were left dead upon the beach, the wounded, who were also numerous, were brought on board, as were the guns, except one, which remained in possession of the Turks. Subsequently another attempt was made to land an army of 18,000 men, Slade having gone with his squadron to the Bosphorus. This attempt was also unsuccessful, the Turks opposed the landing, and the Russians had to re-embark, this time carrying their dead as well as wounded with them, and saving all their guns.

General Prince Woronzoff was now in great straits at Tiflis: Schamyl had penetrated thither in one of his impetuous and wonderful razzias, and carried off not only booty, but several prisoners, under the eye of the astonished Woronzoff. The latter was nearly surrounded, and his retreat all but cut off: the Mussulmen of Georgia were in arms; Goumri showed above its white towers the ensigns of the sultan; Redoubt Kaleh and Kislar acknowledged the

* There was not time to execute his orders in this respect, a large portion of the provisions was secured by the Turks.

ascendancy of the Crescent. Schamyl attacked and stormed the fortress of Zakhatala, after thirty-six hours' unremitted fighting and great slaughter. Kahitty capitulated to a detachment of auxiliary Lesghians and Daghestans, after a bloody resistance of several days. The Turks advanced to Alexandrople, in Georgia, which they blockaded, as also Akista (or Akhaltzick), and summoned the citadel to surrender. The plan of Selim Pasha was for the two corps of the Turkish army, that of Batoum and that of Anatolia, to unite at Tiflis after they had cleared their respective lines of route of the Russian forces; and although but little skill was shown by the Turkish leaders, and as little bravery, such was the courage of the soldiery that when led by European officers, or by the few officers of science and courage of their own nation, they greatly distinguished themselves. In many of these combats fortune favoured the Turks, or hard fighting, in spite of bad generalship, achieved the victory; and sometimes by fortuitous circumstances they literally stumbled upon success, when the measures of their chiefs were such as to render defeat all but a certainty. Abdi Pasha was always frightened in action, always apparently desirous to get out of it, and yet as eager for an advance, after having so often shown to himself and others that he did not know what to do when the object of such advance was reached. On the other hand, Prince Woronzoff, if not great in arms, succeeded by his most effective civil administration in preventing insurrection, and he effectually checked the disposition of the Russians to commit excesses upon the inhabitants of the disturbed districts. General Bubatoff, his lieutenant, displayed consummate military skill, and by one stroke of generalship he saved the Asiatic provinces of Russia from being overrun by the vehement onslaught of the Turks in the first campaign. He blew up the fort of Bayazid, just as the Turks had made preparations to take it, and led the garrison by forced marches in another direction, so as to confuse and paralyse the plans and proceedings of the Turks. He followed out this plan of destroying forts, the defence of which was uncertain, and which kept his men detached; employing their garrisons in the field, where they might be most useful in checking the onward course of the enemy, or in attacking with superior numbers the unsuspecting Turkish generals, so as to defeat them in detail.

Early in November, Mehemet Pasha, the commandant at Bayazid, advanced upon Erivan, which the Russians wisely evacuated. The Russians about the same time attempted a surprise on Goumri, which they were very near accomplishing. It was defended by Ahmed Pasha, "director of the army of Anatolia," who, recovering from the confusion into which

he was at first thrown, beat back the Russians with much carnage, and pursued them to the citadel of Alexandrople. In the neighbourhood of Akhaltzick there was fighting with little intermission throughout November, until the Turks received a defeat there, which was one of the most signal in their annals. The minor combats in that neighbourhood were all in their favour, and the encounter at Paskoff was even brilliant on the side of the Turks. Zarif Mustapha, at the head of his Bashi-bazouks and a few battalions of regular troops, drove out the Russians with the utmost impetuosity, and then threw up with celerity such defences as secured the position, which was of some importance from its vicinity to the fortified town of Akhaltzick, which it was Mustapha's design to storm. The capture of this place was urgent, because it is so situated on the borders of Georgia and Armenia as to give its possessors a secure base of operations upon a large extent of country in both provinces. Before the attack upon Akhaltzick the Turks attempted to storm Alexandrople, but their artillery was too light to make any impression upon the place, and, at their first attempt to force it, they were repulsed so signally that their troops fell back upon Goumri. At Akhaltzick they were at first successful; they entered the town, and were in possession of every part of it except the citadel, which they could not breach from the inferiority of their guns; the Russians, seizing a favourable juncture, attacked the besiegers, drove them out of the town, and afterwards defeated them on the open plain.

The accounts received in England of this battle, or rather series of battles, were contradictory; some of them coming by way of Constantinople, some by Vienna, and others through St. Petersburg and Berlin. The Turkish despatches admitted a loss of 1000 men killed (without stating the number of wounded) and 200 prisoners. From Vienna we were informed that the Turks lost 5000 killed (the wounded not being referred to), twelve pieces of cannon, and seven stand of colours, and all the baggage and stores of the besiegers. The Russian account is inconsistent with the others and irreconcilable,—especially with the detailed particularisation of the Turkish occupation of the city, and their efforts to breach the citadel. We give it from the despatch of General Andronikoff, who commanded the garrison, which account is itself discrepant with what appeared in the St. Petersburg papers.

"On the 12th November (O. S.) I arrived at Akhaltzick. I reconnoitred the position of the enemy, and obtained the conviction that the ground they occupied was unapproachable. It extended from the village of Ab down to Supplis; and this position was further strengthened

by many breastworks and batteries. The condition of the town and district of Akhaltzick compelled me to act with decision; and this the more, since I had been informed that the Turks had been reinforced, and that fresh reinforcements were expected from Ardogan, Adjar, and Kars. Early on the morning of the 14th instant, I formed a column of four battalions of foot and fourteen guns, and pushed them forward against the enemy's front at Lower Supplis. The artillerymen had been drafted from the various regiments, and the horses were taken wherever they could be got. Another column, consisting of three battalions and three light guns, was detached against the left wing of the Turkish position, on the banks of the river Poskhoff-Tchaï. This second column was supported by nine *sotnias* (100 men each) of Cossacks, twelve *sotnias* of Tiflis militia, and one detachment of noble volunteers. The engagement commenced with the fire of the artillery, which was continued on either side till thirty minutes past eleven, A.M. The obstinacy of the enemy in the defence of the position they had taken, convinced me of the necessity of storming that position, in spite of its natural advantages and fortifications, and although the river is of considerable depth. The Turks made a desperate defence in their entrenchments, in the houses, gardens, and, in short, in every point which offered the possibility of resistance. Exposed to the grapeshot of the whole of the enemy's artillery, and harassed by the fire from the Turkish foot, our own infantry, up to their necks in water, crossed the river, and attacked the enemy with such violence and overwhelming force, that, in spite of their obstinacy, they commenced losing ground. The first step backward was the commencement of a total defeat of the Turks. On this side, in Lower and Upper Supplis, we captured nine pieces of artillery; and in the village of Pamatsh, we took three pieces of artillery and two light field-pieces. The streets and houses of the village were covered with the bodies of the slain. While a hand-to-hand combat was raging on the right bank of the Poskhoff-Tchaï, a second victory was gained on the left bank. At ten o'clock a large column of the enemy, horse and foot, was descried approaching the heights of the mountain Obas Tumanski. Six *sotnias* of Cossacks were sent against this force, and the firing commenced at two o'clock, P.M. A detachment of the mountain battery No. 1, consisting of guns taken from the enemy, was sent to support the Cossacks. The six *sotnias* of Cossacks and the noble volunteers, who joined them from Upper Supplis, attacked and routed the enemy. Two hundred were killed, and the rest dispersed; and, in spite of their attempts, they could not effect a junction with the main force. At sunset the combat was over, because there

were no antagonists for us to conquer. I must confess that this success, unheard-of in its way, which was obtained by perseverance in a cannonade of four hours, and after a fire of grape and musketry, which lasted two hours, and which was consummated by a hand-to-hand engagement, could be expected only from the dauntless courage of Russian troops. All this proves that there can be no obstacles for the orthodox army, fighting at the call of the mighty Sovereign for its creed, czar, and country. Can there be obstacles for an army which is mindful of the imperial word?—"In thee, O Lord, have we trusted: let us not for ever be confounded!" We have lost one officer and thirty-nine privates, and nine officers and 179 privates were wounded. The loss of the enemy must have been very severe, for above 1000 Turks remained dead on the field of battle. We took 120 prisoners of foot, horse, and artillery; and among them a mullah, and the servants of the pasha. They were taken to the fortress. We took also ten field-pieces and two mountain guns, two artillery parks, several flags and standards, and a large number of small flags, with stores, &c."

In this battle the Russians brought into action field-pieces carrying balls of 16lb., the usual weight carried by other armies being 12lb. Those guns of superior weight were managed with the same facility as the lighter guns of other European armies; and to this superiority in their field-artillery the Russians were mainly indebted for their signal victory, although neither the despatch of Andronikoff nor the publications of St. Petersburg chose to make the acknowledgment. This was not the first time this new description of gun was brought into the field by Russia; but it was the first time upon a large scale that it was used, and contributed so signally to victory. In the battle of Baschkady, fought soon after, they were still more indebted to this weapon, for chiefly by its instrumentality the Turks were routed, their artillery being speedily overpowered. Otherwise the battle was against them, for the Turks everywhere foiled them in bayonet charges and hand-to-hand combats with the sword. In this action the Turks lost more than thirty pieces of cannon, which were spiked or broken by the Russians, and left upon the roads. The Russians in the closer strife of the engagements lost heavily; and 1500 men, according to their own despatches, were placed *hors de combat*.

Another defeat was sustained by the Turks, and on their own territory, in quick succession to the former disasters. At Ongusli, upon the 1st December, General Bubatoff attacked, by a sudden and bold manœuvre, the Turkish seraskier, and routed him, driving him in great disorder upon Kars. The Turkish camp

equipment and stores, with twenty pieces of cannon, became the prizes of this enterprising Russian officer. Later in the year the Turks were attacked at Soubattan; both sides claimed the victory, but the Turks remained in possession of the ground. They were attacked also at Baiander; where both sides also claimed the victory, but the Russians were certainly repulsed.

Both armies now went into winter-quarters. The Turks in doing so almost disbanded, and suffered from attacks concerted between the Russian armies and certain Georgian volunteer bands, fanatics of the Greek Church. In some cases whole detachments of the Turks were cut off. Tahir Pasha, who had received an English military education, did all in his power to prevent and to repair these evils, and among the Turkish officers he was by far the most efficient.

At the close of the year, Prince Woronzoff had collected an army of about 50,000 men upon skilfully arranged positions, and had written the most urgent applications for reinforcements; he was said to have remonstrated, in terms which no other Russian subject dare employ, against the tardiness with which supplies and troops were sent, and the imperfect arrangements in his rear, in those provinces over which he had no control. The Turks, greatly reinforced and better officered, held also strong positions. Zarif Mustapha Pasha and Selim Pasha were in occupation of the Russian territory of Georgia, at the head of more than 20,000 men, chiefly irregular Asiatic troops. General Guyon, at the head of 30,000 men, menaced Akhaltzick; and Stein, at the head of 25,000, menaced Alexandropol. It had been arranged at Constantinople, chiefly through the counsels and remonstrances of the British ambassador, that the European officers of the Asiatic army should not have a merely nominal command. The religious scruples of the Turks against obeying "infidel commanders" constituted the difficulty in the way of such arrangements; but the Porte undertook, notwithstanding such an obstacle, to give the European officers in its service in Asia such commissions as would release them from the subjections to the pashas which had hitherto embarrassed them. Thus both armies awaited the opening of the campaign in 1854. The two most remarkable men in action upon the fields and shores of these countries, during the events we have recorded, were Prince Woronzoff and Admiral Slade. We shall make the close of the campaign of 1853 available for giving a brief memoir of each.

Prince Michael Woronzoff, or, as the Russians spell it, Woronzow, was born at Moscow, in the year 1792, a year remarkable in European history. His father was appointed to the

embassy in London while Michael was but a child; and in England therefore he received his early education, and spent a considerable portion of his life. It was his father's intention to bring him up for the diplomatic profession,—one of the highest ambition to every Russian,—but he preferred the army, and served with distinction in the ever-memorable campaigns commencing in 1812 and ending with the battle of Waterloo. He commanded the Russian armies in occupation of France from 1815 to 1818. He left France to take part in the conferences of Aix, where his sagacity attracted attention. Proceeding home, he received from the emperor the governor-generalship of Odessa, New Russia, and Bessarabia. During his control of these provinces he showed the usual craft and greediness of his race; and in the exercise of these qualities pleased his master, the Emperor Alexander, by gaining for him fresh acquisitions of territory. On the accession of Nicholas, he was ordered to support the negotiations of the Russian ambassador at the Persian court (the emperor's designs upon Persia having first developed the ruthless spirit of aggrandisement which influenced his whole career), and there he acquitted himself to his lord's satisfaction.

Subsequently, as holding the government of the contiguous provinces, he was ordered to give efficient support to the Russian armies acting on the Danube. Prince Menschikoff, then commanding the army besieging Varna, was dangerously wounded, and had to resign the command, which Prince, then Count, Woronzoff assumed. Less fiery in his temper than Menschikoff, and characterised by the discretion and cunning hereditary in his family, he sought to gain by address what Menschikoff failed to win by arms. He succeeded in corrupting the Turkish commandant of Varna, and in this way obtained the surrender of the place. After this exploit he was made governor and commander-in-chief of the Caucasus. He suggested the plan of a "blockade" of the whole mountain district, and the gradual separation of the tribes by corruption. His plans were harassing to the Caucasians; but it was generally thought that a slow but sure success would attend them, had not the breaking out of the present war disconcerted all his arrangements. It does not appear, however, that his projects for subjugating the mountaineers issued in any solid successes; and he was himself despondent, when the war upon the Asiatic frontier of Turkey directed his energies thither; and there, whenever he was personally engaged, he incurred defeat. It is indeed questionable whether, but for the skill of Bubatoff throughout the campaign, and the unexpected victory of Andronikoff at Akhaltzick, he would not have been obliged to have abandoned all Russian Armenia and

Georgia before the end of 1853. His title of prince was conferred upon him for his services in the Caucasus, when, in 1845, the novelty of his undertakings attracted attention, and seemed to promise the best results for Russian policy.* Perhaps no subject of the czar held so high a post, or is so much honoured. As a politician, a diplomatist, and an administrator, he is wise and adroit; as a military man his plans are showy, and wear the appearance of being thoroughly perfected, but he does not himself execute them with promptitude and address. His reflective faculties are in excess of his observing, and yet he is a shrewd adept in corrupting oriental politicians. His improvements at Odessa, where he has large property, and in the Crimea, are praiseworthy. His palace in the Southern Crimea is one of the most magnificent and most beautifully situated in the world. Mrs. Neilson, an Irish lady, long resident in the Crimea, has given the most graphic sketch of both the palace and the country around it that has yet issued from the press. From a perusal of her account we infer that the prince is better adapted to the arts of peace than of war; that the government of provinces rather than the command of armies is his forte; and that in the encouragement of industry and of the fine arts he is a munificent patron.

In our account of the capture of Fort St. Nicholas, and the performances of the Turkish navy in the Black Sea, we noticed the services of Admiral Slade. He was born at Maunsel Grange, in Somersetshire, and is the fifth son of General Sir John Slade, Bart., G.C.H. This family has given servants to their queen and country in larger proportion than have most others. The father of Admiral Slade was a distinguished officer. The admiral's eldest brother died in 1843, when lieutenant-colonel of the 1st Royal Dragoon Guards; his second died a few years previously, when major of the 3rd Light Dragoons, with which notable regiment he served in India. Another brother died in 1828, when lieutenant, R.N., from fever, caught in the discharge of his duty upon the western coast of Africa. Colonel Marcus Slade, who commanded the Light Infantry during its distinguished services in South Africa, is also a brother of the admiral; and so is Frederick William Slade, the well-known queen's counsel. The subject of this notice is named Adolphus, and bears the rank of post-captain in the British navy, and that of admiral in the Turkish. He is also of the distinguished Turkish rank of a pasha, and receives the designation of Mushawar. From a very early

age he betrayed a partiality for the sea, and was entered by his family as a pupil in the Royal Naval College at Portsmouth. He was a close student, and carried off the gold medal from many competitors. He entered as a midshipman in the navy in the year 1817, on board the *Tyne* of 26 guns, and served three years on the South American station. We next hear of him on board the flag-ship of Sir Harry Neal, at the demonstration against Algiers, in 1824. He served at the battle of Navarino, in charge of the *Hind* cutter, after which he was promoted to the rank of lieutenant. When the war of 1828 broke out between Russia and Turkey, Lieutenant Slade went to Constantinople as a private gentleman, but accompanied the Capitan Pasha in his cruise in the Black Sea. Of this he has published a very interesting account, as well as of his travels in Turkey, which were extensive, and in which he informed himself accurately of the resources and military strength of the Turkish empire; the book is entitled *Records of Travels in Turkey, with a Cruise in the Black Sea with the Capitan Pasha*. Lieutenant Slade afterwards became a student in the Naval College at Portsmouth, and gave himself sedulously to the study of every branch of his distinguished profession, until appointed to the flag-ship of Admiral Sir Josias Rowley, in 1834, upon the Mediterranean station. Employed by the admiral chiefly in scientific and diplomatic affairs, he visited Sebastopol, and drew up a report of its defences; he had been previously there in the *Blondé* with Captain (now Admiral) Sir Edward Lyons. On his return home, after the usual tour of the Mediterranean service, he published his work on *Turkey, Greece, and Malta*. In 1841, after having been twenty-six years in the service, he was promoted to the rank of commander. In his indefatigable thirst for knowledge, and especially professional knowledge, he placed himself in the arsenal at Woolwich, for the purpose of studying steam power as applied to naval warfare, and obtained a first-class certificate. He then received command of the *Recruit*, 12-gun iron sailing brig, and was employed on the coasts of the Spanish peninsula and at the Azores, where his services met with the approbation of his superiors. It was not until New Year's-day, 1849, that he obtained the rank of post-captain, for which he was indebted to the influence of the first sea lord of the Admiralty, Admiral Dundas, afterwards associated with him in the allied commands of the fleets in the Euxine. At the beginning of 1850, we again hear of him as an ardent student in the Naval College at Portsmouth, from which he was taken by Lord Palmerston, and sent to the British admiral on the Mediterranean station, to offer his advice and assist-

* Mr. Sydney Herbert, who is married to a near relative of this promoter of Russian ambition, was the British secretary at war while the prince commanded a Russian army against our ally.

ance should war arise between Turkey and Austria in the case of the Hungarian refugees. By Lord Palmerston's further recommendation, he was received by the sultan as advising or consulting Admiral of his fleet, which is the rank he now holds. He is a distinguished scientific scholar, a profound proficient in fortifications and naval gunnery, and a man of extensive reading and literary research; as a linguist few surpass him: he converses freely in all the languages spoken on the shores of the Mediterranean and Black Seas. His flag-ship, the *Nuz retick* (the Victorious), is a model of naval architecture; she is built after Turkish taste, but nothing is sacrificed to Turkish prejudices. With the exceptions of the inter-

positions of Admiral Dundas and Lord Palmerston, Admiral Slade never had a friend at the Admiralty. He belonged to a very unfashionable class of British officers there—the truly scientific. “A learned sea-horse” is quite odious to a first lord: a dashing spirited young fellow, with a brave heart and a high title and plenty of money, is the favourite. Many whom Slade had assisted to give them some qualification for their profession were promoted over his head; the students from whom he won naval prizes were post-captains while he was a midshipman! Honour to Lord Palmerston for his discrimination and justice, in this instance, in giving merit its proper place.

CHAPTER VIII.

THE WAR ON THE DANUBE AT THE OPENING OF 1854.—GREEK INSURRECTION.—THE PROCEEDINGS OF THE WESTERN POWERS.

“At times a warning trumpet blown,
At times a stifled hum.”

SCOTT.

THE year 1854 opened with many and painful forebodings; for although hope against hope was cherished by the cabinets and communities of civilised countries, the general uneasiness was manifest, and many foresaw that the year could not close before the peace which had so long prevailed among the leading powers of the world would be interrupted. The thunder-clouds hung darkly and menacingly over Europe, which were so soon to concuss, and startle the whole world by the flashes and peals of war. In the meantime, Turkey waited not for the accomplishment of these portents; she had armed and battled not in vain, and her recent successes nerved her arm for more vigorous exertions. The war in Asia had issued in something like a drawn battle; the campaign had been exceedingly chequered, which terminated there with the close of the old year. Russia had not lost—with the exception of the defeats at Fort St. Nicholas—battles such as she had gained. The Turks had been shamefully defeated upon the open field, although their movements had been more rapid than those of the Russians, except where General Bubatoff was in command; and in various conflicts they proved themselves superior in close combat. The Russians in Asia, however, had the worst of the war viewed as a whole, for they had been obliged to encounter other enemies than the Turks; and these, if not uniformly successful, and if sometimes severely defeated, had nevertheless carried on a desultory warfare, disastrous to the Russians. Turkey had every right then to feel encouraged as the year 1854 opened with its dim light upon the dreary wastes of the Danube. It was a

severe winter, the operations of the contending hosts had been embarrassed by the frosts and snows of December, and with the opening year the severity of the winter increased; as war hung upon

“The skirts of the departing year,”

so the arriving year was attended by its furies. Omar Pasha was ill, but still active. The embarrassments which were so needlessly placed around him by the intriguing pashas, politicians, and bigots at Constantinople, compelled more exertion than even his vigorous habits could with impunity endure, and he was scarcely equal to any task, much less that imposed upon him by the aspect of affairs. He, however, continued the policy so successfully pursued by him hitherto; and on the 4th January he opened the work of 1854 by an attack upon Giurgevo in person. The contest was little more than one of skirmishes, and seemed only to have been directed by Omar to give heart to his men for more important struggles, and to increase their confidence in themselves and him. The Russians, however, lost more men than the Turks, and both in skill and courage the latter showed superiority. The Turkish general seems to have been unable to undertake anything further, but having given such directions to his officers as, if properly executed, would lead the Russians to believe that his vigilant eye was still upon them, he retired to Schumla, and was for some time in imminent danger of death. The tidings of his illness, although fortunately kept pretty well from general cognizance, soon reached the Porte, and the sultan immediately dispatched

his own chief physician to be in attendance upon his most trustworthy general. Before his personal surveillance became essential, his recovery was completed: had the Russians known of his illness, they would have been emboldened to more enterprising measures.

The corps of the Russian army which was directed to advance upon the Danube in a westerly direction, bent their march upon Kalafat; but as this corps was not of itself of sufficient strength to attack that place, the general in command ordered entrenchments to be made behind the village of Citate,—we presume in the hope that troops from the corps moving to their left would converge upon Kalafat also, and in sufficient time to co-operate with them. Seeing that the columns moving on their left were within a few hours' march of them, it indicated some timidity on the part of the Russian general at Citate to entrench his army there. The lessons of the previous autumn and winter were not forgotten: Oltenitza especially filled the recollections of the whole Russian army. The entrenchments were not well executed, and instead of being thrown up before the post which they were intended to defend, they were formed behind it; and as an enemy in possession of the village would have gained an advantage towards the accomplishment of his intentions against the trenches, the Russians were obliged to occupy the village also. The village consisted of a long, straggling street, with intersecting lanes; behind the houses lay farmyards; and large haystacks in great numbers were in those yards and the adjoining fields, also ricks of maize and piles of firewood; near the centre of the street is a large Greek church, and for a mile in one direction, and some seven-eighths of a mile in the other, the street straggles away from this centre. The troops in the neighbourhood were commanded by General Fishback: his generals of division were Englehardt and Bellegarde. Prince Vasilitchkoff commanded the cavalry; General Aurep, it was said, commanded in Citate. The prince was the only Russian general in the corps of Fishback; the rest were all Germans—ever ready, as we have shown in our account of the war in the Caucasus, to aid Russia as mercenaries in her career of spoliation. Achmet Pasha and Ismail Pasha commanded at Kalafat; and these, acting in concert with Sami Pasha, the intelligent and most gallant governor of Widdin, resolved to attack the Russians quartered so securely as they thought themselves at Citate. A certain American officer has described this as an attack with “purposeless aim, although of fortunate issue;” but the purpose was wise, and had it not been wise on general grounds, it were still wise from necessity. The Turkish pashas must have been assured that if the three advancing

corps were to unite at Kalafat, under Gortschakoff, the chances of maintaining themselves at Kalafat in the face of such an army were greatly lessened; and to maintain Kalafat was worth great sacrifices, for it was the only place the Turks had on the northern shores of the river, and as long as they held it, the Russian possession of Wallachia was threatened in a manner to disturb its security. It was evidently then good generalship to strike a blow at Citate, sudden and effectual, before the converging corps of the invaders should concentrate. Accordingly, early on the 6th January (Christmas-day, old style), while the Russians were either wholly in repose, or looking forward to a day of religious festival and rejoicing, the Turks marched stealthily out from Kalafat, and proceeded along the road which lies through Romau, Galoutza, Maglavit, Gunia, and Funtina. As if Heaven smiled upon their enterprise, the morning was exceedingly fine. The severe frost which had prevailed suddenly relaxed the previous day, and rain fell, but on the morning of the 6th the sun rose genially, the air was clear and warm as on a sunny spring day; the Danube rolled its huge masses of floating ice crashing by the works of Kalafat, and its uproar could be heard even while the guns were passing through the gates of the defences, so quietly did the host move out to their enterprise. The Turks never fight so well in cold weather as under a warm sky, and the effect of the change was observable upon the soldiery. A column of 10,000 infantry, under the more immediate direction of the two pashas, was supported by 4000 cavalry under Mustapha Pasha, and 1000 irregular cavalry or Bashi-bazouks under Ferck Bey, with Skender Bey, so well known by reputation both in Europe and Asia, as his second in command. Two batteries of six guns each accompanied the infantry. Two “battalions” of light field-pieces were with the cavalry, and there were two howitzers with the reserve. The advance-guard was under the command of Tefih Bey, and consisted of about 1000 chasseurs, or irregular infantry, armed with the new French rifle. Tefih Bey arrived at the entrance of the village about nine o'clock, followed closely by Achmet Pasha; the former with some guns entered by a cross street or lane, while the latter took post with a portion of the infantry in reserve, and Ismail Pasha charged into the place at the head of the main body of the infantry. The cavalry wheeled round to the other end of the street, where a detached body of Russians were posted, and whom the cavalry cut up, driving them down the street to the church, the Russians making every curve in the line of street and every projection of house a defence, against which the light guns with the cavalry immediately opened,

sweeping away the defences and the defenders, until the latter fell back upon the entrenchments, the guns of which played with effect upon the cavalry, who still pressed forward, suffering much and inflicting some injury. The Bashi-bazouks threw themselves from lane to lane, and taking the houses in the main street from the rear, stormed them, putting their occupants (the Russian soldiers) to the sword. These men were thus as formidable dismounted as when in their saddle. The irregular infantry also clambered into carts and upon the firewood, maize-ricks, and haystacks, and thence replied to the fire of musketry opened by the Russians from the windows of the houses which they occupied when surprised by the attack, or to which they had been driven. Selim Pasha and his infantry were in front, but even there fighting in line was out of the question. Every rush of the infantry was, however, facilitated by volleys of artillery; then, leaping forward, the foot soldiery, hand to hand, encountered every group of Russians who could find means to throw up some obstacle between themselves and their opponents, or who defended the houses which now front and back were assailed with such determined impetuosity.

Thus for some hours a wild and murderous street-fight, more bloody than those sustained behind the barricades of Paris, was kept up between the defenders and the assailants. The superiority of the light-armed Turk, who in close combat frequently used his musket merely as a shield, and with his scimitar or dagger rushed into the closest struggle with his foe, was evident. Those of the Russian soldiery who were roused from bed or from breakfast, and had no time properly to accoutre themselves, fought best, as they were unencumbered by the long-tailed coats and heavy helmets. Before twelve o'clock, the village of Citate was cleared of the Russians with great slaughter, and very little loss to the Osmanlis; and such of the former as could, found refuge in the entrenchments behind the village. There the Russian cannon were principally placed; and they were twice as numerous, and of twice as heavy mettle as those of the Turks. Upon these entrenchments the Turkish cannon opened with deadly skill, while the Russians served their guns as badly as it was possible for soldiers to serve artillery; yet in the front of these entrenchments the Turks incurred considerable loss: cannon fired point-blank upon a body of men rushing up to their very muzzles must be destructive, however incompetent the gunners. Twice, or as some accounts say, thrice, the Turks were scattered back from the open mouths of those instruments of death; but the four Turkish pieces, which were with the cavalry who had entered to the right of Citate, had opened upon the

entrenchments with excellent effect, levelling the earthworks and dismounting the guns; and the cavalry had actually ridden into the entrenchments, and put many of the gunners to the sword, but with severe loss. If a battalion of infantry had been at that point with the cavalry, the trenches would have been at once conquered.

Thus matters were when a new event caused the assailants to hesitate, and singularly changed the whole aspect of the combat. The Russian troops in the neighbourhood of Karul heard the firing (or, as some say, received a messenger dispatched by the Russian general at Citate the moment he recovered from his surprise), and hurried to the scene of battle. This reinforcement consisted of the regiment of Odessa, 3000 strong, and two regiments of the tenth division of infantry, each regiment of the same strength,—with that of Odessa making a force of 9000 infantry, together with 600 horse and nine guns. This new enemy appeared on the road from Respicht, where at the beginning of the action Achmet posted himself with about half a brigade of infantry, while Ismail gallantly commanded the attack, riding everywhere on a large white horse, and wearing a white pelisse, as if anxious to show himself to the Russian marksmen. In the critical juncture of affairs now developing itself, Achmet Pasha met the advancing host; and while Ismail and a portion of the brave assailants of the trenches kept order of battle in that direction, another portion made front in their rear—a manœuvre which would try the courage of the most veteran soldiers of our best European armies. Fortunately, the Russians had been driven out of the village, their battery at the church had been captured, at the lower end of the main street a Russian battery had been also taken, and at the opposite end of the long line of street a redoubt, which had served the Russians as a defence, had been stormed; now every barrier formed by the Russians became one for the Turks against the new Russian force in their rear. The orchards, ricks, barricades, farmyards, all were made into ready and efficient defences; while Achmet Pasha with the *immediate* reserve formed the first line of the new front thus so gallantly offered with impromptu, skill, and valour by the Turks. Assailed between two fires, and by double their numbers, the prospects of the conquerors seemed now darkly changed: the new Russian force was already in the streets of Citate; the cavalry had dashed upon the guns of the Turks, some of which had been dismounted, and the positions of which they were changing; but a volley of musketry, and a discharge of grape and canister left half that cavalry prostrate on the spot where they charged. Happily, when the Turks were advancing upon Citate they left some troops

on their line of march to cover, if necessary, their retreat; for these Ismail Pasha now sent, and they arrived just at the moment when their presence was essential, not indeed to repulse the column from Karul, that had already been effected, but to complete its rout, prevent it from reforming, and to advance in a new attempt upon the entrenchments. It was at the moment Ismail Pasha's reserves were in sight that the Russian reserves had made their attack: they came on in dense columns—just as the French used to do in the peninsula—and were received by the Turks as our “thin red line” used to receive the columns of the French. The result was similar: before the Russians could deploy, the line two deep of musketry flashed upon them, and with the grape and canister of the cannon rent the column into fragments; and the speedy charge with the bayonet upon the disjected masses, put them completely to the rout, the living line passing as it charged over piles of the fallen foe. As the Turks were exhausted with this charge, the reserves from Moglovitz arrived, and threw in their fire upon the retreating Russians, whose retreat was speedily turned into flight, leaving several guns in the hands of the victors, while the dispersed and fugitive soldiers were broken beyond the power of their officers to rally. Nearly 3000 Russians had now fallen in the streets, field-works, defences of the village, and along the road by which the Russian reinforcements arrived. Still there was more work to do; and joining the reserves to his already victorious force, Ismail Pasha precipitated them against the entrenchments, and with success.

Citate is built upon a slope, and the entrenchments behind the town command it. So long as Russ and Turk fought hand-to-hand in its streets, the batteries from the trenches could not play upon the latter; but when they attempted a storm, then as they mounted the ascent they were exposed, without the slightest shelter, to the devastating fire of the trenches. So excited were the Turks in the flush of their previous triumph, and the confidence inspired by the arrival of their reserve, that they charged the entrenchments with enthusiasm. The commands of their officers were anticipated by a general impulse; and through the murderous fire, across the bellowing guns, breasting the measured array of musketry, forcing aside the fixed lines of bayonets, onward rose the tide of brave men, and every arm struck for life and victory. It was victory, but it was carnage—horrible; no quarter was expected, none need have been: the Russian officers, pulling their caps over their faces, rushed madly upon the weapons of the stormers, and died pierced with every weapon borne by the victors. There were no prisoners—the broken and scattered

trench, and the bleeding piles of conquered slain, alone remained. The Turkish loss was very little anywhere but in the entrenchments. They had so completely surprised the Russians on their arrival, and were so well protected by the defences of the town when they turned front to the Russian force from Karul, that their loss was mainly before and in the trenches: here it was considerable—1000 men in killed and wounded; but they had at this cost stormed a strong place, dispersed two separate corps, killed and wounded 6000 of the enemy, proved that the Turkish soldier well led could take as well as keep entrenchments, and so humbled the vaunting foe in the eyes of all Europe as to lessen his courage and sully his renown. There was great booty captured; but as the Turks did not intend to hold Citate, this was to a great extent destroyed.

On the 7th the Russians made a reconnaissance in force, but retired upon the advance of the Turkish cavalry and some field-guns. On the 8th a more formidable demonstration was made, and there was some severe fighting,—the Russians who were sent to attack putting themselves on the defensive the moment they felt the fire of their opponents. On the 9th the Turks advanced, and drove the Russians before them, who retired upon Krajova. Various estimates are given of the Russian loss, some making it as low as 3000 killed and wounded: we believe that the estimate we give is the nearest to the truth. Some accounts also represent the Turks as retiring upon Kalafat on the 7th, leaving the Russians in possession of the entrenchments; but such accounts are entirely inconsistent with the nature of the victory, and the efforts which the Turks had chiefly in view—namely, to clear the neighbourhood of Kalafat from the presence of the enemy.

The battle of Citate made a great impression at St. Petersburg. The czar bit his lips at the intelligence until the blood appeared; and it was dangerous to be near his person and hazard any unwelcome remark. The terrible excitement he evinced after the battle of Oltenitza was renewed; and he sent orders to take Kalafat whatever the cost of life. Bloodshed was of little moment to that man, if his humours only could be gratified, and his ambition promoted. General Aurep, who it was alleged commanded in Citate, was ordered in disgrace to the rearguard of the army of the Caucasus; which, if a position of humiliation to him, was also one of peril, for the rearguard of that army had, in fact, become the advance-guard of the troops destined to supply the war on the Georgian and Armenian frontier, and was constantly harassed by the free bands of the unvanquished regions.

As soon as the expeditionary force had retired from Citate and the surrounding country

upon Kalafat, that place was further strengthened, and also Widdin, upon which as a place of support it rested; and the returning severity of the weather precluded all hostile operations on either side, until the spring of the year should enable them, with renewed resources, to open another campaign.

At this juncture, General Schilders arrived with instructions from the emperor to Prince Gortschakoff, and with a commission to report upon the losses of the army. He confirmed the report previously given, that up to New Year's-day (old style) 35,000 Russian troops had perished, many also being in hospital, of whom a considerable portion would probably be disabled from active service. Prince Gortschakoff, upon the reception of his new commands, was to perfect his arrangements for a decisive opening of the spring campaign early in February; and, meanwhile, supplies and troops were to be moved southward from Bessarabia and the capital of Moldavia. The usual boastings were now rife in St. Petersburg, Brussels, and all the German cities from Berlin to Vienna, and wherever there was a pro-Russian party. Prince Gortschakoff was to operate, in February, at the head of such an army as would overwhelm, not only Kalafat and Widdin, but sweep the armies of Omar Pasha behind the Balkan. This seems a suitable occasion to satisfy the inquiry which may arise in the minds of our readers, "Who is this redoubtable Prince Gortschakoff?"

The name of Prince Gortschakoff has few *souvenirs*. We need not occupy much space in our history, or much time on the part of our readers, in a narrative of the commander of the Russian Danubian armies. He was born in that year of great events, and in which, and the year that succeeded it, so many great notorieties began their existence—the year 1792. He has an elder brother and a younger. The elder served well in the army of General Diebitch, in 1829, and was in constant attendance upon the person of that chief, and in his counsels, until the treaty of Adrianople put an end to that war. He was afterwards employed as governor of remote provinces, especially in Siberia. The younger brother became a diplomatist. He was chief-secretary of the Russian legation in London, in 1824. He was afterwards employed in negotiating the delicate affair of the marriage of the Grand-Duchess Olga with the Crown-Prince of Wirtemberg. Lately, he has taken a prominent place among the diplomatists of this war.

The subject of this notice seems always to have been engaged in hard work; and, without much praise or blame, he has made his way to high distinction. We can account for this by what appear to us to be the leading peculiarities of his intellectual constitution. He is not

a vain man, and does not seek praise; yet he is not indifferent to honour, and fails not to wear upon his breast the crosses, medals, orders of civil and military distinction, and badges of imperial favour. He is a man of no imagination. His perceptions are also slow. He has no original power, no genius; he is not even a clear thinker; yet he is a plodding, painstaking, honest performer of prescribed work. He would have walked into Kalafat if he had known how, very indifferent as to any results of any kind whatever. If directed to dry up the Danube by any one whom he thought ought to know how the thing should be done, he would, according to his orders, work assiduously, regularly, and truly, and try to dry it up, although with every apparent certainty of being himself swept away with its flood. He entered the artillery service, and he is an artillery officer to this day, and nothing more. To fire upon a position, a fortress, or an advancing column; to defend a position or a fortress according to any good old rule and prescribed plan or principle which he happens to know, is about the extent of his capacity. He will do what he is ordered, and say nothing about it before or after it is done; or he will try to do it, and, failing, be neither more nor less communicative. He is soldierly in his bearing, and has a severe, frank face, bearing a strange blending of the intelligent and the puzzled in its expression, such as is often to be seen with merely practical and unimaginative men in our own country, especially among gentlemen of the military profession. His conduct is very much influenced by his religion, when the naked idea of military duty does not rule it. He believes in God as the God of the Greek Church and of Russia; and that the Greek Church and Russia and the emperor (who is both the Greek Church and Russia) are almost, if not quite divine. During his whole military career, he has always been hammering away at something or at somebody. He served in the Danubian campaign, in 1828-9; he was the artillery officer of General Urassoffsky, while the latter engaged the attention of Redschid Pasha, in order that General Diebitch might cross the Balkan, and gain Adrianople, while Redschid was so occupied. The encounters between Redschid and Urassoffsky were many, and the victory was nearly as often on the one side as the other, and Gortschakoff was certainly always in those combats, at whichever side victory scattered its laurels; but never, in any despatch of his general, nor previously in any despatch of General Diebitch, is any mention made of his name: he is never praised, and he is never blamed. In the great Polish insurrection he again served as general of artillery, under Diebitch, with the same queer sort of distinction—that of always doing what he was

bid. The cholera took away Diebitch, and then Paskiewitch succeeded to the command; it was all one to Gortschakoff—he still did as he was bid, and powdered away with his artillery according to the best-known rule which he understood himself, or which any one else might tell him who was authorised to tell him anything. In this way, by a quiet sort of fighting (if that be not a solecism), and a constancy to his duty, he rose to distinction and power, and at the period which our history finds him, he was commander-in-chief of the Russian army of the Danube, aide-de-camp general, general of artillery, chief d'état-major of the active army, military-governor of Warsaw, and first member of the Council of Administration of Poland; and in the absence of Prince Paskiewitch, the *Namietstwick*, or Secretary General of the kingdom, he held the privilege of presiding at the deliberations of the council of that kingdom.

Having left the army of Omar Pasha shut up from enterprise, during the weeks of his illness and the severity of the Danubian winter, it seems a suitable moment to describe a portion of his army that figured in the previous contests, and which we shall hear of again and again during the progress of the war. A passage descriptive of the Russian soldier, from the graphic pen of the "Roving Englishman," enlivened a previous chapter, we will now give a description of the Bashi-bazouk from the same source. The description is, with certain exceptions, as true as it is humorous and racy:—

"He is a dark brown, wild-looking fellow, in golden clothes—a modern captain of a free company. His arms are a wonder of expensive uselessness. The settings of his pistols are perhaps solid silver, or silver-gilt, inlaid with precious stones, but their barrels were probably made by some clumsy Greek armourer during the war of independence; their locks are on the old flint and steel principle, and bad of their kind; yet the treacherous flint is of course fixed in a silver holder, and the worthless lock has very likely a thumping turquoise stuck rudely on to it. The fellow is a barbarian, and looks like it. He is tawdry, loose, and dirty beyond belief; he is fierce, selfish, and greedy to an equal degree; he is clumsy and awkward; his gorgeous clothes seem to be thrown on rather than put on; and his apparel presents the same odd contrast as his mind. He comes from some far-away country—from the mountains of Circassia or Albania, from Syria, or where not—so that he does not comply with the modern fashion of the Turks at Constantinople, and cover his head merely with a red cap; but he twines an immense shawl in picturesque folds round and round it till he looks, while sitting down, like a gigantic mushroom. It may be that the

shawl, thus apparently misapplied, is worth almost as much intrinsically as the useless pistols; but it is incredibly soiled, and dirty, and twisted, and tangled. I have used the word 'apparently' however with intention, for the headdress here described might be as absurd as costly in England, we should be slow to attach the idea of ridicule to that which is a general custom in any country. If, therefore, most of the oriental countries keep their shaved heads warm, we may conclude with tolerable certainty that the practice is approved, and that they do so wisely. It is at least positive that a thick covering will foil the rays of the sun much more successfully than a thin one; and this is an object of paramount importance in a country where the inhabitants pass most of their time in the open air, and sun-strokes are frequent and dangerous.

"The rest of the Bashi-bazouk's dress is contrived probably for reasons equally prudent, if one could get to the bottom of them. An immense sash of thick silk is wound many times round his loins, and again above it is girded a broad thick red leather belt with pockets and receptacles for arms. This makes a capital support for a man who passes sometimes twenty hours on horseback at a time, and who never saw a chair with a back to it. His pistols and silver-sheathed sword (as splendid and trustworthy as the pistols) stick out so far, both before and behind, that he could hardly wear a long coat, or button even a short one. His waistcoat is therefore one dirty blaze of bad embroidery in front, and he has also embroidered sleeves to it; while his jacket is made something on the principle of a *husar's*, save that it covers both shoulders; that is to say, the large, open, fantastic sleeves, hang down behind, like a fanciful pair of golden wings. His breeches are also embroidered, and they appear at first sight too short, for they fasten far above the knee, and leave the hinges of the leg as free as a Highlander's, and probably for the same reason. A man had better not confine or cramp his knees who is always scrambling up and down mountains, and who must be always ready for a dashing leap across some yawning chasm. From the commencement of the calf of the leg down to the ankle, the leg is bandaged as tightly as strength can bandage it: it is bandaged until the leg becomes as hard and shapeless, and almost as thin as a broomstick. Over the bandages he wears leggings of the same eternal gold tinsel, confined by long, gay, flaunting garters of scarlet silk. His shoes are curiously old and foul; he kicks them off therefore at every opportunity, and curls his legs under him. He is a curious study, but he does not improve on acquaintance. He has none of the virtues or vices of a soldier. He avoids fighting

whenever it is possible, and will think it an extremely proper thing to decamp at the approach of danger. His idea of the duties of the military profession is firing felon shots with a long rusty gun from a rock on the sea-coast, or a tree by the way-side. His glory is to surprise and butcher the defenceless, as they wind through some lonely mountain gorge; to torture his prisoners for sport; to rob his friends adroitly. He is a mere marauder—a bandit—a ruffian. His savage heart would make a monster of him, if it were not so often palsied by a dastard fear. His love of money is a passion; he clutches it with a rapacity, and hoards it with a secrecy quite wonderful. He would not give a piastre to save his comrade from being flayed alive; he would rather even suffer torture than part with it for any purpose, save that on which his foolish heart is set. Perhaps he covets some glittering ring, which he has seen in the bazaar and cannot steal; perhaps he wants a watch, or a more magnificent pair of pistols, or a new pair of silver-hilted pincers, to take little bits of ardent charcoal out of the fire and light his pipe. He plucks out his beard to look young; he waxes his mustachios and arches his eyebrows with his dagger; yet this love of fine appearance seems strange in a man who always leads a solitary, roving life; who will never marry, and who lives unbeloved; who would as soon rend the coins from a virgin's hair as ease a Rayah merchant of his ducats. He is abstemious, almost to contempt of dainty food; a few grapes or olives, according to the season, a lump of coarse black bread, a few onions, and a little unsweetened coffee, is all he cares for. He has a great fear of disease and death. He wears charms and talismans to protect him from harm. He believes in omens and magicians, but he has no real religion."

In the above description of a very dirty military dandy, a robber without being exactly a professional robber, neither his patriotism nor courage have had fair play from the writer. He is sometimes a hero, sometimes a poltroon; and often, when he appears the latter, he is as gallant as ever. He has no notion of regular warfare; he does not profess to be a *regular* soldier; he despises the drill, and the drilled man heartily. He will take to flight when placed before regular troops, but not to disappear altogether from the field of action, for he will be found speedily, somewhere or other, on the flank or rear of the troops before whom he fled. He will keep at long range while he sees regular forces in disciplined array, but let them break line, and he does not fear single combat, but will dash upon his enemy, and fight or turn, or turn and fight again, just as in his opinion any stratagem is open to him, or opens to him a prospect of success. These

men, when sufficiently trained to act with regular troops, have, as in the battle of Citate, shown great bravery in the most trying emergency. They are often, they are generally, the first in the field and the last out; they will stay to plunder, or with desperate courage cover a retreat. They have certainly no romantic notion of generosity; yet they have love of country, and a sense of loyalty to their sovereign: they have often proved incorruptible to Russian gold, although always ready to risk a great deal to plunder it. Attempts to discipline them in the modern system of European infantry, or even cavalry, have generally failed, but not always. Our readers will judge of Omar Pasha by a knowledge of the materials out of which he had to make an army, and such, for the most part, they were. Under such commanders as Skender Bey, these men would go anywhere; but neither for him nor any one else would they submit to the regularity of discipline required in well-organised troops. In the battles yet to be described, in which the peculiarities of the Turkish forces were displayed, our readers will comprehend many features of the combats, and the motives and plans of the Turkish officers, by understanding the sort of troops which composed those forces, and which these officers had to command.

While matters on the Danube seemed to slumber, and, wrapt in the chill of winter, the belligerents found even their quarters scarcely tenable, the official tyranny of Russia was busy in the unfortunate provinces occupied by her armies. The Moldavians suffered at first much more than the Wallachians from the pillage of the Russian soldiery, and the oppression of the Russian chiefs. It was deemed politic to spare the Wallachs, because of their vicinity to the enemy. Prince Gortschakoff, in a fierce proclamation, threatened them, however, with a vengeance "speedy and dire" if they held any intercourse with "the pagan enemy," or showed that enemy any sympathy. The Wallachs did show them sympathy; and this resulted in the decapitation of three of the principal inhabitants in one village, and the scourging of many heads of families in another. In a third case, the whole village was plundered, and the people left utterly destitute. In a fourth instance, the men rose in rebellion against the violation of their women; and after all the women were violated, every male inhabitant was put to the sword.

The frost and snow hemmed in the Russian troops in their cantonments from any active operations against an honourable and armed foe; but they still found opportunity to visit with rapine, rape, and murder, a most harmless and inoffensive peasantry. Never was the military occupation of an enemy's country

more resentful, dishonest, and treacherous; but in this instance the provinces occupied were under the protection of the emperor, and Prince Gortschakoff marched into the territory proclaiming that protection, and offering justice to all.

The sultan's dominions nearer to the capital were exposed to still more serious troubles. The Greeks of Greece and the Greeks of Turkey formed a confederacy for the subjugation of the empire by a revolt, in concert with the Russian invasion; and the bursting out of the insurrection greatly depressed the sultan, embarrassed the allies, discouraged the people in the occupied provinces, and emboldened Russia to assume a loftier tone of boasting and defiance to Turkey and to the world. The establishment of the kingdom of Greece had been an event altogether in favour of Russia. The incompetency and servility to Russia of our foreign minister, Lord Aberdeen, spoiled every thing at that juncture which the good intentions of the allies proposed. The territory taken from Turkey for the purpose of making a Greek kingdom was too small or too large. Either such an extent of territory as might support a population numerous enough to retain independence should have been carved out of the sultan's empire, or the Greeks should have been left under his authority: the coercion brought to bear upon the sultan for the recognition of Greece, should have been employed (if employed any way) to secure his Greek and other Christian subjects their civil and religious liberties. The plan, as it was executed, was Russia's. The Emperor Nicholas, in his conversations with Sir G. H. Seymour, already referred to, plainly declared that he would never suffer the revival of the Greek Empire, or anything similar to it; which means that he thought any power in Greece or Constantinople strong enough to defend the Bosphorus and the Dardanelles, and to use the position of strength afforded by their shores, would be an impediment to the designs of Russian conquest sufficient to frustrate them. According to this policy, the little kingdom of Greece was just made large enough to be a focus of intrigue and treason for all the discontented Greeks of the sultan's empire. Russian diplomacy found there a sufficient theatre for its talents; and at Athens, as a centre, influences were laid and maintained, which soon spread through the whole population of European Turkey professing the Greek rite. The sums expended by Russia in Greece since 1829, would never be lavished by any power for honourable objects. It was designed that this outlay should repay itself by its effects upon Greek fanaticism in favour of Russia, and its efficiency in spreading discontent among the subjects of the Porte.

The weakest prince in Europe was by the wisdom of "the powers" put upon the throne of Greece, reminding one of the inimitable satire of Lucian, when he describes the gods as doing things too foolish, and using instruments too feeble, for mortals in their inferiority to think of. Otho and his patrons were at once feared, hated, and ridiculed by the Greeks: as their ancestors laughed in the theatres at the gods they adored in the temples, so the Greeks bowed down to "the powers" with servile reverence, and lampooned the puny despot they set up. Otho became, of course, the possession of the most active and keen amongst the diplomatists, which is only another way of saying that he became from the first an instrument of Russia. Austria was very anxious to see a scion of the house of Bavaria on the throne of Greece; for it held out to her, through her influence upon the former, the prospect of promoting her own selfish ends upon Turkey, by pulling the strings of the Bavarian puppet at Athens. Austria became too weak and dependent upon Russia to turn the scheme to any account; and besides, her diplomatists were outwitted so thoroughly by those of the czar, that in seeking only for herself she was made solely to serve Russia.

The policy of the sultans towards their Greek and other Christian subjects became greatly improved; but still the Christians of every creed, and everywhere under the government of the Porte, were great sufferers: they were plundered, and sometimes murdered, by the pashas, and even by mobs, who were allowed to do these things with impunity. Beautiful Greek and Armenian girls—especially the former—were maltreated in a manner too horrible to describe, and their testimony would not be received in any court of justice: so that while the spirit of the sultan and his government was lenient, conciliatory, and just, that of the pashas and people was fanatical, insulting, and oppressive. There was no indisposition in Europe to promote the liberty and rights of these sufferers; but Russia never sought to do so, except in some form that would extend her own authority. Any liberal concessions to the Christians were stigmatised as "new-fangled western ideas;" and the sultan was warned against "those revolutionary changes" by the Russian minister at Constantinople. Indeed, it was very injurious to Russian designs that any reforms in the administration of Turkish affairs, favourable to the liberties of the Greek Christians, should take place. The czar hoped to work upon their sense of wrongs and oppressions to keep up disturbances, which, essaying to put down in the sultan's behalf, there would be afforded pretexts to demand new treaties, conferring new titles to Russian interference with the civil affairs of Turkey, and ceding more

territory for the czar's better management. Thus affairs in Greece and Greek Turkey were kept in incessant irritation; the emissaries of the Russian chancellerie everywhere fomenting discontent, because of the very grievances which the Russian ambassador as incessantly interposed to prevent the Porte from redressing.

In this way the elements of insurgency were seething up to January, 1854. The British ambassador called the attention of the Porte to the justice and necessity of vigorously carrying out all contemplated reforms, and he gave to his own government constant information on the subject. The sultan and the sultan's government, although obstructed by the Russian embassy, and the bigotry, ignorance, avarice, and tyranny of the pashas, as well as by the fanaticism of the Mohammedan population, were vigilant to redress every wrong, and secure to the Christians every privilege compatible with the existence of a Mohammedan government. But the greatest difficulty in the way of reform was in the intemperance, bigotry, dishonesty, falsehood, and immorality every way, of the Greeks themselves. The Turks regarded them as rogues in the very grain—as born traitors, liars, and robbers; and they were very much in the right, unhappily, in these opinions. Many of the Greek merchants and persons of opulence and education were an honour to the empire, as they would be to any country; still retaining the commercial enterprise and judgment of their ancestors, when Greek colonies and commerce were the fame not only of the Mediterranean and the Euxine, but of all Asia, Europe, and Africa; still characterised by the lively and caustic wit of former generations; still born with that unrivalled genius which shone in the works of Praxiteles or Ctesiphon, and that taste which of old could make proselytes by the exquisite sculpture or carving of a deity; still speaking in the powerful and euphonious tongue which filled the eloquence of Demosthenes with its thunders, and the song of Sappho with its strains. Yet the mass of the Greek people were, if addicted to arms, cut-throats and banditti; if engaged in commerce, cunning and fraudulent—and almost in everything and everywhere false. The glory of Grecian valour had sadly departed, for the Greeks outnumbered their oppressors in Europe three to one, and yet only responded to their oppressions by clanking their chains, and crying in the ears of Europe, or turning with desire and hope to the stern despotism of the North. They mingled in all the vices of their conquerors, and surpassed them on their own ground and in their own way; and so surrendered to pleasure their energies, as to justify the taunt of Byron:—

“You have the Pyrrhic dance as yet,
Where is the Pyrrhic phalanx gone?
Of two such lessons, why forget
The manlier and the nobler one?”

Perhaps this and kindred taunts were felt, and amongst the braver Greeks enkindled a desire for liberty; but still, as a whole, they were always relying upon foreign valour, again reminding one irresistibly of the stinging words of the generous and noble friend of their race already quoted:—

“Trust not for freedom to the Franks,
They have a king that buys and sells:
In native swords and native ranks
Your only hope of freedom dwells.”

Cringing and cursing, rebelling and running away by turns, they were at last, it was thought by the czar and his man Otho, ripe for a real revolt. Accordingly, in defiance of the terms on which Otho received his throne, and of the recognised neutrality of his kingdom, he literally placed himself at the head of the conspirators. His chief minister might as well have been chairman of their committees; and the printing-presses of Athens threw off oceans of insurgent proclamations and appeals, which, somehow, the censor of his Hellenic majesty never could detect. Arms, too, from the government arsenals, or rather stores, found their way into the hands of the rebels, who had been rapidly organising from the moment Turkey proclaimed war; and arms were also given into the hands of the sympathisers, who were collecting in bands, and bound by oath to liberate their brethren from the Osman yoke.

The queen of Greece, a much more manly person than her husband,—besides having the comparative advantage of not being a fool,—might be considered in the light of secretary to the sympathisers, and Russian paymaster. Through her majesty, the czar's minister distributed most of the douceurs so amply given to reward the labours of spies and emissaries. The Greek priests were paid through their superiors; they were, major and minor, all agents of his imperial majesty. Everywhere, in Greek chapels and convents, splendid presents from the czar were paraded with great pride. The clergy showed magnificent rings; and the churches were enriched with pictures, relics, altar furniture, and various ecclesiastical trappings, bestowed by the imperial protector of the Greek Church. Assassination and robbery were amongst the instrumentalities set to work in this reckless conspiracy, where czar, king, queen, and priests, were all straining after objects of their own by every means, however unprincipled; and only a few gallant Greeks were really fired with the patriot's noble aspirations.

King Otho and his ministers, we are strongly

inclined to believe, would never have yielded to the gold of Russia, or her promises of aggrandisement for themselves, if Bavaria and Austria had not covertly encouraged the court of Athens. It is true that the courts of Vienna and Munich afterwards united with those of St. James and the Tuileries in remonstrance to both Otho and his queen; but Otho would never have braved the Western powers and Turkey for an hour, if he believed that the German governments were inimical to his procedure. Russia, however, flattered him with the promise of enlarged dominions; and it was said that the Russian minister so little respected his sagacity, that he felt himself safe in holding out to his hopes the dazzling promise of an imperial crown. As the bird of Eastern story, which flitted from tree to tree with the talisman, mocking the eagerness of the pursuer's ambition, so would the eagle of Russia play with the unhappy aspirant to the crown of the Byzantine Empire. Her majesty, who could see so much and so well where gold gave light, was blind to the omens of disaster which at the very outset of the undertaking threatened the throne of her frail lord; and she devoted her whole energies, which were not contemptible, and used her address, which was not without a certain influence, in favour of the projected insurrection.

A sort of proclamation was issued by the committee at Athens, although it was desired that it should be circulated as if coming from another source, of which we give a copy:—

"We, the undersigned, inhabitants and elders of Radobitsi, in the province of Artz, sighing under the pressure of the exorbitant taxation which has been imposed on us by Ottoman conquerors, who are not only incapable of civilisation, but besides violate the chastity of our maidens, do renew the struggle of 1821, and swear by the name of the Almighty and by our sacred fatherland, in no case and under no plea to lay down our arms until we have obtained our liberty.

"Now, at the commencement of the struggle, we hope to rouse the sympathy of our brethren, of the free Greeks, and of all those groaning under the Ottoman yoke, so that they may take up arms to renew the holy war of 1821, and fight for faith, fatherland, and our inalienable rights.

"The war is holy and just; and no one who considers the weight of our burdens and the rights of nations, will utter a word in defence of our barbarous oppressors, or advocate the cause of the Crescent, which is planted on the summit of our sacred Church.

"Up then, brethren! rush to battle! throw off the hated yoke of our tyrants! and with us loudly proclaim to God and the world that we

do battle for our fatherland, and that the Most High is our shield of defence.

"JOHANN COSOVAKIS; DEMETER KOKAS;
COSTI KOSMA; BAS NAKOS; NITULAS
BASOS; COLIOS MAVROMATI; K. C.
STUMA; DEMETER SCALIVIOJANI; GEORG
CALZIGAMI; C. MERCHAS; K. KATZILAS;
KONST ZEYARIDES."

With the above was circulated a form of oath, to be taken by all willing to devote themselves to the revolt, which ran as follows:

"I swear by the Holy Gospels, by the Holy Trinity, and by Him crucified, that I take up arms which shall not be cast aside until our oppressors are driven from the homes of our fathers, and my fatherland is free. I also swear by an Almighty God to be faithful to my flag, and, if necessary, to shed the last drop of my blood in defence of my comrades."

The allegation of heavy taxes contained in the above address is false; no people were ever more lightly taxed than the Greek subjects of the Porte, and few populations better able to bear a heavy taxation. Commercially they were favoured by the Porte; the foreign trade of all Turkey is in the hands of the Greeks, and the most liberal system of commercial law regulates their traffic. Their acquisition of property is never interfered with, and their possession of it never rendered insecure. The aim of the Greek population is not liberty. One reason why they hate the Ottoman government is, that they see other sects beside their own tolerated. Were there a Greek empire, an enlarged Greek kingdom perfectly independent, or a Greek republic, there would follow a cruel and bloody persecution of Latins, Armenians, and Protestants, within its bounds. The Jews, despised by the Osmanlis, are everywhere beaten, robbed, and oppressed by the Greeks. When persons in England have advocated the resuscitation of an independent Greek nation, they have been unwittingly urging the ascendancy of a bigoted sect and a resentful people, and promoting the persecution of Jews and Christians of various communities, the most inoffensive in the world, but whom the Greeks desire to expatriate or extirpate. It is a remarkable confirmation of this view of the spirit of the Greek Church and people, that in none of their appeals to Christendom for countenance and aid do they ever refer to the persecutions endured by Jews or Armenians, Franks or Nestorians—all other religions and all other sects of the Christian religion are ignored by these pseudo-liberals and patriots. The only activity and life of independent Greece is displayed in its religious intolerance or its brigandage; a gloomy superstition and morose intolerance

brood over the minds of the people, which even the love of pleasure does not banish from their hearts or from their physiognomies :—

“Tis Greece, but living Greece no more ;”

that trite line tells the condition of the Greek kingdom, and of the Greek race beyond its limits, also, except where the freedom of Turkish commercial law, and the intercourse with foreigners, have quickened the commercial and literary enterprise of a portion of the populations of the great cities. Shortly before the insurrection burst forth, the British ambassador had private information which enabled him to aid the Turkish government in detecting the plans of the projectors to some extent. Letters were also intercepted inviting Prince Gortschakoff to cross the Danube, as the Greeks of Bulgaria were ready to rise in arms at his presence. It is likely that, had the prince been able to take Kalafat and Widdin, a Bulgarian insurrection would have been attempted. He, however, had been occupied in a manner that neither promised much for his spring campaign, nor for those who intended to welcome him between the Danube and the Balkan. Before the measures of the patriots—as they called themselves—were ready, the British minister for foreign affairs became urgent upon the Porte to make such concessions as would deprive the malcontents of their best plea, and of the sympathy of Christendom. Indeed, when the sultan was upon the verge of a declaration of war, and the Greeks and King Otho were but beginning to bestir themselves, Lord Clarendon thus wrote to the ambassador :—“It is the deliberate opinion of her Majesty’s government, that the only real security for the continued existence of Turkey as an independent power is to be sought by enlisting the feelings of its Christian subjects in its preservation ; that although Turkey may get over her present difficulties by the aid of her allies, she must not reckon on external aid as a permanent resource, but that she must create for herself a sure defence in the affections of the most intelligent, active, and enterprising class of her subjects ; and that it is impossible to suppose that any true sympathy for their rulers will be felt by the Christians, so long as they are made to experience in all their daily transactions the inferiority of their position as compared with that of their fellow-subjects—so long as they are aware that they will seek in vain for justice for the wrongs done either to their persons or their property, because they are deemed a degraded race, unworthy to be put in comparison with the followers of Mohammed. Your excellency will plainly and authoritatively state to the Porte that this state of things cannot be longer tolerated by the Christian powers : the Porte must decide

between the sacrifice of an erroneous religious principle, and the loss of the sympathy and support of its allies. You will point out the immense importance of the selection it has to make ; and her Majesty’s government conceive that very little reflection will suffice to satisfy the Turkish ministers that the Porte can no longer reckon upon its Mussulman subjects alone as a safeguard against external danger, and that without the hearty assistance of its Christian dependents, and the powerful sympathy and support of its Christian allies, the Turkish empire must soon cease to exist.”

The Greek insurrection, so long ripening, came to maturity at the latter end of January, and it first indicated its strength in Albania, and then rapidly extended to other provinces. The Albanians* are a brave race, and are often employed in the service of the Porte ; they

* In our sketch of Turkey we were obliged to glance merely at the general outline of the country, and the leading facts of her history, because of our anxiety to approach in our story of the war the great events upon the Danube and in Asia, which had so recently thrilled upon the heart of Europe. We therefore take occasion, in passing, to notice the places and people referred to in the narrative of the struggles which so lately stained and darkened those beautiful realms. Albania is one of the western provinces of Turkey, and stretches along the shores of the Adriatic Sea from Montenegro and Bosnia on the north, to the provinces of Epirus and Thessaly on the south. The physical character of both Albania and Epirus are similar ; and alike, or nearly alike, favoured the plans of the insurgents. They have been well described in a pleasant modern work, called *European Turkey*, by William Knighton, M.A., we select the description from that work because of the grace of expression and the brevity with which so much is conveyed :—“The whole of the ancient Epirus, the lower portion of the modern Albania, is covered with mountains chiefly of a calcareous character, and furrowed by deep ravines or dark caverns. The outlets to the sea, which are few, correspond with the character of the country—the Suli, the Vojutza, the Scombi, and the Drino, are all mountain torrents ; making their way precipitously into the sea from the heights of the interior, sometimes hemmed in by narrow ravines, through which they murmur boisterously as they plunge on to the west, sometimes falling over precipitous rocks with headlong fury, and sometimes again watering peacefully a level district that slopes almost imperceptibly to the borders of the next ridge, where the foaming and dashing recommences. The climate of Albania is like that of Italy, warm, clear, and cloudless, but subject to protracted droughts, as well as to sudden and violent north winds, that produce instantaneous changes of temperature. The olive luxuriates on the lower shores of the Adriatic to the south-west of Albania, whilst as the traveller ascends to the mountains, extensive forests are found clothing their sides, forests concealing rich mines that have but to be worked to furnish employment for many inhabitants. The vintage in the valleys and lower plains begins in September, and the heavy rains during December are succeeded by frosts, often severe in January. The oak, the plane, the cypress, and the ash, flourish on the sides of the hills, at the base of which the laurel and the latick abound, indigenous to the soil ; cedars, pine, larch, and chestnut trees, are by no means scarce. Such is the character of most of the hills of Southern Albania, but by no means of all ; many of them are arid and sterile ; but even of these, such is the prolific virtue of the stimulating heat, the sides in early spring are clothed with the violet, the narcissus, and the hyacinth. The entire landscape is then a mass of vegetation of the most brilliant colours, abounding with contrasts that serve to embellish the scene, and to render it striking as well as beautiful.”

make good troops—regular and irregular—and, when well officered, fight with self-reliance, spirit, and obstinacy. They showed their characteristic courage in various desultory encounters with the sultan's troops. The Turkish garrison of Arta* was soon after besieged, and thrice attacked with boldness and skill. In the port of Arta* a sea-fight occurred between a Greek cutter and the Turkish guard-ship, which ended in the destruction of the latter. At Janina,† and various other places of more or less strength, the Turkish troops were hemmed in by superior numbers; and in some instances the places were stormed, and the small garrisons put to the sword. These combats were maintained with virulent animosity, the Greeks loading their enemies with curses and vituperations during the conflicts, and showing a rage, bigotry, fanaticism, and bloodthirstiness truly horrifying. When the Turks were successful, they showed as little disposition to give quarter, although they maintained the fight with a gravity and an enthusiasm strangely blended; when the Turks were defeated, they died without a cry or a murmur of either despair or rage, but selling their lives as dearly as possible. In Epirus the objects of attack by the insurgents were not so much the Turkish troops as the mosques; but from which the aggressors only tore the emblems of the Mohammedan religion, supplanting the Crescent by the Cross, and erecting altars where the Greek mass was offered. The insurrection extended in the same spirit to Thessaly‡ and Macedonia;§ in fact,

* Arta is the second city of Albania. It is situated upon the banks of the river Arta, which falls into the Gulf of Arta. Its population is about 15,000. The neighbourhood is rugged and picturesque, sometimes wild and sometimes beautiful.

† Janina is the first city of Albania. Its inhabitants number 40,000. It is beautifully situated upon the shores of a small lake called Acherusia, which discharges itself into a subterranean abyss. Viewed from the elevations of the Zitza, the valley of Janina is indeed lovely. "The lake tapering off to a point towards the north, the white houses and lofty minarets reflected in its waters, the sides of the encompassing mountains, with their calcareous cliffs denuded of vegetation, form a landscape of which paintings might give an idea in detached portions, but which it would be impossible to bring before the eye in one view by any sketch however extended."

‡ Thessaly is bounded on the east by the Archipelago, on the west by Epirus, on the south by the kingdom of Greece, and on the north by Roumelia. It is one of the fairest and richest portions of all Turkey. Pindus, Olympus, Issus, and Pelion, overlook its plains; and the traveller can wander nowhere in Thessaly without perceiving that he is on classic soil.

§ Macedonia, once the seat of kingdom and even of empire, where Philip reigned, and Philip's more glorious son, is now a division of the province of Roumelia, to the west of which it lies. The mountains of Macedon afforded secure haunts for the rebels; but Macedon, although rich, is not so in the resources of armies. Cotton and tobacco are the staple productions. The vine, however, flourishes there also, producing the best wines; and the mountain-sides are dotted with rich corn-fields. Who can think of the legislative genius of Miltiades, and witness without regret the misrule of Macedon? and who

all the portions of Turkey contiguous to Greece, which had formed a part of ancient Greece, were speedily in some degree of revolt. The insurrectionary bands were led either by officers of King Otho's army, or by students from the University of Athens. One corps of 8000 men was led by Spiridion Karakaisis, son of the Karakaisis who figured in the Greek revolution; this Spiridion held a commission from King Otho, and although publicly summoned to return to Athens, he disregarded the command, and so acted as to show that his proceedings would secure him the secret approval of his sovereign. These Greek companies, and this army under Spiridion were well paid, and the leaders had money which was freely distributed; it did not all come from Russia—the Greek community of Constantinople was thoroughly initiated in the conspiracy, and largely subscribed to it through their commercial agents in Athens, Smyrna, and elsewhere. The Greek merchants of Paris, Lyons, Marseilles, London, Liverpool, and Manchester, are generally very rich, and it was alleged that they supplied the "sinews of war." In Manchester and London they indignantly denied this, disavowing all complicity in any matter of disloyalty to the sultan, or embarrassments to the countries whose hospitality they enjoyed. Circumstances of grave suspicion existed, however, by reason of which these disavowals were very much discredited.

The insurrection was kept up without at all relaxing through the month of February, and was not suppressed until, at the end of March, awed by the demonstrations of the allies, and the fear of consequences to himself, King Otho was made to feel the madness of the enterprise into which he had been seduced. Early in February, Salonica* suddenly rose in arms; but the Turkish troops, without firing a shot, charged with the bayonet, and dispersed the insurgents with slaughter. In Thessaly a body of 3000 men made head against the authorities; but this corps was composed chiefly of sympathizers. Can we think of the inquisitive genius of Aristotle, and not mourn over the occupation of this fine region by a race of uninquiring Turks and of mongrel Greeks, wedded to their customs, however foolish?

* "Salonica is situated on a semicircular extent of coast that lies at the head of the gulf of that name. Its population has been estimated at fifty, seventy, and a hundred thousand. Monuments of its ancient splendour meet the wanderer in every direction; triumphal arches, ruined temples and churches, broken statues and empty pedestals—all evidences of a civilisation passed away, ere the refinement of European civilisation gave way to the impetuous voluptuousness of Asiatic life. The harbour, built by Constantine the Great, will easily contain three hundred ships of large size; but the bay without is unsafe. The Jews form a very large proportion of the population of Salonica. They have established some factories and several schools. A considerable overland trade is carried on by them with Semlin (opposite Belgrade) and Vienna. They even penetrate to Leipzig with their cottons, leather, carpets, and tobacco."—*Knighton.*

thisers from Greece, and brigands. The Thes-salians generally felt that their smiling land, where peaceful industry is so amply repaid by productive harvests, should not be overrun by banditti and the tools of foreign tyrants. Thessaly is now, as in ancient times, a province rich in cultivation; and, whatever may be the political disabilities of the people, they are secure in person and property; and, literally, "every man sits under his own vine and his own fig-tree, none making him afraid." They were unwilling to exchange all this for the despotisms of Athens or St. Petersburg, although they sighed, like all the Greek race, for the dawn of the happier time to which they look forward, when the Cross shall eclipse the Crescent, and shed from the dome of St. Sophia its glory upon the capital of a Greek Empire.

The Suliots* and Servians† were much ex-

* The Suliots are the fiercest of the tribes of Albania and Epirus. The town of Souli is about twenty miles north-west of Arta. Lord Byron thus compliments their heroism:—

"On Suli's rock, and Parga's shore,
Exists the remnants of a line
Such as the Doric mothers bore."

These Suliots were nearly exterminated by the ruthless Turk, Ali Pasha; there is, however, a formidable remnant of them still; and, throughout the insurrection, the swarthy Suliots might be seen foremost in the bands of whatever kind that ravaged or attempted to ravage the western provinces of Turkey, and all the country between the Gulf of Venice and the Archipelago. The country of the Suliots is interesting from its picturesque character, its classic associations, and the dauntless heroism of its turbulent people. Lord Byron has consecrated afresh all the shores of the Adriatic to the Muses; and, in mere passing gleams of description, his inimitable genius has given vivid pictures of both the people and the famed shores on which they dwell:—

"Land of Albania! where Iskander rose;
Theme of the young, and beacon of the wise;
And he his namesake, whose oft baffled foes
Shrank from his deeds of chivalrous emprise:
Land of Albania! let me bend mine eyes
On thee, thou rugged nurse of savage men!
The Cross descends, thy minarets arise,
And the pale Crescent sparkles in the glen,
Through many a cypress grove within each city's ken.

"Morn dawns; and with it stern Albania's hills,
Dark Suli's rocks, and Pindus' inland peak,
Robed half in mist, bedewed with snowy rills,
Array'd in many a dull and purple streak,
Arise; and, as the clouds along them break,
Disclose the dwelling of the mountaineer:
Here roams the wolf, the eagle whets his beak,
Birds, beasts of prey, and wilder men appear,
And gathering storms around convulse the closing year."

† Servia lies to the extreme north upon the Danube, having Bosnia upon its western, and Bulgaria upon its eastern, confines. It is opposite to Slavonia and the Banet, the Danube separating it from them. The Servians are Slaves in race, and Greeks in religion. The influence of Russia in that principality is in the ascendant; the utmost jealousy of the Turks being entertained by the people, who sympathise in religion and race with the Russians. The Servians do not desire, however, their country to become a Russian province; they are resolved to maintain their independence against all odds, whether Russ or Turk invade it. Notwithstanding their invidious prejudice of race, and their bigoted prejudice of religion,

cited; and serious apprehensions were entertained by the Porte of terrible conflict with both. Montenegro* also showed symptoms of renewing the proceedings which, in 1852-3, furnished Austria with a pretext for armed interference, and a mission to Constantinople, *à la* Menschikoff. In Epirus a corps of 2500 men marched through several districts in triumph, carrying the Greek Cross, with the motto of the Labarum—the old standard of the Byzantine Empire—"Conquer by this!" As

the Servians enjoy an advanced civilisation, and possess a very ancient literature: the wild songs and irregular poetry of Servia are pervaded by a genius altogether peculiar, except that sometimes when in Slavonia and Russia the mind and heart were free to pour out their tribute to nature, similar characteristics of thought and feeling to those of Servia are seen. Of late some trouble has been taken, both by German and British writers, to bring out the literature of Servia; and the public mind in England has been taken by surprise to learn that so remote and obscure a province upon the Danube should be so rich in literary treasure. The Servians are brave, proud, and free.

* Montenegro is a small, compact territory, bounded on the north by Herzegovina and Bosnia; on the east and south by Albania; on the west by the Gulf of Venice. Its Italian name, *Montenegro*, "Black Mountain," expresses its aspect from the shores of the Adriatic. The whole circle of the province—if province we may properly call a territory which owns no master—is surrounded by a girdle of bold, dark, bleak, rigid-looking mountains. From these innumerable rivulets descend, intersecting the country like a system of veins. The landscape is wildly picturesque; and supports in a barbarous life about 100,000 inhabitants. One fourth of the entire male population are warriors—old men and boys delighting in the use of arms, and a barbarous military parade. They are brave with a savage bravery, robbers when they can find opportunity, with no scruple about murder where a Turk is concerned, and they are intensely religious according to the Greek ceremonial. None of the peoples formed into separate communities upon the soil of what is ostensibly the Turkish Empire regard Russia without some jealousy and alarm, unless the Montenegrins. The interference of Austria on their behalf, in 1853, was manifestly at the instigation of Russia, as we have shown at large elsewhere. Russia would not tolerate Austrian interference in any way, where a community professing the Greek Church was concerned, if she had not a concealed purpose of her own. Kravinski, in his work entitled, *Montenegro and the Slavonians of Turkey*, describes the government as republican, which is correct only so far as that its chief is not a king. The government is in fact *sui generis*. The chiefs are elected nominally by the people, but really by the military; and these chiefs elect the governor, the metropolitan, and the commanders. The persons elected, however, are for the most part those who would have ruled on the hereditary principle. Fathers govern their families, not by a national or even a religious code, but by their patriarchal privilege. Chiefs, soldiers, officers, and heads of families, are all governed by the priests, who teach them nothing but the most superstitious stories of saints, and to hate with all their hearts Turks, and schismatics as all Christians not of the Greek Church are termed. Their conduct to woman is that of savages. Sir G. Wilkinson, in his work entitled, *Dalmatia and Montenegro*, informs us that a Montenegrin thinks it beneath him to speak of a woman before a stranger, even accompanying any remarks about his own wife with such expressions as "saving your presence," "begging your pardon," &c. The women are made, in fact, not only the labourers, but the beasts of burthen: a mule or an ass would have, among these friends of freedom, an easier life than that of a woman. To say their prayers, rob and murder the object of their plunder, or in the name of religion to perpetrate some great revenge, seems to be the occupations most congenial to the Montenegrins.

this body passed through the districts which they sought to revolutionize, they scattered the most inflammatory appeals to the invidious feelings of race and religious distinction, and blazoned forth acts of individual injustice on the part of the Turks, as if the Turkish government had countenanced their perpetration. These means, by which it was hoped to strengthen the insurrection, in fact weakened it, for they roused the martial spirit of the Turks even to ferocity. The garrison of Arta exemplified the truth of this opinion, for they sallied forth, dispersed with slaughter various Greek bands, and, while exasperated by the calumnies they saw everywhere posted upon public places in the villages, they committed various excesses. At Peta they committed sacrilege upon the Greek Church, and violated the defenceless. This event did much to quicken the insurrection into a fitful life—the people rose and cried for vengeance. Arta was sacked, so far as the Turkish garrison was concerned, and Preveza was obliged to capitulate.

A great number of Greek subjects of Great Britain crossed over from the Ionian Isles into Epirus, and gave important aid to the rebellion by money, counsel, and arms. The Lord High Commissioner of the Ionian Isles,* Sir Henry Ward, took measures to put a stop to this movement. He directed a circular to the British functionaries in all the islands, in which he said—"Your duty, sir, is to convince the authorities of your island that the movement which has so unfortunately commenced in Greece, is certainly calculated to remove all hope of amelioration in the condition of the Greek population of Turkey, by impelling them into a barbarous struggle of a nature to endanger themselves, their families, and their property, without the slightest chance of success; since no one can imagine that the treaties and declarations of the great cabinets of Europe can depend on committees at Athens, the acts of which are assuredly not admitted by any established government."

The Austrian government thought it necessary to comply with the requisitions of the Western powers, and to intimate to the Servians and Montenegrins that she would permit neither to revolt. The Turkish government acted with decision; troops were dispatched to Epirus and Thessaly, and these were reinforced by Egyptian reserves. The forts previously taken by the rebels were recaptured; hesitation appeared among their leaders; and the courage of the Turkish and Egyptian soldiery, aided by their superior discipline, which secured several signal successes, made such an impres-

sion upon the Greek population of Turkey that the revolted laid down their arms everywhere, until the disturbance was confined to predatory bands in the mountains of Albania and Thessaly, and to the incursions of certain "free companies" across the frontiers of Greece.

It would interrupt the order of narrating contemporaneous events, if in this place the final issue of the Greek insurrection were anticipated: other scenes and other actors demand our attention before that event finds its place upon our pages.

The indignation felt in England and France when the tidings of the massacre at Sinope reached them, compelled the governments to order their fleets into the Black Sea.* On the 19th December the instructions to the admirals were dispatched, but the storms and fogs so common at that season in the Euxine detained them at Beicos Bay until the 4th January, when, accompanied by several Turkish line-of-battle ships, laden with troops and stores for the

* The Black Sea and the countries upon its shores being the principal theatre of the war, it is necessary for such of our readers as have not the advantages of extensive libraries that we give some description of it. It is a great inland sea between Europe and Asia, extending from the strait of the Bosphorus to the strait of Kertch, which separates it from the Sea of Azoff, in length about 700 miles, and rather more than half that in breadth. It washes the shores of the Turkish provinces of Roumelia and Bulgaria, and the Russian provinces of Bessarabia and the Crimea in Europe; also the shores of the Turkish provinces of Asia Minor from the Bosphorus to Fort St. Nicholas, and the whole shores of the Caucasus thence to the strait of Kertch. It is generally considered dangerous to navigators, because of dense fogs and sudden storms; these dangers exist, but many who are well acquainted with it declare them to be exaggerated. It is tideless, and its depth steadily decreases. The waters are nearly one sixth less salt than those of other seas, which is attributed to the vast quantity of fresh water poured into it by the rivers which empty themselves from its shores, such as the Danube, the Don, the Dniester, the Dnieper, and the Bug. Some of the most beautiful scenery in the world may be beheld from its bosom. The mountain-coast of the Crimea is very lovely; from the southern side of the peninsula the hills are richly wooded to their summits, orchards and gardens clothe their slopes, amidst which are the summer-palaces of the Russian nobles, some of which are on a scale of princely grandeur, and others, conceived in the most perfect taste, are built in a style of architecture more in keeping with their purpose and the retreat of the locality. From the little port of Yalta one of the fairest scenes may be contemplated. All along the Circassian coasts the sublime or beautiful is present, and frequently the voyager realizes the truth of the doctrine taught by some metaphysicians—that the image of the sublime is often formed by successive images of the beautiful. A voyager already quoted describes his first glimpse of the Caucasus in these terms:—"After passing the mouth of the Cuban, the lesser chain of the Caucasian mountains rose up before us in all their varied and picturesque beauty—for we were now skirting the coast of Circassia—and a more brilliant pageant than they exhibited, with the glorious sun of Asia lighting up every separate pinnacle, cannot be conceived." The shores of the Black Sea have, if possible, more historic than picturesque interest; they are crowded with tumuli, ruins, dilapidated castles and monasteries, and the relics of ancient cities. All the great nations of antiquity had their emporiums and settlements upon these for ever famous coasts. But where the Greek, the Roman, and the Genoese, built cities, the Turk and the Russ spread ruin and desolation.

* The Ionian Isles were part of the ancient dominion of Greece, and afterwards subject to the Turks, they are now under the protection of England, who is represented by a lord high commissioner.

Asiatic army, they proceeded to the coast of Anatolia, and afterwards lay a short time off Trebizond. A small British squadron remained at the entrance of the Bosphorus; and the *Retribution* (ominous name!) was sent to Sebastopol, to convey to the Russian admiral a notice that the fleets had entered the Euxine, and to require the surrender of certain English engineers captured at Sinope. While before Sebastopol, the officers of the *Retribution* sketched the fortifications; this circumstance being observed by the Russians, gave them great umbrage, which they have never since failed to show in receiving maritime flags of truce, or communications of any sort from the British squadrons, either in the Black Sea or in the Baltic. The fleets did not remain long upon their eastern cruise, but returned to Beicos Bay, except a few steamers which remained in observation off Odessa and Sebastopol, in order to prevent any sudden attacks or descents upon the Turkish coasts. When the czar was informed of the entrance of the naval squadrons into the Euxine, he expressed no surprise, simply observing that he had foreseen the difficulty, and had provided against it. The despatch of Lord Clarendon, the English minister for foreign affairs, and the notifications of the English and French ambassadors at Constantinople, in reference to this new demonstration of the allies, rekindled the czar's wrath, which seemed to have been much appeased by his public thanksgivings for the slaughter at Sinope. He became morose, and almost savage to all about him; no one but the empress could approach him with confidence; and tokens of a degree of excitement, amounting to mental aberration, began to display themselves. While the tidings were fresh, and this excitement at the highest, he, in the presence of his whole court, delivered a sudden and terrible philippic against the allied governments and the sultan. The impromptu character of this strange address—the intense excitement of the czar's countenance—the blended solemnity and ferocity of his manner, and the expressiveness of his elocution, produced the most imposing effect upon all present. They listened with astonishment and awe while, with uplift eyes and extended hand, he pronounced, "War, war, war, to the enemies of Russia!" and added—"Following in the path of my predecessors—faithful, like them, to the orthodox faith—after having invoked, like them, the aid of Almighty God, we shall await our enemies with a firm foot, from what side soever they come; persuaded that our ancient device, 'the faith, the czar, and the country,' will open to us, as it has ever done, the path of victory." And then, extending his hands, and assuming an attitude as if inspired, he pronounced the words—"Nobiscum Deus! Audite populi, et vinci-

mini; quia nobiscum Deus!" While in this elevation of excitement, he ordered despatches to his ambassadors at the courts of St. James and the Tuileries, directing them to demand explanations as to the entering of the allied squadrons into the Black Sea; and if the replies did not satisfy the ambassadors that the Western powers would preserve a strict neutrality, they were to demand their passports. The replies of course gave no such satisfaction; and the ambassadors took their leave, much it was believed to their own regret, as rumour ascribed to them a hearty disapproval of the conduct of the czar in provoking the war. Baron Brunow had resided many years in the Russian embassy, and was an admirer of the English nation; and M. Kisseleff had resided many years in Paris, and was much respected by every class of Parisian society which could have the opportunity of intercourse with him. The answers of the English and French governments were presented to Baron Brunow and M. Kisseleff on the same day, the 1st of February; on the 6th the baron received his recall, M. Kisseleff his on the day following.

While the ambassadors of Russia were arranging the preliminaries of their withdrawal from the Western courts, Count Orloff was acting as the especial envoy of the czar to the courts of Vienna and Berlin. His ostensible object was to negotiate terms of peace; but what was shrewdly conjectured then, facts have since but too well established—that his real object was to secure the alliance, or, at all events, the neutrality of the German powers. It was not alone with the governments of Austria and Prussia that the count was diplomatically busy—all the petty German governments had a share of his attentions; and as his agents were legion, and all selected for their competency, and paid without parsimony, he was exceedingly well served. It was then the plans were laid of action and counter-action, advance and obstruction—of mimic rivalry and frustrating delays, which have ever since characterised the proceedings of the whole of the German powers. The ostensible proposals of the count were at once rejected by the Emperor Francis Joseph. Count Orloff, feigning himself ill—as some uncharitably suggested—remained in Vienna longer than diplomatic usage allowed after the rejection of his terms. He then framed new proposals, to which the Vienna conference would not listen. The Turkish note which the Vienna conference adopted was refused by the Russian emperor, who haughtily announced that he would listen to no mediation between himself and the sultan; that if the latter desired to sue for peace, he must do so at the headquarters of the emperor's army, or at St. Petersburg by an especial embassy. Count

Orloff, before leaving Vienna, presented his final terms of peace, in which was included, as the first, that Turkey should initiate proceedings, and, according to the emperor's misssive above noticed, either at the head-quarters of his army in the provinces, or at St. Petersburg; with, however, liberty to refer for counsel to the four powers. The second was that the former treaties between Russia and Turkey should be renewed. The third that Turkey should enter into a new treaty never to give an asylum to political refugees. The fourth that the sultan should recognise by an especial and formal declaration the emperor's protectorate of the Greek Christians. These demands, being much in excess of those made by Prince Menschikoff, showed the allies the hopelessness of negotiating upon a basis favourable to Turkey, and might have taught them the futility of all negotiations with Russia until arms had impressed her with the necessity of herself seeking a peace founded upon the security of the Ottoman Empire. Count Orloff left Vienna on the 4th February, and brought with him to St. Petersburg the welcome news that the German powers would retain a strict neutrality. The Austrian government immediately after proposed a general protectorate of the Christian subjects of the Porte, and sent this proposal to the czar for his acquiescence, before submitting it to the allies. The answer of Nicholas was fierce and prompt. "Russia will permit no other power to meddle in the affairs of the Greek Church. Russia had treaties with the Porte which would settle the question between them alone." Yet, will it be credited by the general reader, that, after this decisive and insulting communication, Austria again set to work to engage the allies—Turkey more especially—in another note; that the Western powers allowed themselves to be played with by the artifices of Austria, and constrained their spirited and consistent ally, Turkey, reluctantly to take part in the weak proceeding? Nothing, however, came of these diplomatic conferences but delay, until the allies sent their ultimatum to the czar some weeks later. The most notable person in all these negotiations, originating at Constantinople and transferred to Vienna, was Lord Stratford de Redcliffe; and the most sagacious of all the negotiators, although not universally reputed so, was Retschid Pasha, the Turkish foreign minister. We shall close the present chapter by a brief memoir of each.

VISCOUNT STRATFORD DE REDCLIFFE, G.C.B., ambassador-extraordinary and minister-plenipotentiary to the Ottoman Porte, was born about the year 1783, and is the son of a London merchant. George Canning, the distinguished statesman, orator, and scholar, was his first cousin. Stratford Canning received his early education at Eton, and his more

complete education at King's College, Cambridge. The Cannings are of humble origin—the grandfather of Lord Stratford (and of George Canning) having lived in a very obscure condition in Ireland, where he was born, before he sought better fortunes in England. Stratford Canning was appointed, in 1807, *précis* writer to his cousin George, who was then secretary of state for foreign affairs. In the same year, he attended Mr. Merry on his special mission to Denmark and Sweden; and, in conjunction with the late Earl of Mornington, acted as secretary to the envoy. In 1808, he accompanied Mr. Adair in a similar capacity to the Porte. In 1809, he was appointed permanent secretary to the embassy at Constantinople; and so early as 1810, upon the recall of Mr. Adair, was appointed minister-plenipotentiary to that court; but, after negotiating the peace of Bucharest, between the Porte and Russia, he returned home. His first exploit in diplomacy—at all events, the first on his own responsibility—gave great satisfaction to the party in power in England, among whom Mr. Stratford Canning had many influential friends, who lost no opportunity of commending his parts, and holding him up as a young man of genius and of the greatest promise. The treaty of Bucharest, however, was all in the interest of Russia. The success of Mr. Stratford Canning's mediation lay in obtaining, as it was thought, better terms for Turkey than could have been expected; and, at all events, in promoting a peace between the two powers, which was then desired by England. The English policy in those days was to strengthen Russia, as a conservative power, useful in the balance against revolutionary France; and Mr. Stratford Canning's negotiations were influenced by that policy. In 1814, the subject of our memoir was sent out as envoy to Switzerland, and assisted in the arrangement of the alliance of the nineteen cantons, which became the basis of their federal compact. This compact has never secured a happy and complete federal union of the cantons; but we believe Mr. S. Canning had no merit and deserved no blame in connexion with any of the successes or failures of that treaty: he merely represented his country, and did little and offered little advice upon the occasion. His presence was of more importance at the Congress of Vienna afterwards, whither he went to aid in the final settlement of the Swiss question. In 1820, he was created a privy councillor, and was accredited envoy-extraordinary and minister-plenipotentiary to the United States of America. He remained there three years. Soon after his return home, he was again dispatched to America to adjust all the questions in dispute between the government of that country and his own. A treaty was drawn up as the result of his negotiations,

which was not ratified. The boundary question, which he supposed he had settled, remained as unsettled as ever, and nearly provoked a war subsequently between the two countries.

In 1824, Mr. S. Canning was sent to St. Petersburg on a special mission in reference to the Greek revolution, and *en route* he accomplished a mission to the court of Vienna. Having executed the duties laid upon him by his government at those courts, he was again appointed ambassador to the Porte, whither he went from St. Petersburg. He became the partisan of the Greeks on that occasion, and originated the petty policy which made a little kingdom for Otho, and which made a little kingdom and a little king the suitable instruments of the czar in his oriental designs. Upon Mr. S. Canning's return to London, in 1827, he drew up the treaty of London, by which the naval events of Navarino, and the coercion of the Porte by a Russian army, shook to their centre the power and empire of the sultan, and prepared the way for fresh Russian aggressions. In 1828, he went on a special mission to Greece; and, in 1829, took part in the especial conferences, held at Paris, for the formation of the Greek monarchy. While he was negotiating, Diebitch, the Russian general, was fighting his way to Adrianople; as, recently, while the great diplomatist was similarly engaged, the armies of Russia were laying siege to Silistria. His province seems to have been the theoretical; the czar's, and that of his officers, the practical and substantial. It must be told, in justice to Mr. S. Canning, that although disposed to make a little Greek kingdom, his plan assigned a considerably wider boundary than that agreed upon. It was chiefly through Russian influence that the independent Greek territory was so limited as it is. Mr. Canning opposed the Russian limits; but the government at home repudiated their own plenipotentiary, and adopted in their integrity the plans of Russia. He then resigned, and returned home; but public opinion was with him in this case; and the government, yielding to its force, recommended the king to confer upon him the Order of the Bath, and he became thence known as Sir Stratford. He then entered parliament for the most corrupt and contemptible of all the unreformed boroughs—Old Sarum. In 1831, Sir Stratford was sent once more to Turkey, and some of his previous views as to boundary, constitution, &c., were carried into effect concerning Greece; so that, in 1832, the treaty of London was executed finally, and definitely settling the affairs of Greece. The same year he was sent on a special mission to Madrid and Lisbon, but only went to the former. He soon returned, and re-entered parliament as member for one

little borough after another, until his services were again required at Constantinople. He had twice, in the meantime, refused the governor-generalship of Canada. Returning, on leave of absence, he was sent to Berne, in 1847, to interpose in the cantonal quarrel between the *Sunderbund* and the other portions of Switzerland. It was a very judicious selection of a minister on the part of the British government, as the cantons regarded him as a sort of sponsor for their constitution. Russia, Austria, and Louis Philippe, the traitor citizen-king, had conspired against the liberties of Switzerland; and, as is always the case when a free state is to be oppressed or dismembered, they blackened the reputation of the Swiss people and government through the medium of the press of Paris, Brussels, Vienna, and Berlin. Sir Stratford exposed these calumnies, and reconciled the existing differences, or controlled them by his moral influence and intellectual and historic authority—much to the disappointment of the author of all the mischief, Louis Philippe, and his abettors, Austria and Russia.

Sir Stratford again returned to his post in Turkey, where he was the sound counsellor of the Porte against Russian intrigue and aggression, as far as the instructions of his government allowed. Although some of his proceedings were unfortunate, and the results of his policy detrimental to Turkey, we are of opinion that, in these cases, he was much fettered by the orders of the Foreign-office. On one occasion, the czar refused to receive him as an ambassador from the British court; and the bitter personal hostility to him of Nicholas was notorious. He is much feared and disliked by the Russian diplomatists, and by none more than by Count Nesselrode, who is often regarded as friendly to England. Sir Stratford's oriental policy was drawn from the advice of his illustrious cousin, of whom Byron said, "Canning is a genius—almost a universal one: he is a wit, a poet, an orator, and a statesman." It was well understood at St. Petersburg whence Sir Stratford derived his diplomatic inspirations, and he was disliked and feared accordingly. We have a remarkable exemplification of this in a certain diplomatic document of Count Pozzo di Borgo, dated October, 1825; it is from a secret despatch to Count Nesselrode:—"The introduction of Mr. Canning into the ministry, and the influence which he exercises in it, in his character as a popular leader, have weakened the ancient relations between Russia and the British cabinet; indeed, the change of doctrines which results has almost destroyed them. His conduct in the affairs of Turkey proves that neither the most perfect confidence displayed on our part, nor sacrifices the most evident, have

been able to change his sentiments in regard to us. It has been full of suspicion and jealousy; which proves that it may one day become hostile."

Sir Stratford and Lord Palmerston heartily co-operated in the case of the Hungarian refugees; and the advice which was given by them, and by Redschid Pasha and Omar Pasha, sustained the sultan in refusing their extradition at the demands of Austria and Russia. The most important reforms in the Turkish administration were accomplished at the instance of Sir Stratford, and since he became Lord Stratford de Redcliffe, his influence has been similarly wielded. Torture, and the infliction of death upon renegades, were abolished at his suggestion. The appointment of mixed commissions of Turks and Christians for the trial of offences is his idea; and the reception of the testimony of Christians in the courts was afterwards established at his request. On the 24th of April, 1852, he was raised to the peerage; and on his return to Constantinople, he obtained firmans for the liberties of all Protestant Christian sects, as well as of the oriental sects throughout the sultan's dominions. Lord Stratford de Redcliffe is a man of taste, and a patron of literature and science; he is especially fond of classic antiquities. When Mr. Layard could not obtain any help from government, Lord Stratford (then Sir Stratford Canning), at his own expense, authorised him to proceed with many of his researches. The Budrum marbles, the supposed remains of the Mausoleum erected at Halicarnassus by Artemisia, Queen of Caria, for her husband, Mausolus, were obtained by Sir Stratford, by firman from the Porte, and given by him to the British Museum.

Lord Stratford married, in 1816, Harriet, daughter of Thomas Raikes, Esq., Governor of the Bank of England, who was removed from him in the year following by death. In 1825, he married his second wife, Elizabeth Charlotte, daughter of James Alexander, Esq., of Sumner Hill, near Tunbridge, niece of the Earl of Caledon. His heir is his son, the Hon. George Canning.

Lord Stratford is one of the most industrious men that ever represented England at a foreign court. It was not from laziness or love of ease that he neglected the hospital at Scutari, about which so much has recently been said. He was duped by those whose interest it was to deceive him, but upon whose representations he relied. He has been much blamed for the severity of his temper, and his want of urbanity to British strangers in Turkey. We believe that no resources of time or temper could meet the demands made upon them, in Lord Stratford's case, by the crowds of his idle, and foolish, and we must add interested fellow-

subjects, who pursue him for patronage and favour in his embassy. Truth compels us, however, to admit that his temper, always quick, has of late years become irritable to a degree that gives just offence to others, and is most painful to his friends. He does not possess the vigilance and activity of his former years. Since exalted to the peerage, it has also been observed that he has assumed a *hauteur*, an air of consequence, a pomp, and an authority, foreign to his previous habits. The time has arrived when the *otium cum dignitate* becomes his years.

MEMOIR OF REDSCHID PASHA.—Redschid Pasha is undoubtedly the most eminent man in the Turkish Empire; Lord Redcliffe is represented to have said of him that he was the only honest man among its public men. Guizot in public designated him a great man. That he is a very important person to Turkey and Europe may be inferred from the fact that he is the chief instrument in effecting all the useful reforms of the sultan's government, and that by his conduct of its foreign affairs Russian encroachment has been resisted, and Russian menace recently defied. We wish we could add that Russian intrigue had been baffled, but that has not been the case. The diplomatists of the czar have outwitted Redschid; they soon discovered that his weak points were a love of protocols and treaties; and a pride in his own capacity and dexterity; they also perceived that he dreaded and abhorred war, for which he has no genius, and that he would make great sacrifices to avert it. The policy of Nicholas was based upon this knowledge of Redschid; and therefore the Porte was perpetually threatened with war during that monarch's life, in order to induce Redschid to negotiate, which he was always ready to do, and, with the aid of his faithful friend, Lord Redcliffe, he was even eager to try a diplomatic fencing-match with the czar's envoys. Skilful as Redschid is, he was generally defeated, having a weak power to serve, and the cunning employers of a formidable empire to contend with. It was under Redschid's influence that the late sultan founded a diplomatic corps to represent him abroad; previously, the sultans, although occasionally sending ambassadors for special purposes, did not employ stated representatives to foreign governments.

Of the early life of Redschid very little is known. It is difficult to learn anything of the early life of public men in Turkey: they are generally persons who have originally been poor tradesmen, small shopkeepers, or slaves. Redschid was the son of some government functionary, and when a boy had opportunity of observing how the public business was carried on. The terrible Ali Pasha, whose

cruelties in the Greek insurrection became so notorious, married Redschid's sister; and as her father died while her brother was a boy, she took him to her home, and he became the private secretary of his brother-in-law. While the latter was governor of the Morea, and when previously grand vizier, Redschid was his painstaking and intelligent secretary; and when Ali's failure in Greece ruined him, Redschid, previously a notable person, emerged into a prominent public life. He was employed in various important offices in Turkey; and, in 1836, he was appointed ambassador to France, an office for which his knowledge of the French language and literature peculiarly qualified him—departments of intelligence generally unknown to Turkish public men. After serving his master well in Paris, he was accredited to London in a similar capacity, and here his knowledge of the English language and literature excited great surprise, and won for him much respect. In fact, Redschid was one of the most considerable persons in Paris and London while residing in those places. He was respected by the *corps diplomatique*, and was fashionable with the leaders of *haut ton*. In 1846, he was first named minister of foreign affairs by the sultan; and since then was three times grand vizier, and twice minister at the Foreign-office. He is the head of the reforming party, and is violently opposed by the old Turkish party. M. Bianchi, late oriental secretary to the foreign minister of France, says of him:—"Redschid Pasha is not only—by the European celebrity of his name—the first statesman in the empire, he is also indisputably the man whose past history recalls the greatest services to the country, and to its civilization. Among these services may be enumerated the constitutional act of Gulhane, the quarantine, the posts, the abolition of monopolies, the re-organisation of the army, the reform of the currency, the creation of the university; in short, all the important improvements by which Turkey has been favoured by the sultans since 1838, have either been

suggested, or prepared and executed by Redschid Pasha, under the auspices of these sovereigns." His personal character is not to be commended. He has been accused of speculation, and but for his services would have been punished. No foreigner can visit his house without being surrounded by his servants for "*backshish*" (a fee), in order to obtain the privilege of an interview. Important public business will not secure the great man's reception unless bribes go before it. It is alleged that even Lord Stratford, who preserves Redschid in power, cannot visit him without a cost of 500 piastres. Opposed to polygamy, he allows his wife to train young persons for the harems of others. He is cunning, expert, intriguing, and selfish; and but for his love of European manners and ideas, and his vigilant opposition to Russia, he would be an undesirable servant or councillor for the sultan. His age is about fifty-five, and he is said to be very handsome, but all writers do not so represent him. Mr. McFarlane, who seems to have a prejudice against him for his reforming tendencies, says, "I never saw him but once, when he was returning through the filthy streets of Tophana from a conference with the sultan. He appeared to be a very different man from what he was in London, he had grown obese, and his complexion had become muddy; he looked gloomy, uneasy, and sulky; but this may have proceeded from the fact that he was then on the point of being thrust from place and power." If our readers wish to know more of him, they may consult Bayle St. John's work—*The Turks in Europe*. He is still the most influential man in Turkey in the department of foreign politics, and is a warm partisan of the Western powers, and a decided opponent of Russia. If he can be kept from entangling himself, his country, and her allies, in some new mesh of protocols, by which he may display his accomplishments in that line and gratify his vanity, his usefulness as a minister or vizier of Turkey may yet be very great.

CHAPTER IX.

PREPARATIONS FOR WAR.—CORRESPONDENCE OF THE TWO EMPERORS.—RUSSIAN MANIFESTO.
—ENGLISH PEACE DEPUTATION.—ULTIMATUM OF THE ALLIES.—THE CZAR'S REPLY.

"He doth bstride this narrow world
Like a colossus."

SHAKSPEARE.

WHILE the negotiations recorded in the previous chapter were "dragging their slow length along," England and France began gradually to prepare for the impending strife. It is marvellous to ordinary men how our statesmen could suppose peace possible under such circumstances as our history has pointed out; but the

hallucination prevailed equally in the Foreign-offices of Paris and London, and, stranger still, the Turkish Foreign-office admitted the idea, and Redschid Pasha was as ready to nibble at all sorts of overtures as Lord Westmoreland at Vienna, and as Count Buol was to present them; yet some of the best statesmen in

both countries warned their respective governments against indulging in the hope that war could be averted. M. Thiers expressed himself to the Emperor Napoleon with great confidence to this effect. His words are represented to have been — “The Emperor Nicholas finds that Russia has in face of her a far more difficult affair than he had ever anticipated, but notwithstanding the difficulty of his position he is not the man to give way: in addition, he is subjected to the pressure of the old Muscovite party, as the sultan is constrained in a measure by the ulemahs and the old Ottoman party.” M. Guizot was especially summoned to the imperial presence, and interrogated as to his opinion. His answer is said to have been — “Sire, I am convinced that the czar will not abandon an iota of his pretensions.” The opinions of our own leading political men are already familiar to our readers. At this juncture Kossuth wrote some letters which did not attract sufficient notice at the time, but which foreshadowed darkly the coming events. The French emperor was still of opinion that peace might be maintained, and so expressed himself to the two veteran statesmen above-named. It was not then known that his reliance was mainly upon the effect an autograph communication from himself might have upon the Emperor Nicholas. He wrote a letter—a masterpiece in its way—but the czar was unchecked even for a moment in his career. Still, while the letter was meditated, and, afterwards, speeding its way to St. Petersburg, Napoleon III. was organising his resources and making ready for the worst. Early in January orders were given to provide 400 horses for every cavalry regiment, instead of 120, the usual yearly supply. Soon after an order was issued to the minister of marine to arm twelve additional ships of the line; at Brest a squadron had been already fitting when this order was given; and at L’Orient a squadron of four frigates was nearly ready for sea. The emperor frequently consulted Marshal St. Arnaud and General Pelissier on subjects of military arrangement; and the *Débats* hinted that the latter should be made minister of war, the former commander-in-chief of an expeditionary army. Other Paris papers foretold the appointment of General Canrobert. An extraordinary levy of seamen in the ports of Brittany was ordered contemporaneously with the instructions issued to the minister of marine for the increase of ships. The *Courier du Havre* gives a painful picture of the promptitude and stringency with which these orders were executed.

The preparations in England were not equal to those of France, and our French neighbours murmured at this; the English press also called public attention to the dilatory conduct of the

British government. Quickened by these discontents in both capitals, some hurry was shown, and various orders were issued and recalled. There seemed to be no directing head in English military affairs; and the fact that an order was given was no security that it was intended to be obeyed. Sir Stephen Lake-man was sent to Omar Pasha as an adviser, and a sort of British commissioner. A military writer in *Colburn’s New Monthly* for June, 1855, represents this appointment as an annoyance and hindrance to the pasha, and calls Sir Stephen a military incubus! Several other officers were sent to Turkey, some of them to Omar Pasha, and others to Selim Pasha, at Batoum; but none of these appointments were popular among military men, and very little good, if any, resulted from them. In the case of Omar Pasha, he was continually harassed by pompous opinions from these officers, who were alike ignorant of the character of the contending armies, and of the habits of the people upon the theatre of war.

The presence of Lord Dudley Stuart and other independent English gentlemen at Constantinople encouraged the sultan; and they were afterwards acceptable guests at the headquarters of Omar Pasha’s army, where their presence greatly encouraged the Turkish troops by this proof of sympathy on the part of the Western nations. Several distinguished Poles and Hungarians offered their swords to the sultan, but the Austrian minister, in a menacing but still furtive manner, opposed his acceptance of their services. The sultan was also discouraged and surprised by receiving from the Austrian and Prussian ministers strongly-expressed communications disapproving of the entrance of the allied fleets into the Black Sea. So long as the sultan’s allies only directed protocols against the aggressor, Austria and Prussia affected coincidence of opinion; but, upon the first display of solid protection, they were full of alarm and disapprobation. This was consistent on the part of powers whose ministers congratulated the czar upon the cowardly butchery at Sinope; but how the Western governments or Turkey could put any confidence in sovereigns so acting, passes our knowledge of human nature, and may well furnish metaphysical and ethical writers with a new chapter on the philosophy of credulity. The Pasha of Egypt was a less doubtful ally; he sent to the Porte 25,000 muskets, a large portion of which were given in charge to a murid sent by Schamyl on an especial embassy to the Porte. This murid brought an autograph letter from the Daghestan chief, or a letter at all events purporting to be such, as some deny to the warrior a knowledge of letters. A communication from the Pasha of Egypt placed at the sultan’s disposal 12,000 additional troops,

and a small but efficient detachment of artillery, independent of the guns usually allotted to Egyptian brigades. The efforts of the Porte were incessant to direct reinforcements upon the Danube, and to send to Schumla and also to Batoum, upon the Asiatic theatre of the war, large supplies of arms and ammunition. The most formidable preparations were made by the English Admiralty throughout the month of January, and in February, up to the time of the departure of the Russian ambassador. There was much hesitation and confusion—almost as many counter-orders as orders—waste and extravagance incalculable; but still, so great were the naval resources of Great Britain that the work went on, and powerful naval armaments filled her ports and arsenals before the word was given to “let slip the dogs of war.”

Russia was not idle: the din of preparation for a war *à l'outrance* seemed to sound forth all over her vast territory. Inspections of the Russian fleets in the Baltic, and of the Russian arsenals, were incessant. Reviews of immense bodies of troops took place, especially in Poland and in “the governments” contiguous to the Baltic. Masses were offered, and incense perfumed the air in all the churches, for the divine interposition and the “powerful aid of our Lady and the holy saints of Russia.” The czar made various mendacious representations to the Scandinavian powers; his efforts to cajole them failed, and he resorted to menace. The *Falles Rast*, a Stockholm journal, informs us that King Oscar laid before the chambers of his kingdom no less than twenty-five notes, lettered from A to Z, which he had received from the “diplomatising” powers. He referred to the demands of Russia in terms of indignation, which his majesty’s enemies represented as assumed. These demands were to the effect that Sweden should join her, or maintain an unarmed neutrality. The allies, on the other hand, were desirous to secure the assistance of Sweden, but offered no threats. Prussia advised a strict but armed neutrality for the present—her own course of action, or non-action; and King Oscar preferred the advice of Frederick William, with whom he seemed disposed to co-operate in any policy. Norway decided on the fitting out of a squadron composed of frigates, corvettes, brigs, and gun-boats—crafts suited to the shallows of the Baltic Sea; and she was willing to join the allies, if Sweden would concur. Sweden would not concur. The Russian envoys retired baffled and angry with the spirit evinced by the Swedes, but with undissembled rage and vengeance towards the people of Norway, whose love of liberty and jealousy of Russia far exceeds in intensity those traits of feeling on the part of the people of Sweden.

Overtures were at the same time made from St. Petersburg to the cabinet of Copenhagen for the cession of the island of Bornholm to Russia. Bornholm is within a day’s sail of the Sound and Copenhagen. The King of Denmark was not unwilling to oblige his great conservative and imperial brother, but his fear of the Danish diet decided his refusal. His majesty, moreover, resolved upon a neutral position, and the czar declared that he would not recognise that neutrality—that Denmark must, from her position, be on one side or the other. It is to be presumed, therefore, that if the Baltic coasts of Russia cease to be blockaded by the allies, the Russian fleets will attack Denmark, making her neutrality a *casus belli*; for, although the war has far advanced at the time we write, Russia has not withdrawn her protest, nor recognised the neutrality of his Danish majesty. A similar protest was sent by the Russian court to that of Sweden, and the czar added this significant threat—“Look well to your interests.” It had been well for the interests of all the Baltic powers if they had united with the allies; Russia might ere now have been forced back from the positions which she has so recently taken upon its shores. Sweden, Norway, and Denmark, could furnish gun-boats and other small craft, and hardy and gallant seamen to man them, who would have penetrated every sinuosity upon the shores of the Gulfs of Bothnia and Finland; Helsingfors, Cronstadt, and perhaps St. Petersburg itself, would ere now have been bombarded. When peace is being secured, it will certainly not be for the interest of the Western powers to do anything for the Scandinavian nations, or shelter them in any way from the wrath of Russia, unless they have shaken off in the meantime the thralldom of, their present unconstitutional and pre-Russian sovereigns.

It is remarkable that throughout these protracted negotiations the sovereigns of Germany and Scandinavia, and of Europe generally, with the exception of the King of Sardinia, were all in favour of the czar, while the people were as generally in favour of the allies. The existence of so many petty states in Germany and Italy, the preservation of which, and of despotic authority in them, forms a part of the czar’s policy, is injurious to the liberties of Europe, and promotes the designs of Russia. An author of some celebrity wrote well many years ago on this subject; we wish his words may enlighten the policy of the more free and powerful governments.

“Europe is divided into unnatural sections by the force of its existing governments; when that foreign and hostile force is removed, the sections will reunite with the masses from which they were originally separated. The

mind of Germany is one, though the governments are many; the governments are tottering, and Germany, free and independent, will form one powerful and enlightened empire. This change must be for the benefit of Great Britain. Our alarms about the power of France are unnecessary: but Germany, united in one body, would at all times form a counterpoise to all aggressions from the other side of the Rhine. Italy, when it formed one kingdom, would be sufficient to defend its natural barrier, the Alps; and the Slavonian provinces of Austria, confederated with Poland, would form an advanced guard against the aggressions of Russia in Europe."*

The czar did not confine his naval or diplomatic efforts to the northern and western departments of his empire. He made fresh attempts to entangle the shahs of Central Asia and the Persian monarch in his nets, and he increased his defences on the coasts of the Crimea; his ships were withdrawn within the harbour of Sebastopol, where they numbered forty — *twenty of them being line-of-battle!* What an armament to keep upon the waters of an enclosed sea, where he had no enemy to encounter, and no use for this array of power but aggression upon Turkey!

Sympathy with the objects of the Western powers, and opposition to Russia, arose at this juncture from a very unexpected quarter. Prince Metternich, the veteran and absolutist statesman, exerted his influence with his royal master to induce a closer alliance between Austria and the West. When taunted by the Russian party at Vienna with his inactivity in the days of his power where Russia was concerned, he replied: "My administration of affairs has been always anti-Russian; I have never been indifferent to her progress, and was only passive when I saw that France was in alliance with her, and when my opposition and protest could avail nothing. I was greatly opposed to the erection of a Greek kingdom, for which opposition I incurred great reproach. I wished to do everything possible for the independence of Germany, which must cease if Russia become one day all-powerful; and the emancipation of Greece was an additional instrument in the hands of Russia." These remarkable words made a deep impression upon the young Emperor Francis Joseph, and greatly disconcerted the Austro-Russian party.

Amongst the many schemes and enterprises which racked the brain of the czar, was one to dethrone the Emperor Napoleon by what was called the fusion of the elder branch and the Orléanist branch of the Bourbon family. The agents of the czar accomplished "the fusion." The Duchess of Orleans, mother of

the heir of the French throne through the Orleans dynasty, resisted, notwithstanding the importunities of her unprincipled brothers-in-law, who, forfeiting nothing themselves, were willing to strip her and their young nephew of hope and glory, if they could only inflict mischief upon the hated rival of both sections of the Bourbons. The conduct of the Duchess of Orleans was politic, wise, fearless, and high-principled; and if a scion of the Bourbon race again mount the throne of France, we trust it may be under the regency of this pure and noble-minded woman.

Before the answers of the British and French governments were communicated to the Russian ambassadors, concerning the entrance of the allied fleets into the Black Sea, the French emperor performed one of those eccentric but clever "affairs," for which he has gained so much notoriety. He addressed an autograph letter to the czar; the letter he had been for some weeks revolving in his mind, and upon the effect of which he relied so much. The letter occupies too important a place on the scroll of history to be omitted from our pages.

"Palace of the Tuileries, 29th January, 1854.

"SIRE,—The difference which has arisen between your majesty and the Ottoman Porte has assumed such a grave aspect, that I think it right myself to explain directly to your majesty the part which France has taken in this question, and the means which suggest themselves to me in order to avoid the dangers which menace the tranquillity of Europe. The note which your majesty has just sent to my government, and to that of Queen Victoria, endeavours to prove that it was the system of pressure adopted from the commencement by the two maritime powers which alone involved the question in bitterness. On the contrary, according to my view, the matter would have continued a cabinet question, if the occupation of the two principalities had not suddenly transferred it from the region of discussion to that of fact. Nevertheless, although your majesty's troops had entered Wallachia, we advised the Porte not to consider that occupation as a warlike act, thus proving our extreme desire for conciliation. After I had consulted with England, Austria, and Prussia, I proposed to your majesty a note designed to give satisfaction to all. Your majesty accepted it. We had hardly, however, been informed of this good news, when your minister, by explanatory commentaries, destroyed all the conciliatory effects of it, and thus prevented us from insisting, at Constantinople, upon its pure and simple adoption. The Porte, for its own part, suggested some modifications in the note, to which the representatives of the four powers at Vienna were not indisposed to agree. They were not,

* The Progress of Britain, p. 80. By James Douglas.

however, agreed to by your majesty. It was then that the Porte, wounded in its dignity, its independence threatened, and being compelled to raise an army to oppose that of your majesty, preferred to declare war rather than remain in a state of uncertainty and humiliation. The Porte had claimed our support; the cause of the Porte appeared to us to be a just one; and the English and French squadrons were therefore ordered to the Bosphorus. Our attitude in reference to Turkey was that of a protector—but it was passive. We did not invite her to war. We unceasingly addressed to the ears of the sultan the advice of peace and moderation, persuaded that this was the best mode of coming to an agreement; and the four powers consulted together again, and submitted to your majesty some other propositions. Your majesty, on your part, exhibiting the calmness which arises from the consciousness of strength, contented yourself with repulsing from the left bank of the Danube, as in Asia, the attacks of the Turks; and, with the moderation worthy of the chief of a great empire, your majesty declared that you would act on the defensive. Up to that period we were, I may say, interested spectators—but simply spectators—of the dispute, when the affair of Sinope compelled us to take a more decisive part. France and England had not thought it necessary to send troops to the assistance of Turkey. Their flag, therefore, was not engaged in the conflicts which took place upon land. But at sea it was very different. There were at the entrance to the Bosphorus 3000 guns, the existence of which proclaimed loudly enough to Turkey that the two leading maritime powers would not allow her to be attacked by sea. The affair at Sinope was for us as painful as it was unexpected; for it matters little to us whether the Turks wished to convey munitions of war to the Russian territory. In fact, Russian ships attacked Turkish vessels in the waters of Turkey, while those vessels were riding quietly at anchor in a Turkish port. The Turkish vessels were destroyed, in spite of the assurance that there was no wish to commence an aggressive war, and in spite of the vicinity of our squadrons. It was no longer our policy which received a check, it was our military honour. The sound of the cannon-shot at Sinope resounded painfully in the hearts of all those who, in England and France, wish to preserve national dignity. There was a general participation in the sentiment that, wherever our cannon can reach, our allies ought to be respected. Out of this feeling arose the order given to our squadrons to enter the Black Sea, and to prevent by force, if necessary, the recurrence of a similar event. Thence arose the collective notification sent to the cabinet of St. Petersburg, announcing that if we prevented

the Turks from making an aggressive war upon the coasts of Russia, we would also protect the Turks upon their own territory. As to the Russian fleet, in prohibiting its navigation of the Black Sea, we placed it upon a different condition; because it was important during the war to preserve a guarantee equivalent in force to the occupation of the Turkish territory, and thus facilitate the conclusion of peace, by having the power of making a desirable exchange. Such, sire, is the real result and statement of the facts. It is clear that having arrived at this point, they must either bring about a definite understanding or a decided rupture. Your majesty has given so many proofs of your solicitude for the tranquillity of Europe, and by your beneficent influence has so powerfully arrested the spirit of disorder, that I cannot doubt as to the course you will take in the alternative that presents itself to your choice. Should your majesty be as desirous as myself of a pacific solution, what would be more simple than to declare that an armistice shall now be signed; that things shall resume their diplomatic course; that all hostilities shall cease; and that the belligerent forces shall return to the places from which motives of war have led them? Thus the Russian troops would abandon the principalities, and our squadrons the Black Sea. Your majesty, preferring to treat directly with Turkey, might appoint an ambassador, who could negotiate with a plenipotentiary of the sultan a convention which might be submitted to a conference of the four powers. Let your majesty adopt this plan, upon which the Queen of England and myself are perfectly agreed, and tranquillity will be re-established and the world satisfied. There is nothing in the plan which is unworthy of your majesty—nothing which can wound your honour; but if, from a motive difficult to understand, your majesty should refuse this proposal, then France, as well as England, will be compelled to leave to the fate of arms and the chances of war that which might now be decided by reason and justice. Let not your majesty think that the least animosity can enter my heart. I feel no other sentiments than those expressed by your majesty yourself, in your letter of the 17th of January, 1853, in which you write, ‘Our relations ought to be sincerely amicable, based as they are upon the same intentions—the maintenance of order, the love of peace, respect for treaties, and reciprocal good feeling.’ This programme is worthy of the sovereign who traced it, and I do not hesitate to declare that I remain faithful to it. I beg your majesty to believe in the sincerity of my sentiments; and it is with these sentiments that

“I am, sire, your majesty’s good friend,
“NAPOLEON.”

The above letter arrived at St. Petersburg the 6th February. M. de Castelbacque, the French ambassador, informed Count Nesselrode that he wished to present a letter to the czar from the Emperor of the French. The etiquette of the Russian court forbids any business with the emperor after four o'clock; but Count Nesselrode made this important communication an exception, and M. Castelbacque appeared at the palace the same evening. The emperor was ill, but graciously received the envoy and his communication. Having read it, the czar appeared painfully affected. He then spoke a few words in Russ, in a low tone, which the ambassador did not comprehend. The czar, upon recovering his composure, told the envoy that he would answer the letter in a few days, which he did upon the 9th of February, in a spirit as insolent, as false, and as hypocritical, as pervaded the other documents and manifestoes to which his signature has been attached since Prince Menschikoff appeared at Constantinople.

"St. Petersburg, 28th January (9th February), 1854.

"SIRE,—I could not reply better than by repeating to your majesty, as they belong to me, the words by which your letter terminates:—'Our relations must be sincerely amicable, and rest upon the same intentions—the maintenance of order, the love of peace, the respect of treaties, and mutual good-will.' Accepting, as you say, that programme such as I have traced it, you profess to have remained true to it. I dare believe, and my conscience tells it to me, that I have not deviated from it. For in the affair which separates us, and of which the origin does not come from me, I have always endeavoured to maintain friendly relations with France. I have avoided with the greatest care to come in contact on this ground with the religion professed by your majesty. I have made in the interests of peace, both in form and substance, all the concessions compatible with my honour; and in claiming for my co-religionists in Turkey the confirmation of the rights and privileges which have been acquired for them since a long time, at the price of Russian blood, I have demanded nothing but what was consequent upon treaties. If the Porte had been left to itself, the differences which now rend Europe would have been long ago settled. A fatal influence alone came and threw itself across it. By provoking gratuitous suspicions, and exalting the fanaticism of the Turks—by misleading their government on my intentions and the real bearing of my demands, it has made the question assume such exaggerated proportions that war has been the result.

"Your majesty will allow me not to enter into too long details of the circumstances exposed in your particular point of view, of

which your letter presents the chain. Various acts of mine very unexactly appreciated, in my opinion, and many a controverted fact would be necessitated to be re-established, at least, in such manner as I conceive them—long developments scarcely suitable in a correspondence from sovereign to sovereign. It is thus that your majesty attributes to the occupation of the principalities the wrong of having suddenly translated the matter from the domain of discussion to that of fact. But you overlook the fact that that occupation, still purely eventual, was anticipated, and in a great measure caused, by a very grave anterior fact—that of the apparition of the combined fleets in the neighbourhood of the Dardanelles. Moreover, long before that, when England still hesitated to assume a menacing attitude towards Russia, your majesty had first sent your fleet to Salamis. That offensive demonstration surely evinced little confidence in me. It was of a nature to encourage the Turks, and paralyse beforehand negotiations by showing them France and England ready to maintain their cause at all risks. And, again, your majesty attributes to the explanatory commentaries of my cabinet on the Vienna note the impossibilities in which France and England found themselves to recommend its adoption to the Porte. But your majesty may be able to call to mind that our commentaries followed, and did not precede, the non-acceptation, pure and simple, of the note; and I think that the powers, if they really desired peace, were bound to demand as a preliminary that adoption pure and simple, instead of permitting the Porte to modify what we had adopted without change. Moreover, if any part of our commentaries was of a nature to give rise to difficulties, I offered at Olmutz a satisfactory solution, which appeared such to Austria and Prussia. Unhappily, in the interval, a portion of the Anglo-French fleet had already entered the Dardanelles, under the pretext of protecting there the life and property of English and French subjects; and, to allow the whole fleet to enter without violating the treaty of 1841, it was necessary that war should be declared by the Ottoman government. It is my opinion, that if France and England had desired peace as I did, they should at all cost have prevented this declaration of war, or when war was declared, at least have acted so as to keep it within the narrow bounds which I desired to trace for it on the Danube, so that I should not have been forcibly torn away from the purely defensive system it was my intention to follow. But from the moment the Turks were allowed to attack our Asiatic territory, to storm one of our frontier posts (even before the term fixed for the commencement of hostilities), to blockade Ak-haltziek, and to devastate the province of

Armenia—from the moment it was left free to the Ottoman fleet to convey troops; arms, and ammunition to our coasts, could it be reasonably expected that we should wait the result of such an attempt? Was it not to be supposed that we should do everything in our power to forestall it? The affair of Sinope was the consequence—the forced consequence—of the attitude adopted by the two powers; and the event surely could not appear to them unexpected. I had declared my wish to remain on the defensive; but before the explosion of the war, as long as my honour and interests allowed me, as long as it remained within certain limits. Was that done which ought to have been done to prevent those limits from being passed? If the part of spectator, or even of mediator, did not suffice for your majesty, and you desired to be the armed auxiliary of our enemies, then, sire, it would have been more worthy of you to have told me so beforehand, by declaring war to me. Then every one would have known his part. But is it equitable to charge us with criminality after an act which nothing was done to prevent? If the cannon-shots reverberating from Sinope were painful in the hearts of all those who in France and England entertain the lively sentiment of national dignity, does your majesty suppose that the menacing presence of the 3000 guns you speak of, and the noise of their entrance into the Black Sea, are facts without an echo in the heart of the nation which I have the honour to defend? I learn from you for the first time—as the verbal declaration made to me here did not mention it—that at the same time they protected the provisioning of the Turkish troops on their own territory, the two powers have resolved to forbid us the navigation of the Black Sea; that is to say, apparently, the right of provisioning our own coasts. I leave it to your majesty to consider if that is, as you say, to facilitate the conclusion of peace, and if, in the alternative of which I am placed, I am allowed to discuss—to examine for a moment—your proposition of an armistice, of the immediate evacuation of the principalities, of negotiating with the Porte a convention to be submitted to a conference of the four powers—would you, sire, yourself, if you were in my place, accept such a position? Would your national spirit permit you to do so? I boldly say No. Grant to me, then, the right to think as you do. Whatever your majesty may decide, it is not threats that will make me give in. My confidence is in God and in my right; and Russia, I will guarantee it, will know how to show herself in 1854 what she was in 1812.

“If, however, your majesty, less indifferent to my honour, should return to our pro-

gramme—if you will offer me a cordial hand, as I now offer mine to you at this last moment—I will willingly forget how offensive the past has been to my feelings. Then, sire, —but then only—we may discuss, and perhaps come to an understanding. Let your fleet confine itself to the prevention of the Turks taking new forces to the theatre of war. I willingly promise they shall have nothing to fear from attempts of mine. Let them send me a negotiator, and I will give him a fitting reception. My conditions are known at Vienna; they are the only basis upon which I can treat.

“I beg of your majesty to believe in the sincerity of the sentiments with which I am, sire,

“Your majesty’s good friend,
“NICHOLAS.”

This letter to the Emperor Napoleon was followed by another irate production of the czar, in the form of a manifesto, which, as it produced an immense effect upon Russia, and the members of the Greek Church in Turkey, we give.

“We Nicholas, Autocrat and Emperor of all the Russias, &c. &c.

“We have already informed our beloved and faithful subjects of the progress of our disagreement with the Ottoman Porte. Since then, although hostilities have commenced, we have not ceased to wish—as we still wish—the cessation of bloodshed. We retained even the hope that reflection and time would convince the Turkish government of its misconceptions, engendered by treacherous instigations, in which our just demands—founded on treaties—have been represented as attempts at its independence, veiling intentions of aggrandisement. Vain, however, have been our expectations thus far. The English and French governments have sided with Turkey, and the appearance of the combined fleets off Constantinople served as a further incentive to its obstinacy; and now have the Western powers, without previously declaring war, sent their fleets into the Black Sea, proclaiming their intention to protect the Turks, to prevent the free navigation of our vessels of war for the defence of our coasts. After a course of proceeding so unheard of among civilised nations, we recalled our ambassadors from England and France, and have broken off all political intercourse with these powers. Thus England and France have sided with the enemies of Christianity against Russia, combating for the orthodox faith. But Russia will not betray her holy mission; and, if enemies infringe her frontiers, we are ready to meet them with the firmness bequeathed to us by our forefathers. Are we not still the same Russian nation to

whose exploits the memorable year of 1812 bears witness?—May the Almighty assist us to prove this by deeds! With this hope—combating for our persecuted brethren, followers of the faith of Christ—with one accord let all Russia exclaim: ‘O Lord, our Redeemer, whom shall we fear? May God be glorified, and his enemies be scattered!’”

To both these documents an able refutation was given by the French minister for foreign affairs in what is called, in political parlance, a diplomatic circular. The animadversions of the French minister were eloquent and cutting, but betraying some mortification that his reliance on the Emperor of Russia's *moderation* was disappointed. It is at once amusing and painful to read the recognition of the czar's great services to the cause of order, and his extreme moderation, in the despatches and circulars of the French minister, and compare them with the recorded conversations of her majesty's ambassador at St. Petersburg. What services did the czar ever render to the cause of order? Did he not throw the two great eastern empires of Turkey and Persia into repeated disorder by his aggressions? Did he not rob and trample upon the people of the Danubian provinces whenever it suited his purposes? Did he not tread out the last glimmering spark of liberty in Poland? Did he not aid Austria to carry fire and devastation upon the free and happy homes of Hungary, and there quench liberty and order in the blood of their bravest defenders? There lived no man in Europe, while he lived, from whom freedom and order might demand such extensive reparation. It is with shame, then, we read of Sir G. H. Seymour reminding his imperial majesty of his well-known moderation, which he always maintained, and perceive such men as Drouyn de Lhuys complimenting him for the services he rendered to Europe in supporting it against what were really efforts for its own emancipation from civil and ecclesiastical bondage. There were parties and public men in Europe, in 1848-9, whose objects and proceedings were anarchical and unholy; but the mass of the European population sought for liberal and enlightened government, and used their victories with moderation. The re-actionaries and despots neither imitated the moderation of the people, nor proposed to themselves righteous or honourable ends. Never in the history of nations was political perfidy more shamelessly perpetrated than in the conduct of the courts and governments of Europe in the re-actionary policy of which the great autocrat was the main support. It is no wonder that Drouyn de Lhuys should ultimately retire from his post, overreached by both Austria and Russia, whom he trusted, and after having perverted his own great talents

and abused the position and interests of his country by a temporising policy, dictated by his despotic sympathies, as evinced in the circular we give below. It is necessary to call the attention of our readers thus early to the bias of this statesman's mind, because of the important and injurious part played by him in the tedious negotiations by which the progress of the war, and the success of the allies, were impeded; while, at the same time, we give him credit for his exposure of the czar's sophisms, and his eloquent denunciation of the czar's hypocrisy.

“Paris, March 5, 1854.

“SIR,—You are now cognisant of the answer of the Emperor Nicholas to the letter of the Emperor Napoleon, and you have also read the manifesto which the former sovereign has addressed to his people. The publication of these two documents has destroyed the last hope which might have been placed upon the wisdom of the cabinet of St. Petersburg; and that same hand which had acquired honour by the support it had held forth to Europe, shaken to its foundations, now opens the way to passion and chances. The government of the emperor is deeply afflicted at the inutility of its efforts, and the ill-success of its moderation; but on the eve of the great struggle which he has not desired, and which the patriotism of the French nation will enable him to assist, he feels it necessary once more to disavow responsibility for results, and to place its whole weight upon that power which will have to account for it in history, and to God.

“In addressing the Emperor of Russia in terms in which the utmost conciliation was united with the most noble frankness, his imperial majesty was desirous of clearing the question of all the absurdities which kept the world in suspense between peace and war; and endeavoured so to arrange it as that there might be no offence given to the dignity of any one. Instead of acting upon a similar principle, and accepting the hand extended to him, the Emperor Nicholas preferred to recur to facts upon which Europe had definitively pronounced an opinion, and to represent himself as having had to contend, from the commencement of a crisis provoked by his government, with a preconceived and systematic system of hostility, which was fatally calculated to bring about that state of things which has happened. It is not my voice, sir, it is that of Europe which replies, that never, at any period, did an imprudent policy meet with adversaries more calm and more patient in their resistance to designs which their judgment pronounced to be unjust.

“I will not go back to past events, upon which such full light has been thrown; but I must

once more repeat that it is no longer allowable to assimilate the dispute between the Latins and the Greeks about the Holy Sepulchre, with the claim now put forward. The question was arranged from the commencement of Prince Menschikoff's visit to Constantinople; and it is the claim which that ambassador raised upon one point, when he had obtained satisfaction upon another, which has aroused the whole world, and inspired all the cabinets with the same desires for caution and conciliation.

"Is it necessary to enumerate all the attempts, the failure of which is only attributable to an invincible obstinacy? Nobody is ignorant of them; and there is nobody that is not aware that if decisive demonstrations were made during the progress of negotiations, each one of them was preceded by an aggressive act on the part of Russia.

"I will only recall to recollection the fact that if the French squadron, at the end of March, anchored in the bay of Salamis, it was because since the month of January there had been an immense assemblage of troops in Bessarabia. If the naval forces of France and England had approached the Dardanelles, where they only arrived in the month of June, it was because a Russian army was encamped upon the banks of the Pruth, and because the resolution to cross that river had been taken, and had been effectually announced since the 1st of May. If, at a later period, our fleets were at Constantinople, it was because cannon resounded on the Danube; and, in short, if they entered the Black Sea, it was because, contrary to the promise of acting upon the defensive, Russian vessels had left Sebastopol to destroy the Turkish vessels at anchor in the port of Sinope. Every step which we took in concurrence with England in the East had peace for its object, and we did not desire to interfere between the belligerent parties. Every day, on the contrary, Russia advanced openly towards war. Assuredly, if there were two powers unlikely to coincide with France and Great Britain in a conflict with Russia, these powers were Austria and Prussia. You know, sir, that the principles by which we are actuated are known, and that Europe, constituted as a jury, has pronounced a solemn verdict upon pretensions and acts of which no apology—however high the name from which it may now emanate—can change the character. Thus, the dispute is not between France and England assisting the Porte, and Russia; it is between Russia and every state which has a respect for what is right, and whose opinion and whose interest must compel it to support the good cause.

"I therefore confidently contrast the unanimity of the great cabinets with that appeal to the recollections of 1812, addressed to a sovereign who had just made a honourable

and powerful effort at conciliation. The whole conduct of the Emperor Napoleon sufficiently attests that if he be proud of the inheritance of glory left him by the head of his race, he has neglected nothing in order to render his accession to the throne a pledge of the peace and tranquillity of the world. I will only say one word, sir, of the manifesto in which his majesty the Emperor Nicholas announces to his people the resolutions he has taken. Our epoch, however troubled, has at least been exempt from one of the evils which most affected the world in former days—I mean the wars of religion. Now, however, an echo of those disastrous times is made to resound in the ears of the Russian people. There is an affectation of opposing the Cross to the Crescent; and an appeal is made to fanaticism for the support which cannot be obtained from reason. France and England need not defend themselves from the imputations made against them. They do not support Islamism against the orthodox Greek faith. They go to protect the Ottoman empire from the ambitious covetousness of Russia. They go there with the conviction that the presence of their armies in Turkey will destroy the prejudices—already much weakened—which still separate the different classes of the subjects of the Sublime Porte, and which cannot be reconciled, unless the appeal sent from St. Petersburg, by provoking hatred of race and a revolutionary explosion, should paralyse the generous intentions of the sultan. For us, sir, we seriously believe that by giving our support to Turkey, we shall be of more use to the Christian faith than the government which uses it as an instrument to promote its temporal ambition. Russia is too oblivious, in the reproaches she makes against others, that she is far from exercising in her own empire, in reference to the sects not professing the dominant faith, a tolerance equal to that to which the Sublime Porte has a good right to lay honourable claim; and that, if she were to display less apparent zeal for the Greek religion beyond her frontiers, and more charity towards the Catholic religion at home, she would better obey the law of Christ, which she so pompously invokes.

"Receive, &c.,

"DROUYN DE LHUYS."

The ambassadors of the allies left St. Petersburg during this diplomatical logomachy. The emperor showed a marked difference in his mode of treating them. The French ambassador took his leave in the usual manner, and such politeness was offered to him as the occasion allowed. He left on the 21st of February. The English ambassador was not permitted to ask for his passports—the czar, anticipating his recall, sent them; he was not allowed to take

leave, and intimations were made to him that his departure had better be quickened: accordingly, Sir G. H. Seymour left on the 18th of February. The French ambassador signified his displeasure at the discourtesy shown to his British colleague, and declined such marks of respect as, being refused to Sir G. H. Seymour, it might appear in him invidious to accept. The *St. Petersburg Journal* immediately after recorded the czar's protest against the line of policy pursued by the Western governments.

The circular of Drouyn de Lhuys was exceedingly well-timed, for it followed immediately upon the allied ultimatum, which was dated the 28th of February; and on Tuesday, the 7th of March, the messenger left Vienna to bear it to the Russian capital. The terms were brief and stringent:—that, before the end of April, the czar should withdraw his armies from the principalities; and that, in six days after his receipt of the demand, he should signify its acceptance. The czar's comment on this was, that “it did not require *five minutes' consideration*; and that he would expend his last rouble, his last musket, and his last man,” rather than submit. This, however, was not his formal reply; he gave none, but retired to Peterhoff the day before the missive arrived, and the only official notice taken of it was by Count Nesselrode, who intimated that “*there was no answer.*” Thus haughtily, defiantly, and contemptuously, did the autocrat treat the Western nations, their overtures of peace, their demonstrations of power, and their respectful forbearance. Austria and Prussia did not join in the ultimatum; their policy was to reap all the fruits of war, if it should ensue, without any of the costs or risks. Austria pretended that it was necessary for her to give all her attention to the security of peace among the Slaves on both sides of the Danube; to strengthen herself against Russian attack; Hungarian, Polish, or Italian revolt; and the suspicious and jealous policy of her German rival, Prussia. An official document published in Vienna immediately upon the ultimatum having been sent, characterises the demands of the allies as just, and in accordance with the interests of Europe. While, however, the czar affected so much haughtiness and disdain at St. Petersburg, he sent a confidential agent, whose path crossed that of the bearer of the ultimatum; this agent was authorised to make proposals through Austria to the Western governments. These proposals were, however, the same imperious demands somewhat changed in form; and the ministers of England, France, Austria, and Prussia, were unanimous in at once deeming them unworthy of any serious discussion. Thus was brought to an end all negotiations between the allies and Russia preliminary to war.

In order to preserve in our narrative the consecutive occurrence of these controversial and diplomatic letters and documents, we have carried our readers some way into the month of March, whereas the combatants on the fields of war were left shut up in the snows of winter, except as they emerged occasionally for some desultory attack. The warlike preparations of the allies we left as they stood at the end of January. We shall return to these matters in another chapter, and shall conclude this by noticing one of the most odd and eccentric circumstances which has ever been recorded in connexion with the politics of belligerent states. The Quakers, and the members of other religious denominations in England, constituting the Peace Society, regarded the probable outbreak of war with great anxiety. The Society of Friends convened a general meeting of their body, and delegated from it three of their number to wait upon the Emperor of Russia, and present him with an address deprecating war. The letter was written in the second week of January, and the Friends deputed to convey it were—Joseph Sturge of Birmingham, Robert Charleton of Bristol, and Henry Pease of Darlington. They left London on the 20th of January, and proceeded by way of Berlin, Königsberg, and Riga, to St. Petersburg, and arrived there on the 2nd of February. The deputation did not adopt the usual method of foreigners who seek a communication with the emperor; instead of applying through their own ambassador, they at once made application to Count Nesselrode, who most courteously received them. The Friends justified their departure from the etiquette observed in communications with the imperial person or government by foreigners, on the ground that theirs was a religious, and in no sense a political mission, and therefore they made no use of courtly media in approaching the chief of the grand chancellerie and the emperor. Possibly the shrewd Friends divined that neither the government at home, nor the ambassador at St. Petersburg, were very favourable to their undertaking. On the 10th of February, the deputation was introduced by Count Nesselrode to his majesty, who received them standing, although at the time ill with the gout. The address was then read, and was as follows:—

“*To NICHOLAS, EMPEROR OF ALL THE RUSSIAS.*

“May it please the Emperor,—We, the undersigned members of a meeting representing the religious Society of Friends, commonly called Quakers, in Great Britain, venture to approach the imperial presence under a deep conviction of religious duty, and in the constraining love of Christ our Saviour.

“We are, moreover, encouraged so to do by the many proofs of condescension and Christian

kindness manifested by thy late illustrious brother, the Emperor Alexander, as well as by thy honoured mother, to some of our brethren in religious profession.

"It is well known that, apart from all political considerations, we have, as a Christian Church, uniformly upheld a testimony against all war, on the simple ground that it is utterly condemned by the precepts of Christianity, as well as altogether incompatible with the spirit of its Divine Founder, who is emphatically styled the 'Prince of Peace.' This conviction we have repeatedly pressed upon our own rulers; and often, in the language of bold but respectful remonstrance, have we urged upon them the maintenance of peace as the true policy, as well as manifest duty of a Christian government.

"And now, O great prince, permit us to express the sorrow which fills our hearts as Christians and as men, in contemplating the probability of war in any portion of the continent of Europe. Deeply to be deplored would it be, were that peace (which to a large extent has happily prevailed for so many years) exchanged for the unspeakable horrors of war, with all its attendant moral and physical suffering.

"It is not our business, nor do we presume to offer any opinion upon the questions now at issue between the imperial government of Russia and that of any other country; but, estimating the exalted position in which Divine Providence has placed thee, and the solemn responsibilities devolving upon thee, not only as an earthly potentate, but also as a believer in that Gospel which proclaims 'Peace on earth and good-will toward man;' we implore Him by whom 'kings reign and princes decree justice,' so to influence thy heart and to direct thy counsels, at this momentous crisis, that thou mayest practically exhibit to the nations, and even to those who do not profess the 'like precious faith,' the efficacy of the Gospel of Christ, and the universal application of his command, 'Love your enemies: bless them that curse you: do good to them that hate you: and pray for them that despitefully use you and persecute you, that ye may be the children of your Father, which is in heaven.'

"The more fully the Christian is persuaded of the justice of his own cause, the greater his magnanimity in the exercise of forbearance. May the Lord make thee the honoured instrument of exemplifying this true nobility, thereby securing to thyself and to thy vast dominions that true glory and those rich blessings which could never result from the most successful appeal to arms.

"Thus, O mighty prince, may the miseries and devastations of war be averted; and in that solemn day when 'every one of us shall

give account of himself to God,' may the benediction of the Redeemer apply to thee:— 'Blessed are the peacemakers, for they shall be called the children of God:' and mayest thou be permitted, through a Saviour's love, to exchange an earthly for a heavenly crown, 'a crown of glory which fadeth not away.'

[The signatures follow.]

"London, 11th of First month, 1854."

The emperor listened with the most serious interest to these plain, pious, and impressive words. He seemed especially affected by the reference to his mother, and nodded assent to the expression concerning his predecessor, Alexander's, good-will to the Friends. Indeed, his whole manner was urbane and even respectful. These simple, upright, honest men, commanded from the haughty arbiter of the fate of nations a respect which generals, and nobles, and kings could not win, even from his courtesy. The impression of the deputation was, that he was not uninfluenced by what was addressed to him; and the harshness, so often characteristic of his countenance, gave way to a bland kindness, while his voice, naturally commanding and severe, was filled with suavity. He detained the delegates some time in conversation, and gave them what he termed "an explanation of his differences with their government." The Friends afterwards noted down what was addressed to them, and compared these notes, which were as nearly as possible as follows:—

"We received the blessings of Christianity from the Greek empire; and this has established and maintained ever since a link of connection, both moral and religious, between Russia and that power. The ties that have thus united the two countries have subsisted for 900 years, and were not severed by the conquest of Russia by the Tartars; and when, at a later period, our country succeeded in shaking off that yoke, and the Greek empire, in its turn, fell under the sway of the Turks, we still continued to take a lively interest in the welfare of our co-religionists there; and when Russia became powerful enough to resist the Turks, and to dictate the terms of peace, we paid particular attention to the well-being of the Greek Church, and procured the insertion, in successive treaties, of most important articles in her favour. I have myself acted as my predecessors had done, and the treaty of Adrianople, in 1829, was as explicit as the former ones in this respect. Turkey, on her part, recognised this right of religious interference, and fulfilled her engagements until within the last year or two, when, for the first time, she gave me reason to complain. I will not now advert to the parties who were her principal instigators on that occasion. Suffice it

to say that it became my duty to interfere, and to claim from Turkey the fulfilment of her engagements. My representations were pressing, but friendly; and I have every reason to believe that matters would soon have been settled, if Turkey had not been induced by other parties to believe that I had ulterior objects in view—that I was aiming at conquest, aggrandisement, and the ruin of Turkey. I have solemnly disclaimed, and do now as solemnly disclaim every such motive. . . . I do not desire war; I abhor it as sincerely as you do; and am ready to forget the past, if only the opportunity be afforded me. . . . I have great esteem for your country, and a sincere affection for your queen, whom I admire, not only as a sovereign, but as a lady, a wife, and a mother. I have placed full confidence in her, and have acted towards her in a frank and friendly spirit. I felt it my duty to call her attention to future dangers, which I considered sooner or later likely to arise in the East, in consequence of the existing state of things. What on my part was prudent foresight, has been unfairly construed in your country into a designing policy and an ambitious desire of conquest. This has deeply wounded my feelings and afflicted my heart. Personal invectives I regard with indifference—it is beneath my dignity to notice them; and I am ready to forgive all that is personal to me, and to hold out my hand to my enemies in the true Christian spirit. I cannot understand what cause of complaint your nation has against Russia. I am anxious to avoid war by all possible means. I will not attack, and shall only act in self-defence. I cannot be indifferent to what concerns the honour of my country. I have a duty to perform as a sovereign: as a Christian, I am ready to comply with the precepts of religion. On the present occasion, my great duty is to attend to the interests and honour of my country.”

The deputation observed that as their mission was not of a political character, but only intended to convey to his majesty the religious views of their body, they could not enter into any of the topics touched upon by his majesty as concerned in the dispute. They craved permission, however, to call the emperor's attention to the subject of national arbitration, by which nations might settle their disputes as peaceably-disposed individuals find it feasible to settle theirs. They pointed out to his majesty the difference between Mohammedanism and Christianity—the former resting upon the sword as its instrument of propagation, the latter relying upon truth and moral suasion. They then made an appeal to the czar as to the slaughter, suffering, famine, and ruin, which must be attendant upon a European

war amongst such great powers, and depicted the injuries which must in its course befall the weak and the innocent. The emperor, however stern his heart, must have been deeply affected by such themes from the lips of these true, benevolent, and disinterested men. As the deputation were about to leave, the emperor expressed his desire to introduce them to the empress, who, with the Grand Duchess Olga (said to be favourable to the English) entered the room, and conversed in an affable manner with “the Friends.” On their departure, *the czar shook each of them cordially by the hand*, and desired them to remain some days in St. Petersburg. They were afterwards informed by Baron Nicolay that the emperor desired to transmit to the Society of Friends a written reply. A reply in French was subsequently given, which is substantially the same as the *vivâ voce* address of the czar. It is as follows:—

“Sa Majesté l'Empereur a reçu l'Adresse présentée par la Députation de la Société des Amis avec une vive satisfaction, comme l'expression de sentiments entièrement conformes à ceux dont il est animé lui-même. Sa Majesté a horreur comme eux de la guerre, et désire sincèrement le maintien de la paix. Pour y arriver elle est prête à oublier insultes et offenses personnelles, à tendre le premier la main à ses ennemis et à faire toutes les concessions compatibles avec l'honneur. Sa Majesté n'attaquera pas: elle ne fera que se défendre, et sera toujours disposée à entendre des offres de paix.

“L'Empereur regrette vivement l'état actuel des choses, et il en rejette loin de lui la responsabilité. Il a constamment désiré vivre en bonne entente avec l'Angleterre: il a une sincère affection pour la Reine, qu'il estime comme souveraine, femme, épouse, et mère; et il lui a donné des preuves non équivoques de confiance et d'égards. Sa Majesté répudie toute idée ambitieuse de conquête ou d'ingérence injuste dans les affaires de la Turquie: elle n'y réclame que ce qu'elle a le droit de demander en vertu des traités explicites conclus par ses devanciers et par elle-même. Le lien qui unit la Russie à ses co-religionnaires en Orient date d'il y a 900 ans; c'est de l'ancien empire Grec que lui est venu le Christianisme, et depuis ce tems une communauté constante d'intérêts religieux a été maintenue entre la Russie et l'empire de Byzance jusqu'à sa chute. Débarrassée elle-même du joug des Tartares, la Russie s'est depuis ce tems constamment appliquée à améliorer le sort de ses co-religionnaires: elle y a travaillé avec succès. Elle ne saurait récuser ses sympathies religieuses pour eux et renoncer à une influence légitime acquise au prix de son sang. Mais l'empereur ne veut rien au delà; il n'en veut nullement aux Turcs: et il serait heureux de voir l'Angleterre rendre

meilleure justice au mobile qui a guidé ses actions. Il ne croit pas lui avoir jamais donné le moindre motif de plainte; et il en appelle au témoignage de tous les Anglais établis dans ce pays, qui n'hésiteront pas, sa Majesté en est convaincue, à déclarer qu'ils n'ont eu toujours qu'à se louer de l'accueil qu'ils ont trouvé en Russie.

“NESSELRODE.”

“Petersbourg, le 1 (13) février, 1854.”

For the reception of the Quaker deputation, the Emperor Nicholas took great credit to himself; and the Emperor Alexander II. and his government have since paraded it in all sorts of ways, as proofs of the amicable spirit of the Russian court and government. As a specimen of the mode in which it is still traded upon as a political capital, we annex an extract which recently appeared in *Le Nord*, a Belgian paper, established in Brussels by the Russian government, for the purpose of producing some effect upon the public opinion of Western Europe in favour of Russian ideas. The extract is another flagrant proof, added to the many which have appeared already in our pages, of the unblushing hypocrisy of the Russian government, and the falsehood upon which the whole political system of Russia is based. It is difficult to peruse the extract without being at a loss to know whether amusement or indignation should predominate in the mind to which such transparent humbug and pretence are presented.

“When, two years ago, the Oriental question assumed the gigantic dimensions of a European war; when the French Emperor challenged the czar, and the English parliament voted, amidst the cheers of the House, the declaration of a war which already has cost so many precious lives and so large an amount of money, without bringing the principal question a single step nearer to its definitive solution; then, three men of brave hearts and intelligence—three generous defenders of humanity and pacific progress—set out from England for St. Petersburg to carry to the Emperor Nicholas the wishes and the prayers of the Peace Party, which they represented. And in the whole of Europe there was one man only who treated seriously this noble and touching enterprise of the pilgrims of peace and humanity. He was the only one fully to comprehend the whole compass and purpose of that sterling generosity—that sincere devotion

to the interest of civilisation and progress, and the enlightened patriotism and self-denial of this pacific mission, upon which the English people looked with irony and contempt—as nothing else than a piece of good-natured Don Quixotism. To talk of peace at a moment when the soldiers of the West embarked in all the English and French ports, impatient to destroy the phantom of Muscovite preponderance, was an anachronism, an absurdity, a folly! The Emperor Nicholas was the only man who, to the full extent, comprehended this cry of anguished charity. In his imperial palace he received the English pilgrims; listened with kindness and sympathy to the expression of sentiments so like his own; and no doubt, if the dignity of his empire and the interest of his subjects had allowed him, the czar would have instantly sent to the armies of the West the olive-branch which these peace-men had brought to him. But it was not the czar who had to recall a declaration of war, which he never made; it was to France and England that the words of conciliation and peace ought to have been addressed; to these powers it behoved to retrace an imprudent and precipitate resolution—the worst consequences of which will recoil upon themselves—by making acceptable propositions to Russia, who has always shown herself ready to accept them. The missionaries of peace understood this. They went back to their homes, and then arose that powerful Peace Party which, from time to time, raises its voice indignantly, to protest against the disasters accumulated upon the country by an unjustifiable armed intervention, and apprehensions of conquests perfectly imaginary—to cry over the huge war-graves which cover the sons and relatives of the noblest families of Great Britain; to groan under the enormous burthens imposed by a reckless war expenditure; and to this voice answers—like a sinister and threatening echo—the cries of the army in the East, twice renewed and twice destroyed.”

The Friends remained some time in the Russian metropolis, where they were “the lions” of the day. Crowds followed them in every direction, and they were most popular persons. They were treated by all classes of the people with honour. Their mild and benevolent demeanour, and the obvious sincerity of all they said and did, produced an impression everywhere in favour of their Society, their country, and themselves.

CHAPTER X.

PROCEEDINGS OF THE ALLIES IMMEDIATELY PREVIOUS TO THE DECLARATION OF WAR.—
EMBARKATION OF TROOPS FOR THE EAST.—DEPARTURE OF THE BALTIC FLEET.

"A great nation cannot have a little war."—FIELD-MARSHAL THE DUKE OF WELLINGTON.

ON the last day of January, Queen Victoria opened parliament in person; and the introductory paragraphs of "the speech" from the throne were well-timed, and more expressive and clear than such documents usually put forth:—

"MY LORDS AND GENTLEMEN,

"I am always happy to meet you in parliament, and on the present occasion it is with peculiar satisfaction that I recur to your assistance and advice.

"The hopes which I expressed at the close of the last session, that a speedy settlement would be effected of the differences existing between Russia and the Ottoman Porte have not been realised; and I regret to say that a state of warfare has ensued.

"I have continued to act in cordial co-operation with the Emperor of the French, and my endeavours, in conjunction with my allies, to preserve and to restore peace between the contending parties, although hitherto unsuccessful, have been unremitting. I will not fail to persevere in those endeavours; but as the continuance of the war may deeply affect the interests of this country and of Europe, I think it necessary to make a further augmentation of my naval and military forces, with the view of supporting my representations, and of more effectually contributing to the restoration of peace."

The speech of her majesty was received with great unanimity in both houses, and every disposition was shown to support her requisitions should war unfortunately ensue. Much dissatisfaction was, however, expressed with the dilatory proceedings of the government, and their want of firmness of purpose; and a very general discontent in and out of parliament began to evince itself in reference to secret diplomacy. The Marquis of Clanricarde said in his place, and the truth of his remark was generally acknowledged, "that no policy had ever been attended with such want of success. The people of the continent had in consequence entertained a lower opinion of the spirit and energy of the English nation; and that we were neither to be trusted by friends, nor feared by foes—'willing to wound, but yet afraid to strike.' We were on the brink of a great war, but a war which a more firm and direct attitude on our part would have done much to prevent. The government ought to have been more watchful of the aggressive policy of Russia upon Turkey. And

this neglect could not have been the result of want of intelligence of what was passing, for in the February of 1823 the French government had called their attention to it, and the public press had done the same. When Colonel Rose called for the fleet, the government should have been awakened, and the vigour displayed by Colonel Rose followed up."

We quote his lordship's speech because it echoed the public voice at the time, although his lordship was not regarded as a popular leader.

In the reply of Lord Clarendon, he admits—"It is only another proof of the inconvenience which I have seen for the last few months, of not being able to lay the whole of the intelligence before the house and the country. No one can be more conscious than myself of this disadvantage, and of the many misrepresentations that might have been prevented by publicity. *But we thought it right not to depart from the established practice of this country.* The government is answerable to parliament alone for its conduct."

These opinions were everywhere quoted and discussed, and that prejudice against secret diplomacy which has grown up in the public mind began to develop itself more actively from the influence exercised upon it by the opening of the session. The opinion of the public was also much influenced by another passage from the speech of Lord Clarendon:—"My Lords, it must be remembered that if this peace, which is of unexampled duration, be once broken, it may be followed by a war alike without parallel. You must remember that those doctrines which convulsed Europe in 1848 are still cherished by vast numbers; and they having lost none of their strength, a war now would be no ordinary war. Europe in such a case would be the battle-field not only of contending armies, but of contending opinions; and we, to whom such mighty interests are entrusted, would have been worthily thought utterly unmindful of their importance—would have disqualified ourselves when we asked for support in a necessary war—if we could not have then shown that we had first exerted and exhausted every means for maintaining the blessings of peace."

The inference deduced from this by a large portion of the general public was, that inasmuch as a war might endanger the despotic thrones upon the continent, and give the people—betrayed and oppressed by the re-actionary

policy since 1848—a chance of recovering their liberties, her majesty's government were willing to make almost any sacrifice, even the sacrifice of the independence of Turkey, if it could have been managed by any trick of notes and protocols, rather than by any prompt and energetic resistance to Russia, give opportunity for popular insurrections abroad." That the government of Lord Aberdeen sympathised with Austria, Prussia, and the other despotic powers who had trampled upon the liberties of the continent, became a conviction with multitudes after that speech.

It is necessary to notice these causes of the general disposition to find fault with the government, and to suspect it, which characterised the population of the British Isles, and more especially of London, during the preparations and negotiations which pervaded the months of February and March. The public was denounced by the government press as rash, petulant, and impatient, in a degree previously unknown; and all remonstrances with the government for dilatoriness at home, and uncertain and trimming policy abroad, was set down to a disposition too impatient and warlike. The opinions uttered by Lord Clarendon were afterwards repeatedly endorsed by Lord Aberdeen, Mr. Gladstone, and Mr. Sydney Herbert; and thus were sown the seeds of that suspicion and constitutional jealousy with which the whole government came to be regarded by so large a portion of the people. Unhappily, the popular suspicions were too well founded; the objectionable passages in these speeches of the cabinet were the real indices of the opinions and sympathies with which they entered into the war, which left Silistria to its own resources, which spared Odessa, which entered upon the Crimea expedition without foresight, and which in all the preparations for war, both before and after the declaration, showed such confidence in ultimately securing a peace without a contest, because of the magnanimity of the emperor; and such an unwillingness to lessen his power, or give pain to his feelings,—although by neglecting to do the one, and by an undue consideration of the other, disaster to our arms, and disadvantage to the national objects, should ensue.

At this juncture, the public mind was also much disturbed by reports concerning his Royal Highness Prince Albert. Much of the unwillingness of government to meet the designs of Russia with energy and promptitude had been attributed to the prince for some months. It was said that he interfered in an unconstitutional manner with the foreign despatches; that he also interfered with the army in a manner as much at variance with the constitution; that he corresponded with the foreign despots, sympathising with them, and affording them

counsel and information, such as was incompatible with his station as the consort of a constitutional queen. These rumours caused much discontent and distrust in the mind of the multitude, and made them look with less respect and confidence upon the court. Lord John Russell, in one of his most eloquent speeches, denied some of these charges altogether, and gave a qualified negation to the others, and the public impression became much more favourable concerning his royal highness; but still there lurked in various directions a feeling that the court sympathised with Russia—that the government regarded the unimpaired power of the czar as necessary to the European balance, and as a counterpoise to foreign liberalism. Under the influence of such ideas, the people became more liable to imprudent zeal for hostilities.

The omission of any notice of this state of the popular will in England, and the causes of it, would leave much unaccounted for in the pressure exercised upon the government and parliament.

As to the conduct and policy of the British government, from the presence of Prince Menschikoff in Constantinople to the opening of the British Parliament on the 31st of January, 1854, it may be summed up in the speech of the Earl of Derby, delivered in his place in the House of Peers on the 14th of February. The noble earl ironically asked—"What must be the state of that country which was neither at peace nor war, nor yet neutral? Taking the Blue-books," he contended, "that so early as the 7th of January, 1853, the government had ample information that Russia was preparing military forces to carry out her objects, whatever those objects might be. They had similar information in March, and again in April. It is true, that Count Nesselrode's answers to questions on this subject were evasive; but there were the like accounts from our own consuls and agents in or near the countries where the forces were being collected. The noble earl, the foreign secretary, had in his possession the fact that Russia had endeavoured to negotiate a secret treaty with Turkey against the Western powers when he stated to their lordships, on the 25th of April last, that he had perfect reliance upon the friendly assurances of Russia. And, subsequent to that period, had they reason to believe that Russia would abandon her claims? Again, quoting the Blue-books, they must have had every reason for supposing the contrary, particularly from the despatches of Sir G. Seymour. The government had characterised the occupancy of the principalities as an act derogatory to the dignity and fatal to the independence of Turkey; but when it occurred, did they remonstrate against it, or did they throw upon

the czar the responsibility of war? No: but they mildly expressed their confidence in the czar's pacific intentions, and that the door would not be closed to an arrangement. Yet, at this moment, they were also encouraging resistance on the part of Turkey. After the czar had taken this step, it was not likely that he would withdraw upon such language; but if, before he had ventured upon it, energetic language had been held, the peace which the noble earl at the head of the government valued so much, might have been preserved. With regard to the prospects of the future, he could not see any hope of avoiding war. On what did Lord Aberdeen rest his expectations of peace? Did he expect that the Emperor of Russia would suddenly recede from his position? If he did, it would be the strongest condemnation of the noble earl's policy; for, in such a case, on what ground could he say that his attitude of war ought not to have been taken earlier. He did not blame the government for having endeavoured to preserve peace, though he did not approve of the means they had adopted; but if they were in earnest, and if they were embarking in this war in a manner worthy of the country, and of the justice of its cause, he should, waiving all other considerations, render them all the support in his power."

Against these arguments the Earl of Aberdeen reiterated his assurances of going to war in earnest, if necessary, but declared "that he would not even then abandon the hope of peace." It is no wonder if the preparations for the struggle went on slowly, considering the magnitude of that struggle, and the delay already permitted. How the czar in his cabinet must have laughed the English premier to scorn! He had already overmatched him in his previous war with Turkey; and he rightly calculated that, while the destinies of Britain were in the same hands, he might with safety prosecute the schemes of his ambition sufficiently far to secure a formidable footing upon Turkish soil, before England could move a regiment to expel him.

During the month of February, the debates upon the impending war in the British Commons were frequent. Mr. Layard called the attention of the House and the government to the sluggish preparations made by the British government, and showed from the Blue-books, and from circumstances which fell under his personal knowledge, that the French government had initiated every movement of a decisive character, and had (to use the honourable member's own language) "great difficulty in dragging the English government along with it." To the taunts and admonitions of Mr. Layard, and other gentlemen acquainted with Eastern politics, Sir James Graham replied

with the boldest affirmations of vigorous earnestness in the prosecution of the war; and demanded great credit for his government in pursuing so politic a course towards Russia and the German powers, that the former was isolated from the rest of Europe, and Austria and Prussia committed to the alliance of the West. Lord John Russell's assertions as to facts were more cautious; but his bold denunciations of Russian imperiousness and aggression were such as would lead the country to suppose that he was satisfied with the determination of his colleagues—to obtain ample guarantees for the integrity and independence of Turkey, or have recourse to arms. Notwithstanding these assurances by the leading members of the government, it was evident that it had no heart for the war; and that it would have accepted any concessions on the part of Russia, although merely nominal, which Turkey could be induced to comply with. The bold speeches were made to keep the British public at bay, whose indignation was now fairly roused. The people at large were as eager for war as a boy in classic times impatient for the *toga virilis*; there grew up a desire in the nation to try its strength with Russia, and put an end to the vaunting and defiance with which that power marked its relations with the rest of the world. The leader of the House of Commons told that assembly that an increase of "no less" than 10,000 men would be demanded for the army—a statement which was received by "the House" with great seriousness, but which the people laughed to scorn. The country everywhere saw the absurdity of voting estimates for an addition of only 10,000 men to the army, while Russia was already master of the Moldo-Wallachian territory, and had an army in her empire of three-quarters of a million of men. The increase demanded by government for the navy was 10,000 seamen and 3000 marines. The calling out and organisation of the militia went slowly on. There was bustle and preparation; but through it all a keen observer might perceive that the government of England expected that these demonstrations would effect, without conflict, all that was desired. The naval preparations assumed, however, formidable magnitude; and never did England look forward to her navy with such confidence as she did to the fleet preparing for the Baltic. Before a declaration of war was even resolved upon, it was determined by France and England to protect Constantinople by a large body of troops; and it was confidently believed that the presence of the allied armies on Turkish soil, and of the allied fleets in the Black Sea and the Baltic, would either render a declaration of war unnecessary, or, if war must come, such a display of the resolution and resources of

the allies would speedily bring the czar to terms. Subsequent events have proved that both the Western governments, but more especially the British, laboured under this delusion—a delusion by which many thousands of men, many millions of money, and much honour have been sacrificed.

On the 14th February the first movement of troops was observed in London. The 1st battalion of the Coldstream Guards marched out of St. George's Barracks, Trafalgar Square, in order to proceed to Chichester, previous to embarkation for Malta. This event produced an intense enthusiasm among the people; and, at the same time, excited the most kindly and tender feelings towards the soldiery. Seldom do our historians depict the first scenes of military preparation; the accounts we first learn from them relate to the actual campaign, when the grim front of battle is presented. How much of the evils of war are experienced before the first gun booms over the field of conflict, or hostile navies meet in terrible encounter! Often will the old soldier, while he

“Shoulders his crutch, and shows how fields were won,”

turn his recollections beyond the battle and the bivouac, to the first pangs of parting, and the last look upon eyes that to his never looked love again. No one could witness the departure of the first battalion for the war through the streets of London without mingled emotions of triumph and sorrow: triumph, to witness the soldierly bearing of the men, as they returned with dauntless but kindly looks the greeting of the multitude, as their steady tramp resounded along Trafalgar Square, and their fine uniform and array appeared to such advantage upon what has been called “the finest site in Europe;” sorrow, when the thought forced itself upon the unwilling heart that many of these men went forth never to return, and that “the leave-takings, hopeful though heart-breaking,” were the last kind interchanges of feeling between the dearest. Where are these brave men now? Has it not been as truly as eloquently written of them—“Reckless of all danger were they, regardless of death; spurning all ease, all pleasure, all private emolument, they seemed preternaturally daring. They fought like gods, but how many of them perished like beasts? They have faced without flinching the roaring cannon, the silent cholera, the deluging rains, and the riotous tempests.” “Meanwhile, we have at home their disconsolate relatives, attired in mourning, and weeping because they are not. In the halls of the nobility, and the cottages of the peasantry, alike is this affliction seen. Many a pale young bride sits solitary; she is now a widow, and every night she sees in visions her gallant

husband's corpse; many an ardent daughter weeps when she thinks of her noble father, who has perished in the field; and many a tender sister's heart is bleeding, for her brother has fallen. And see ye that anxious and huddling group of little children, who watch in vain for their father's return? They shrink already beneath the chilling winds of orphanhood, and wonder why they too could not have died.”

It was just noon when the battalion left the barracks, and the hour of course was favourable to a large assemblage. The steps of the National Gallery and of St. Martin's Church were perhaps never so thronged by eager sight-seeing crowds; and the whole line of streets, from the barracks, along the Strand, over Waterloo Bridge, to the terminus of the South Western Railway, was literally blocked up by multitudes, all eager to show some token of sympathy. Many a hand was stretched out to the brave fellows as they passed, which they had never clasped before—men of the humblest station grasped hands in which the best blood of England flowed. “Fair women and brave men” waved their parting adieus; and tears trembled upon the cheek of beauty and the stern cheek of manhood, as the long line of martial men marched past. The windows and even the housetops were peopled with spectators, whose cheers, and waving hats, and kerchiefs, testified their interest in the scene. Many of the officers were young-looking men, and the rank and file seemed to be in the very bloom of youth and manhood, and to have attained that soldierly bearing which only a perfect discipline, united to professional pride, ever thoroughly forms.

There were some heart-rending incidents along the track of this brave pageant. One motherly-looking poor woman, of much beauty, and with two neatly-clad boys with her, all dressed in mourning, as if death had been lately in their little circle, or as if they felt that mourning became the occasion, stood on the flagway by the steps of the National Gallery. A soldier, in the first company, with an expression of manly sorrow on his countenance, waved them an adieu, which they returned; and then, with a passionate burst of weeping, the poor woman placed an arm round each of her boys, and hurried along through the multitudes to keep pace with the line in which *he* marched. In the Strand an elegant girl stood, with countenance deadly pale, until nearly the last company arrived, when she clasped her hands, and exclaiming, “He is there!” fell senseless upon the pavement. A more touching picture of affection and despair occurred still further on. A very old woman, poorly clad, her white hair streaming beneath a bonnet that seemed as if crushed by the crowd in her

efforts to make her way to the front, stood straining her eyes for some object of the deepest interest to her, when suddenly recognising in the ranks what she sought, she stretched out her lank arms as if to grasp it, and would have fallen if not caught by the bystanders, and carried from the spot. She neither spoke nor cried—a low, deep groan expressed her anguish.

On the same day, the 3rd battalion of the Grenadier Guards left the Tower, to take the place of the Coldstreams in St. George's; but as it was generally known that they were to depart thence on the following Saturday, the populace in the East-end made that the occasion for their adieus. They played the "British Grenadiers" as they left the Tower, which seemed to delight the mob, who made the vicinage of the "old keep" ring with their cheers. As they passed along, and played "The girl I left behind me," the multitude took a more sober tone; cordial greetings were expressed mutually by people and soldiers, and the latter frequently turned and smiled significantly, as voices from the crowd rang out with such expressions as "Guards, remember England!" "Grenadiers, think of England!" "Guards, leave your mark on 'em!" "Give it 'em, Grenadiers!" &c. &c.

The 1st battalion of the Fusilier Guards being "on turn" for foreign service, volunteers from the 2nd battalion, at Windsor, were ordered to join it at the Wellington Barracks, London. Three hundred and sixty rank and file left Windsor on the same day as the movements above recorded took place; they proceeded to the Windsor Station of the South Western Railway, under Lieutenant-colonel Dixon; and the scenes in the line of march were similar to those which took place in London with the Coldstreams and the Grenadiers. The band of the 2nd battalion of the Fusilier Guards was reputed a fine one, and it "played off" the volunteers. As they marched out of barracks they struck up "Cheer, boys, cheer," which evidently thrilled upon the crowds, and fired the soldiers themselves, for they marched with a most animated expression, loudly cheered by the people. As they passed up to the station they played "We are going far away," and the effect upon the multitude was instantaneous; a feeling of deep and inexpressible sympathy pervaded them, and fond farewells were heard on every side. At the station, the concourse was so great that it appeared as if the whole population of Windsor and the neighbouring country had turned out. The Eton boys and their tutors occupied a small elevation at the end of the arrival platform; and when the guards entered the train, and the band ceased to play, these young patriots raised a loud and hearty cheer, which evidently

delighted the soldiers, who responded to it vociferously, waving their hats, and appearing as if excited by the surprise with which this youthful huzza fell upon them. The people in the Park and at the station caught up the cheer; the animation of the whole multitude, military and civilians, patricians and plebeians, proved that the heart of England was stung by the insulting bearing of the czar, and that the national spirit, goaded to war, met its prospects with unquailing energy.

Meanwhile other regiments in England and Ireland received orders to prepare for embarkation, and volunteers were invited to join them from such regiments as were not intended for the campaign. Notice was sent to the provisional battalion at Chatham that 600 men were required: they were promptly supplied. It was remarked that not one man who volunteered had ever been tried by a court-martial, or fallen under military censure, and many of them bore good-conduct marks. The duty-men of the 24th volunteered to a man, with the exception of two old soldiers who had served long in India, and having just come home, expected to retire from the service: they were left by themselves on parade, amidst loud laughter from the troops and the civilians who were present. When the 71st Highlanders came off duty the day they were requested to furnish volunteers, the whole dépôt offered and were accepted, and their pay-sergeant was left standing on the parade alone!

On the following Thursday morning, the 1st battalion of the Fusilier Guards were drawn up for parade and inspection at the Wellington Barracks, by the Duke of Cambridge, the Colonel-in-chief of the regiment. His royal highness was accompanied by General Millemay Fane, Colonel the Hon. C. B. Phipps, Colonel Bentick, Colonel Hall (1st Life Guards), Colonel Brownlow Knox, and other officers. The men were under the command of Lord Rokeby; Colonel Colville's retirement on half-pay, and expected brevet, leaving the command to that nobleman. After the men had been satisfactorily conducted by the noble lord through various evolutions, his royal highness formed them into square, and delivered to them a most inspiring address. The Duke of Cambridge bears no reputation as an orator, but his words and manner in that square of guards were thoroughly eloquent: it was an abrupt, frank eloquence, suitable to soldiers, and evidently went home to their hearts. His royal highness did not flatter them, while he, at the same time, conveyed his admiration of their celerity of movement and thorough discipline. Perhaps the battalion never before presented so fine an appearance, or seemed animated by a higher military enthusiasm, although it has so often "gone to the wars," to

justify the proudest confidence, and most generous hopes of the nation.

On the evening of this day, the guards had their farewell banquet at the London Tavern. His royal highness the Duke of Cambridge, as Colonel of the Scots Fusileer Guards, occupied the chair, supported on the right by Lieutenant-general Sir Edward Bowater, K. C. H., and on the left by Lieutenant-general Sir Willoughby Cotton, G. C. B., K. C. H. A long list of noble and gallant men surrounded the festal board: General Hope, General Aitchison, Colonel Berkeley Drummond, Colonel W. T. Knollys, Colonel Colville, Colonel Lord Rokeby, Colonel Eden, Colonel Moncrieff, Colonel Walker, Colonel Blair, Colonel Sir G. Walker, Colonel Tyrwhitt, Colonel De Bathe, Colonel Onslow, Colonel G. Dixon, Colonel Phipps, Colonel Scott, Colonel Dalrymple. After the banquet, the Duke of Cambridge alluded to the services those around him were about to render to their country, and his royal highness mingled happily the rough energy of the soldier with the sentiment of a man of feeling. There was a deep seriousness about this meeting which was toned by patriotic and professional enthusiasm. Alas! some of the names recorded in the above list belong to men who now sleep beneath the turf of Alma, or upon the bleak ridges of Inkerman; and some never saw the fields of war towards which their impetuous valour aspired, but dropt silently beneath the withering pestilence at swampy Varna; and some still keep watch and ward in the contested trench, lead the perilous assault, perhaps, ere long, to add to the list of the great and gently born who died for England and for honour.

Woolwich, Portsmouth, Plymouth, and all our great arsenals seemed as if we were preparing to resist an invasion, rather than fitting out squadrons, and preparing to embark troops for a distant theatre of war.

On Monday, the 20th of February, Prince Albert inspected the 3rd battalion of the Grenadier Guards, and the 1st battalion of Scots Fusileer Guards, in the square of the Wellington Barracks. Both these battalions were under immediate orders for embarking, and this circumstance gave *éclat* to the proceeding. His royal highness was attended by the Duke of Cambridge, Lord Hardinge, the Commander-in-chief of the forces, and a retinue of the nobility. Peers and peeresses gathered together to look upon the line of brave men upon whose valour the pride of England would so soon depend.

A series of banquets were given to the officers of the guards, which were attended by many of the nobility, and assisted to keep alive, in that class, the warlike ardour which was generally supposed at the time to actuate more warmly the humbler classes of the community.

A banquet given to the Duke of Cambridge, who was appointed to command one of the divisions of the expeditionary army, was especially *recherché*; and it was said that nothing so splendid had been seen since the grand entertainment given to the royal visitors in 1814. The Duke of Cambridge was at this time a most popular personage. He was regarded as a well-instructed and practical officer, and not wearing the uniform of the army as a royal decoration.

On Wednesday, the 22nd, a portion of the Grenadier Guards left London, *en route* for the East. The men were mustered at three o'clock in the morning, and although they had unrestricted leave, not a man was absent when the roll was called. Early as was the hour fixed for their departure, a dense crowd occupied every spot in Trafalgar Square. While the multitude awaited the appearance of the guards, they sung with stentorian vehemence "Rule Britannia," and "God save the Queen." Soon after five o'clock the band emerged from St. George's Barracks, through the passage beneath the National Gallery, and proceeded to the Strand, where they took up their station. Soon after the grenadiers came forth, without order, each separate group as it came out, and almost each separate man, was cheered by the people; as they ran along to form in the Strand, they were attended by running escorts of friends and admirers, every one eager to show them some courtesy, and to bestow upon them some little gift. When the column was formed, it was a thousand strong, and they began their march to Waterloo Bridge, their black bear-skin caps towering above the heads of the masses of people, and their bright flashing bayonets gleaming above all in the light of the lamps, for day had not dawned. As the band played, and the people shouted, many a door and window was flung open along the line of march, and many an adieu was given *en déshabille*. From the Waterloo terminus to Southampton, at every intervening station, fresh greetings awaited "the gallant guards;" and their arrival at that place was signalled by an outburst of national and generous feeling, which vied with that of the metropolis. The same evening they embarked for Malta, on board the *Ripon* and the *Manilla*, the band playing them on board at an early hour. The Coldstreams had arrived from Chichester, and went quietly on board the *Orinoco* for the same destination. The *Manilla*, the smallest of these steam-ships, and which was fitted with the boomerang propeller, was the first ready for sea; she steamed out about two o'clock, having 250 rank and file of the grenadiers, six officers, and a large quantity of baggage and stores on board. Soon after three, the *Ripon* paddle-wheel steamer followed, having on board 600

rank and file of the grenadiers, thirty officers, and thirty-two women. Last of all, and detained for more than two hours in the dock by want of water, the *Orinoco* took her departure, with 854 rank and file of the Coldstreams, thirty officers, and thirty-two women. She had also on board Colonel Bentinck, Colonel Eyre, and their respective staffs. The three steamers remained in Southampton water all night. The next morning, as they proceeded on their voyage, crowds were collected in the vicinity of the ships, and the soldiers departed upon their long voyage, their ears and hearts filled with the encouraging shouts of their fellow-countrymen, and their own lips bidding their "native land adieu," in the strains of excited patriotism and enthusiastic loyalty. It was a grand sight, not only in its scenic effect but in its moral aspect, to witness this first departure of the soldiers of England for the great war of 1854. Nor was this boisterous leave-taking unmingled with tender incidents: as the vessels proceeded out of dock, there were fair hands to wave "a long, a last adieu," and eyes too dim with tears to behold any objects but those on which love fixed their gaze. One fair girl was there, whose dearest earthly object and whose hope fell on the slopes of Alma. A mother wended her way, "with broken step and slow," to the house which had been deprived of two brave boys—only sons: they fell together at bloody Inkerman. An old man took his leave of an only son—his pride and joy: he died amidst the stench of the Scutari hospital, neglected by the country (or rather its government) in whose service he had been maimed. The pageant was fair, and there was a halo of glory in it, as the stately ships rode away through the still Southampton waters; but, alas! it was a gorgeous funeral procession—these brave men went, with few exceptions, to untimely death. It was a striking feature of this scene, that the women seemed the least affected of any on board; nay, in most cases, their bearing was positively joyful. They had won the lot by which permission was extended to some to accompany their husbands; and to share with them their dangers seemed their ambition and their solace. A few of these soldiers have returned, and since then the hand of the first lady in England has appended medals to their gallant breasts: they were nobly won—they were nobly and appropriately bestowed. A few of the humble soldiers who were on board that little fleet of transports wear now, not only the medal and clasps which record the contests they sustained so well, but the epaulette also. We wish that all who merited so distinguished a promotion had received it: it would have roundeared to our country's honour, and increased her strength.

The fine spirit of the rank and file of the guards may be further illustrated by the fact that several of the non-commissioned officers, not required to go with the Fusileer battalion, requested to be reduced to the ranks that they might be eligible. Many officers of the household infantry were absent on leave, and having wintered in Italy, had still lingered about Rome, Leghorn, Naples, Nice, Genoa, and other Italian cities of fashionable English resort. The telegraph was put into requisition for their recall; in this way Lieutenant-colonel Cartwright, Sir John Ferguson, the Hon. Captain Egerton, Captain Lewis, and other officers of distinction, were hurriedly recalled to their regiments. Private letters at the time gave amusing accounts of the sensation produced in the petty courts of Italy by the perpetual flashing of the telegraphs to the British consuls; and Cardinal Antonelli, and the papal cabinet, were at first seriously alarmed. Having vacillated with Austria—between the secret dread of Russian encroachment and jealousy of the Greek Church, on the one hand, and the Anglo-French alliance and liberalism, on the other—these apparently energetic measures gave them uneasiness, which was betrayed in a manner that amused the British and French residents.

The last detachment of the brigade of guards, whose turn it was to go on foreign service, left London on the 28th. This was the 1st battalion of the Scots Fusileer Guards. It was reputed to be the finest corps in the service. Her majesty gave orders that the regiment should draw up in front of Buckingham Palace, that she might take her leave of them there. The hour appointed was seven o'clock; but hours before that time a vast concourse of persons had assembled in St. James's Park, and along the Birdcage Walk. The impression being very general that it was at the Horse Guards, and not at Buckingham Palace, the regiment was to be paraded, the esplanade and all that portion of the park were also crowded. At seven o'clock the troops marched out of the east gate of the barracks, and consequently had to pass through the densest portion of the crowd, so that they could with difficulty proceed. It was impossible to preserve their ranks—the people pressed upon them with gifts and greetings, and after considerable delay only were they mustered before the palace. On the entrance of the troops within the railing of the principle façade, her Majesty, the Prince of Wales, the Princess Royal, Prince Alfred, Princess Alice, and his Royal Highness the Prince Consort, appeared upon the balconies, and were received by the people with every demonstration of loyalty. As soon as the entire battalion had entered the enclosure they formed line, and presented arms, the band playing "God save the Queen." Their royal highnesses stood

uncovered, and her majesty repeatedly bowed in acknowledgment. The soldiers then uncovered, and gave three hearty cheers; and at least 20,000 persons, many of whom were standing too remote to witness the scene, caught up the cheering, and again and again renewed it. The mounted officers then rode up in front, and saluted her majesty, who returned it with evident emotion. The order for the march was given—her majesty and the royal family remaining standing until the last of the troops filed off from the vicinity of the palace. The line of march was crowded with enthusiastic multitudes, so that the troops could scarcely move along. The wives, sisters, and other female relations, broke into the ranks, and with sobs and weeping caused a deep feeling of sympathy and pity even amongst the most uproarious of those whose plaudits rang in the ears of the soldiery. An observer of the march at Charing Cross wrote at the time—"Women saw husbands, lovers, brothers, friends, for the last time; and sad and woe-worn were their looks as they rushed to the ranks, and the crowd intuitively made way for them." Numbers of young men, relatives, and friends, encouraged the men with feeling but manly tone—"Keep a brave heart, Bob!" "Never say beat, Dick!" "We'll meet again, old boy!" "We'll see one another before you come home!" was the significant expression of some.

It was at Waterloo Bridge that the enthusiasm of the multitude rose to the highest pitch; and there also the most painful part of the proceedings took place. The agony of the women could no longer be suppressed, and a cry of helpless grief rose above every other sound. The countenances of the soldiers were wet with tears, while a manly resolution was also unmistakably expressed there. Some poor fellows seemed to have no friends; they perhaps were happiest—the tendrils of the heart were not so rudely torn by so rough a parting; and yet, at such a moment, to feel alone in the world, without one to bid them an adieu, was perhaps more afflicting than to hear for themselves the cry of anguished love which filled the farewell with which others were so fondly left. It was beautiful to notice the attentions of this class of the soldiers to their comrades, and to the women who clung to them. Perhaps other hearts far away, in loneliness, were breaking for them—eyes which could not look upon them a fond good-bye, wept in bitter solitude their departure—lips which could not speak the parting word, were then earnestly moved in prayer to Heaven on their behalf! And the brave men thought of this, and felt for others. They thought of it afterwards on the solitary sea—on the pallet of pestilential disease—by the drear watch-fire, as

they paced the sentinel's desolate round upon the barren hill—as they followed where their leaders pointed, when the tide of battle rose fiercely against their breasts—and as they struck for "England, home, and beauty," in the moment of chivalry which crowned them with victory and their country with glory, or left only for the loved ones far away the hallowed memory of their valour, their duty, and their affection.

When the troops were fairly got within the Waterloo Station, the band struck up "Cheer, boys, cheer;" and the brave fellows gave three hearty British huzzas, and waved their hats, as they were rapidly borne away.

It was a curious thing to witness, the emotions of the crowd as they dispersed. The women, who had parted with those most dear to them, were the objects of many manly acts of kindness; and from their own sex received unbounded attentions. Some seemed to take comfort in this, but others slipped away as soon as possible, and sought a silent spot in which to weep. The children of the soldiers were literally laden with confectionery; and many a poor man and poor woman gave gifts of money that day to the bereaved, which they bestowed from purses as scanty as their hearts were full of generous sympathy. Groups of young men collected at every corner, and by every public-house door; and not a few mounted the ribbons of the recruit forthwith. On all hands, and from all sexes and ages, the czar came in for liberal denunciations; and we fear that the handling given by certain brewers' men to a notorious Austrian general, would only symbolise what the Emperor Nicholas would have met with from some portions of the crowd who lingered to discuss his peculiar qualities, after the train bearing the guards had passed from sight and hearing upon its mission.

On arriving at Portsmouth, this favourite corps was received with similar enthusiasm to that which had been shown to it by the people of London. Four fine regimental bands met it at the station, and "played it on board" the *Simoom*. They were received by the governor, Major-general Simpson, who then little expected that he would occupy the important position to which he has since been appointed in the expeditionary army.

While the departure of the guards occupied so largely the attention of the metropolis and the southern seaports, and, indeed, of all the country, other bodies of troops were daily hastening to the ports of embarkation; and their departure was also signalised by the generous sympathy, the loyal respect, and the hearty patriotism of the people. The 2nd battalion of the Rifle Brigade, which has since rendered such useful service, embarked at

Portsmouth on the 27th February. Few corps were so distinguished as the Rifle Brigade during the Peninsula struggle; there and at Waterloo they formed part of "the light division"—a division drilled after the peculiar tactics of the unfortunate but most distinguished general, Sir John Moore. Napier, the Livy of English military history, assures us that it was the best disciplined and most efficient division in the army of the Peninsula. Napier himself served as subaltern and captain in the 43rd Light Infantry, which was also attached to the division; and what he relates of the gallant rifles, therefore, fell under his own observation. From the reputation of this corps there was a large assemblage of nobility and gentry to witness their embarkation, many proceeding from London to Portsmouth for the purpose. The Duchess of Sutherland, the Marquis and Marchioness of Stafford, the Marquis and Marchioness of Kildare, the Earl and Countess of Grosvenor, Rear-admiral Lord Adolphus Fitzclarence, Lord Leveson Gower, &c. &c., were on the dockyard jetty, where the *Vulcan*, which lay alongside, received her gallant freight. Major-general Simpson addressed the battalion in language adapted to the object of sustaining and inciting their patriotism and love of military glory; and when he expressed the hope that they would not allow the old reputation of the Rifle Brigade to be lowered, an intense and deafening hurra burst from the square—it was like a volley of musketry, instantaneous and abrupt: as if one voice uttered the sudden shout, the men gave vent simultaneously to the *esprit de corps* which the general's words enkindled.

A romantic incident occurred at the moment of embarking. The wife of a private, not having the good fortune as she would have deemed it to draw the ballot, so as to be included among the number of women allowed by the regulations of the service, dressed herself in the Rifle uniform, and, rifle in hand, marched into the dockyard. She was not detected until just getting on board; but the mediation of the benevolent and noble-hearted Duchess of Sutherland, backed by that of the ladies who were with her, so wrought upon the authorities, that she was allowed to go, and marched on board the *Simoom*, shouldering her rifle, to the pride of her husband, and the pleasure of his comrades. What will not woman do where she loves! The storm, the weary march, the desolate bivouac, the roar of battle, cannot deter her from following him to whom she gives her heart. The soldier's wife often exhibits noble traits of character, and we fear too often is poorly recompensed. Let such instances as these, however, be remembered, and the soldier's wife will also be remembered when the soldier falls; and if both

are sacrificed to their country's necessities, let not their orphan children be strangers to their country's gratitude.

The Rifle Brigade was formerly the Old 95th, and their colours bear the words "Copenhagen, Monte Video, Corunna, Roliça, Vimiera, Busaco, Barossa, Fuentes d'Onore Ciudad Rodrigo, Badajos, Salamanca, Vittoria, Nivelle, Nive, Orthes, Toulouse, Waterloo." The 1st battalion had been only a year at home when ordered to the Cape, to take part in the late Caffre war: upon their return, just before the expedition was ordered to the East, most of the men volunteered to serve in the 2nd battalion.

On the 24th of February, the streets of the metropolis of the sister-country presented scenes similar to those we have described as witnessed in London. The first contribution of men from the Dublin garrison for the army of the East embarked that day at Kingstown. The 50th regiment, with staff-colours and band, was paraded in the Palatine Square of the Royal Barracks in heavy marching order. They thence, forming four deep, marched to the Westland Row Station of the Dublin and Kingstown Railway. The bands of three other regiments of the garrison led them along the line of route—one of the finest in Europe; and vast crowds accompanied them, vociferously cheering, while from the windows handkerchiefs and scarfs were waved, and every token of a hearty "God speed" displayed. As the regiment took the north side of the long and splendid line of quays for which Dublin is so celebrated, the bands struck up "Auld lang syne," which the citizens took as a compliment, as the "Blind Half-hundreth," as the regiment used to be called, had often shared their hospitality. As they came to the Queen's Bridge, they played "A good time coming;" the bands took up the concluding line of each verse, as the instrumental music died away, and sang it. This vocal repetition was quite in unison with the habits and tastes of the Dubliners, and old Eblana echoed the shouts of the people. When the regiment arrived at Essex Bridge, it crossed, passing up Parliament Street, where the Exchange steps presented a splendid position for the sight, and from which the cheering and waving of handkerchiefs was most enlivening as the corps turned down Dame Street. When they arrived in College Green, instead of wheeling to the left between the Bank of Ireland and the statue of William III., they kept to the right "of King William," and leaving the University to the left, proceeded up Nassau Street and Leinster Street to Westland Row, affording by the longer route the better opportunity to the people to display their feelings. It also gratified the gowmsmen, who, at the front of Trinity College, welcomed the soldiery by waving of

caps and flourishing of shillelahs, and various original demonstrations of good-will, retired through the grand entrance into the College Park, and climbing the railings, continued their hearty plaudits along the line of Nassau Street, and then penetrating to the rear of the College grounds by the School of Anatomy, met the procession again in Westland Row. From the station to Kingstown, crowds of the *élite* of Dublin society welcomed the train as it passed, and a new concourse received it at the Kingstown Station. The troops hastened on board the *Cambria*, and when the colours of the 50th were placed upon the deck of the steamer, the granite cliffs of Kingstown resounded with the cheers of the assemblage who had gathered to bid them a brave "good-bye." The whole jetty, and every crag of rock, was gay with the many-hued multitude; and as the destination of the regiment was Constantinople, merely touching at Malta for coal and water, there was the more interest felt by the people—it was the direct reality of an expedition to the probable theatre of war. The 50th regiment fought through the Peninsula, and one of the best accounts of its services we know of, may be found in *The Adventures of Captain* (afterwards Major) *Patterson*." In the war of the Punjaub, it more recently won many laurels—the battles of Moodkee, Ferozeshusha, Aliwall, and Sobraon, having witnessed its valour. When the regiment left Kingstown Harbour, it was in fine condition, being principally composed of well-seasoned and hardy veterans.

On the Monday following (the 27th of February), the 93rd Highlanders embarked at Plymouth. The distance from the Citadel at Plymouth to the gates of the Victualling Yard, at Stone House, is over a mile and a half; and perhaps no spot of ground of the same extent was ever more densely occupied by people than this was. In the midst of the general excitement, the cheering of men and wailing of women, the Highlanders maintained a calmness such as none of the regiments that had previously embarked had the self-control to maintain. Those fine men, with compressed lips and steady countenances, sustained their martial bearing, and preserved their order, notwithstanding all the temptations to relax which circumstances presented. The spectacle within the Royal Victualling Yard was striking; the extensive wharves which surround the government offices were occupied by the people of Plymouth, Stone House, Devonport, and neighbourhood; many of the gentry of Cornwall and South Devon came to take leave of the brave Highlanders, and it was in this position they were principally congregated. The weather was extremely fine—it was one of the most beautiful specimens of a bright

spring-day in the south-west of England. The searching light which belongs to spring, and which often makes faces and attire appear to less advantage than at other seasons, only served in this instance to bring out prominently every feature of the spectacle. The beautiful harbour of Hamooze was studded with numerous vessels; little boats filled with gay company glided about, and gave a picturesque life to the whole. While the regiment was embarking, the bands of the 20th regiment and the Royal Marines played the national anthem and "Auld lang syne," and the band of the Highlanders produced much effect upon the crowds by the way in which they played "Scots, wa hae," "The girl I left behind me," and "O, Susanna, don't you cry for me," which was played again and again with renewed applause. At last the embarkation was completed, the steamers moved off, and rounded the point opening into Plymouth Sound, amidst voluminous cheers from the people, responded to by the waving of Highland bonnets.

At the disciplinary camp at Chobham this regiment was noticed with especial interest by all visitors, professional and non-professional. They are called the Sutherland Highlanders, and their plaid well becomes the military costume. Recently, at the Cape of Good Hope, this corps rendered good service, and attracted very much the interest of the natives, enemies and allies. Major-general David Stewart says, "There are few regiments in the service which, in all those qualities requisite to constitute good soldiers and valuable members of society, excel this respectable body of men. None of the Highland corps is superior to the 93rd regiment. I do not make comparisons in point of bravery, for, if properly commanded, they are all brave; but it is in their well-regulated habits that the Sutherland Highlanders have for twenty years (this was written in 1825) preserved an unvarying line of conduct. The light company has been nineteen years without having a man punished." In the beginning of August, 1805, the regiment embarked for the Cape of Good Hope, to form part of the expedition of Sir David Beard, intended for the reduction of that place. The regiment remained in the Cape, after the conquest of that colony, until 1814, when it landed at Plymouth, and was soon embarked for North America, where, in the short campaign of that year, it fought with distinction under the command of Generals Keane and Pakenham. These were the only campaigns in which the regiment was engaged, from its being raised in Sutherland and Ross, in 1800, to the peace in 1815. The character given of the corps by General Stewart, in 1825, has been strictly maintained ever since. It is a curious fact in connection with this corps, that they occupy more ground

than an equal number of any other infantry regiment in the service.

At the same time that the British Isles were stirred throughout by the dispatch of troops to the East, several regiments in garrison at Gibraltar and Malta received orders to hold themselves in readiness for immediate embarkation. The 55th was at Gibraltar, where it had been stationed since 1851, and orders were transmitted to it to prepare for the probable seat of war. This regiment had fought through the Chinese campaign, and has consequently the word "China" embroidered on its colours, and the figure of a dragon, to commemorate its services in the land of which that device is the very inappropriate emblem.

The 33rd, at Malta, received similar orders. This regiment has probably seen more active service than any other in the British army; from the days of William III. to the battle of Waterloo it has always been in the lists of war. The late Duke of Wellington commanded it in India in the war of Tippoo Saib, where first the great duke's renown became illustrious. It was the regiment in which, as the Hon. Mr. Wellesley, he entered as an ensign. After his decease, the queen herself suggested that it should be called, "the Duke of Wellington's own," and bear on its colours his motto and crest.

We have been particular in noticing the first regiments sent to the East, and the popular feeling connected with their departure, because such topics are so commonly neglected by the historian; and because few remembrances are more deeply interesting to many who will peruse these pages, than those associated with the departure of our brave countrymen. The alacrity for the defence of their queen and country displayed by a class of men so little cared for and so seldom rewarded, forms one of the noblest subjects for the historian's pen; and exemplifies the bold and generous character of the nation in a way to add to its honour, and encourage it in every just undertaking. The language of Shakspeare may be appropriately applied to these poor but gallant men—

" 'Tis wonderful

That an invisible instinct should frame them
To loyalty unlearned; honour untaught;
Civility not seen from others; valour
That wildly grows in them, but yields a crop
As if it had been sowed."

During the movements of troops in February and the beginning of March recruiting went briskly on through all parts of the United Kingdom: never did the guards, line, or militia, meet with such numbers ready to enlist. In the remoter parts of Ireland and Scotland this desire was less active than elsewhere; but in the metropolis of both coun-

tries the readiness with which recruits entered the service was surprising. An Irish periodical thus amusingly describes it:—"Those who are enlisting in Ireland just now have amongst them not only those who may have nothing else to do, but many of comparative substance in their class of life, who are urged by a sort of chivalry to take up arms. A few days ago a number of Dublin car-drivers—men whose worldly means are certainly superior to a common soldier's—threw down their whips with one accord, and followed the ribbons. To give some idea of the *animus* which moved the new recruits, the following anecdote may be relied upon:—A sergeant was, after his custom, importuning some people 'to 'list,' when one, who appeared to be spokesman for the whole, advanced to ask something about their prospects in the army. He did not inquire whether the eating or the drinking might be good, or if they would have fair pay, or anything of that kind, but simply—'Musha, sir, d'ye think we'd ever git a prod at the Emperor of Roosha?' Of course the sergeant said they would not fail to come face to face with the redoubtable Nicholas; and in five minutes after her majesty had twenty additional soldiers."

Strong detachments of artillery, engineers, sappers and miners, and men connected with the commissariat, were put under orders; and Woolwich was a scene of intense bustle and activity. Yet all this apparently energetic preparation only appeared so because of the contrast afforded to the usual quiet in our military depôts and arsenals; in reality the preparations were far beneath the exigency, and the progress made in the equipment of troops, and in commissariat and hospital arrangements, did not comport with the intelligence and earnestness of the country. The government was for "making a little war," if driven to make war at all; and the country was determined upon a bold and magnanimous course, worthy of its chivalry.

Some weeks before the declaration of war, the officers for the command of the expedition were nominated, and the number of troops agreed upon between the Western allies and their Eastern *protégé*. The British were to send 30,000 men, and the French 70,000: the British to be under the command of the Master-general of the Ordnance, Lieutenant-general Lord Raglan, who was to receive the brevet of General.

Although anticipating the military arrangements, which were not perfected until after the declaration of war, it will render the narration of the further proceedings of the authorities at the Horse Guards more intelligible, if we give in this place an outline of the staff of the army as ultimately constituted, and the divisional and

brigade arrangements of the regiments sent on service.

FIRST DIVISION.—LIEUTENANT-GENERAL THE DUKE OF CAMBRIDGE COMMANDING.

First Brigade.

Grenadier Guards, 3rd battalion. The Grenadier Guards bear on their colours "Lincelles," "Corunna," "Barossa," "Peninsula," "Waterloo," "Coldstream Guards, 1st battalion. The Coldstreams bear on their colours "Egypt," "Talavera," "Barossa," "Peninsula," "Waterloo," "Scots Fusileer Guards, 1st battalion. The Scots Fusileer Guards bear on their colours "Egypt," "Talavera," "Barossa," "Peninsula," "Waterloo."

Under the command of Major-general Bentinck.

Second Brigade.

42nd Royal regiment, or "Royal Highland Watch." They bear on their colours a noble record of services: "Egypt," "Corunna," "Fuentes d'Onor," "Pyrenees," "Nivelle," "Nive," "Orthes," "Toulouse," "Peninsula," "Waterloo." The motto of the corps is "Nemo me impune lacessit." 79th regiment (Cameron Highlanders). "Egmont-op-zee," "The Sphinx," "Egypt," "Fuentes d'Onor," "Salamanca," "Pyrenees," "Nivelle," "Nive," "Toulouse," "Peninsula," "Waterloo." 93rd, or Sutherland regiment.

Under the command of Major-general Sir Colin Campbell.

SECOND DIVISION.—LIEUTENANT-GENERAL SIR DE LACY EVANS COMMANDING

First Brigade.

30th regiment. This corps served with honour on many fields, especially in Egypt, at "Badajoz," "Salamanca," "Peninsula," "Waterloo." 55th regiment. "China." 95th regiment (a new regiment). The Old 95th served throughout the Peninsula and at Waterloo.

Under the command of Major-general Pennefather.

Second Brigade.

41st regiment (Welsh). "Detroit," "Queenstown," "Miami," "Niagara," "Ava," "Candahar," "Ghuznee," "Cabool." Motto in Welsh—"Gwell Angau na Chywilydd;" the device—the Prince of Wales's plume. 47th regiment (The Lancashire). "Tariffa," "Vittoria," "St. Sebastian," "Peninsula," "Ava." 49th regiment (The Princess Charlotte's). "Egmont-op-zee," "Copenhagen," "Queenstown," "China."

Under the command of Brigadier-general Adams.

THIRD DIVISION.—LIEUTENANT-GENERAL SIR RICHARD ENGLAND COMMANDING.

First Brigade.

1st regiment (The Royal regiment, formerly called Royal Scots). "St. Lucia," "Egmont-op-zee," "Egypt," "Corunna," "Busaco," "Salamanca," "Vittoria," "St. Sebastian," "Nive," "Peninsula," "Niagara," "Waterloo," "Nagpore," "Maheidpore," "Ava." 28th regiment (North Gloucester). During the present century this regiment has been Irish. "Egypt," "Corunna," "Barossa," "Albuhera," "Vittoria," "Pyrenees," "Nivelle," "Nive," "Orthes," "Peninsula," "Waterloo." 38th regiment (1st Staffordshire). "Monte Video," "Roliça," "Vimiera," "Corunna," "Busaco," "Badajoz," "Salamanca," "Vittoria," "St. Sebastian," "Nive," "Peninsula," "Ava."

Under the command of Brigadier-general Eyre.

Second Brigade.

44th regiment (East Essex). During the present century this regiment has been Irish. "Egypt," "Badajoz," "Salamanca," "Peninsula," "Bladensburg," "Waterloo," "Ava." 56th regiment (West Essex). "Moro," "Gibraltar." The device—the castle and key; the motto—"Montis Insignia Calpe."

68th regiment (Durham Light Infantry). "Salamanca," "Vittoria," "Pyrenees," "Nivelle," "Orthes," "Peninsula."

Under the command of Brigadier-general Sir J. Campbell.

FOURTH DIVISION.—LIEUTENANT-GENERAL SIR GEORGE CATHCART COMMANDING.

First Brigade.

20th regiment (East Devonshire). "Minden," "Egmont-op-zee," "Egypt," "Maida," "Vimiera," "Corunna," "Vittoria," "Pyrenees," "Orthes," "Toulouse," "Peninsula." 21st regiment (Royal North British Fusileers). "Bladensburg."

1st battalion Rifle Brigade.

Under the command of the senior Lieutenant-colonel as Brigadier.

Second Brigade.

63rd regiment (West Suffolk). "Egmont-op-zee," "Martinique," "Guadaloupe." 46th regiment (South Devonshire). "Dominica." 57th regiment (West Middlesex). "Albuhera," "Vittoria," "Pyrenees," "Nivelle," "Nive," "Peninsula."

Under the command of the senior Lieutenant-colonel as Brigadier.

FIFTH, OR LIGHT DIVISION.—LIEUTENANT-GENERAL SIR GEORGE BROWN COMMANDING.

First Brigade.

Royal Rifle Brigade, 2nd battalion. 7th Royal Fusileers. "Martinique," "Talavera," "Albuhera," "Badajoz," "Salamanca," "Vittoria," "Pyrenees," "Orthes," "Toulouse," "Peninsula." 23rd Royal Welsh Fusileers. "Minden," "Egypt," "Corunna," "Martinique," "Albuhera," "Badajoz," "Salamanca," "Vittoria," "Pyrenees," "Nivelle," "Orthes," "Toulouse," "Peninsula," "Waterloo." 33rd regiment (Duke of Wellington's own). "Serlingapatam," "Waterloo."

Under the command of Brigadier-general Goldie.

Second Brigade.

19th regiment (1st York, North Riding). 77th regiment (East Middlesex). "Serlingapatam," "Ciudad Rodrigo," "Badajoz," "Peninsula." 88th regiment (Connaught Rangers). "Egypt," "Talavera," "Busaco," "Fuentes d'Onor," "Ciudad Rodrigo," "Badajoz," "Salamanca," "Vittoria," "Nivelle," "Orthes," "Toulouse," "Peninsula."

Under the command of Brigadier-general Buller.

CAVALRY DIVISION.—LIEUTENANT-GENERAL THE EARL OF LUCAN COMMANDING.

First Brigade, Heavy.

1st (Royal) Dragoons. "Peninsula," "Waterloo." 2nd (Royal) Dragoons (Scots Greys). "Waterloo." 4th Dragoon Guards (Royal Irish). "Peninsula." 5th Dragoon Guards (commonly called Green Horse). "Salamanca," "Vittoria," "Toulouse," "Peninsula." 6th Dragoons (Inniskillens). "Waterloo."

Under the command of Brigadier-general the Hon. J. Scarlett.

Second Brigade, Light.

4th Light Dragoons (Queen's own). "Talavera," "Albuhera," "Salamanca," "Vittoria," "Toulouse," "Peninsula," "Afghanistan," "Ghuznee." 8th King's Royal Irish Hussars. "Leswarree," "Hindostan." 11th Hussars (Prince Albert's own). "Egypt," "Salamanca," "Peninsula," "Waterloo," "Bhurt-pore." 13th Light Dragoons. "Peninsula," "Waterloo." 17th Lancers.

Under the command of Major-general the Earl of Cardigan.

We have marked the names of the engagements in which these various regiments were distinguished, as the minds of our readers will follow them to the campaign with greater interest, by being reminded of their past services and glory.

During these military preparations, public discussions were promoted in connection with the dress and pay of the British soldier. Scarcely a particle of his dress, from the bearskin cap, or shako, to his ill-made shoes, escaped criticism. The public soon became unanimous in denouncing the weight the soldier is obliged to carry: the stock by which on parade he is often nearly choked, the general tightness and want of freedom in his uniform, the indifference to climate shown in providing him with apparel, and the exorbitant charge made upon him for an inferior "kit." Out of a shilling a day, stoppages of all sorts are wrung, under every conceivable form of pretence, for clothing which ought to cost him nothing. The arms and accoutrements fell as much under public censure as the costume: the British soldier was badly armed—"Swords that would not cut, muskets that would not shoot, pioneers' tools that were impracticable, clothes in which the wearer had difficulty to move, and a stock to stifle him in hot weather," was the stinging description with which an American newspaper summed up the information afforded by the discussions on these matters in the London press. The infantry soldiers' old companion, "Brown Bess," became unpopular both in the army and among the people; indeed, everywhere but at the Ordnance-office, and among the older generals, who still insisted that as the army had driven the French before them from the heights of Busaco to Toulouse with "Old Brown Bess," there was no need of Minié rifles or any other "new-fangled" weapons.

It is to the discredit of a portion of the manufacturing and commercial community that ships, arms, and stores, were in course of preparation for the enemy, while our government was organising armaments against him. In the Clyde and the Tyne steamers intended for the service of the czar were under equipment, and were seized by the authorities, and confiscated to the use of her majesty. Information was conveyed to the Home-office, that large stores of arms and ammunition were preparing for export to Odessa, and a proclamation was issued on the 18th of February, from the Queen in Council, declaring contraband all such material of war. Through the imbecility of the government, large quantities of munitions of war had, however, previous to the proclamation, been actually shipped to Odessa, and other ports of the enemy.

The estimates which parliament was asked

to vote for 1854, beginning on the 1st of April, were utterly inadequate to the crisis; they were—

	Proposed Vote.	Increase.
For the Army	6,287,488	262,470
„ Navy	7,487,948	1,202,455
„ Ordnance	3,854,878	792,311
	<u>£17,621,312</u>	<u>£2,257,236</u>

These estimates were of course the occasion of much parliamentary discussion, the feeling of the House being in favour of a larger vote. The Chancellor of the Exchequer, Mr. Gladstone, hoped by this "bit by bit" preparation for the war to show his majesty the czar British desire for peace; and expected to conciliate him by showing how few regiments we were willing to raise, and the modicum of expense we contemplated. All who knew the habit of thought in Asiatic nations—and Russia is essentially an Asiatic nation—were aware that this parsimonious war-making would have a contrary effect: the czar understood it as a token of a commercial disgust to war, and a dread of adding to the national debt, and he was encouraged to proceed. That such was the feeling at St. Petersburg private letters at the time, and subsequently, abundantly established.

The naval preparations for the war, as we have already intimated, made better progress than those of the army. A fleet was fitted out, the most magnificent the world ever saw, and was committed to the command of Vice-admiral Sir Charles Napier. Rear-admirals Chads and Plumridge were also appointed to important commands under Sir Charles. This fleet was exercised daily off Portsmouth by Admiral Chads, especially in gunnery, who had obtained great celebrity in that department of a naval officer's qualifications. The Russian fleets had paraded about the Gulfs of Bothnia and Finland the preceding autumn, and the usual boastings were heard through the Russo-German organs of the press, and from the friends of Russia in the London clubs. In consequence of these boastings, the public were very anxious for the dispatch of the Baltic fleet as early as possible in the spring, and the 11th of March was fixed upon. On the 7th, a grand banquet was given to Sir Charles Napier by the members of the Reform Club. It was given in the coffee-house of the club-room, in Pall Mall, which only afforded accommodation for 200 persons. The members of the club, however, who could not obtain seats at the dinner-table, crowded the ante-rooms and the approaches to the coffee-room, in order to hear the addresses. The flags of England, France, and Turkey, were tastefully blended around the room. There was a large assemblage of persons outside the club, who greeted the arrival of distinguished individuals

with hearty applause; but the favourites were Sir Charles Napier and Lord Palmerston, who, perhaps, were never before greeted by the populace so fervently. The latter member of the club took the chair. He was supported by political names of eminence, and of some who deserved eminence:—Sir W. Molesworth, M.P.; Mr. Peto, M.P.; Admiral Berkeley, M.P.; M. Musurus, the Turkish Minister; Namik Pasha; Mr. Olievera, M.P.; the Hon. W. Cooper, M.P.; Sir J. Lillie. The Vice-chairs were occupied by Lord Dudley Stuart, M.P., and Sir De Lacy Evans, M.P. This banquet was afterwards a subject of discussion throughout the whole empire, and even in foreign countries. A tone of boasting was adopted unusual among English gentlemen; expressions of foolish menace fell from almost all the speakers when referring to Russia. Unhappily, the men who from their position should set an example of prudence, seemed to lose all self-possession, and to give themselves an indulgence in absurd rodomontade. The most warlike and boastful language was adopted by Sir J. Graham, the First Lord of the Admiralty—a man who has since avowed himself to have been anxious to obtain any terms from Russia; and who, in fitting out that mighty fleet, only intended it as a demonstration, and expected to awe the czar by its display, while he and his colleagues flattered him by a courtly diplomacy, and craved peace at his hands almost in the language of supplication. The public universally disapproved of the conduct of the leading men at the Reform Club; and grave questions and remonstrances connected with the language there employed were heard in the senate. The excuse offered for all the folly enacted there was, that the speeches were after-dinner orations, to which especial indulgence ought to be given. This did not satisfy the public, who believed that men to whom the guidance of our diplomacy and the command of our fleets were entrusted, ought to be able to preserve their discretion after dinner as well as before. When the health of Sir Charles was drunk, he responded with great vivacity to the compliments paid to him: the opening sentences of his speech were made the subject of much party animadversion:—“I cannot say that we are in a state of war, because we are still in a state of peace; but I suppose we are very near at war. I suppose that, when I get to the Baltic, I shall have an opportunity of declaring war. (*Loud cheering.*) And certainly, if I have the opportunity, I hope it will end in a prosperous war, because I can safely say that this country never sent out such a splendid fleet as that which is about to go into the Baltic in a few days.”

Sir James Graham, as First Lord of the Admiralty, was of course toasted, and as a

matter of course also made a speech, from which we select this paragraph:—“He does not go forth under the hypocritical pretence of conducting a religious war (*loud and vehement cheering*); but he goes forth to assert the independence of Europe; to resist—and I hope successfully to resist—that lawless spirit of aggression and aggrandisement which now threatens to disturb the general peace (*cheers*). My gallant friend says, that when he gets into the Baltic, he will declare war: I, as First Lord of the Admiralty, give him my free consent to do so (*loud cheers*). I hope that war will be short; it may be sharp; but I hope that, with the spirit and energy that ever characterised my gallant friend, it may be decisive.”

On the Monday after these foolish speeches, Mr. French called the attention of the House of Commons to the fact of Sir James Graham having announced that he gave permission to Sir Charles Napier to declare war upon entering the Baltic. Sir James Graham, in a rambling and irate reply, endeavoured to escape the consequences of his words, by reminding the House that he had spoken “after dinner.” A scene of wordy conflict ensued between the friends and opponents of government; but the general sense of the House was clearly indicated as hostile to the spirit of empty bravado that had pervaded the speeches complained of, and the arrogant and imprudent language employed. We especially notice these incidents as explaining the indignation of the country, when, subsequently, the men who thus boasted, and uttered such belligerent language, were proved to be unfavourable to the war they appeared to advocate, and anxious to avoid everything that might practically humble Russia, while deceiving the country and its allies by the utterance of an earnest patriotism.

On the 10th of March, her majesty, on her way to Osborne, visited the fleet in the *Fairy*, royal yacht; and a scene only somewhat inferior in grandeur and effect to that which was presented the next day, at the departure of the mighty armament for the Baltic, was witnessed by the multitudes who, from every part of Great Britain, had collected in Portsmouth and its neighbourhood, and the Isle of Wight. Sir Charles had his flag flying on board the *St. Jean d'Acre*, and as soon as the guns from the guardship, the *Victory* (on board of which Nelson fell at Trafalgar), announced the queen's arrival, the signal was given from the *St. Jean*, and every ship was seen with her yards manned. Immediately after the *Fairy*, with the royal standard floating from her main, bent her course for the head of the fleet. As she passed the Platform Battery, the guns thundered out their welcome, and tens of thousands of people

rent the air with their acclamations. The salute then began, and ran along the fleet, forming a sublime spectacle. The first flash was seen from the broadside of the *St. Jean d'Acre*, and then the roar of cannon was poured over the quiet waters from all the huge thunderers that composed the formidable array. When the smoke passed away, the *Fairy*—a tiny but graceful thing, a perfect contrast to the huge war ships by which she passed—was seen steaming for Osborne. Then, ship after ship poured forth its volleys of cheers, the men upon the yards displaying the utmost enthusiasm. The *Black Eagle* attended the *Fairy*, and carried a large company of the most distinguished attendants upon the court.

Up to a late hour on Friday night, myriads of persons entered Portsmouth and the contiguous towns. Hotels, lodgings, out-houses, every available place, was eagerly resorted to by those in quest of an abode. The illuminations were on a scale never before witnessed in Portsmouth, Portsea, or Gosport. The next day, the first symptom of the events about to transpire was the shifting of Sir Charles Napier's flag from the *St. Jean d'Acre* (101 guns) to the *Duke of Wellington* (131 guns). Soon after, the *Neptune* (120 guns) was steamed out to Spithead by a small steamer. An observer graphically remarked—"It was a strange sight to see that majestic hull, towering aloft with its three decks and its lofty masts, and taken as a helpless prisoner by a petty steam-tug, which could have been stowed away without inconvenience in any part of its ample decks. The superiority of science over bulk could hardly have been better illustrated than in this case: here was one of the finest line-of-battle ships in the world lying sluggishly at the mercy of the reluctant breeze, when lo! a little black magician appears, and taking the huge leviathan by the fin, coolly places her in her position in the proper order of departure. It is quite clear that sailing line-of-battle ships will soon be matters of history in this country. Vast crowds were upon the ramparts to see this ship pass out; and the band, playing well-remembered tunes, gave to the proceeding a strong degree of interest."

The gallant Sir Charles was invited to the Guildhall, to receive an address from the Corporation; and as he proceeded thither, he was welcomed by "the shoresmen" with vociferous cheers. As he returned to embark on board the *Sprightly* for his flag-ship, the throng that pressed around him of all ranks was at once cordial to him personally, and enthusiastic for the enterprise. The pier was decorated with the flags of France, Turkey, Austria, and the United States, as well as that of the United Kingdom. Sir Charles was attended by his three daughters, who were the objects of

unbounded admiration and respect on the part of the multitude. Arriving on board the *Duke of Wellington*, the admiral and the fleet prepared to receive her majesty. The fleet itself was, in fact, but the first division of that destined for the Baltic; the second division was in course of preparation, and to be dispatched subsequently, under the orders of Vice-admiral Corry. That under the immediate command of Sir Charles Napier consisted of the following ships:—

SCREW LINE-OF-BATTLE SHIPS.			Horse-power.
	Guns.	Men.	
Duke of Wellington	131	1100	780
Royal George	121	990	400
St. Jean d'Acre	101	900	650
Princess Royal	91	850	400
Blenheim	60	660	450
Hogue	60	660	450
Ajax	58	660	450
Edinburgh	58	630	450
	680	6420	4030

SCREW FRIGATES.			Horse-power.
	Guns.	Men.	
Impérieuse	50	530	360
Arrogant	47	450	360
Amphion	34	320	300
Tribune	30	300	300
	161	1600	1320

PADDLE-WHEELS.			Horse-power.
	Guns.	Men.	
Leopard	18	280	560
Dragon	6	200	560
Bulldog	6	160	500
Valorous	16	220	400
	46	860	2020

Making a total of sixteen war steamers; of which two, the *Duke of Wellington* and the *Royal George*, are three-deckers, while three carry admirals' flags—Sir Charles Napier's in the *Duke*, Admiral Chads' in the *Edinburgh*, and Admiral Plumridge's in the *Leopard*. The *Euryalus*, screw-steamer, 51 guns, 531 men, and 400 horse-power, was subsequently added.

The second division, under Vice-admiral Corry, which afterwards joined Sir Charles Napier, may be here noticed. It consisted of:—

SAILING SHIPS OF THE LINE.			Men.
	Guns.		
Neptune	120		970
St. George	120		970
Waterloo	120		970
St. Vincent	101		900
Prince Regent	90		820
Monarch	84		760
Boscawen	70		730

SCREWS.			Horse-power.
	Guns.	Men.	
Cæsar	91	850	400
James Watt	91	850	600
Nile	91	850	400
Majestic	80	750	400

FRIGATES, SLOOPs, ETC.

SCREWS.			Men.
	Guns.		
Miranda	15		175
Archer	14		160
Conflict	8		180

	PADDLES.	Guns.	Men.
Odin	16	6	220
Bulldog	6	6	160
Gorgon	6	6	160
Driver	6	6	160
Rosamond	6	6	160
Prometheus	6	6	145
Alban	3	3	60
Lightning	3	3	60
SAILING.			
Frolic	16		130

Making in the whole a fleet of forty-four vessels, 2200 guns, 16,000 horse-power, and 22,000 sailors and marines.

After Sir Charles received the address at the Guildhall, and had returned on board the *Duke of Wellington*, the *Fairy* yacht with the royal party set out from Cowes. There were on board Her Majesty, the Prince of Wales, the Princess Royal, Princess Alice, Prince Alfred, and the Prince Consort; also the ladies and gentlemen in waiting, and Sir James Graham, in attendance as First Lord of the Admiralty, and Vice-admiral Sir Thomas Cochrane. The *Elfin*, *Fire Queen*, and *Black Eagle*, were in attendance upon the *Fairy*. On a signal from the admiral, a salute of twenty-one guns was fired by the whole fleet; and when the spectacle was associated with its grand object, none could fail to feel its sublimity. Scarcely had the thunder of the guns died away, and the smoke dispersed, when the *Fairy* and her retinue of steamers reached the fleet. The rigging of the ships was manned, and the men cheered heartily; and their cheers were as enthusiastically taken up by the multitudes on board the pleasure-boats which swarmed around every ship. The bands of the several vessels, as well as the amateur bands on board the various yachts and steamers, played the national anthem. The flagship had her side ladders and decks covered with scarlet cloth, to receive her majesty and suite on board; but the little yacht kept on her course, threading the mazes of the fleet—the royal party examining every ship—and finally passing to leeward, the captain made signal for admirals and captains to come on board. The barges and gigs of the several vessels were instantly put into requisition to convey those officers to the *Fairy*; the admiral's barge led the way, with Sir Charles and his captain in the stern-sheets. By this time an immense circle of pleasure-yachts formed around the *Fairy*, as near as propriety allowed. Her majesty and suite received the officers on the deck of her little yacht. Sir Charles Napier, and Commodore Seymour, the captain of the fleet, were the first on board; they were presented to her majesty by Sir James Graham, and she conversed in an animated manner with these two officers for some time. The queen was deeply affected while speaking to the officers

around her, and addressed them in the language of confidence and hope—manifesting the deepest personal interest in them, and a tender sympathy for all her loyal tars. She was attired in black, but wore a blue veil and parasol, in compliment, it was supposed, to the admiral's flag. The *Fairy* answered well to its name—so swiftly did it glide about, and appeared, in its brilliant painting and tasteful carving, an elegant thing beside the huge war ships amongst which it so gracefully passed.

With all this gay and exciting array, and all the enthusiasm of the multitude on board the fleet and the pleasure ships, there was something in the spirit of the whole in contrast to that of the grand naval review of the previous autumn: on the one occasion all was holiday and merrymaking; on the other, there was an aspect of stern reality—an expression of countenance and a bearing which indicated, both on the part of the crews and the spectators, a consciousness of the terrible reality of war. An observer thus describes it:—"Boats passed from ship to shore incessantly, and with rapidity which seemed directed by earnestness. Signalmen were in constant requisition. Weeping female faces might constantly be seen, as fathers, sons, or brothers, sped away to join their ships. Even the people, who came in thousands to behold the spectacle, wore countenances that were thoughtful, earnest, and even sad."

At two o'clock a signal-gun was fired from on board the *Duke of Wellington* for the fleet to get under weigh. The scene on board the noble ship was at that instant exciting: the veteran Sir Charles stood, glass in hand, giving orders to the ships to weigh in succession; and immediately the signals were run up, and answered by the ships addressed. The shrill sound of the boatswain's whistle could be faintly heard in the distance; "and the sailors, crowding aloft, spread themselves along the yards. Soon the great sails were shaken out, swelling majestically in the breeze; the captains could be heard working to the sound of the fife, and soon the great anchors were seen dangling at the bows, and the ships creeping slowly away." As soon as the first division of the fleet was fairly started, the admiral's own ship "weighed," and made sail with wonderful celerity. "Every rope was hauled home in a moment by the silent but simultaneous efforts of a hundred men; the rigging was soon literally black with sailors; and, while the eye detected everywhere the greatest energy and activity, there was no sound perceptible to the ear but the boatswain's whistle, and an occasional command from an officer, sharp, short, and decisive."

The most interesting event on the occasion was the *Fairy* heading the fleet. By a rapid

move round to windward, she passed from where she had been lying to, and, followed by her attendant steamers, took up her station a little in advance of the leading ship—her majesty standing on the deck, and literally leading her fleet out to sea. The effect of this movement upon the sailors and the spectators was electric, loud shouts filled the air; the sun, which had been partially hidden by piles of cumbrous clouds, burst out refulgently, and seemed to fill the sails of the screw steamers, which all went out to sea impelled by the breeze, and not by steam; the sea foamed and sparkled, as divided by the prows of the advancing ships; and the queen of the seas herself was in the van of the mighty forces she thus led forth to menace and defy her foes. If ever Victoria felt proud of her greatness it might have been then, as she stood upon the deck of her beautiful *Fairy* yacht, followed by those floating fortresses, frowning in their grim strength over the yielding waters. When the foremost ships had neared St. Helen's, signal was made to shorten sail, that the admiral's flag-ship might come up, and this was the moment chosen by the queen to return; and as the whole fleet passed her, ship by ship, she wept, and bid them God speed; and the cheers of her brave tars rang in her ears, until, borne afar upon the world of waters, their sounds died away. As the *Duke of Wellington* was neared by the *Fairy*, the crews rushed up the rigging, and uttered the most hearty demonstrations of loyalty; the *Fairy* hove to, and let the *Duke* pass her; this apparent condescension of the queen filled the generous hearts of the rough sailors with delight, which they were by no means sparing in expressing. One of the crew climbed up to the truck of the maintop-mast, followed by crowds of others, among whom he was the successful competitor for the dangerous position; having attained the giddy eminence, he then seated himself, and taking off his hat, waved it, cheering her majesty, and seeming to occupy this pinnacle of elevation with as much ease as he would have stood on deck,—her majesty and all on board the royal yacht acknowledging his salute. The queen and Prince Albert leaned over the side of the quarter-deck, the former waving her handkerchief, and the latter his hat, giving this gallant fellow the honour of their last adieus. Two other sailors, one perched on the top of the foremast, and the other on the mizen-mast, attracted also the attention of the court on board the *Fairy*. Thus passed out to sea the most brilliant naval squadron that ever left the shores of England. Never before was a fleet better handled, in the opinion of nautical men; never before were enthusiasm, and loyalty, and patriotism, more manifestly and ardently displayed by the brave mariners of England when going to seek the

enemy. If the results of this great expedition did not answer the public expectation, the fault was not with the men, nor their intrepid commander, but with the Admiralty at home, which neglected to provide gun-boats and other craft suitable for warfare in the Scandinavian shallows.

When the fleet reached open water, the order of sailing was formed in two divisions, Admiral Napier's and Admiral Chad's ships, the *Duke of Wellington* and the *Edinburgh*, leading their respective divisions. Clear off the coast, Sir Charles issued the following characteristic order: "Lads, war is declared! We are to meet a bold and numerous enemy. Should they offer us battle, you know how to dispose of them; should they remain in port, we must try to get at them. Success depends upon the quickness and precision of your fire. Lads, sharpen your cutlasses, and the day is your own!" As soon as this address reached the English newspapers, many and severe animadversions upon the indiscretion of the British admiral were made, and the opposition in both houses of parliament called attention to what they regarded as a repetition of the indiscreet and assuming language of the Reform Club banquet.

Off Dover, the fleet fell in with the *Hecla* steam-sloop, which had just returned from a surveying expedition to the Baltic. The *Hecla* had performed her difficult task admirably, and her meeting with the fleet was opportune. She had only left Hull on her outward-bound voyage on the 19th February, and had completed her work, and returned in time to place pilots on board the fleet, and to distribute the surveying officers, who had on board of her performed the commission assigned to them. She had passed 3000 miles of sea in the short time referred to, and made the gratifying announcement that she had left no ice in the Baltic. Her commander's report to the Admiralty was most interesting, and exemplifies the energy, skill, and daring of the British navy quite as much as a victory over the enemy could have done. According to this report, she "anchored in the harbour of Flekksfiord on the 22nd, and left on the 23rd for Christiansand; she proceeded to Christiana, and carried a line of soundings across the harbour, thence to Fredericsvarn, a small port near Laurvig, where she anchored on the 24th. The commandant of that fort furnished a government pilot, and a set of Norwegian charts for the whole of Christiana Fiord. She left on the 25th for Laurvig Bay, and steamed about there; then proceeded to Christiana Fiord, past Høsten, to Drøbach, where she anchored in the evening. The anchorage of this place was found very bad. The *Hecla's* party went across to Christiana in sledges, and were well received. She

left on the 28th, and proceeded down the Fiord of Christiana. On the 1st inst. she sighted the lights of Wingo Sound at midnight, hove to, proceeded at daylight in through Warholm, Flemish and Hawke Roads, and in and out of the North, Middle, and South Channels. She left Wingo Sound on the 2nd, and made for the Skaw, on the coast of Jutland, and proceeded along Albeck Bay and FredericksHAVEN. She sounded all the way; in the evening anchored at Nyborg Roads; and on the 3rd passed between Kalskø and Spøge, noting the leading marks in and out; also the marks on the Vengeance Shoal. Then she went by the Langland Deep, S.S.W., through the Great Belt, and anchored at Kiel on the same night. Here she received orders to return to the Downs, in consequence of some Russian frigates being in a dangerous proximity. It would have been a grand chance for a Russian frigate to have caught at once all the masters of the Baltic fleet. The masters as well as pilots were told off, and stationed at the guns, in case of being attacked by a Russian of superior force. The *Hecla* left Kiel about eight o'clock on the evening of the 3rd, and arrived off Copenhagen on the 5th, having made Dais Point on the previous morning, and examined the locality of the Plantagenet Shoal, where a line-of-battle ship sank a long time ago. She found the shoal accurately marked on the chart; and commenced her return on the 7th, so as to be in the Channel on the 12th, as ordered, that she might meet the Baltic fleet, and place the masters and pilots on board. The Danish government, she found, had recently issued an order that no vessel should anchor within a certain distance of the Trekroner Battery. The *Hecla* reported that the Great Belt is easily navigable. Christiansand appeared to be the best port that a fleet could anchor in upon the coast of Norway; Wingo Sound on the coast of Sweden; Nyborg in the Great Belt; and Kiel Bay on the eastern coast of Holstein, a little to the south of Schleswig—the most advantageous of any for a large fleet. It is a capacious and most beautiful bay, and possesses the permanent advantage of communication by railway with Hamburg, besides any amount of victualling supplies, which are both good and cheap; coals are also plentiful, and may be had at a reasonable price." The *Hecla* fell in with the fleet in two divisions, "under stern and all plain sail." She commenced with the last ship in the lee division, and continued to transship the officers until her mission was accomplished. The fleet was thus put in possession of a mass of useful as well as necessary information, which could not fail to facilitate their approach to their destination, and their successful manœuvres there. The *Hecla* had several times very narrow escapes

from the Russian frigates. She was herself better fitted for speed than fighting, mounting only six guns—two 10-inch shell guns of 85 cwt., and four 32-pounders of 65 cwt.

An extract from a letter written by Mr. W. S. Lindsay, the great ship-owner, and one of the best practical judges in connection with the commercial marine, will convey to our readers a striking estimate of the qualities of the Baltic fleet.

"We have improved to a most surprising extent in our merchant vessels during the last thirty years, but I certainly was not prepared to find an improvement nearly as great in our men-of-war. I did so. Those who have only inspected a line-of-battle ship of Nelson's day, will form a very imperfect idea of the *Duke of Wellington* by any comparison they may make in their own minds; they must see her before they can understand the real strength of Napier's flag-ship. She is, indeed, a magnificent specimen of naval architecture—a thorough peace-maker; for one broadside of her tremendous artillery must tend materially to create silence. Everything seemed in its place, ready for action. It struck me, however, that fifty feet greater length would have been a marked improvement in the build of the *Duke*, by increasing the extent and range of her battery, and by causing a greater buoyancy, which would have elevated her lower tier of ports still further from the water. A glance at the *Impérieuse*, 50-gun frigate, confirmed me in this opinion. She was everything the most practised eye could desire, and struck me as a fit match for any line-of-battle ship that Russia could produce. In her motions she must be exceedingly rapid, of great length, light, and graceful in appearance, yet with a range of guns of ponderous calibre, which could be brought to bear in almost any weather. The "block-ships," too, mounting, as I understood, in all, sixty 68-pounders on two decks, must prove most effective vessels of war—giant fortifications on the ocean, so low in the water, compared to the three-decker, that in the distance they appeared like frigates; in fact, one of them, the *Blenheim*, was painted as such. This struck me as an excellent idea; the enemy would suppose her to be a single-decked ship, and it would only be when her lower ports were traced up and the double range of guns, fully charged, run out, that the mistake would be discovered—likely enough, too late to prepare for so unexpectedly powerful an antagonist, or to withdraw from the range of her tremendous artillery. As a whole, the fleet surpassed my expectations. Great credit is due to the Admiralty, and the thanks of the country are due in an especial manner to Captain Milne for his untiring zeal and indefatigable labours in sending to sea, in so short a space of time, the

most perfect fleet of ships that ever sailed from our ports.

"In regard to the efficiency of the crews, I had not an opportunity of judging. In getting under weigh they displayed great activity; and I was certainly surprised at the rapidity with which the topsails and courses were unfurled and spread. That they sailed in the best of spirits, and were most enthusiastic in the cause, there could hardly be a doubt.

"I was informed that there were very few officers on board who understood anything about the navigation of the Baltic. If it is so, let us dispatch at once, in a steamer after the fleet, for distribution among the ships, some twenty or thirty north-country skippers. Abundance of volunteers can be found, who have traded all their lives in these seas; who know every inch of the ground, and every bay and headland along the coast."

It is a pity that the advice given at the close of this extract was not followed: the information given to Mr. Lindsay was but too true, as to the paucity in the number of officers on board the fleet who understood the navigation of the Baltic. The means of supplying this deficiency were as ample as Mr. Lindsay pointed out; but the Admiralty did not deign to notice the counsel so wisely given. That this counsel was necessary, all persons must determine who take the trouble to make themselves acquainted with the shores and waters of the Baltic. That sea is almost entirely formed by the concentric disemboisement of great rivers: ocean currents are little felt; and there is but little wind power as compared with that which prevails in the Euxine or any other sea—circumstances which made a steam navy expedient. It terminates in gulfs, which are often icebound for a long period of the year, and in which storms are rarely formidable. In these gulfs there are rocks which no charts indicate. The entrances to the Baltic are by "the Sound" and by the "Great Belt." Except the entrance to the Sea of Marmora, guarded by the Dardanelles, there is no entrance to any sea more difficult; while the exit of a Russian fleet to the ocean is impossible, so long as these gates of the Baltic are occupied by hostile forces. Along the shores, up to St. Petersburg, the waters are shallow, and studded with rocky islets. Great ships of war cannot enter these shallows; and the formidable fortresses erected by Russia cannot be approached by large ships, so as to be brought under fire of their broadsides. Everywhere the navigation is most intricate; and to effect it, even for peaceful purposes, is next to impossible without an intimate experience. The Admiralty, however, adopted means to lay down buoys, the Russians having taken up those which usually guided the navigation. The *Valorous*, of

16 guns, and the *Lightning*, 3 guns, were dispatched for this purpose.

On the 14th March, the *Miranda* steam-sloop had the honour of being the pioneer of the fleet in the Baltic. She fired the first guns heard in connection with the expedition when saluting Kronborg Castle, Elsinore. It was a curious coincidence, that at the moment her cannon pealed forth their thunders the upper house of the Danish parliament was coming to the vote, an almost unanimous one, against the pro-Russian and tyrannical ministry of the Danish king.

On the 20th March, Sir Charles Napier arrived at Copenhagen on board the *Valorous*, 14, and immediately landed. He was speedily followed by the rest of the 1st division, and by reinforcements.

Whatever may be said in favour of the ships of this fine fleet, the spirit of the men was still more deserving of praise. There was no press-gang employed as in days of yore; it was a fleet manned by volunteers. What a contrast in this respect to the forced levies of Russian sailors! There was an off-handed, buoyant spirit among the men, as much in contrast with the heavy, dogged, discontented spirit of the Russians. It has been remarked by a traveller, a military man, that it is no bad test of either soldiers or sailors to watch them in their pleasures. Judged in this way, "Jack" is certainly a marvellous contrast to his Russian antagonist. The latter, when he is trusted to go on shore, quietly gets drunk on the cheapest spirit he can procure, generally alone; or if a group of Russian sailors get drunk together there is no fun in them, no sailorly love of jollity. They will drink together in silence, or a few remarks about home, interlarded with oaths, constitute their conversation; and as they fall more under the influence of the liquor the oaths are exchanged for prayers, as a Russian never honours the saints so much as when he is intoxicated. The British sailor will always when he can escape ship for a "trip on shore;" but when the trip is over he is sure to return to duty. The same quick-wittedness that marks his love of fun serves him in his duty, while the slow-witted Russian is alike without ingenious resources in getting a ship under weigh, working her at sea, or serving her in battle: in a storm he is most of all helpless. The *Devonport Telegraph* gave an amusing illustration of the characteristics of the British sailor when bent upon a spree, as exemplified in some of Sir Charles Napier's own crew.

"When the *Duke of Wellington* was taken into dock last week, it was anticipated that liberty would be given to the men to go on shore—especially to such of them as were married, and had wives at this port. In this,

however, they were disappointed, and considerable dissatisfaction was the result. Many of the crew, however, were determined that they would not be baulked in this way, and were bent upon putting into execution some preconcerted manœuvre which should enable them to regain their liberty, if only for a short period. To this, however, many obstacles were presented—the most serious of which was ‘how to pass the gate,’ and ‘hoodwink the peelers.’ Jack’s ready wit, however, here stood him in good need; and the following cleverly concocted stratagem being put into execution, was attended with the desired result: About forty ‘blue jackets’ and marines having clandestinely left the ship, by preconcerted arrangement, met in the yard and formed into line. Prior to leaving the vessel, one of the men had possessed himself of a ‘sergeant’s jacket,’ whilst another had donned a ‘middy’s’ upper garment; and, being thus prepared, they boldly marched up to the gate. Here, as expected, they were stopped by the police inspector on duty, who demanded their business. Our *pseudo* sergeant, commanding his ‘company’ to ‘halt!’ replied that ‘they were the picket,’ and were ‘going out to pick up stragglers.’ ‘Can’t let you pass,’ rejoined the individual in blue coat and silver buttons, ‘without permission of the officer.’ ‘All right!’ immediately responded a mimic small voice, in a tone of authority, from the rear, and which proceeded from the aforesaid ‘middy;’ who, stepping forward, gave the now satisfied inspector ‘ocular demonstration’ of his ‘authority.’ The word was then passed, and the gate being thrown open, the ‘gallant band’ saw liberty before them; and our ‘sergeant,’ commanding his troop to ‘form four deep’ and ‘quick march!’ the ‘picket’ marched gravely forth, and shortly afterwards dispersed; not, however, without indulging in a hearty laugh at the facility with which they had ‘hoaxed the inspector.’ An hour subsequently, as one of the police constables was quietly patrolling his beat, he had occasion to pass the vessel, when a brief colloquy ensued between him and the ‘officer of the watch.’ ‘Rather a large picket gone out to-night, sir,’ casually remarked the former. ‘Picket,’ rejoined the astounded officer—‘what picket?’ ‘The one that’s gone to look out for stragglers,’ quoth the other. ‘There is no picket sent from here;’ and so saying the officer of the watch proceeded below, when his fears were speedily verified—Jack’s ‘trick’ had been successful.”

These men were not runaways; their carouse over, or their visits to their wives and sweethearts paid, all were again at their posts, ready to do or dare, as duty demanded.

On the 16th, the Queen, Prince Albert, the Prince of Wales, Prince Alfred, Princess Helena, and Princess Louisa, visited Admiral Corry’s

squadron, at Spithead, preparatory to its departure to join the division of the fleet under command of Sir Charles Napier. The scene was in every respect similar to that which was presented when her majesty took leave of Admiral Napier, only that everything was on a smaller scale. The *Neptune* (120 guns), under the command of Captain Hutton, attracted the attention of the royal party, and of all the visitors. So rapid were the performances of her crew, that her sails were set by simultaneous movement, as if by machinery. As she lay at anchor, with all sails furled, she seemed as if no life were within her; the next moment her canvas fell, and she wore round with the grace and swiftness of a cutter. This being her first trip, she was watched by nautical eyes with great interest and with great pride, for never did ship put to sea in more gallant trim. She seemed a creature of conscious beauty and power. The *Fairy*, with the Queen and court on board, followed by the *Elfin*, accompanied the *Neptune* out for some distance; and when signal was made that she was about to part company, the rigging was manned in an instant, and the sailors resorted to all their usual daring and boisterous modes of greeting their sovereign. What had previously taken place on board the *Duke of Wellington* was repeated here; the men climbed the giddy top of the main, fore, and mizen trucks. The royal party received these exuberant tokens of loyalty with their wonted kindness and grace; and her majesty seemed so much affected by the loyalty of her brave mariners that, instead of parting company, she ordered the *Fairy* to resume its course, and follow the *Neptune* outside the Nab, notwithstanding that there was a fresh gale blowing, and the sea was very rough. Her majesty and the royal children are, however, reputed to be good sailors; and “Jack” is not a little proud of the way in which her majesty, and the Prince of Wales especially, bear the sea. The Prince-Consort does not share in this reputation for partiality to “blue water,” which “Jack” attributes to his being a foreigner. While the *Neptune* glided out, followed by the *Fairy*, a large war-steamer appeared in the distance. The Queen herself ordered a demand-signal to be run up; to which the reply given by the stranger was, “*Penelope*, from the coast of Africa.” Her majesty is well acquainted with the whole signal-system, and frequently takes that department under her own management when on board the royal yachts, selecting and reading the signals with as much precision and quickness as her officers. The tars consider her a real “Sailor Queen,” and this opinion is very influential in the enthusiasm with which they regard her.

The arrival of the Baltic expedition at its

destination, without accident of any kind, gave great pleasure to the British public: the first letters from the fleet were eagerly read, not only by those to whom they were addressed but by the general public, as they soon found their way into the public prints. One of these, written from on board "the *St. Jean d'Acre*, Wingo Sound, March 18th," gave an interesting description of the progress of the fleet at sea, and of the occurrences attendant upon its arrival at that place of rendezvous:—

"On Monday evening we weighed and stood out to sea. All the ships, with the exception of the paddle-steamers, taking advantage of a favourable breeze from the S.S.W., were under sail. But the impatience of the admiral to arrive at the scene of his future operations was soon evinced by a signal to get up steam. We proceeded in the same order as before, leaving the English coast; the in-shore squadron, under Admiral Plumridge, to windward; Sir Charles leading the starboard; and Admiral Chads the port line. Towards evening, however, a light wind from the northward rolled down upon us a dense mass of fog, which soon made the relative positions of the ships a mere matter of conjecture. Nothing could be seen, save an occasional flash from the position guns of the admiral, or the top-gallant-mast heads of some tall ships towering above the vapour. During the night even these uncertain guides failed; and though we, from our position immediately astern of the flag-ship, were enabled to keep station with some degree of certainty, the remainder were not so fortunate. Morning came, and with it a strong wind, which swept away the fog, and revealed our straggling squadron.

"The recall signal hoisted by the flag-ship was quickly repeated by all within sight. Mere specks in the far-away horizon gradually increased into great ships, as they hastened to take up their positions; and, by twelve o'clock, all who had not hopelessly strayed were again in order of sailing. The paddle-squadron of Admiral Plumridge, and the *Princess Royal*, *Impérieuse*, *Amphion*, and *Royal George*, were not to be seen. This morning, on arriving, we found them all (excepting the *Royal George*, which has not yet turned up) anchoring at Wingo.* The *Euryalus*, which started from Sheerness on the same day as we from the Downs, having been ordered to proceed with all speed, was here on Thursday. She is spoken of as a wonder of naval architecture.

"I give you the gossip of the fleet for what

it is worth, believing that all the sayings and doings of our naval armaments have an interest, at the present moment, for readers at home. Our vicinity to Gothenburg has afforded facilities for crowds of eager sight-seers to visit the fleet. Their little steamers, gaily decked out with national colours, have been cantering about all day, cheering each ship with nearly as much enthusiasm as their brother-excur-sionists off the English south coast. I need hardly say, that the rigging is manned and the ensign dipped, on board all the ships, at each fresh demonstration of Swedish kindly feeling. This enthusiasm for the English is, I am told, very general throughout the country; but I cannot speak from any personal knowledge.

"The bay in which we are lying is surrounded on three sides by a low rocky coast. There are no houses but those belonging to the light-keepers; and a more bleak, uninteresting spot could hardly be imagined: the weather, during the last few days, has been bitterly cold."

While the fitting out and dispatching of squadrons and single ships-of-war for the Baltic were in such rapid progress, means were adopted to embark the artillery and cavalry for the East. Captain Laury's troop of Royal Horse Artillery, and part of Captain Anderson's company of Foot Artillery, were ordered to embark at Woolwich with very unnecessary dispatch, judging by the delays permitted after the actual embarkation. On March the 17th, at midnight, the Deputy Quartermaster-general of Artillery communicated to the Commodore Superintendent of the Dockyard that the troops must begin to embark next morning shortly after six. At five o'clock on the morning of the 18th the men were awakened, and then for the first time had any intimation of the order. By that time the waggons and stores had actually arrived. Such were the promptitude and celerity of the men, that by a quarter past six o'clock they were all mounted in route order. The troops left the garrison before seven o'clock. The band did not play; and the whole proceeding was so quiet and so quick, that the inhabitants of Woolwich were not apprised of it. On entering the Dockyard at seven o'clock, the horses were unharnessed in the Dockyard parade-ground, and the harness packed into casks for each given department. The embarkation of the horses then began; and the whole of the guns and ammunition-waggons were put on board, and the six ships taken out of the basin and towed to moorings at the Royal

* Wingo is a rock near the entrance to Gotheborg (or Gothenburg), on the Swedish coast. Wingo Sound has good "holding ground" for ships in fifteen fathoms water. The roadstead is convenient for vessels going to Gothenburg, and thence outward-bound. In a south-west gale, a heavy sea sets in, but in the Fiord of Rifo, four miles to the eastward of Buskar (the Sound is situated between Buskar and Batta), in the inlet of

Gothenburg, ships may ride sheltered in all winds. The city of Gothenburg is a commercial place, having facilities by its water communications for intercourse with the interior of Sweden. The population is about 30,000.

The selection of Wingo Sound for the rendezvous of the fleet was judicious, as offering peculiar facilities for such a purpose, and as affording the fleet a position for the command of the Baltic.

Arsenal by half-past three o'clock in the afternoon: thus prompt were these brave fellows at the call of duty. No section of the army contained an equal proportion of well-conducted and excellent men as the artillery stationed at Woolwich, for which Colonel Anderson deserves much of the credit: his untiring efforts, enduring patience, kind interest in the soldiery, humane conduct to their families, and the high moral example he personally sets them, have greatly tended to produce such results. It was not until two o'clock that the men could find opportunity or permission to take leave of their families and friends, who were admitted into the Dockyard for short interviews. Seven women, but no children, were allowed to go; and as a large proportion of the men were married, another scene of heart-rending suffering was added to the number which the preparations for the war entailed. Many of these men since fell in action; they bid "a long and last farewell," upon the parade at Woolwich, to those they loved beyond all things, except so far as country and duty entered into the honourable rivalry. They wept as they pressed their wives and little children to their hearts, and yet there was in their bearing a noble manhood—

"A woman's tear-drop melts, a man's half sears,
Like molten lead, as if you thrust a pike in
His heart, to force it out."

Their adieus were uttered in the mingled cadences of intense suffering, and of a most dauntless defiance of all adverse fortunes. Some of the most soldierly-looking men were in this party, and among those that clung to them with fondest embrace, and hung upon their breast in passionate weeping, were truly lovely young women. There was too a considerable number of fine children, old enough to be conscious of their loss. Oh, how terrible the responsibility of that bad, ambitious man, whose lust of power, and ruthless indifference to human tears and blood, begat this war!

Large draughts from the artillery stationed in Ireland were embarked for the Black Sea, so that the garrison of Athlone, the central garrison of that country, was left with a single gunner. The whole of the horse-artillery stationed at Dublin were sent out, and Woolwich, the great artillery depot, was in a constant state of bustle, embarking guns, horses, and men.

Much discontent was evoked amongst the more thinking portion of the public by the mal-arrangement which characterised all these preparations. Horses were shipped in vessels that were not sea-worthy. When steamers could have been obtained, horses were sent in sailing ships, and died before they reached Malta; and a considerable body of troops had been landed in that place, and the transports had returned, while it was generally understood

that Gallipoli was the spot in the Turkish dominions where the allies were ultimately to disembark. The public naturally felt that, although the troops at Malta were so much nearer Turkey, yet they might as well have remained in England for any power they had to get to Gallipoli; while the transports that might have conducted them thither were uselessly lying in English harbours, or were on their way home. Dissatisfaction with the arrangements of the commissariat, although it had as yet scarcely extended to the general public, was freely expressed in intelligent circles. The hay purchased for the horses of the artillery was discovered to be of the very worst quality, and many of the trusses were filled with dust, straw, shavings, and other rubbish: a dead cat was found in one truss, and a dead lamb in another. It was evident that, among the contractors, were men who would sell their country; men who, for a paltry profit would put the lives of the troops in peril; for of course the efficiency and safety of the artillery and cavalry depended very much upon the means of keeping their horses in health.

While England was occupied with the great preliminaries for war, her ally was not less busy: the two governments acted in perfect accord. The exertions of France, however, were greater for the common object. We of course do not possess the means of giving these in such accurate detail as those of our own government, nor would our readers take the interest in descriptions of the embarkation of particular corps of the French army which they would in the departure of those of our own, in which their near relatives, or friends, or acquaintances, may have been enrolled. The French Baltic fleet was not equipped so soon as ours, the maritime resources of France being much less than those of Britain. It was not until after the allies had declared war that the French squadrons were dispatched; and at the same time a new squadron, under Admiral Bruat, was sent forth as a reserve for the Black Sea fleet, under Admiral Hamelin. The *Moniteur*, which was the organ of the Imperial government, gives a statement of the whole of the French naval expeditionary forces in its number of the 21st of April.

"The Baltic fleet, under the command of Vice-admiral Parseval-Deschênes, has sailed from Brest for the Gulf of Finland. This fleet, on board of which a body of infantry and marine artillery has embarked, is composed of the following vessels:—*Tage*, 100 guns; *Austerlitz*, screw, 100; *Hercule*, 100; *Jemmapes*, 100; *Breslaw*, 90; *Duguesclin*, 90; *Inflexible*, 90; *Duperré*, 80; *Trident*, 80; *Semillante*, 60; *Andromaque*, 60; *Vengeance*, 60; *Poursuivante*, 50; *Virginie*, 50; *Zenobie*, 50; *Psyché*, 40.

Darien, steam-frigate, 14; *Phlegeton*, steam-corvette, 10; *Souffleur*, ditto, 6; and *Milan*, *Lucifer*, *Aigle*, and *Daim*, small steamers. The French naval force in the Black Sea, under the command of Vice-admiral Hamelin, is composed of the *Friedland*, 120 guns; *Valmy*, 120; *Ville de Paris*, 120; *Henri IV.*, 100; *Bayard*, 90; *Charlemagne*, screw, 90; *Jéna*, 90; *Jupiter*, 90; *Marengo*, 80; *Gomer*, steam-frigate, 16; *Descartes*, 20; *Vauban*, 20; *Mogador*, 8; *Cacique*, 14; *Magellan*, 14; *Sané*, 14; *Caton*, steam-corvette, 4; *Sérieuse*, sailing ditto, 30; *Mercur*, *Olivière*, and *Beaumanoir*, 20-gun brigs; *Cerf*, 10-gun brig; *Prométhée*, *Salamandre*, *Héron*, and *Monette*, small steamers. The squadron of Vice-admiral Bruat, intended to act in the Black Sea, the Sea of Gallipoli, and in the Eastern Archipelago, comprises the following vessels:—*Montebello*, 120 guns; *Napoléon*, screw, 92; *Suffren*, 90; *Jean Bart*, screw, 90; *Ville de Marseille*, 80; *Alger*, 80; *Pomone*, screw, 40; *Caffarelli*, steam-frigate, 14; *Roland* and *Primauquet*, steam-corvettes, eight guns each. Independently of these three squadrons and all the frigates, or steam-corvettes, which are assembled in the Mediterranean for the transport of the army of the East, all the naval stations in the West Indies, the Pacific Ocean, the Indo-China seas, and in all quarters where the fish-

eries are carried on, have been reinforced. The French navy has now embarked on different seas 56,000 sailors, and England has an equal force."

The French army embarked from Marseilles and Toulon with great dispatch. The force set apart for the expedition was two divisions of infantry of 20,000 men each; the first under the command of General Canrobert, the second under the command of General Bosquet. A reserve division of 20,000 men was placed under the command of Prince Napoleon Buonaparte, cousin to the French Emperor. The Marshal de St. Arnaud commanded in chief. The engineers and artillery of this fine force were considered by British military men as most intelligent and efficient troops, especially the officers. There were very few cavalry appointed to go out with the first corps of the expeditionary army. The commissariat was as nearly perfect as could be desired. The hospital department was perhaps better arranged than that of any army which ever left the shores of France, or of any other country. Before war was declared, a large portion of the allied expedition reached Malta,—a few of the superior officers of the British army, and most of the superior officers of the French, having arrived with their respective troops.

CHAPTER XI.

THE SECRET CORRESPONDENCE.

"Before mine eyes thou hast set, and in mine ear
Vented much policy, and projects deep
Of enemies, of aids, battles, and lagues."—MILTON.

THE proceedings of the allies were undoubtedly quickened by the popular feeling in both countries; and just before war was declared that feeling was intensely exasperated by the productions of "the secret correspondence." The occasion by which this correspondence was brought to light was a speech delivered by Lord John Russell in the British Parliament, February 17th, in reply to some important questions from Mr. Layard. An abstract of both speeches will best introduce our readers to the true position of the matter. Mr. Layard called the attention of the House to the present state of the relations of this country with Turkey and Russia. There had been so much reserve by this country that it became absolutely necessary that some inquiry should be instituted. Had the ministers adopted a more straightforward policy, they would never have blundered into the position in which they now found themselves. The statements made by the Russian government to the British and French governments were sufficient to disclose the intentions of that power; but if any doubt

could exist, it ought to have been removed by the immense military preparations of Russia, intelligence of which was duly communicated to our government by our ambassadors abroad. He was quite willing that credit should be given to the pacific assurances of Russia, so long as her acts did not contradict those assurances; but when she was privately saying one thing, and openly doing another, it was an extraordinary infatuation that could influence the government in giving credit to her statements. He said there was reason to believe that the Turks would have driven the Russians out of the principalities before they had time to establish themselves there, had it not been for the paralysing advice of our government. It was alleged as an excuse for the tardy operations of our government that they were influenced by the desire to carry the French government along with them; but it was evident that the French Emperor was before them in promptitude, and in a clear perception of what was best to be done. It was the French government that had to slacken its

progress to bring up the reluctant British ministry to its side. In reference to the melancholy affair at Sinope, he thought the responsibility of it should be thrown upon the English minister, by whose instructions Lord Stratford de Redcliffe had persuaded the sultan not to send the whole of his fleet into the Black Sea. Lord Stratford had gone so far as to remonstrate with our government upon its vacillating policy. Although it was well-known the Russians were cruising in the Black Sea, the fleet was kept back, and the result was the dreadful slaughter of Sinope. It appeared as if from some fatality every step taken by our government was a mistake, and it was therefore the more necessary to require from them an explanation of the policy which they now were about to pursue.

Sir James Graham made an ingenious "ad captandum" reply; but the House was not satisfied, and Lord Dudley Stuart and Mr. Roebuck demanded explanations in a manner which showed that the temper of the House was not to be trifled with. This brought up Lord John Russell, who blandly said he was willing to give the information sought for, and, in a tone of much decision and energy, gave the following exposition of affairs:—"There was no doubt that there was deception and concealment on the part of Russia towards this government. Although giving credit to Russia, they were aware that she might have ulterior objects in view, against which it was necessary to be on their guard. He believed that the czar was sincere in the declaration that he was not contemplating an acquisition of territory in the course he was pursuing. He believed the object was to degrade Turkey by defeats, and to force her into terms which would lead at a future period to its conquest or partition. As to the future he had to say that, as the course pursued by the Emperor of Russia had an utter disregard to the peace of Europe and a contempt for its opinions, he had no doubt that the Emperor of Russia would refuse the proposal of the Emperor of the French, and direct all the power of Russia to effect his designs against Turkey. To meet such a proceeding there was but one course of action, and that was to exert the powers at their disposal to defeat his objects; to aid Turkey in resisting the wanton disturber of the peace of Europe; and to fling back upon him the consequences of his own acts. He had further to inform the House that France and England united had an agreement with Turkey that the latter should make no peace with Russia without the consent of her allies. He hoped the House would give the government their confidence, or confide to other hands the destinies of the approaching contest—and may God defend the right."

The effect of this bold speech upon the House was evinced by the repeated bursts of cheering that arose from every side, the opposition benches not less than the ministerial. "Out of doors" the speech produced a similar effect, and may "God defend the right" echoed through the nation. Due notice of all this was of course taken in foreign countries. At Vienna and Berlin the speech was considered as tantamount to a declaration of war, and the imputations of treachery and aggrandizement cast upon the Russian government and emperor startled the timid courts and governments of Germany as something very daring. The effect of these brave words upon the continent, and upon Eastern Europe especially, was such that the Russian government was at once uneasy as to the result, and exasperated as to the course which produced it; but resorted to a method of counteracting the moral influence of the speech, which only gave to it a greater depth and breadth. The *St. Petersburg Journal* was instructed to retort the charge of treachery, and to insinuate that whatever the designs of Russia, there was on the part of the British government complicity. This was evidently done by the Russian court under the impression that the English ministry would be unable or unwilling to produce "the secret correspondence"—the production of which eventually refuted the *St. Petersburg Journal*, and the government of which it was the organ. On the 2nd March the following article appeared in that paper:—

"We have just received a report of the sitting of the House of Commons of the 17th February, and the speech which Lord John Russell made on that occasion. It is not here the place to repeat brutal outrages, of which every faithful servant of the emperor will preserve the recollection, but which do not reach the august person to whom they are addressed. We shall confine ourselves to remarking that the parliamentary annals might be searched in vain for an example of such intemperate language from the mouth of a cabinet minister, in reference to a sovereign against whom the country of that minister has not yet declared war. What are of importance in this speech, are not the invectives of the minister, but the nature of the determinations of the government which the speech reveals. It must be very evident henceforward that the peace of the world does not depend upon chance only, but that war forms a decided element of the plans of the English ministry. From this cause has necessarily arisen that fatal distrust which in the Eastern question was the origin of all the previous difficulties, and which will lead at last to the most deplorable result. That such distrust may have been entertained by France

—that it may, up to a certain point, have found a place in the mind of a government still recent, which has not had time to acquire by long experience of former relations with it an exact idea of our real intentions, and abandoning itself involuntarily to the almost traditional opinion which has been formed of Russian policy in the East,—that may be easily conceived; but on the part of England, which is aware of the antecedents and the character of the emperor from a connexion of long date, an opinion of such a nature justly excites surprise. Less than any other the British government should entertain such suspicions. It has in its hands the written proof that there is no foundation for them; for long before the present condition of affairs—before the questions which led to the mission of Prince Menschikoff to Constantinople had assumed so serious an aspect of difference—before Great Britain had adopted the same line of policy as France, the emperor had spontaneously explained himself with the most perfect candour to the queen and her ministers, with the object of establishing with them a friendly understanding, even upon the most important result which can effect the Ottoman Empire. Since the year 1829, his majesty followed with great attention the march of events in Turkey. The emperor could not shut his eyes to the consequences of the changes which were, one after the other, introduced into that state. Ancient Turkey disappeared from the time when it was sought to establish those institutions diametrically opposed as well to the genius of Islamism as to the character and usages of the Mussulmans—institutions more or less borrowed from modern liberalism, and consequently entirely opposed to the spirit of the Ottoman government. It became evident that Turkey was undergoing a complete transformation, and that these experiments, at least doubtful so far as regarded the reorganisation of the empire, seemed rather calculated to lead to a crisis which would overturn it. It seemed likely that a new order of things would arise, which, although indefinable, would at all events destroy that which existed. To these permanent and increasing causes of dissolution recent complications have been added, resulting from the affairs of Montenegro, the religious persecutions exercised in several Christian provinces, a difference with the Austrian government, considerable financial embarrassment, and, lastly, the important affair of the holy places, to which the imperious demands of the French ambassador at Constantinople were beginning to give a serious and menacing character. These complications, which created sullen excitement among the Christian population, were likely, from one day to another, to bring about a sudden catastrophe which it was urgent to

prevent. Penetrated with the extreme importance of such a result, and having at that period almost reached the region of the possible, if not entirely of the probable,—convinced of the disastrous consequences which might result from it, the emperor thought it necessary to assure himself beforehand whether the English government shared his apprehensions. He wished more particularly, by a frank previous understanding, to remove every subject of misunderstanding between Great Britain and himself. It seemed of the highest importance to his majesty to establish the most perfect identity of views with the government of Great Britain. With this view the emperor engaged the English minister at St. Petersburg to cause her majesty to be informed of his anticipations with respect to the danger, more or less imminent, that menaced Turkey. He requested on this subject a confidential interchange of opinions with her Britannic majesty. That was certainly the most evident proof of confidence which the emperor could give to the court of St. James; and thus did his majesty most openly signify his sincere wish to prevent any ulterior divergence between the two governments. Sir H. Seymour acquitted himself forthwith of the important commission which the emperor had impressed on him in a long and familiar conversation. The result has shown itself in a correspondence of the most friendly character between the present English ministers and the imperial government. It is not permitted to us to divulge the contents of non-official documents, which do not concern the emperor alone, and which contain the expression of a mutual confidence. What we are permitted to say is, that in examining the circumstances more or less likely to affect the duration of the *status quo* in the East,—an examination undertaken from the conviction respectively entertained that every effort should be made to sustain that *status quo*, and to prolong it as long as possible,—there never was any question of a plan by which Russia and England might dispose beforehand, and between themselves, of the destiny of the different provinces which constitute the Ottoman Empire; still less of a formal agreement to be concluded between them, without the knowledge and unassisted by the counsel and intervention of the other courts. The two parties were limited to a frank and single confidence, but without reserve on either side, to communicate what might be adverse to English interests, what might be so to Russian, so that in any given case hostile or even contradictory action might be avoided. In looking over the different parts of this confidential correspondence—in recalling the spirit in which they themselves had interpreted it—the ministers with whom at the time it was carried

on, and who since have permitted themselves to be swayed by prepossessions to be regretted, will be able to decide if those prepossessions are just. Let Lord J. Russell more especially re-peruse that correspondence, in which he was the first to take part, before ceding to Lord Clarendon the direction of foreign affairs. Let him consult his conscience, if the passion which leads him astray permit him to recognise its voice. He can decide now whether it be really true that the emperor has been wanting in frankness towards the English government, or if rather his majesty has not unbosomed himself to England with as little reserve as possible; if there exists the least reason for believing that we have ambitious or *exclusive* views on Constantinople, or if, on the contrary, the emperor has not explained himself in a way to remove all doubt as to his real intentions on the subject of the political combinations to be avoided, in the extreme case which he at the time pointed out to the foresight of the British government."

This article soon found its way into the English papers, and attracted universal notice and surprise. The Earl of Derby gave expression to the feeling of the whole country, when, in his place in the House of Lords, he demanded of the premier, "Whether the correspondence referred to by the *St. Petersburg Journal* did actually take place, and whether the noble earl, being challenged by the Emperor of Russia, would satisfy the people of this country by producing the whole of such correspondence?" Lord Aberdeen, in reply, said:—"The communications to which the noble earl referred, and which took place between his majesty the Emperor of Russia and some of her majesty's ministers, were not printed with the papers laid on the table, in consequence of the confidential character which was considered to be in some degree attached to them. It has not been usual, under circumstances similar to those under which these communications were made, to lay upon the table of parliament a statement of familiar conversations, such as those described, between a sovereign and a foreign minister; and for this reason her majesty's government did not think it proper or consistent with that respect or delicacy which was due to a prince with whom we were on terms of alliance, to produce papers which had a somewhat private and confidential character. The statement in the *St. Petersburg Journal*, which must be considered as in some degree official, and by which it appears that there is no reluctance on the part of Russia that her majesty's government should produce and make public all communications which had passed on the subject, relieves her majesty's ministers from much difficulty in

treating with the matter, and removes any reasonable scruple they might have entertained relative to the production of the papers to which the noble earl refers. I can assure the noble earl that if he had not made the observations he has, I should still have laid these papers on the table, and stated these communications to your lordships, the object to retain them and consider them as private having now ceased. The whole of this correspondence will therefore be laid upon the table."

To describe the sensation which the answer of Lord Aberdeen to the Earl of Derby's demand for the confidential correspondence produced, not only in England, but all over Europe, would be impossible. The production of the papers was eagerly watched, and perhaps such a run upon the printing-offices of government state-papers was never previously known, even in the fiercest times of political contention. It was necessary in an earlier part of this history, when unmasking the designs of Russia, to quote some passages from the despatches of Sir George Hamilton Seymour: it is here desirable to place the whole correspondence before our readers, for while by so doing we furnish an account of one of the most important and exciting preliminaries of the war, we at the same time afford an insight to the secret springs of these movements on the part of Russia, which filled the world with alarm.

The magazines and journals of the day, which of course gave publicity to this correspondence, omitted a most important document, which, however, throws a full light upon the whole. It is marked No. 6 in the series of Eastern papers published by order of Parliament. It is a memorandum of Count Nesselrode, drawn up and presented to the British government, and founded on communications received from the Emperor of Russia subsequently to his Imperial Majesty's visit to England in June, 1844. This memorandum was not presented to Parliament until March, 1854, when it was given in connection with the secret correspondence, of which it was in fact a sort of anticipation, showing that for a long time the designs of Russia to use England as an instrument of her own aggrandizement was a cherished feature of the policy of St. Petersburg.

[Translation.]

Russia and England are mutually penetrated with the conviction that it is for their common interest that the Ottoman Porte should maintain itself in the state of independence and of territorial possession which at present constitutes that Empire, as that political combination is the one which is most compatible with the general interest of the maintenance of peace. Being agreed on this principle, Russia and England have an equal interest in uniting their efforts in order to keep up the existence of the Ottoman Empire, and to avert all the dangers which can place in jeopardy its safety. With this object the

essential point is to suffer the Porte to live in repose, without needlessly disturbing it by diplomatic bickerings, and without interfering without absolute necessity in its internal affairs.

In order to carry out skilfully this system of forbearance, with a view to the well-understood interest of the Porte, two things must not be lost sight of. They are these:—

In the first place, the Porte has a constant tendency to extricate itself from the engagements imposed upon it by the Treaties which it has concluded with other Powers. It hopes to do so with impunity, because it reckons on the mutual jealousy of the Cabinets. It thinks that if it fails in its engagements towards one of them, the rest will espouse its quarrel, and will screen it from all responsibility. It is essential not to confirm the Porte in this delusion. Every time that it fails in its obligations towards one of the Great Powers, it is the interest of all the rest to make it sensible of its error, and seriously to exhort it to act rightly towards the Cabinet which demands just reparation. As soon as the Porte shall perceive that it is not supported by the other Cabinets, it will give way, and the differences which have arisen will be arranged in a conciliatory manner, without any conflict resulting from this.

There is a second cause of complication which is inherent in the situation of the Porte; it is the difficulty which exists in reconciling the respect due to the sovereign authority of the Sultan, founded on the Mussulman law, with the forbearance required by the interests of the Christian population of that Empire. This difficulty is real. In the present state of feeling in Europe, the Cabinets cannot see with indifference the Christian populations in Turkey exposed to flagrant acts of oppression and religious intolerance. It is necessary constantly to make the Ottoman Ministers sensible of this truth, and to persuade them that they can only reckon on the friendship and on the support of the Great Powers on the condition that they treat the Christian subjects of the Porte with toleration and with mildness. While insisting on this truth, it will be the duty of the foreign Representatives, on the other hand, to exert all their influence to maintain the Christian subjects of the Porte in submission to the sovereign authority. It will be the duty of the foreign Representatives, guided by these principles, to act among themselves in a perfect spirit of agreement. If they address remonstrances to the Porte, those remonstrances must bear a real character of unanimity, though divested of one of exclusive dictation. By persevering in this system with calmness and moderation, the Representatives of the great Cabinets of Europe will have the best chance of succeeding in the steps which they may take, without giving occasion for complications which might affect the tranquillity of the Ottoman Empire. If all the Great Powers frankly adopt this line of conduct, they will have a well-founded expectation of preserving the existence of Turkey. However, they must not conceal from themselves how many elements of dissolution that Empire contains within itself. Unforeseen circumstances may hasten its fall, without its being in the power of the friendly Cabinets to prevent it. As it is not given to human foresight to settle beforehand a plan of action for such or such unlooked-for case, it would be premature to discuss eventualities which may never be realised. In the uncertainty which hovers over the future, a single fundamental idea seems to admit of a really practical application: it is that the danger which may result from a catastrophe in Turkey will be much diminished, if, in the event of its occurring, Russia and England have come to an understanding as to the course to be taken by them in common. That understanding will be the more beneficial, inasmuch as it will have the full assent of Austria. Between her and Russia there exists already an entire conformity of principles in regard to the affairs of Turkey, in a common interest of conservatism and of peace. In order to render their union more efficacious, there would remain nothing to be desired but that England should be seen to associate herself thereto with the same view. The reason which recommends the establishment of this agreement is very simple:—

On land, Russia exercises in regard to Turkey a preponderant action; on sea, England occupies the same position. Isolated, the action of these two Powers might do

much mischief; united, it can produce a real benefit: thence the advantage of coming to a previous understanding before having recourse to action.

This notion was in principle agreed upon during the Emperor's last residence in London. The result was the eventual engagement, that if anything unforeseen occurred in Turkey, Russia and England should previously concert together as to the course which they should pursue in common. The object for which Russia and England will have to come to an understanding may be expressed in the following manner:—

1. To seek to maintain the existence of the Ottoman Empire in its present state, so long as that political combination shall be possible.

2. If we foresee that it must crumble to pieces, to enter into previous concert as to everything relating to the establishment of a new order of things, intended to replace that which now exists, and in conjunction with each other to see that the change which may have occurred in the internal situation of that Empire shall not injuriously affect either the security of their own States and the rights which the Treaties assure to them respectively, or the maintenance of the balance of power in Europe.

For the purpose thus stated, the policy of Russia and of Austria, as we have already said, is closely united by the principle of perfect identity. If England, as the principal Maritime Power, acts in concert with them, it is to be supposed that France will find herself obliged to act in conformity with the course agreed upon between St. Petersburg, London, and Vienna. Conflict between the Great Powers being thus obviated, it is to be hoped that the peace of Europe will be maintained even in the midst of such serious circumstances. It is to secure this object of common interest, if the case occurs, that, as the Emperor agreed with Her Britannic Majesty's Ministers during his residence in England, the previous understanding which Russia and England shall establish between themselves must be directed.

Having perused the foregoing document, our readers will be the less surprised at the overtures made by the czar to our ambassador at St. Petersburg, and which the following correspondence reveals:—*

No. 1.

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL.

(Received January 23.)

(Secret and Confidential.)

MY LORD,

St. Petersburg, Jan. 11, 1853.

ON the evening of the 9th instant I had the honour of seeing the Emperor at the palace of the Grand Duchess Helen, who, it appeared, had kindly requested permission to invite Lady Seymour and myself to meet the Imperial family. The Emperor came up to me, in the most gracious manner, to say that he had heard with great pleasure of Her Majesty's Government having been definitively formed, adding that he trusted the Ministry would be of long duration. His Imperial Majesty desired me particularly to convey this assurance to the Earl of Aberdeen, with whom, he said, he had been acquainted for nearly forty years, and for whom he entertained equal regard and esteem. His Majesty desired to be brought to the kind recollection of his Lordship.

You know my feelings, the Emperor said, with regard to England. What I have told you before I say again: it was intended that the two countries should be upon terms of close amity; and I feel sure that this will continue to be the case. You have now been a certain time here, and, as you have seen, there have been very few points upon which we have disagreed; our interests, in fact, are upon almost all questions the same.

I observed, that I really was not aware that since I had been at St. Petersburg there had been any actual disagreements whatever between us, except with regard to

* The French text is omitted, in order to economise space.

Louis Napoleon's No. III.,—a point respecting which each Government had its own opinion (*manière de voir*), but a point which, after all, was very immaterial.

The No. III., the Emperor replied, would involve a long explanation; I will, therefore, not touch upon the subject at present; I should be glad, however, that you should hear what I have to say upon the question, and will beg of you to call upon me some morning when I am a little free from engagements.

I, of course, requested that His Majesty would be good enough to lay his orders upon me.

In the meantime, the Emperor went on to say: I repeat that it is very essential that the two Governments—that is, that the English Government and I, and I and the English Government—should be upon the best terms; and the necessity was never greater than at present. I beg you to convey these words to Lord John Russell. When we are agreed (*d'accord*), I am quite without anxiety as to the west of Europe; it is immaterial what the others may think or do. As to Turkey, that is another question; that country is in a critical state, and may give us all a great deal of trouble. And now I will take my leave of you, which His Majesty proceeded to do by shaking hands with me very graciously.

It instantly occurred to me that the conversation was incomplete, and might never be renewed; and, as the Emperor still held my hand, I said, Sir, with your gracious permission, I would desire to take a great liberty. Certainly, His Majesty replied; what is it—let me hear.

Sir, I observed, your Majesty has been good enough to charge me with general assurances as to the identity of views between the two Cabinets, which assuredly have given me the greatest pleasure, and will be received with equal satisfaction in England; but I should be particularly glad that your Majesty should add a few words which may tend to calm the anxiety with regard to the affairs of Turkey, which passing events are so calculated to excite on the part of Her Majesty's Government; perhaps you will be pleased to charge me with some additional assurances of this kind.

The Emperor's words and manner, although still very kind, showed that His Majesty had no intention of speaking to me of the demonstration which he is about to make in the South. He said, however, at first with a little hesitation, but, as he proceeded, in an open and unhesitating manner:—The affairs of Turkey are in a very disorganised condition; the country itself seems to be falling to pieces (*menace ruine*): the fall will be a great misfortune; and it is very important that England and Russia should come to a perfectly good understanding upon these affairs, and that neither should take any decisive step of which the other is not apprised.

I observed, in a few words, that I rejoiced to hear that His Imperial Majesty held this language; that this was certainly the view I took of the manner in which Turkish questions are to be treated.

"Tenez," the Emperor said, as if proceeding with his remark, "tenez; nous avons sur les bras un homme malade—un homme gravement malade; ce sera, je vous le dis franchement, un grand malheur si, un de ces jours, il devait nous échapper, surtout avant que toutes les dispositions nécessaires fussent prises. Mais enfin ce n'est point le moment de vous parler de cela."*

It was clear that the Emperor did not intend to prolong the conversation; I therefore said, "Votre Majesté est si gracieuse qu'elle me permettra de lui faire encore une observation. Votre Majesté dit que l'homme est malade; c'est bien vrai, mais votre Majesté daignera, m'excuser si je lui fais observer, que c'est à l'homme généreux et fort de ménager l'homme malade et faible."†

* "Stay; we have on our hands a sick man—a very sick man: it will be, I tell you frankly, a great misfortune if, one of these days, he should slip away from us, especially before all necessary arrangements were made. But, however, this is not the time to speak to you on that matter."

† "Your Majesty is so gracious that you will allow me to make one further observation. Your Majesty says the man is sick: it is very true; but your Majesty will deign to excuse me if I remark, that it is the part of the generous and strong man to treat with gentleness the sick and feeble man."

The Emperor then took leave of me in a manner which conveyed the impression of my having at least not given offence, and again expressed his intention of sending for me on some future day. Whether the intention will be acted upon is not to me so certain. It may be right that I should state to your Lordship that I propose giving Count Nesselrode an account of my conversation with his Imperial master. I am convinced that the Chancellor is invariably favourable to measures of moderation, and, as far as lies in his power, to English views. His desire, then, to act in harmony with Her Majesty's Government cannot but be strengthened by learning the cordial declarations which the Emperor has made to me upon the subject.

Upon reading over my despatch, I am convinced that the conversation, although abridged, has been faithfully reported; the only point of any interest which I am aware of not having touched upon being, that the Emperor observed that the last accounts from Constantinople were more satisfactory, the Turks appearing to be more reasonable, although by what process they had become so had not been made apparent. I will only observe that we have every interest in its being understood that no decision should be taken in the affairs of Turkey, without concert with Her Majesty's Government, by a Sovereign who can dispose of several hundred thousand bayonets. Would the understanding be acted upon?—that indeed may well be doubted, and the rather as the Emperor's assurances are a little contradicted by the measures to which it has been my duty to call your Lordship's attention. Still his Imperial Majesty's words appear to me to possess considerable value, and certainly they offer me at this moment an advantage, of which I shall not be backward in availing myself.

Your Lordship will pardon me if I remark that, after reflecting attentively upon my conversation with the Emperor, it appears to me that this, and any overture of the kind which may be made, tends to establish a dilemma by which it is very desirable that Her Majesty's Government should not allow themselves to be fettered. The dilemma seems to be this:—If Her Majesty's Government do not come to an understanding with Russia as to what is to happen in the event of the sudden downfall of Turkey, they will have the less reason for complaining if results displeasing to England should be prepared. If, on the contrary, Her Majesty's Government should enter into the consideration of such eventualities, they make themselves in some degree consenting parties to a catastrophe which they have so much interest in warding off as long as possible. The sum is probably this, that England has to desire a close concert with Russia, with a view to preventing the downfall of Turkey—while Russia would be well pleased that the concert should apply to the events by which this downfall is to be followed.

I have, &c.,
(Signed) G. H. SEYMOUR.

P.S.—Since this despatch was written, I have heard from the Austrian Minister that the Emperor has spoken to him of the conversation which he had held with me. I told Sir Hamilton Seymour, His Majesty said, that the new ministry appears to me to be strong, and that I am anxious for its duration—although to say the truth, as regards England, I have learned that it is the country with which we must be allied. We must not lean to this or that party.

G. H. S.

No. 2.

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL.

(Received February 6.)

(Secret and Confidential.)

My Lord, St. Petersburg, Jan. 22, 1853.

On the 14th instant, in consequence of a summons which I received from the Chancellor, I waited upon the Emperor, and had the honour of holding with His Imperial Majesty the very interesting conversation of which it will be my duty to offer your Lordship an account, which, if imperfect, will, at all events, not be incorrect. I found his Majesty alone; he received me with great kindness, saying, that I had appeared desirous to speak

to him upon Eastern affairs; that, on his side, there was no indisposition to do so, but that he must begin at a remote period.

You know, His Majesty said, the dreams and plans in which the Empress Catherine was in the habit of indulging; these were handed down to our time; but while I inherited immense territorial possessions, I did not inherit those visions—those intentions if you like to call them so. On the contrary, my country is so vast, so happily circumstanced in every way, that it would be unreasonable in me to desire more territory or more power than I possess; on the contrary, I am the first to tell you that our great, perhaps our only danger, is that which would arise from an extension given to an Empire already too large.

Close to us lies Turkey, and, in our present condition, nothing better for our interests can be desired; the times have gone by when we had anything to fear from the fanatical spirit or the military enterprise of the Turks: and yet the country is strong enough, or has hitherto been strong enough, to preserve its independence, and to insure respectful treatment from other countries.

Well, in that Empire there are several millions of Christians whose interests I am called upon to watch over (surveiller), while the right of doing so is secured to me by Treaty. I may truly say that I make a moderate and sparing use of my right, and I will freely confess that it is one which is attended with obligations occasionally very inconvenient; but I cannot recede from the discharge of a distinct duty. Our religion, as established in this country, came to us from the East, and there are feelings, as well as obligations, which never must be lost sight of.

Now Turkey, in the condition which I have described, has by degrees fallen into such a state of decrepitude, that, as I told you the other night, eager as we all are for the prolonged existence of the man (and that I am as desirous as you can be for the continuance of his life, I beg you to believe), he may suddenly die upon our hands (nous rester sur les bras); we cannot resuscitate what is dead: if the Turkish Empire falls, it falls to rise no more; and I put it to you, therefore, whether it is not better to be provided beforehand for a contingency, than to incur the chaos, confusion, and the certainty of an European war, all of which must attend the catastrophe if it should occur unexpectedly, and before some ulterior system has been sketched; this is the point to which I am desirous that you should call the attention of your Government.

Sir, I replied, your Majesty is so frank with me, that I am sure you will have the goodness to permit me to speak with the same openness. I would then observe, that, deplorable as is the condition of Turkey, it is a country which has long been plunged in difficulties, supposed by many to be insurmountable.

With regard to contingent arrangements, Her Majesty's Government, as your Majesty is well aware, objects, as a general rule, to taking engagements upon possible eventualities, and would, perhaps, be particularly disinclined to doing so in this instance. If I may be allowed to say so, a great disinclination (répugnance) might be expected in England, to disposing by anticipation (d'escompter) of the succession of an old friend and ally.

The rule is a good one, the Emperor replied, good at all times, especially in times of uncertainty and change, like the present; still it is of the greatest importance that we should understand one another, and not allow events to take us by surprise. "*Maintenant je désire vous parler en ami et en gentleman; si nous arrivons à nous entendre sur cette affaire, l'Angleterre et moi, pour le reste, peu m'importe; il m'est indifférent ce que font ou pensent les autres. Usant donc de franchise, je vous dis nettement, que si l'Angleterre songe à s'établir un de ces jours à Constantinople, je ne le permettrai pas; je ne vous prête point ces intentions, mais il vaud mieux dans ces occasions parler clairement; de mon côté, je suis également disposé de prendre l'engagement de ne pas m'y établir, en propriétaire, il s'entend, car en dépositaire je ne dis pas; il pourrait se faire que les circonstances me misent dans le cas d'occuper Constantinople, si rien ne se trouve prévu, si l'on doit tout laisser aller au hasard.*"*

* "Now I desire to speak to you as a friend and as a gentleman; if England and I arrive at an understanding of this matter, as regards the rest, it matters little to me:

I thanked His Majesty for the frankness of his declarations, and for the desire which he had expressed of acting cordially and openly with Her Majesty's Government, observing at the same time, that such an understanding appeared the best security against the sudden danger to which His Majesty had alluded. I added that, although unprepared to give a decided opinion upon questions of such magnitude and delicacy, it appeared to me possible that some such arrangement might be made between Her Majesty's Government and His Majesty, as might guard, if not for, at least against, certain contingencies.

To render my meaning more clear, I said further—I can only repeat, Sir, that, in my opinion, Her Majesty's Government will be indisposed to make certain arrangements connected with the downfall of Turkey, but it is possible that they may be ready to pledge themselves against certain arrangements which might, in that event, be attempted.

His Imperial Majesty then alluded to a conversation which he had held, the last time he was in England, with the Duke of Wellington, and to the motives which had compelled him to open himself to his Grace; then, as now, His Majesty was, he said, eager to provide against events which, in the absence of any concert, might compel him to act in a manner opposed to the views of Her Majesty's Government.

The conversation passed to the events of the day, when the Emperor briefly recapitulated his claims upon the Holy Places; claims recognized by the Firman of last February, and confirmed by a sanction to which His Majesty said he attached much more importance—the word of a Sovereign.

The execution of promises so made, and so ratified, the Emperor said he must insist upon, but was willing to believe that his object would be attained by negotiation, the last advices from Constantinople being rather more satisfactory.

I expressed my belief that negotiation, followed, as I supposed it had been, by the threats of military measures, would be found sufficient to secure a compliance with the just demands of Russia. I added, that I desired to state to His Majesty what I had previously read from a written paper to his Minister, viz., that what I feared for Turkey were not the intentions of His Majesty, but the actual result of the measures which appeared to be in contemplation. That I would repeat, that two consequences might be anticipated from the appearance of an Imperial army on the frontiers of Turkey,—the one the counter-demonstration which might be provoked on the part of France; the other, and the more serious, the rising, on the part of the Christian population, against the Sultan's authority, already so much weakened by revolts, and by a severe financial crisis.

The Emperor assured me that no movement of his forces had yet taken place (*n'ont pas bougé*), and expressed his hope that no advance would be required.

With regard to a French expedition to the Sultan's dominions, His Majesty intimated that such a step would bring affairs to an immediate crisis; that a sense of honour would compel him to send his forces into Turkey without delay or hesitation; that if the result of such an advance should prove to be the overthrow of the Great Turk (*le Grand Turc*), he should regret the event, but should feel that he had acted as he was compelled to do.

To the above report I have only, I think, to add, that the Emperor desired to leave it to my discretion to communicate or not to his Minister the particulars of our conversation; and that before I left the room, His Imperial Majesty said, You will report what has passed between us to the Queen's Government, and you will say

it is indifferent to me what others do or think. Frankly, then, I tell you plainly, that if England thinks of establishing herself one of these days at Constantinople, I will not allow it. I do not attribute this intention to you, but it is better on these occasions to speak plainly; for my part, I am equally disposed to take the engagement not to establish myself there, as proprietor that is to say, for as occupier I do not say: it might happen that circumstances, if no previous provision were made, if everything should be left to chance, might place me in the position of occupying Constantinople."

that I shall be ready to receive any communication which it may be their wish to make to me upon the subject. The other topics touched upon by the Emperor are mentioned in another despatch. With regard to the extremely important overture to which this report relates, I will only observe, that as it is my duty to record impressions, as well as facts and statements, I am bound to say, that if words, tone, and manner, offer any criterion by which intentions are to be judged, the Emperor is prepared to act with perfect fairness and openness towards Her Majesty's Government. His Majesty has, no doubt, his own objects in view; and he is, in my opinion, too strong a believer in the imminence of dangers in Turkey. I am, however, impressed with the belief, that in carrying out those objects, as in guarding against those dangers, His Majesty is sincerely desirous of acting in harmony with Her Majesty's Government. I would now submit to your Lordship that this overture cannot with propriety pass unnoticed by Her Majesty's Government. It has been on a first occasion glanced at, and on a second distinctly made by the Emperor himself to the Queen's Minister at his Court, whilst the conversation held some years ago with the Duke of Wellington proves that the object in view is one which has long occupied the thoughts of His Imperial Majesty. If, then, the proposal were to remain unanswered, a decided advantage would be secured to the Imperial Cabinet, which, in the event of some great catastrophe taking place in Turkey, would be able to point to proposals made to England, and which, not having been responded to, left the Emperor at liberty, or placed him under the necessity, of following his own line of policy in the East.

Again, I would remark that the anxiety expressed by the Emperor, even looking to his own interests, for an extension of the days of "the dying man," appears to me to justify Her Majesty's government in proposing to His Imperial Majesty to unite with England in the adoption of such measures as may lead to prop up the falling authority of the Sultan.

Lastly, I would observe that even if the Emperor should be found disinclined to lend himself to such a course of policy as might arrest the downfall of Turkey, his declarations to me pledge him to be ready to take beforehand, in concert with Her Majesty's Government, such precautions as may possibly prevent the fatal crisis being followed by a scramble for the rich inheritance which would remain to be disposed of.

A noble triumph would be obtained by the civilization of the nineteenth century, if the void left by the extinction of Mahomedan rule in Europe could be filled up without an interruption of the general peace, in consequence of the precautions adopted by the two principal Governments the most interested in the destinies of Turkey.

I have, &c.,
(Signed) G. H. SEYMOUR.

No. 3.

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL.

(Received February 6.)

(Secret and Confidential.)

(Extract.) *St. Petersburg, Jan. 22, 1853.*

I HAVE generally found straightforward conduct to be the best policy, and as it is peculiarly called for towards those who have acted by us in a similar manner, upon leaving the palace on the 14th instant I drove to the Foreign Office, and gave Count Nesselrode a correct summary of the conversation I had just had the honour of holding with the Emperor.

No. 4.

LORD JOHN RUSSELL TO SIR G. H. SEYMOUR.

(Secret and Confidential.)

SIR, *Foreign Office, Feb. 9, 1853.*

I HAVE received, and laid before the Queen, your secret and confidential despatch of the 22nd of January. Her Majesty, upon this as upon former occasions, is happy to acknowledge the moderation, the frankness, and the friendly disposition of His Imperial Majesty. Her Ma-

jesty has directed me to reply in the same spirit of temperate, candid, and amicable discussion.

The question raised by His Imperial Majesty is a very serious one. It is, supposing the contingency of the dissolution of the Turkish Empire to be probable, or even imminent, whether it is not better to be provided beforehand for a contingency than to incur the chaos, confusion, and the certainty of an European war, all of which must attend the catastrophe if it should occur unexpectedly, and before some ulterior system has been sketched; this is the point, said His Imperial Majesty, to which I am desirous that you should call the attention of your Government.

In considering this grave question, the first reflection which occurs to Her Majesty's Government is, that no actual crisis has occurred which renders necessary a solution of this vast European problem. Disputes have arisen respecting the Holy Places, but these are without the sphere of the internal government of Turkey, and concern Russia and France rather than the Sublime Porte. Some disturbance of the relations between Austria and the Porte has been caused by the Turkish attack on Montenegro; but this, again, relates rather to dangers affecting the frontier of Austria than the authority and safety of the Sultan; so that there is no sufficient cause for intimating to the Sultan that he cannot keep peace at home, or preserve friendly relations with his neighbours.

It occurs further to Her Majesty's Government to remark, that the event which is contemplated is not definitely fixed in point of time. When William the Third and Louis the Fourteenth disposed, by treaty, of the succession of Charles the Second of Spain, they were providing for an event which could not be far off: the infirmities of the Sovereign of Spain, and the certain end of any human life, made the contingency in prospect both sure and near. The death of the Spanish King was in no way hastened by the Treaty of Partition. The same thing may be said of the provision, made in the last century, for the disposal of Tuscany upon the decease of the last prince of the house of Medici. But the contingency of the dissolution of the Ottoman Empire is of another kind: it may happen twenty, fifty, or a hundred years hence.

In these circumstances it would hardly be consistent with the friendly feelings towards the Sultan which animate the Emperor of Russia, no less than the Queen of Great Britain, to dispose beforehand of the provinces under his dominion. Besides this consideration, however, it must be observed that an agreement made in such a case tends, very surely, to hasten the contingency for which it is intended to provide. Austria and France could not, in fairness, be kept in ignorance of the transaction, nor would such concealment be consistent with the end of preventing an European war. Indeed, such concealment cannot be intended by His Imperial Majesty. It is to be inferred that, as soon as Great Britain and Russia should have agreed on the course to be pursued, and have determined to enforce it, they should communicate their intentions to the Great Powers of Europe. An agreement thus made, and thus communicated, would not be very long a secret; and while it would alarm and alienate the Sultan, the knowledge of its existence would stimulate all his enemies to increased violence and more obstinate conflict. They would fight with the conviction that they must ultimately triumph; while the Sultan's generals and troops would feel that no immediate success could save their cause from final overthrow. Thus would be produced and strengthened that very anarchy which is now feared, and the foresight of the friends of the patient would prove the cause of his death.

Her Majesty's government need scarcely enlarge on the dangers attendant on the execution of any similar Convention. The example of the Succession War is enough to show how little such agreements are respected when a pressing temptation urges their violation. The position of the Emperor of Russia as depositary, but not proprietor, of Constantinople, would be exposed to numberless hazards, both from the long-cherished ambition of his own nation, and the jealousies of Europe. The ultimate proprietor, whoever he might be, would hardly be satisfied with the inert, supine attitude of the heirs of Mahomet the Second. A great influence on the affairs of Europe seems naturally to belong to the Sovereign of

Constantinople, holding the gates of the Mediterranean and the Black Sea. That influence might be used in favour of Russia; it might be used to control and curb her power.

His Imperial Majesty has justly and wisely said: My country is so vast, so happily circumstanced in every way, that it would be unreasonable in me to desire more territory or more power than I possess. On the contrary, he observed, our great, perhaps our only danger, is that which would arise from an extension given to an Empire already too large. A vigorous and ambitious State, replacing the Sublime Porte, might, however, render war on the part of Russia a necessity for the Emperor or his successors. Thus European conflict would arise from the very means taken to prevent it; for neither England, nor France, nor probably Austria, would be content to see Constantinople permanently in the hands of Russia.

On the part of Great Britain, Her Majesty's Government at once declare that they renounce all intention or wish to hold Constantinople. His Imperial Majesty may be quite secure upon this head. They are likewise ready to give an assurance that they will enter into no agreement to provide for the contingency of the fall of Turkey, without previous communication with the Emperor of Russia.

Upon the whole, then, Her Majesty's Government are persuaded that no course of policy can be adopted more wise, more disinterested, more beneficial to Europe, than that which His Imperial Majesty has so long followed, and which will render his name more illustrious than that of the most famous Sovereigns who have sought immortality by unprovoked conquest and ephemeral glory.

With a view to the success of this policy, it is desirable that the utmost forbearance should be manifested towards Turkey; that any demands which the Great Powers of Europe may have to make, should be made matter of friendly negotiation rather than of peremptory demand; that military and naval demonstrations to coerce the Sultan should as much as possible be avoided; that differences with respect to matters affecting Turkey, within the competence of the Sublime Porte, should be decided after mutual concert between the Great Powers, and not be forced upon the weakness of the Turkish Government.

To these cautions Her Majesty's Government wish to add, that in their view it is essential that the Sultan should be advised to treat his Christian subjects in conformity with the principles of equity and religious freedom which prevail generally among the enlightened nations of Europe. The more the Turkish Government adopts the rules of impartial law and equal administration, the less will the Emperor of Russia find it necessary to apply that exceptional protection which His Imperial Majesty has found so burdensome and inconvenient, though no doubt prescribed by duty and sanctioned by Treaty.

You may read this despatch to Count Nesselrode, and, if it is desired, you may yourself place a copy of it in the hands of the Emperor. In that case, you will accompany its presentation with those assurances of friendship and confidence on the part of Her Majesty the Queen, which the conduct of His Imperial Majesty was so sure to inspire.

I am, &c., J. RUSSELL.

No. 5.

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL.

(Received March 6.)

(Secret and Confidential.)

(Extract.) St. Petersburg, Feb. 21, 1853.

THE Emperor came up to me last night, at a party of the Grand Duchess Hereditary's, and in the most gracious manner took me apart, saying that he desired to speak to me. After expressing, in flattering terms, the confidence which he has in me, and his readiness to speak to me without reserve upon matters of the greatest moment, as, His Majesty observed, he had proved in a late conversation, he said: And it is well it is so; for what I most desire is, that there should be the greatest intimacy between the two Governments: it never was so necessary

as at present. Well, the Emperor continued, so you have got your answer, and you are to bring it to me to-morrow?

I am to have that honour, Sir, I answered; but your Majesty is aware that the nature of the reply is very exactly what I had led you to expect.

So I was sorry to hear; but I think your Government does not well understand my object. I am not so eager about what shall be done when the sick man dies, as I am to determine with England what shall not be done upon that event taking place.

But, Sir, I replied, allow me to observe, that we have no reason to think that the sick man (to use your Majesty's expression) is dying. We are as much interested as we believe your Majesty to be in his continuing to live; while for myself, I will venture to remark, that experience shows me that countries do not die in such a hurry. Turkey will remain for many a year, unless some unforeseen crisis should occur. It is precisely, Sir, for the avoidance of all circumstances likely to produce such a crisis, that Her Majesty's Government reckons upon your generous assistance.

Then, rejoined the Emperor, I will tell you, that if your Government has been led to believe that Turkey retains any elements of existence, your Government must have received incorrect information. I repeat to you that the sick man is dying; and we can never allow such an event to take us by surprise. We must come to some understanding; and this we should do, I am convinced, if I could hold but ten minutes' conversation with your Ministers—with Lord Aberdeen, for instance, who knows me so well, who has full confidence in me, as I have in him. And remember, I do not ask for a Treaty or a Protocol; a general understanding is all I require—that between gentlemen is sufficient; and in this case I am certain that the confidence would be as great on the side of the Queen's Ministers as on mine. So no more for the present; you will come to me to-morrow, and you will remember that, as often as you think your conversing with me will promote a good understanding upon any point, you will send word that you wish to see me.

I thanked His Majesty very cordially, adding that I could assure him that Her Majesty's Government, I was convinced, considered his word, once given, as good as a bond.

It is hardly necessary that I should observe to your Lordship that this short conversation, briefly but correctly reported, offers matter for most anxious reflection. It can hardly be otherwise but that the Sovereign who insists with such pertinacity upon the impending fall of a neighbouring State, must have settled in his own mind that the hour, if not of its dissolution, at all events for its dissolution, must be at hand. Then, as now, I reflected that this assumption would hardly be ventured upon unless some, perhaps general, but at all events intimate, understanding, existed between Russia and Austria.

Supposing my suspicion to be well founded, the Emperor's object is to engage Her Majesty's Government, in conjunction with his own Cabinet, and that of Vienna, in some scheme for the ultimate partition of Turkey, and for the exclusion of France from the arrangement.

No. 6.

SIR G. H. SEYMOUR TO LORD JOHN RUSSELL.

(Received March 6.)

(Secret and Confidential.)

(Extract.)

St. Petersburg, Feb. 22, 1853.

I HAD the honour of waiting yesterday upon the Emperor, and of holding with his Majesty one of the most interesting conversations in which I ever found myself engaged. My only regret is my inability to report in full detail a dialogue which lasted an hour and twelve minutes.

The Emperor began by desiring me to read to him aloud your Lordship's secret and confidential despatch of the 9th instant, saying that he should stop me occasionally, either to make an observation, or to call upon me for the translation of a passage.

Upon arriving at the fourth paragraph, the Emperor desired me to pause, and observed, that he was certainly

most desirous that some understanding should be entered into with Her Majesty's Government, for providing against a contingency so probable as that of the downfall of Turkey; that he was, perhaps, even more interested than England could be in preventing a Turkish catastrophe, but that it was constantly impending; that it might be brought about at any moment, either by an external war, or by a feud between the old Turkish party and that of the "new superficial French reforms;" or again, by a rising of the Christians, already known to be very impatient of shaking off the Mussulman yoke (*joug*). As regards the first cause, the Emperor said that he had a good right to advert to it, inasmuch as, if he had not stopped the victorious progress of General Diebitch, in 1829, the Sultan's authority would have been at an end. The Emperor likewise desired me to remember that he, and he only, had hastened to the assistance of the Sultan, when his dominions were threatened by the Pasha of Egypt.

I proceeded to read, and was again stopped at the sentence beginning "In these circumstances it would hardly be consistent with the friendly feelings," when the Emperor observed, that Her Majesty's Government did not appear to be aware that his chief object was to obtain from Her Majesty's Government some declaration or even opinion of what ought not to be permitted in the event of the sudden downfall of Turkey. I said, Perhaps your Majesty would be good enough to explain your own ideas upon this negative policy. This His Majesty for some time declined doing; he ended, however, by saying, Well, there are several things which I never will tolerate: I will begin by ourselves. I will not tolerate the permanent occupation of Constantinople by the Russians; having said this, I will say that it never shall be held by the English, or French, or any other great nation. Again, I never will permit an attempt at the reconstruction of a Byzantine Empire, or such an extension of Greece as would render her a powerful State; still less will I permit the breaking up of Turkey into little republics, asylums for the Kossuths and Mazzinis, and other revolutionists of Europe; rather than submit to any of these arrangements I would go to war, and as long as I have a man and a musket left would carry it on. These, the Emperor said, are at once some ideas; now give me some in return.

I remarked upon the assurance which would be found respecting the English resolution of never attempting to possess Constantinople, and upon the disinclination of Her Majesty's Government to enter into eventual arrangements; but upon being still pressed by his Imperial Majesty, I said—Well, Sir, the idea may not suit your Majesty, may not suit Her Majesty's Government; but what is good between man and man is often a good system between one State and another;—how would it be if in the event of any catastrophe occurring in Turkey, Russia and England were to declare that no Power should be allowed to take possession of its provinces,—that the property should remain, as it were, under seals until amicable arrangements could be made as to its adjudication?

I will not say, the Emperor observed, that such a course would be impossible, but, at least, it would be very difficult; there are no elements of provincial or communal government in Turkey: you would have Turks attacking Christians, Christians falling upon Turks, Christians of different sects quarrelling with each other; in short, chaos and anarchy.

Sir, I then observed, if your Majesty will allow me to speak plainly, I would say that the great difference between us is this—that you continue to dwell upon the fall of Turkey, and the arrangements requisite before and after the fall; and that we, on the contrary, look to Turkey remaining where she is, and to the precautions which are necessary for preventing her condition from becoming worse. Ah! replied the Emperor, that is what the Chancellor is perpetually telling me; but the catastrophe will occur some day, and will take us all unawares.

His Imperial Majesty spoke of France. God forbid, he said, that I should accuse any one wrongfully, but there are circumstances both at Constantinople and Montenegro which are extremely suspicious; it looks very much as if the French Government were endeavouring to embroil us all in the East, hoping in this way the better to arrive

at their own objects, one of which, no doubt, is the possession of Tunis.

The Emperor proceeded to say, that for his own part he cared very little what line the French might think proper to take in Eastern affairs, and that little more than a month ago he had apprised the Sultan that if his assistance were required for resisting the menaces of the French, it was entirely at the service of the Sultan! In a word, the Emperor went on to observe, as I before told you, all I want is a good understanding with England, and this not as to what shall, but as to what shall not be done: this point arrived at, the English Government and I, I and the English Government, having entire confidence in one another's views, I care nothing about the rest.

I remarked that I felt confident that Her Majesty's Government could be as little disposed as His Imperial Majesty to tolerate the presence of the French at Constantinople; and being desirous, if possible, of ascertaining whether there were any understanding between the Cabinets of St. Petersburg and Vienna, I added, But your Majesty has forgotten Austria; now all these Eastern questions affect her very nearly; she of course would expect to be consulted.

Oh! replied the Emperor, greatly to my surprise, but you must understand that when I speak of Russia, I speak of Austria as well; what suits the one suits the other; our interests, as regards Turkey, are perfectly identical. I should have been glad to have made another inquiry or two upon this subject, but I did not venture to do so.

I ought to have stated that in a preceding part of the conversation, His Majesty, although without any appearance of anger, expressed some surprise at an expression in your Lordship's despatch, "the long-cherished ambition of his (the Emperor's) own nation;" he would ask what that phrase meant? It happened that I was prepared for the surprise expressed, and ready to answer any reflection which it might call forth. Sir, I said, Lord John Russell is not speaking of your ambition, he speaks of that entertained by your people.

The Emperor could not at first admit that the term was applicable to the Russian nation any more than to himself; when I said, Your Majesty will permit me to remark that Lord John Russell only repeats what was said thirty years ago by your brother, of glorious memory. In writing confidentially to Lord Castlereagh in the year 1822, the Emperor Alexander spoke of being the only Russian who resisted the views of his subjects upon Turkey, and of the loss of popularity which he had sustained by this antagonism. This quotation which, by accident, I could make almost in the words of the letter, seemed to change the current of the Emperor's ideas.

You are quite right, he said; I remember the events to which my late brother alluded. Now it is perfectly true that the Empress Catherine indulged in all sorts of visions of ambition, but it is not less so that these ideas are not at all shared by her descendants. You see how I am behaving towards the Sultan. This gentleman (*ce monsieur*) breaks his written word to me, and acts in a manner extremely displeasing to me, and I have contented myself with despatching an ambassador to Constantinople to demand reparation: certainly I could send an army there if I chose, there is nothing to stop them; but I have contented myself with such a show of force as will prove that I have no intention of being trifled with.

And, Sir, I said, you were quite right in refraining from violence, and I hope upon future occasions you will act with the same moderation; for your Majesty must be sensible that any fresh concessions which have been obtained by the Latins are not referable to ill-will towards you, but to the excessive apprehensions of the French entertained by the unfortunate Turks; besides, Sir, I observed, the danger, I will venture to say, of the present moment is not Turkey, but that revolutionary spirit which broke out four years ago, and which, in many countries, still burns underground; there is the danger, and no doubt that a war in Turkey would be the signal for fresh explosions in Italy, Hungary, and elsewhere. We see what is passing at Milan.

His Imperial Majesty spoke of Montenegro, observing that he approved of the attitude taken by the Austrian Cabinet, and that in these days it could not be permitted

that the Turks should ill-treat and even murder a Christian population.

I ventured to remark that upon this point the wrongs were at least divided between the Turks and the Montenegrins, and that I had full reason for believing that the provocation came from the latter. The Emperor, with more impartiality than I had expected, admitted that there had been wrongs on both sides; that certainly the mountaineers were rather addicted to brigandage, and that the taking of Djablak had caused him great indignation. At the same time, His Majesty said, it is impossible not to feel great interest in a population warmly attached to their religion, who have so long kept their ground against the Turks; and the Emperor continued, It may be fair to tell you that if any attempts at exterminating those people should be made by Omar Pasha, and should a general rising of the Christians take place in consequence, the Sultan will in all probability lose his throne; in this case he falls to rise no more. I wish to support his authority, but if he loses it, it is gone for ever. The Turkish Empire is a thing to be tolerated, not to be reconstructed; in such a cause I protest to you I will not allow a pistol to be fired.

The Emperor went on to say that in the event of the dissolution of the Ottoman Empire, he thought it might be less difficult to arrive at a satisfactory territorial arrangement than was commonly believed. The Principalities are, he said, in fact an independent State under my protection: this might so continue. Servia might receive the same form of government. So again with Bulgaria: there seems to be no reason why this province should not form an independent State. As to Egypt, I quite understand the importance to England of that territory. I can then only say, that if, in the event of a distribution of the Ottoman succession upon the fall of the Empire, you should take possession of Egypt, I shall have no objections to offer. I would say the same thing of Candia: that island might suit you, and I do not know why it should not become an English possession.

As I did not wish that the Emperor should imagine that an English public servant was caught by this sort of overture, I simply answered, that I had always understood that the English views upon Egypt did not go beyond the point of securing a safe and ready communication between British India and the mother country.

The conversation now drawing towards an end, the Emperor expressed his warm attachment to the Queen, our gracious Sovereign, and his respect for Her Majesty's present advisers. The declarations contained in your Lordship's despatch had been, he said, very satisfactory: he could only desire that they should be a little amplified. The terms in which your Lordship had spoken of his conduct were, the Emperor said, very flattering to him.

In dismissing me, His Imperial Majesty said, Well, induce your Government to write again upon these subjects—to write more fully, and to do so without hesitation; I have confidence in the English government. “Ce n'est point un engagement, une Convention, que je leur demande; c'est un libre échange d'idées, et au besoin une parole de gentleman; entre nous cela suffit.”*

I might venture to suggest that some expressions might be used in the despatch to be addressed to me, which might have the effect of putting an end to the further consideration, or, at all events, discussion, of points which it is highly desirable should not be regarded as offering subject for debate.

I may only add, apologetically, that I may possibly have failed in reporting some part of His Majesty's conversation, and that I am conscious of having forgotten the precise terms employed by him with respect to the commercial policy to be observed at Constantinople when no longer held by the Turks. The purport of the observation was, that England and Russia had a common interest in providing for the readiest access to the Black Sea and the Mediterranean.

A copy of your Lordship's despatch was left in the Emperor's hands.

* “It is not an engagement, a Convention, which I ask of them; it is a free interchange of ideas, and, in case of need, the word of a gentleman, that is enough between us.”

No. 7.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

(Received March 19.)

(Secret and Confidential.)

(Extract.)

St. Petersburg, March 9, 1853.

WHEN I waited upon Count Nesselrode on the 7th instant, his Excellency said that, in pursuance of orders which he had received from the Emperor, he had to place in my hands a very confidential memorandum, which His Imperial Majesty had caused to be drawn up, and which was intended as an answer to, or a comment upon, the communication which I had made to his Imperial Majesty on the 21st ultimo.

At first, Count Nesselrode invited me to read the paper; he subsequently observed that if, instead of reading it at the time, I chose to take it away, I was at liberty to do so; that, in fact, the paper was intended for my use (*sic*.)

Very little conversation upon the subject passed between the Chancellor and me. He observed that I should find in the memorandum indications of the Emperor's wish to be further informed of the feelings of Her Majesty's Government as to what should not be permitted to take place in the event of any great catastrophe in Turkey; and I, on my side, remarked that, as there is danger in handling hot coals, it appeared to me desirable that communications upon a subject so delicate should not be long kept up.

I have the honour of inclosing to your Lordship a copy of what, under the circumstances which have attended its drawing up and delivery, cannot fail of being considered as one of the most remarkable papers which have been issued, I do not say from the Russian “Chancellerie,” but from the Emperor's secret Cabinet. It would not be difficult either to controvert some of the facts which the memorandum advances, or to show that the impression under which it has been framed is an incorrect one; that impression being evidently that, in the disputes carried on between Russia and France, Her Majesty's Government has leant partially to the latter Power.

Three points appear to me to be fully established by the Imperial memorandum: the existence of some distinct understanding between the two Imperial Courts upon the subject of Turkey, and the engagement taken by the Emperor Nicholas neither to possess or establish himself at Constantinople, or to enter into arrangements respecting the measures to be taken in the event of the fall of the Ottoman Empire without previous concert with Her Majesty's Government.

The wording of this engagement, coupled with the conversation which I had the honour of holding with the Emperor, leaves upon my mind the impression that, whilst willing to undertake not to make himself the permanent master of Constantinople, His Majesty is intentionally inexplicit as to its temporary occupation.

Assuming, as a certain and now acknowledged fact, the existence of an understanding or compact between the two Emperors as to Turkish affairs, it becomes of the deepest importance to know the extent of the engagements entered into between them. As to the manner in which it has been concluded, I conjecture that little doubt is to be entertained. Its basis was, no doubt, laid at some of the meetings between the Sovereigns which took place in the autumn; and the scheme has probably been worked out since under the management of Baron Meyendorff, the Russian Envoy at the Austrian Court, who has been passing the winter at St. Petersburg, and is still here.

INCLOSURE IN No. 7.

MEMORANDUM.—[Translation.]

February 21, 1853.

THE Emperor has, with the liveliest interest and real satisfaction, made himself acquainted with the secret and confidential despatch which Sir Hamilton Seymour communicated to him. He duly appreciates the frankness which has dictated it. He has found therein a fresh

proof of the friendly sentiments which Her Majesty the Queen entertains for him.

In conversing familiarly with the British Envoy on the causes which, from one day to another, may bring on the fall of the Ottoman Empire, it had by no means entered into the Emperor's thoughts to propose for this contingency a plan by which Russia and England should dispose beforehand of the provinces ruled by the Sultan—a system altogether arranged; still less a formal agreement to be concluded between the two Cabinets. It was purely and simply the Emperor's notion that each party should confidentially state to the other, less what it wishes than what it does not wish; what would be contrary to English interests, what would be contrary to Russian interests, in order that, the case occurring, they might avoid acting in opposition to each other. There is in this neither plans of partition, nor Convention to be binding on the other Courts. It is merely an interchange of opinions, and the Emperor sees no necessity of talking about it before the time. It is precisely for that reason that he took especial care not to make it the object of an official communication from one Cabinet to another. By confining himself to speaking of it himself, in the shape of familiar conversation, to the Queen's Representative, he selected the most friendly and confidential form of opening himself with frankness to Her Britannic Majesty, being desirous that the result, whatsoever it might be, of these communications should remain, as it ought to be, a secret between the two Sovereigns. Consequently, the objections which Lord John Russell raises to any concealment as regards the other Powers, in the event of a formal agreement being entered into, of which there is at present no question, fall to the ground; and consequently, also, the inconveniences disappear, which he points out as calculated to contribute to hasten the occurrence of the very event which Russia and England are desirous of averting, if the existence of such an agreement should become prematurely known to Europe and to the subjects of the Sultan.

As regards the object of this wholly confidential interchange of opinions—the possible downfall of the Ottoman Empire, doubtless that is but an uncertain and remote contingency. Unquestionably the period of it cannot be fixed, and no real crisis has arisen to render the realization of it imminent. But after all it may happen; happen even unexpectedly. Without mentioning the ever increasing causes of dissolution which are presented by the moral, financial, and administrative condition of the Porte, it may proceed gradually from one, at least, of the two questions mentioned by the English Ministry in its secret despatch. In truth, it perceives in those questions only mere disputes, which would not differ in their bearing from difficulties which form the ordinary business of diplomacy. But that kind of dispute may, nevertheless, bring on war, and with war the consequences which the Emperor apprehends from it; if, for instance, in the affair of the Holy Places, the *amour-propre* and the menaces of France, continuing to press upon the Porte, should compel it to refuse us all satisfaction, and if, on the other hand, the religious sentiments of the orthodox Greeks, offended by the concessions made to the Latins, should raise the immense majority of his subjects against the Sultan. As regards the affair of Montenegro, that, according to the late accounts, may happily be looked upon as settled. But at the time that the Emperor had his interview with Sir Hamilton Seymour, it might be apprehended that the question would take a most serious turn. Neither ourselves nor Austria could have allowed the protracted devastation or forced submission of Montenegro, a country which, up to the present time, has continued actually independent of the Porte, a country over which our protection has been extended for more than a century. The horrors which are committed there, those which, by Ottoman fanaticism, have a short time since been extended over Bulgaria, Bosnia, and the Herzegovine, gave the other Christian provinces of the Porte only too much reason to anticipate that the same fate awaited them. They were calculated to provoke the general rising of the Christians who live under the sceptre of the Turkish Empire, and to hasten its ruin. It is not then, by any means, an idle and imaginary question, a contingency too remote, to which the anxiety of the Emperor has called the attention of the Queen his ally.

In the face of the uncertainty and decay of the existing state of things in Turkey, the English Cabinet expresses the desire that the greatest forbearance should be shown towards the Porte. The Emperor is conscious of never having acted otherwise. The English Cabinet itself admits it. It addresses to the Emperor, with reference to the numerous proofs of moderation which he has given up to the present time, praises which His Majesty will not accept, because in that he has only listened to his own overbearing conviction. But, in order that the Emperor may continue to concur in that system of forbearance, to abstain from any demonstrations—from any peremptory language—it would be necessary that this system should be equally observed by all the powers at once. France has adopted another. By menace she obtained, in opposition to the letter of the Treaties, the admission of a ship of the line into the Dardanelles. At the cannon's mouth she twice presented her claims and her demands for indemnity at Tripoli, and afterwards at Constantinople. Again, in the contest respecting the Holy Places, by menace she effected the abrogation of the firman and that of the solemn promises which the Sultan had given the Emperor. With regard to all these acts of violence England observed a complete silence. She neither offered support to the Porte nor addressed remonstrances to the French Government. The consequence is very evident. The Porte necessarily concluded from this that from France alone it has everything to hope, as well as everything to fear, and that it can evade with impunity the demands of Austria and of Russia. It is thus that Austria and Russia, in order to obtain justice, have seen themselves compelled, in their turn, against their will, to act by intimidation, since they have to do with a Government which only yields to a peremptory attitude; and it is thus that by its own fault, or rather by that of those who have weakened it in the first instance, the Porte is urged on in a course which enfeebles it still more. Let England then employ herself in making it listen to reason. Instead of uniting herself with France against the just demands of Russia, let her avoid supporting, or even appearing to support, the resistance of the Ottoman Government. Let her be the first to invite the latter—as she herself considers it essential—to treat its Christian subjects with more equity and humanity. That will be the surest means of relieving the Emperor from the obligation of availing himself in Turkey of those rights of traditional protection to which he never has recourse but against his will, and of postponing indefinitely the crisis which the Emperor and Her Majesty the Queen are equally anxious to avert.

In short, the Emperor cannot but congratulate himself at having given occasion for this intimate interchange of confidential communications between Her Majesty and himself. He has found therein valuable assurances, of which he takes note with a lively satisfaction. The two Sovereigns have frankly explained to each other what in the extreme case of which they have been treating their respective interests cannot endure. England understands that Russia cannot suffer the establishment at Constantinople of a Christian Power sufficiently strong to control and disquiet her. She declares that for herself she renounces any intention or desire to possess Constantinople. The Emperor equally disclaims any wish or design of establishing himself there. England promises that she will enter into no arrangement for determining the measures to be taken in the event of the fall of the Turkish Empire without a previous understanding with the Emperor. The Emperor on his side, willingly contracts the same engagement. As he is aware that in such a case he can equally reckon upon Austria, who is bound by her promises to concert with him, he regards with less apprehension the catastrophe which he still desires to prevent and avert as much as it shall depend on him to do so.

No less precious to him are the proofs of friendship and personal confidence on the part of Her Majesty the Queen, which Sir Hamilton Seymour has been directed on this occasion to impart to him. He sees in them the surest guarantee against the contingency which his foresight had deemed it right to point out to that of the English Government.

No. 8.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

*(Received March 19.)**(Secret and Confidential.)*

MY LORD,

St. Petersburg, March 9, 1853.

As it appears very evident that the secret memorial which, by a despatch of this day, I have the honour of bringing to your Lordship's knowledge, has been drawn up under a complete misapprehension (real or assumed) of the part taken by Her Majesty's Government in the late Turkish affairs, I have thought it my duty to address to Count Nesselrode the private and confidential letter of which I beg to inclose a copy to your Lordship.

I have, &c.,

(Signed)

G. H. SEYMOUR.

INCLOSURE IN No. 8.

SIR G. H. SEYMOUR TO COUNT NESSELRODE.

*(Private and Confidential.)**St. Petersburg, Feb. 24 (March 8), 1853.*

MY DEAR COUNT NESSELRODE,

THERE is an observation respecting the very important memorandum placed yesterday by your Excellency in my hands, which I feel obliged to make.

I am most anxious to observe that this paper must have been drawn up under the impression of English policy at Constantinople having been very different from what in reality it has been.

I can affirm, conscientiously and distinctly, that the object proposed to themselves, as well by the late as by Her Majesty's present Government, has been to act as a common friend in the contests between the allied Governments; and that far from having inclined, as has been stated, to France in the course of the late critical transactions, it has been the desire of the Queen's advisers (to the full extent permitted to a Government compelled to observe a neutral attitude) that ample satisfaction should be given to the demands which His Imperial Majesty's Government were justified in making.

This assertion I should have no difficulty in substantiating by written evidence; and I will add, that in any just demand which England may have to make upon a foreign Cabinet, I only desire that the conduct of a friendly Power towards us may be that which quietly and unostentatiously the English Government has pursued in the complicated question of the Holy Places with regard to the claims of Russia.

I request your Excellency's good offices for causing this, the real state of the case, to be rightly understood; at all events, for preventing a contrary belief from being adopted until it shall be clearly ascertained whether or no my statement is correct.

(Signed)

I have, &c.,

G. H. SEYMOUR.

No. 9.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

*(Received March 19.)**(Secret and Confidential.)*

MY LORD,

St. Petersburg, March 10, 1853.

I HAVE just had a very amicable and satisfactory conversation with the Chancellor, who, under the impression of my letter of the 8th instant having originated in a misconception with regard to the Emperor's memorandum, had desired to see me.

We read over the memorandum together, and Count Nesselrode observed that all that was desired here was, that while appealing to the Emperor's magnanimity and feelings of justice, Her Majesty's Government should employ some efforts towards opening the eyes of the French Ministers as to the false course into which they have been led by M. de Lavalette.

To this I replied that such had been the conduct pursued by Her Majesty's Government, not on one occasion,

but on various occasions; and that as a specimen of the language held by your Lordship's predecessor to the French Government, I would beg to read to him an extract from one of Lord John Russell's despatches.

I read accordingly the five or six lines of Lord John Russell's despatch to Lord Cowley of January 28, beginning, "But Her Majesty's Government cannot avoid perceiving," and concluding with, "the relations of friendly Powers," which passage I had copied out and taken with me.

Count Nesselrode expressed his warm satisfaction at finding that Her Majesty's Government had given such excellent advice to the French Government; and only regretted that he had not been long ago put in possession of evidence so conclusive, as to the part taken upon the question of the Holy Places by Her Majesty's Principal Secretary of State for Foreign Affairs.

In conclusion the Chancellor requested that I would consider the passage in the Imperial memorandum commencing with the words, "Que l'Angleterre s'emploie donc," as expressing a hope, and not as implying a reproach,—as referable to the course which it was desired should be taken by Her Majesty's Government, and not as alluding to that which had been pursued.

I have, &c.,

(Signed)

G. H. SEYMOUR.

No. 10.

THE EARL OF CLARENDON TO SIR G. H. SEYMOUR.

(Secret and Confidential.)

SIR,

Foreign Office, March 23, 1853.

YOUR despatches of the 21st and 22nd ultimo have been laid before the Queen, and I am commanded to express Her Majesty's entire approval of the discretion and judgment displayed by you in the conversations which you had the honour to hold with the Emperor.

I need not assure you that the opinions of His Imperial Majesty have received from Her Majesty's Government the anxious and deliberate consideration that their importance demands; and although Her Majesty's Government feel compelled to adhere to the principles and the policy laid down in Lord John Russell's despatch of the 9th of February, yet they gladly comply with the Emperor's wish that the subject should be further and frankly discussed. The generous confidence exhibited by the Emperor entitles His Imperial Majesty to the most cordial declaration of opinion on the part of Her Majesty's Government, who are fully aware that, in the event of any understanding with reference to future contingencies being expedient, or indeed possible, the word of His Imperial Majesty would be preferable to any Convention that could be framed.

Her Majesty's Government persevere in the belief that Turkey still possesses the elements of existence, and they consider that recent events have proved the correctness of the opinion expressed in the despatch of my predecessor—that there was no sufficient cause for intimating to the Sultan that he cannot keep peace at home, or preserve friendly relations with his neighbours.

Her Majesty's Government have accordingly learnt, with sincere satisfaction, that the Emperor considers himself even more interested than England in preventing a Turkish catastrophe; because they are convinced that upon the policy pursued by His Imperial Majesty towards Turkey will mainly depend the hastening or the indefinite postponement of an event which every Power in Europe is concerned in averting. Her Majesty's Government are convinced that nothing is more calculated to precipitate that event than the constant prediction of its being near at hand; that nothing can be more fatal to the vitality of Turkey than the assumption of its rapid and inevitable decay; and that if the opinion of the Emperor, that the days of the Turkish Empire were numbered, became notorious, its downfall must occur even sooner than His Imperial Majesty now appears to expect.

But on the supposition that, from unavoidable causes, the catastrophe did take place, Her Majesty's Government entirely share the opinion of the Emperor, that the occupation of Constantinople by either of the great Powers would be incompatible with the present balance of power

and the maintenance of peace in Europe, and must at once be regarded as impossible; that there are no elements for the reconstruction of a Byzantine Empire; that the systematic misgovernment of Greece offers no encouragement to extend its territorial dominion; and that as there are no materials for provincial or communal government, anarchy would be the result of leaving the provinces of Turkey to themselves, or permitting them to form separate republics.

The Emperor has announced that sooner than permit a settlement of the question by any one of these methods, he will be prepared for war at every hazard; and however much Her Majesty's Government may be disposed to agree in the soundness of the views taken by His Imperial Majesty, yet they consider that the simple predetermination of what shall not be tolerated, does little towards solving the real difficulties, or settling in what manner it would be practicable, or even desirable, to deal with the heterogeneous materials of which the Turkish Empire is composed.

England desires no territorial aggrandisement, and could be no party to a previous arrangement from which she was to derive any such benefit. England could be no party to any understanding, however general, that was to be kept secret from other Powers; but Her Majesty's Government believe that no arrangements could control events, and that no understanding could be kept secret. They would, in the opinion of Her Majesty's Government, be the signal for preparation for intrigues of every description, and for revolts among the Christian subjects of the Porte. Each Power and each party would endeavour to secure its future interests, and the dissolution of the Turkish Empire would be preceded by a state of anarchy which must aggravate every difficulty, if it did not render a peaceful solution of the question impossible.

The only mode by which such a solution could be attempted would be that of an European Congress, but that only affords an additional reason for desiring that the present order of things in Turkey should be maintained, as Her Majesty's Government cannot without alarm reflect on the jealousies that would then be evoked, the impossibility of reconciling the different ambitions and the divergent interests that would be called into play, and the certainty that the Treaties of 1815 must then be open to revision, when France might be prepared to risk the chances of an European war to get rid of the obligations which she considers injurious to her national honour, and which, having been imposed by victorious enemies, are a constant source of irritation to her.

The main object of Her Majesty's Government, that to which their efforts have been and always will be directed, is the preservation of peace; and they desire to uphold the Turkish Empire, from their conviction that no great question can be agitated in the East without becoming a source of discord in the West, and that every great question in the West will assume a revolutionary character, and embrace a revision of the entire social system, for which the continental Governments are certainly in no state of preparation.

The Emperor is fully cognisant of the materials that are in constant fermentation beneath the surface of society, and their readiness to burst forth even in times of peace; and His Imperial Majesty will probably, therefore, not dissent from the opinion that the first cannon-shot may be the signal for a state of things more disastrous even than those calamities that war inevitably brings in its train.

But such a war would be the result of the dissolution and dismemberment of the Turkish Empire; and hence the anxiety of Her Majesty's Government to avert the catastrophe. Nor can they admit that the signs of Turkish decay are now either more evident or more rapid than of late years: there is still great energy and great wealth in Turkey; a disposition to improve the system of government is not wanting; corruption, though unfortunately great, is still not of a character, nor carried to an extent, that threatens the existence of the State; the treatment of Christians is not harsh, and the toleration exhibited by the Porte towards this portion of its subjects might serve as an example to some Governments who look with contempt upon Turkey as a barbarous Power.

Her Majesty's Government believe that Turkey only requires forbearance on the part of its allies, and a deter-

mination not to press their claims in a manner humiliating to the dignity and independence of the Sultan,—that friendly support, in short, that, with States as with individuals, the weak are entitled to expect from the strong,—in order not only to prolong its existence, but to remove all cause of alarm respecting its dissolution.

It is in this work of benevolence and sound European policy that Her Majesty's Government are desirous of co-operating with the Emperor; they feel entire confidence in the rectitude of His Imperial Majesty's intentions, and as they have the satisfaction of thinking that the interests of Russia and England in the East are completely identical, they entertain an earnest hope that a similar policy there will prevail, and tend to strengthen the alliance between the two countries, which it is alike the object of Her Majesty and Her Majesty's Government to promote.

You will give a copy of this despatch to the Chancellor, or to the Emperor, in the event of your again having the honour to be received by His Imperial Majesty.

I am, &c.,

(Signed)

CLARENDON.

No. 11.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

(Received March 26.)

(Secret and Confidential.)

MY LORD,

St. Petersburg, March 12, 1855.

THE Chancellor sent for me this morning, when he placed in my hands a copy of the memorandum which was brought to your Lordship's knowledge by my despatch of the 9th instant. Upon this copy the Emperor had written in pencil, that he was sorry to find that Sir Hamilton Seymour had considered a passage in the paper as reflecting upon the conduct of Her Majesty's Government; that no reproach had been intended, and that the Chancellor would do well to see me and to state that if it should be my wish, the paper might be taken back and altered.

After a few moments' reflection it occurred to me that the explanations which I had received were sufficient, so that a record could be obtained of the Emperor's amicable intentions, and that the paper, if taken back, might be altered in more than one of its passages; I therefore stated, that instead of changing the memorandum I would suggest that his excellency should write me a few lines explanatory of the purport of the passage which I had considered objectionable. To this the Chancellor at once acceded, and it only remained for me to request that his Excellency would be kind enough to express to the Emperor how sensibly I felt his gracious solicitude to efface a disagreeable impression.

I have, &c.,

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

(Received April 4.)

(Secret and Confidential.)

MY LORD,

St. Petersburg, March 16, 1855.

WITH reference to the despatch marked "secret and confidential," which I had the honour of addressing to your Lordship on the 12th instant, I beg to transmit in original the letter which Count Nesselrode undertook to write to me expressive of the Emperor's willingness to change the passage in his memorandum which I had considered open to some misinterpretation.

I have, &c.,

G. H. SEYMOUR.

INCLOSURE IN No. 12.

COUNT NESSELRODE TO SIR G. H. SEYMOUR.

[Translation.]

March 3 (15), 1853.

I HAVE the pleasure, my dear Sir Hamilton, to add to the explanation which I had the honour to offer to you verbally, that having communicated your doubts to the Emperor, His Majesty has authorised me to modify the passage which had caused you to entertain them, at least if you should consider it necessary. The Emperor is, above all things, desirous of removing from a communication altogether personal and friendly with the Government of Her Majesty the Queen, what might give occasion even to an erroneous interpretation, which would be contrary to the intentions by which it was dictated, as also to the object which His Majesty proposes to himself.

Be pleased, &c.,

(Signed)

NESSELRODE.

No. 13.

THE EARL OF CLARENDON TO SIR G. H. SEYMOUR.

(Secret and Confidential.)

SIR, Foreign Office, April 5, 1853.

YOUR despatches of the 9th, 10th, and 12th ultimo have been laid before the Queen.

My despatch of the 23rd ultimo will have furnished you with answers upon all the principal points alluded to in the memorandum which Count Nesselrode placed in your hands; but it is my duty to inform you that that important and remarkable document was received by Her Majesty's Government with feelings of sincere satisfaction, as a renewed proof of the Emperor's confidence and friendly feelings; and Her Majesty's Government desire to convey their acknowledgments to His Imperial Majesty for having thus placed on record the opinions he expressed at the interview with which you were honoured by His Imperial Majesty.

Her Majesty's Government do not consider that any useful purpose would be served by prolonging a correspondence upon a question with respect to which a complete understanding has been established; and I have only, therefore, further to state, that Her Majesty's Government observe with pleasure that, in the opinion of the Emperor, the fall of the Turkish Empire is looked upon as an uncertain and distant contingency, and that no real crisis has occurred to render its realisation imminent.

Her Majesty's Government have never any wish to disguise their policy, which they trust is honest and straightforward towards all other countries; but on such a question they would particularly regret that any misapprehension existed on the mind of the Emperor, and they accordingly approve of the confidential note which you addressed to Count Nesselrode, for the purpose of rectifying some ideas which reflected upon the course pursued by Her Majesty's Government.

On the subject of the *Charlemagne* coming up to the Bosphorus, a correspondence took place between the English and French Governments; and although the Porte gave its sanction unconditionally, the eventual solution of the question was in conformity with the opinion of Her Majesty's Government, and it was settled that the *Charlemagne* should convey M. de Lavalette to Constantinople, under which circumstances it was stated that the passage of the French ship of war would not be further remonstrated against by Her Majesty's Government, but that it must not be drawn into a precedent.

As regards the Holy Places, you are aware of the instructions given to Colonel Rose for his guidance at the Porte, and of the despatch addressed to Her Majesty's Ambassador at Paris, which was communicated to the French Government; and I have further to inform you that Viscount Stratford de Redcliffe was instructed to bear in mind that Her Majesty's Government, without professing to give an opinion on the subject, were not insensible to the superior claims of Russia, both as respected the treaty obligations of Turkey, and the loss of moral influence that the Emperor would sustain throughout his dominions, if, in the position occupied by His Imperial

Majesty with reference to the Greek Church, he was to yield any privileges it had hitherto enjoyed to the Latin Church, of which the Emperor of the French claimed to be the protector.

With respect to the advice which the Emperor recommends should be given to the Porte by Her Majesty's Government, you will inform the Chancellor that Viscount Stratford de Redcliffe was directed to return to his post, and a special character was given to his mission by an autograph letter from Her Majesty, under the impression that the Porte would be better disposed to listen to moderate counsels, when offered by one of Viscount Stratford de Redcliffe's high position, and great knowledge and experience of Turkish affairs; and he was particularly desired to advise the Porte to treat its Christian subjects with the utmost leniency.

Upon this latter point Her Majesty's Government are inclined to believe that the Turkish Government are at length awakened to a sense of their own true interests. At the beginning of this year we know that orders were sent to Kiamil Pasha to proceed instantly to Bosnia, in order to redress Christian grievances, and to empower the Christian communities to build churches. About the same time also the Porte sent the strongest instructions to Omar Pasha, to act with unvaried moderation and humanity towards his enemies (the Montenegrins); and the English Vice-Consul at Scutari confirmed all the previous statements that the inhabitants of Montenegro committed an unprovoked attack on the troops and subjects of the Porte; while the accounts that have reached Her Majesty's Government respecting the atrocities said to have been committed by the Turks in Bosnia, Herzegovine, and Montenegro, are extracted from Austrian newspapers, and must necessarily, therefore, be received with caution.

I have only in conclusion to add, that as Her Majesty and the Emperor have now mutually renewed the assurances of their intention to uphold the independence and integrity of the Turkish empire, it is the earnest desire of Her Majesty's Government that the Representatives of the two Powers may henceforward co-operate together in carrying out this intention by giving similar advice in the same friendly spirit to the Porte.

You are instructed to read this despatch to the Chancellor, and to furnish him with a copy, should he desire it.

I have, &c.,

(Signed)

CLARENDON.

No. 14.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

(Received May 2.)

(Secret and Confidential.)

(Extract.) St. Petersburg, April 20, 1853.

THE Emperor on rising from table, when I had the honour of dining at the Palace on the 18th instant, desired me to follow him into the next room. His Majesty then said that he had wished to state to me the real and sincere satisfaction which he received from your Lordship's despatch marked Secret and Confidential of the 23rd ultimo.

It had been, His Majesty said, most agreeable to him to find that the overtures which he had addressed to Her Majesty's Government had been responded to in the same friendly spirit in which they were made; that, to use a former expression, there was nothing in which he placed so much reliance as "la parole d'un gentilhomme;" that he felt that the relations of the two Courts stood upon a better basis now that a clear understanding had been obtained as to points which, if left in doubt, might have been productive of misintelligence; and, as His Majesty was pleased to add, he felt obliged to me for having contributed towards bringing about this friendly entente.

And His Majesty said, I beg you to understand that what I have pledged myself to will be equally binding upon my successor; there now exist memorandums of my intentions, and whatever I have promised, my son, if the changes alluded to should occur in his time, will be as ready to perform as his father would have been.

The Emperor proceeded to state that he would very frankly offer an observation or two—it might be a criticism—on your Lordship's despatch.

The despatch spoke of the fall of the Turkish Empire as an uncertain and distant event: he would remark that the one term excluded the other; uncertain it was certainly, but for that reason not necessarily remote: he desired it might be, but he was not sure that it might so prove.

His Majesty desired further to observe that he could not doubt that Her Majesty's Government had taken too favourable a view of the state of the Christian population in Turkey; the Sultan might have intended to better their condition, might have given orders in that sense, but he was quite certain that his commands had not been attended to.

Upon my remarking that Her Majesty's Government were understood to receive very accurate reports of what passes in Turkey, the Emperor replied with considerable animation, that he called this fact in question; that he believed, on the contrary, that some of the English Consular agents were incorrect in their reports: he would only refer to Bulgaria; the greatest discontent prevailed there, and His Majesty would affirm that were it not for his continued efforts to repress the manifestation of feelings of the sort, the Bulgarians would some time since have been in insurrection.

His Majesty proceeded to contrast the threatening attitude which had been assumed by Count Leiningen with the peaceable character of Prince Menshikoff's mission; not, however, that he desired to blame the Emperor of Austria, a noble Prince, whom he loved sincerely, and all of whose acts he approved; the difference existed in circumstances, and when Montenegro was threatened with utter devastation, the Emperor of Austria was obliged to act with energy; His Majesty would, he said, have acted in the same manner.

I am desirous of remarking here, that part of the Emperor's observations were, it was obvious, addressed to me personally, and were intended as a reply as well to an allusion which I had made as to religious intolerance in Tuscany, as to my comments to the Chancellor upon the conduct of the Austrian Cabinet with regard to the late confiscatory measures in Lombardy.

His Majesty, after observing that according to the accounts just received (those of the 29th ultimo) little or no progress had been made towards an adjustment of difficulties at Constantinople, said that as yet he had not moved a ship or a battalion; that he had not done so from motives of consideration for the Sultan, and from economical motives; but that he would repeat that he had no intention of being trifled with, and that if the Turks did not yield to reason, they would have to give way to an approach of danger.

I ventured to remark to the Emperor, that it was only by the despatches just arrived that he had received intelligence of the landing at Pera of the French Ambassador, who was understood to be a party to the arrangements about to be concluded; the indirect answer, however, returned to me by His Majesty, and the expressions which he used, lead me to apprehend that this consideration did not receive the attention of which in fairness it appears to me deserving.

No. 15.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

(Received May 2.)

(Secret and Confidential.)

MY LORD,

St. Petersburg, April 21, 1853.

I HAVE had the honour of receiving your Lordship's despatch marked Secret and Confidential of the 6th instant, which, in obedience to your Lordship's orders, I communicated to Count Nesselrode on the 15th instant.

His Excellency, before the arrival of this messenger, had desired to see me for the purpose of communicating to me a paper which had been drawn up by the Emperor's desire, and which was to be considered as an answer to your Lordship's despatch of the 23rd ultimo.

This document, which I beg to transmit in original,

was accordingly placed in my hands by the Chancellor, who observed that he had previously thought that it would close the correspondence, but that it was possible that the fresh despatch which I had brought to his knowledge might, upon being laid before the Emperor, call for some fresh observations on the part of His Majesty.

The only passage in the inclosed paper to which Count Nesselrode was desirous of drawing my attention, was that in which an observation is made respecting the treatment of the Christian population as described by English or by Russian agents.

I remarked, in reply, that the point was the less material, Her Majesty's Government being (as his Excellency has been made aware) as desirous as the Imperial Cabinet could be that no effort should be wanting on the part of the Porte to remove any and every cause of complaint which could be made in justice by the Sultan's Christian subjects.

Your Lordship will perhaps allow me to observe, that supposing the present crisis in Turkish affairs to pass over, an intimation is made in the inclosed paper, which, if taken up and embodied in a joint resolution by all the great Powers, might possibly be the means of long averting a catastrophe which, happen when it may, will probably have disastrous consequences even to those to whom it may be considered the most profitable.

Since the preceding part of this despatch was written, the Chancellor has intimated to me that the Emperor, being of opinion that the paper which I now inclose, followed up by the conversation which I had the honour of holding with His Majesty on the 18th, may be considered as replying to any points touched upon in your Lordship's despatch, does not propose to offer any fresh observation upon the subjects which have been under discussion. His Excellency does not conceal from me his satisfaction at this resolution, these subjects being, as he remarked, of so delicate a nature, that there are always objections to their being brought under discussion.

I have, &c.,

(Signed)

G. H. SEYMOUR.

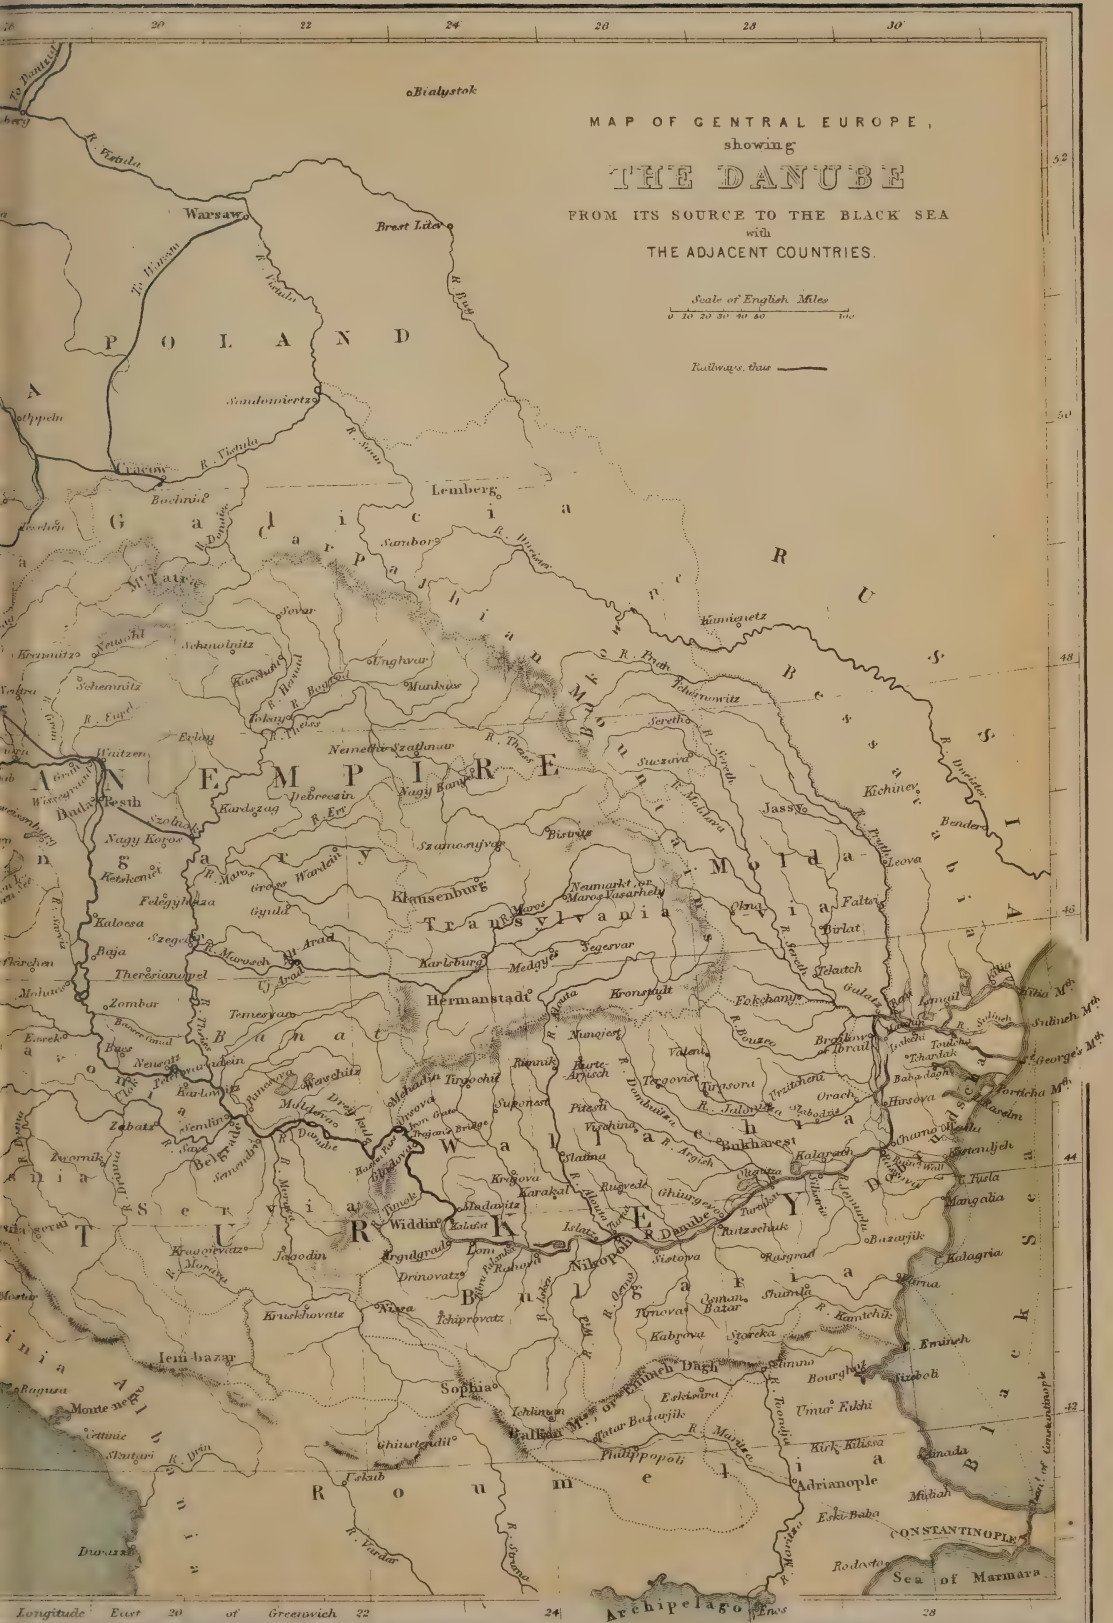

INCLOSURE IN No. 15.

MEMORANDUM.—[Translation.]

THE Emperor has, with lively satisfaction, made himself acquainted with Lord Clarendon's despatch of the 23rd of March. His Majesty congratulates himself on perceiving that his views and those of the English Cabinet entirely coincide on the subject of the political combinations which it would be chiefly necessary to avoid in the extreme case of the contingency occurring in the East which Russia and England have equally at heart to prevent, or, at all events, to delay as long as possible. Sharing generally the opinions expressed by Lord Clarendon on the necessity of the prolonged maintenance of the existing state of things in Turkey, the Emperor, nevertheless, cannot abstain from adverting to a special point which leads him to suppose that the information received by the British Government is not altogether in accordance with ours. It refers to the humanity and the toleration to be shown by Turkey in her manner of treating her Christian subjects.

Putting aside many other examples to the contrary of an old date, it is, for all that, notorious that recently the cruelties committed by the Turks in Bosnia forced hundreds of Christian families to seek refuge in Austria. In other respects, without wishing on this occasion to enter upon a discussion as to the symptoms of decay, more or less evident, presented by the Ottoman Power, or the greater or less degree of vitality which its internal constitution may retain, the Emperor will readily agree that the best means of upholding the duration of the Turkish Government is not to harass it by overbearing demands, supported in a manner humiliating to its independence and its dignity. His Majesty is disposed, as he has ever been, to act upon this system, with the clear understanding, however, that the same rule of conduct shall be observed without distinction, and unanimously, by each of the great Powers, and that none of them shall take advantage of the weakness of the Porte to obtain from it concessions

which might turn to the prejudice of the others. This principle being laid down, the Emperor declares that he is ready to labour, in concert with England, at the common work of prolonging the existence of the Turkish Empire, setting aside all cause of alarm on the subject of its dissolution. He readily accepts the evidence offered by the British Cabinet of entire confidence in the uprightness of his sentiments, and the hope that, on this basis, his alliance with England cannot fail to become stronger.

St. Petersburg, April 3 (15), 1853.

We cannot conclude our chapter upon the secret correspondence more appropriately than in the words of Mr. W. Newman, of Oxford: "The strength of despots is diplomacy, through

which they paralyse the support of right by its only possible guardians. Since the days of Demosthenes and Philip of Macedon, it has been notorious to all educated men that the despot who communicates his counsels to none—who is master of the whole resources of his nation—who pursues his plans undeviatingly and secretly—has infinite advantage over free states, both in negotiation, and in the first outbreak of war. The only means of resisting him is by rallying popular enthusiasm; but this is made difficult or impossible by free states when they are so senseless as to allow any communications with him to be secret."

CHAPTER XII.

SPRING CAMPAIGN ON THE DANUBE.

"And let thy blows, doubly redoubled,
Fall like amazing thunder on the casque
Of thy adverse, pernicious enemy."—SHAKESPEARE.

THE CZAR made preparations corresponding to those made by the allies. In the Baltic his ships and gun-boats were increased, and Cronstadt was greatly strengthened. New batteries were erected at Helsingfors, as well as on the islands of Sweaborg. Batteries were also erected at St. Petersburg, and on various salient points of the Gulfs of Bothnia and Finland; and troops were massed on all positions where they were likely to be available in resisting an attack. On the Euxine, also, careful and laborious preparations were made; the batteries at Odessa were rendered much more formidable; and on the Danubian frontier of Bessarabia immense artillery reinforcements were parked. Even in the Crimea, the coast defences were put in better condition, although there were then no indications that the allies meditated any attack in that direction.

Through Moldavia and Wallachia the forces of Russia were incessantly poured, as soon as the snows of winter departed and the roads were practicable; and it soon became obvious that the Danube was to be the scene of early contest. Famed in story from remote antiquity as washing the shores of many battle-fields, it was destined once more to roll between the camps of opposing hosts, and

"Towers that skirt, and towns that seem to lave
Their battled walls in that majestic wave."

Towards the middle of February the Turkish army, having heard of the departure of the Russian ambassadors from the Western courts, was excited to the utmost enthusiasm, and in various small detachments harassed the Russians before the latter were ready to act upon the offensive. Indeed the Russians, made more cautious by their terrible defeat at Citate even

than they had been after the battles of Oltenitz, began their spring operations by fortifying Fokshani, at the foot of the Carpathians; and so far to the rear of their army, that such a measure could only be dictated by a respect for the Turkish army and its general, acquired during the conflicts of the autumn and winter. In Fokshani great store of warlike munitions was laid up, and troops arrived incessantly as the weather allowed. Finding that the Turks were not in a condition to commence offensive operations, the Russian general took the initiative. It is difficult to say with what forces he commenced the spring campaign, so different are the Russian accounts and those of the pro-Russian press in Germany, and so different is the force of a Russian army upon paper and in fact. Probably 140,000 men had entered the provinces up to the close of 1853, and that force was reduced to less than 90,000 before the arrival of the first spring reinforcements; but so promptly did these arrive, that the Russian general felt confident of the capture of Kalafat, and prepared for a grand system of offensive action upon the whole Danubian frontier.

We have already noticed the importance of the Danube to the Turks as a line of defence, when we described the operations conducted by Omar Pasha in the autumn of 1853 and the winter of 1853-4. It is desirable that our readers should form a more complete conception of it. The topographical and picturesque character of its shores may be studied with interest and pleasure in the *Bosphorus and the Danube*,*

* Eastern Europe, illustrated by a series of 160 Views on the Bosphorus and Danube, from original drawings by W. H. Bartlett and other artists. With topographical

by Miss Pardoe and Dr. Beattie. But, in a military point of view, it is desirable to direct the attention of our readers to its adaptation for defence by an army protecting Bulgaria from invasion. We know of no work where military accuracy and popular simplicity of language are to be found so happily united as in that of Moltke, who, in his book entitled *The Russians in Bulgaria and Roumelia in 1828-9*, thus describes the orographical peculiarities of this great river:—

“Ever since the Turks have been liable to invasion from Russian troops, the Danube has been their first bulwark of defence. It will be necessary for our purpose to give a short description of the lower part of that river. Between Golubraen and Gladova, a distance of about forty miles, the Danube breaks through the limestone rock, which runs from north to south between the Carpathians and the Balkan. At the former point, where there is an old Servian castle, the stream, which is not less than 2000 paces wide, is suddenly narrowed to a width of only a few hundred; and pursues a very winding course between high, and, in many places, precipitous walls of rock, with a very rapid fall. At several points, especially Bebnitz and the Iron Gate (Demir Cassee), its bed is crossed by reefs of rock which, when the water is low, rise above the surface of the river, and when it is high, create prodigious whirlpools, always rendering the navigation of the river difficult, and, at these points, impassable. On this point of the river’s course are the Turkish fortresses of New Orsova (Ada Kalessi, the island fort) and Gladova (Fete-Islam, the triumph of the faith). The width of the stream throughout this tract is, on an average, 600 to 900 paces, and on both sides lies an almost uncultivated, thickly-wooded, and very inaccessible hilly country. Very little below the Iron Gate, however, the stream changes altogether. On the Servian side, it is true, wooded heights still stretch along the right bank as far as the boundary stream of Timoch, but below that the mountains recede far away on either side, and the river flows on through a plain, 100 miles in breadth, down to its mouth.

“Lesser Wallachia as far as the Alouta, and the south of Bulgaria, are indeed traversed by a few chains of hills branching off from the high mountains, and are altogether less flat and low than the vast plains of Greater Wallachia; nevertheless they are, on the whole, level countries. There is, however, a very marked difference between the opposite banks of the river. On the Bulgarian side (all the way below Widdin) they rise steep and high, im-

mediately overhanging the stream; while, on the Wallachian, they are flat and muddy, with extensive meadows intersected by branches of the Danube, and overflowed whenever the water rises. As the river flows on, these low banks become wider and wider, and more and more marshy, and the islands more and more numerous. Below Rustchuk there is only a single spot at the mouth of the Dembowicza, opposite Turtukai, where the shore is firm and dry, though flat, down to the edge of the river, which at that point is not impeded by any islands. Opposite Silistria, too, a road passable at all seasons leads from Kalarash to the Danube.

“In the Dobrudscha, too, the right bank is considerably the highest; the opposite low Wallachian shore is for the most part firm and dry down to the edge of the river, so far as the Bertisa branch; but the islands form a marsh covered with trees and rushes many miles in breadth, which is always flooded when the river is high. Hirsova is the first point at which the valley becomes narrowest, and a passage across the river is practicable. At Brailow the left side of the valley of the Danube first begins to rise from the river in perpendicular terraces of clay, of about eighty or one hundred feet high. From Brailow and Galatz there are roads across the wide marshes, practicable in the fine season to Matschin, which place commands their *débouchés*, and beyond which the fine picturesque tops of the Matschin and Betschepe mountains rise to a height of about 1100 feet.

“Below Isaktchi, the Danube flows through its Delta in three branches, of which only one, the Sulina, is navigable, and this is not above 200 paces wide at the mouth. The whole space, thirty miles in width, between the northern and southern branches (the Kedullet and the Killibogas) is covered by an unbroken waving sea of rushes ten feet high, above which the rigging of the ships is only visible. The Danube, below the Iron Gate, except where it is divided by islands into several arms, is nowhere under 900 paces in breadth, and in many places it is more than double that width. In some places it is as much as seventy or eighty feet deep, but in many parts it is far shallower. Below Pesth, where there is a suspension bridge constructed, the mighty river is only crossed by one bridge of boats,—that at Peterwardein. Of the massive bridge built by Trajan, at Gladova, nothing now remains but the piers, and a sort of tower on the Wallachian shore. The stream at this point is very broad and shallow. At Pulcha the river is diagonally crossed by a sand-bank, which leaves a navigable channel only fourteen or fifteen feet deep. At this point a bridge on piles might be thrown across the main channel, if the approach on the left bank were not rendered impassable by

descriptions of the Bosphorus, by Miss Pardoe; and the Danube, by Dr. Beattie: Virtue and Co., London and New York.

extensive marshes and islands overgrown with reeds. Everywhere else, the passage of the river could only be effected by bridges of boats or pontoons. Although the fall of the Danube is not nearly so great below the Iron Gate, the current on an average does not run less than two miles and a half an hour.

"The natural obstacles offered by this mighty river to the passage of troops across, are increased by the great number of strongholds on its banks. Within a course of 300 miles there are, upon the Lower Danube, Necopolos, Sistova, Rustchuk, Giurgevo, Turtukai, Silistria, Hirsova, Matschin, Brailow, Isaktehi, and Tultscha, all situated at the points where the stream might otherwise most easily be crossed.

"The outworks of Turtukai alone had not been built since the former war; and yet that is the most advantageous place for the passage of an army on the whole of the Lower Danube.

"If Schumla and Varna were to be the points of operation for a Russian army, its march thither from Bessarabia would lie direct through Turtukai. The march across the Dobrudscha, rendered so difficult by the want of water, would thereby be avoided. The obstacle presented by the commanding height of the right bank is, as we have seen, everywhere the same. Moreover, Turtukai stands in the greatest interval between two fortresses, twenty-four miles from Silistria, and twice as far from Rustchuk. The Danube is 995 paces in width; the banks are firm, and always passable; and the Dembowicza, which flows past Bucharest and empties itself into the Danube exactly opposite the town of Turtukai, affords facilities for bringing the means of crossing to the spot.

"It would, however, be utterly impossible, even here, to collect the materials for constructing a bridge 1000 paces long. The navigation of the Danube, properly speaking, does not extend above Brailow and Galatz, where very large supplies of corn are annually shipped for Constantinople."

If our readers will keep in view this brief but very complete sketch of the river line of defence, the proceedings of both armies will be more intelligible in the events that we proceed to record.

The first blow was struck by the Russians on the 13th of February. They collected in very considerable force against Giurgevo, where there had been such fierce contests in the preceding campaign. The Turks were unable to resist such a superior force with any hope of success, yet they prolonged the conflict for several days, and then retired in good order, taking boat to Rustchuk. The Russians, upon taking possession of the place, directed a terrible cannonade against Rustchuk. Considerable ability was shown, and dogged perseverance, in repeated

attempts to cross the river there. The Turkish garrison was kept in a state of painful and unremitting vigilance; and hard although desultory fighting tried the courage and endurance of both armies. At this juncture, the conduct of Omar Pasha was much criticised; his German critics generally animadverted severely upon his strategy, and among them were many officers of note; the American military authorities took up the German criticisms, and gave them currency in the United States; not a few British officers censured, and even derided, the conduct of the Turkish general at that crisis. We believe the "rules of war" were considered by almost all, even his most warm advocates, to demand a different strategical arrangement on his part; but, as a military writer observes, who was no friend to the Turkish chief, "The wisdom of any plan of defence where an extended line of territory is to be guarded is *relative*. What would be utterly absurd in the face of an experienced general, and well-disciplined army, might be the very perfection of wisdom before an ill-conditioned army and incompetent general." It was plain that Omar despised his antagonist, Prince Gortschakoff, as a strategist; and while he knew the deficiencies of his own army, he had reliance upon the courage of his troops. The results of any deviation from the strict rules of war justified his judgment. Omar, perceiving that he had not sufficient force to prevent the Russians from crossing the river, detached his left wing, making it a separate army—no longer having its base upon Schumla, but rather upon Servia and Bosnia. On the 4th of March, before the Russians had yet crossed the river, Omar gave them another lesson, similar to those at Citate and Oltenitza. The corps at Rathova suddenly crossed under his orders, and attacked the Russians at Kalarasch with great impetuosity and success. The Russians fell back with rapidity, suffering great loss. The usual hurrysings to and fro, marches and countermarches on the part of the Russians, showed their surprise; but before they could chastise the aggression, the Turks recrossed the river. In spite of all the valour of the latter, and the skill of their chief, the progress of the Russians became speedily such as to dishearten Europe, and create an impression that, before the allies could intervene, the Russians would be through the passes of the Balkan. This feeling was strengthened by the recollection that "In the late war with the Turks, the power of Russia in the first campaign appeared to be feeble, and many exulted at the ruin of an empire which had been so formidable; but in the second campaign, when it had put forth its real strength, it was evident that the Turkish Empire existed but at the mercy of their opponent." Still every step which the Russians

won to the walls of Silistria was opposed by a stubborn resistance, such as the Turks had not offered in modern times to an invading force. Omar Pasha did everything at this juncture that man could do, to prepare his army for effectual warfare; it is difficult even now to know with what hopes and expectations the general completed his arrangements; but, in spite of the valour of his levies, he must have felt considerable uneasiness. The Constantinople papers give us no real information as to either the plans, movements, or resources, of the Turkish general. The German papers are contradictory, and the correspondents of the London and Paris press not less so. The *Soldaten Freund* professed to have especial sources of information, and was just then more minute than any other publication in Europe in its descriptions of the varying events on either side of the contested flood. According to this authority, Omar's object was to form three army corps, with their head-quarters at Karassu, Sistau, and Widdin; each corps to consist of more than twenty battalions of infantry, thirty squadrons of cavalry, and sixty guns. The force of each corps, 26,000 Nizam (regulars), 18,000 Redifs (militia), and contingent of Bosnians, Albanians, and Herzegovinians; a reserve of well-appointed Egyptian regulars to support each corps. The regulars, militia, and Egyptians, were thoroughly trustworthy; but the Bashi-bazouks were, as we have elsewhere in this History described them, sometimes good and sometimes bad soldiers, and always given to insubordination, plunder, and violence. The Albanians and Herzegovinians were mutinous, from their sympathy with the Greek insurgents, and it was with difficulty the generals could prevent their desertion *en masse*.

It was on the 5th of March Prince Gortschakoff received his orders to cross the Danube, *coûte qui coûte*; on the very same day that the czar proclaimed martial law in seventeen governments of his dominions. Previous, however, to any attempt at effecting the passage of the river, Kalafat was made the object of a *reconnaissance* in force. Strong detachments of Russian irregular cavalry and light artillery were permitted by the Turks repeatedly to come with impunity close to the place. The object of allowing the Russians thus to parade almost under the muzzles of the guns was to conceal their strength. Some good opportunities of cutting off these advanced detachments were lost; and when an attempt on a grand scale, well-planned by the commandant, was made, it was so badly executed that the Russians made good their retreat. It was of the utmost consequence to the Russians to take Kalafat, at this juncture the only strong place held by the Turks on the left bank of the river; it was the key to the great fortified place

called Widdin, on the right bank; it covers Servia, and its occupation by the Turks did much to shut up from the Russians the way that by Sophia leads to the Balkan and to Adrianople. Accordingly, on the 11th of March, a powerful corps of Prince Gortschakoff's army reconnoitred the place, with the view apparently of turning the *reconnaissance* into an attack, if circumstances might be found at all to favour it. The Turks sallied out and attacked this corps with impetuosity; the struggle was fierce and protracted, and ended by a decisive repulse of the Russians.

Meantime General Luders, one of the most skilful and enterprising of the Russian generals, crossed the Danube at Galatz. So conflicting are the accounts of the passage of the Danube by Luders, that no less than five different dates are assigned to it—the 10th, 11th, 22nd, 23rd, and 25th of March. We believe we can unravel this skein. It was on the 10th that Luders made good his landing on the right bank of the river. The passage was effected mainly by rafts, constructed for the purpose, with considerable perseverance and some skill; for he conducted, without any decisive interruption or accident, a large army over a broad river, in the face of a brave army commanded by an able general. The army of Luders consisted of twenty-four battalions of infantry, eight squadrons of regular cavalry, six sotnias of Cossacks, and sixty-four guns. Omar guarded the river effectually, except on the shores of the Dobrudscha, where he knew that a Russian army, if he could contrive to detain it there, would perish from thirst and malaria without the expenditure of much shot or shell on his part. In fact, taciturn as the Turkish general was, he could not dissemble the joy he felt at the direction in which the enemy was compelled to enter that region, by the generalship which prevented their effecting any more advantageous footing in Bulgaria. The indifference with which Omar obviously regarded the advance of this corps of the Russian army, or rather the pleasure he evinced at catching them within the deadly angle of that terrible region, caused reports to be raised in Constantinople that he was bribed; and these reports were amplified in Vienna, and sent rapidly about through Europe. Omar, however, maintained his equanimity, and not only offered no serious obstruction to Luders in crossing, but took no means to prevent his occupation of the entire region, except so far as to maintain a few strong places as long as they could hold out.

On the 15th of March Prince Gortschakoff in person resolved to effect a passage by Turtukai. Our readers will remember that in an early part of this History, the river between Turtukai and Oltenitza was described, and the character of its shores on both sides. In our

accounts of the incursion of the Turks from Turtukai to Oltenitza, we represented them as first seizing and fortifying an island which commanded the banks of the river at Oltenitza, and was itself commanded from the heights of Turtukai. General Gortschakoff determined to take, if possible, that island. This act was one of inconceivable rashness; for not only could the guns of the island command his troops in embarking to reach it, but, if reached and captured, the batteries at Turtukai would make it untenable. Of course, by a terrible expenditure of life, superior forces could ultimately seize the island and cross from it to the opposite side, and storm the batteries there; but the object, when gained, would not by its possession repay the sacrifices made in attaining it. The result of the attempt to capture the island was a terrible defeat, with the loss of 2000 men.

The operations of Prince Gortschakoff against Rustchuk by Giurgevo were as disheartening as his attempts to cross by Turtukai; and while discouraged, doubtful, and almost desperate, because of the stringency of his orders from St. Petersburg to restore the prestige of the Russian name by some feat of arms, he received a despatch from General Luders, announcing what both generals deemed a success; neither suspecting, that as Wellington lured on Napoleon to Waterloo—a field previously chosen by him—so Omar was gradually drawing forces, which he knew were powerful enough to cross the river somewhere, into the trap where they might become the prey of pestilence as well as war. Gortschakoff immediately hurried to the support of Luders, and taking a *detour* in the rear of the place where the latter made his passage, the prince, far to the general's left, passed over a little above Tultscha with fourteen battalions of infantry, sixteen squadrons of regular cavalry, six sotnias of Cossacks, and forty-four guns. He took some guns and prisoners, and drove back upon Tultscha a detachment of Turks who were in observation of his movements. The Russians were now in great force in the Upper Dobrudscha, and they appeared to advance in an alarming career of victory. They stormed and captured one stronghold after another, suffering and inflicting much loss. A detail of these conflicts is unnecessary; what the Russians won they won with difficulty; what the Turks held they held with tenacity; and terrible carnage marked nearly every struggle. At Tultscha the Turks made the most prolonged and desperate resistance, causing heavy losses to the Russians, obstructing their progress, and rendering insecure the advance they were so rapidly making, by maintaining a considerable force in their rear.

Tultscha at last fell, after resisting three desperate attempts to storm it. Matschin,

another of the strong places on the southern side, repulsed as many attempts to storm it, but the garrison at last surrendered at discretion. Isaktchi and Hirsowa, the remaining strongholds on that side of the Danube, surrendered, but not with dishonour. The fortresses on the Danubian shores of the Dobrudscha were dearly paid for with Russian blood. When their keys were received in great pomp and amid great rejoicings at St. Petersburg, it was little understood there what an amount of human life had been expended in winning the trophies. Before the 1st of April the Turks, who had fallen back upon Babadagh by the sea, were forced to evacuate that place, the possession of which was of considerable importance to the invaders. It is here necessary to give our readers some idea of the military value of these conquests.

The Dobrudscha is not properly a part of Bulgaria, although on the Bulgarian side of the river, and is always spoken of by the Turks as a distinct territory. It is a district skirting the Danube on its northern and western bounds, the Black Sea on its eastern bounds, and Bulgaria to the south and south-west. Its extreme measurement is from ninety to one hundred miles by thirty-five. It is perfectly flat, and lower than the Danube; in most places marshy, and the deadly marsh malaria prevailing to a degree more fatal than perhaps anywhere else in Europe. In other places it is dry and sterile, and water cannot be obtained by digging to any depth. There are no roads, and even the paths are dangerous to the solitary traveller. The outlets from this district to Roumelia are commanded by fortifications of great strength, with a fertile country behind them; so that an army hemmed in within this dismal plain is exposed to certain destruction—they will waste away without any attack from a foe. The Russians calculated upon forcing a passage into Bulgaria, as they did in 1828, when Silistria and Varna were captured by them; but at that time they had the command of the Euxine, upon which the allies, at the time we now treat of, kept up a sort of marine patrol. There remained, therefore, nothing for the Russians but to force their way to the Balkan. As the allies occupied Varna later in the spring, the Russians could make no attempt in that direction; or the deeds of Menschikoff and Woronzoff, in 1828, might have been again enacted.

A description of the fortresses which fell into the hands of the Russians by their invasion of the Dobrudscha, will account for the alarm felt in Turkey and throughout Europe.

Isaktchi is thus described by Baron von Moltke:—"It stands near the Danube, upon a hill, surrounded within musket-shot by two valleys, which are not commanded by the for-

tress: no advantage is taken of the lay of the ground, and the correct instinct by which the Turks are usually guided in the choice of their lines seems here to have forsaken them. As usual, there were neither outworks nor covered-way, only a narrow foot-path inside the glacis, which was three feet high. The ramparts were so narrow that there was not room for the guns, except in the bastions, which were tolerably large. The inner escarp of the rampart was supported perpendicularly with wattling; a measure which, in 1810, had so embarrassed the besiegers of Rustchuk. The inner slope of the parapet was partly lined with pallisades, and their outer slopes on the bastions, as well as the embrasures, were lined with gabions. The point of attack upon the fortress comprised the two northern sides of the polygon, which could be enfiladed in their whole length from the heights to the south. The besieging force would not need any entrenchments or other works; they would only have to erect a battery near the bank of the river, at 500 or 600 paces distance from the fortress, to secure themselves from attack by advanced bodies of troops, and to effect breaches in the escarps, which at that point are not defended by any ditch."

The same author describes Matschin, where the Russians incurred such heavy losses, in the following terms:—"It stands upon a ridge which juts out into the Danube, and ends in a precipitous descent into the stream; on the west it is defended by an impassable marsh. The lofty mountains which rise in jagged points on the south-east are too far off to be dangerous, and the intervening ground slopes off gently towards the fortress, and forms a plain on the eastern side. The walls of the town form a heptagon, defended by six small bastions. On the top of the lofty northern precipice stands a citadel upon a granite rock. The citadel commands the town and its walls, the ground in front of it, and the Danube, with all the islands within range of the guns. Although the citadel had no ditch, it presented a very formidable relief, with escarps fifty feet in height, rising twenty-five feet above the enciente of the town, which was so small that it was commanded in every part by the high cavalier, even with musketry. Hence it would have been almost impossible for an attacking party to occupy the town while the citadel remained in the hands of the enemy; and, on the other hand, no attack could be made upon the citadel until the enciente of the town were taken. In fact the citadel, occupied by a resolute garrison, was impregnable by any other means than a well-directed and vigorous bombardment; and even this would by no means ensure the surrender of the place." This description by Baron Moltke was borne out by the facts in March, 1854, for the Russians in vain

attempted the place; they could only conquer it by investment, the garrison having been unprovided for a protracted siege.

"Hirsova, which stands at the point where the Danube may most easily be crossed, is a *tête-de-pont* formed as it were by nature against the Turks. The town is an irregular quadrangle, enclosed on three sides by rocky heights, which slope gently on the inside and abruptly on the out, and on the fourth side by the Danube. At one point, where a perpendicular piece of rock rises eighty or one hundred feet out of the stream, stood an ancient castle, of which the Russians took possession in 1809."

"Tultscha formerly stood upon a broad ridge of hills, with a deep declivity towards the Danube, but separated from it by a marsh 400 paces wide. On the western side the ground sloped gently down towards the fortress. The new town has been built about a mile lower down the Danube, on a spot eminently fitted to command the navigation of the Sulina, which is not 400 paces wide at this point. The town could scarcely be fortified in its whole actual extent; but, if the southern point were sacrificed, the northern—which is surrounded by the Danube, a marsh, a lake, and a commanding height—might be converted into a small fortress, which would require but a slender garrison. But then it would be essential to the safety of the place to erect an outwork upon the further extremity of the island, opposite to the place which, like all the islands in the Danube, was ceded to Russia at the last peace (1829)."

The descriptions by Baron von Moltke were written in reference to the invasion by the Russians, in the war of 1828-9; we have suppressed such portions of his account as were inapplicable to the state of things in 1854. Captain Spencer, writing at the latter end of 1853, says that considerable improvements were made in all these fortresses since he had visited them in 1851. At that time they were in the condition which Von Moltke depicts.

It will be seen that the rejoicings at St. Petersburg, and the apprehensions entertained in other portions of Europe, were not unreasonable. The possession of these river fortresses was of the utmost importance to Russia, although in the actual result she was only emboldened by these successes to commit herself irretrievably to a campaign in the Dobrud-scha, with all its attendant disasters. At the beginning of April, the Russians from Hirsova prepared for a great attempt to pass Trajan's Wall, the line of defence behind which the Turks were necessarily driven; and the Cossacks patrolled to Kustendje-upon-the-Sea, a fortress of considerable strength, and the capture of which would have facilitated an advance upon Varna.

On the 30th day of March, the Turks made a

sally from Kalafat, which served to repair so many disasters. The Russians were posted at Skripetz, and in considerable force. About 10,000 foot and a strong brigade of cavalry from the fortress surprised them, and a battle ensued which lasted several hours, and was most sanguinary. The Muscovites were defeated, losing three men for every one man lost by their victors. Encouraged by this success, the Turks two days after made another sally in the direction of Pojana. The Cossack scouts were in observation, and rode hastily back to alarm the garrison; the Turkish irregulars rode after them, and leaped the ditch of the intrenched camp as the Cossacks entered; being speedily followed by a regular body of horse, the Russians were attacked with fury, and thrown into consternation. A brigade of Russian cavalry was dispersed, some hundreds put *hors de combat*, and many made prisoners. A force of 15,000 men advanced upon Kalafat, to avenge as it was supposed these disgraces, and, if possible, effect something against that strong place; the movement ended in skirmishes, and a partial cannonade, the assailants retiring discomfited.

It is likely that this demonstration against Kalafat was not, however, in any hope of surprising the place, or making any impression there; the forces that defended it were too numerous, and the works too strong for any such hope: it was probably to cover the retreat of the Russian armies from Little Wallachia, as they were withdrawn to carry on the operations organised by Prince Paskiewitch, who arrived on the 8th, and disapproving of Prince Gortschakoff's plan of campaign, new dispositions of the troops were necessary to carry his own projects into execution. The whole right of the Russian army was drawn back; the left was pushed on fiercely through the Dobrudscha, to force an exit thence to Bulgaria; and the troops drawn back, with the reinforcements from Moldavia, were poured upon that portion of the Danube between Oltenitza and Czernavoda. Hirsova was the medium of communication between the corps of Luters in the Dobrudscha and the troops thus massing under Gortschakoff, and which were to be placed under Schilders, while Prince Paskiewitch directed the whole line of operations. Luters was ordered to get between Silistria and Varna, and cut off any chance of help thence by the allies while Silistria was assailed. When the Russian head-quarters were broken up at Krajova, in order to execute the manœuvres we have above detailed, the Turks seized it, and were welcomed by the inhabitants with every token of sincere gratitude and delight: the presence of the Russians had been an intolerable burthen.

At this juncture the Russians sustained a

defeat on the extreme left of their line. As already stated, they were desirous to gain the Wall of Trajan, and drive the Turks from that line of defence. This wall, built by the Roman emperor whose name it bears, for the purpose of repelling the incursions of the barbarians of his days upon the fertile fields and opulent cities of the South, commences at Czernavoda and extends to Kustendje on the Black Sea.* The Turks were in possession of the former place, to dislodge them from which would be necessarily a part of the Russian design upon that line of defence. They attacked the Turks with superior numbers, but with some rashness; for their recent triumphs in the Dobrudscha had filled them with a vain confidence, and they had already begun to suffer from cholera, ague, and fever, so extensively that they were desirous, even at great sacrifices, to conquer their passage onward from this fatal steppe. The Turks received them with unflinching courage, and with great coolness. The Russians were repulsed after a short battle, leaving in slain and prisoners nearly 1000 men. The prisoners were sick and emaciated, and gave terrible evidence of how rapidly the deadly climate of the peninsula of the Danube had wasted their strength. They were also found miserably deficient in apparel, and they reported the Russian army to be but ill provided with supplies and munitions of war. This was probably the result of the catastrophe which happened some time before at Fokshani, where vast stores of military appliances were burnt by an accidental fire, or, as some suppose, by incendiary Wallachs and Moldavians; who, in revenge for the outrages offered to their liberties, and the plunder of their property, so laid the train of the conflagration as to secure the rapid destruction of the vast accumulations of military supplies which the place contained.

We have now approached one of the most eventful periods of the war—the siege of Silistria. We should, however, have to leave too far behind us contemporaneous incidents of great interest, were we here to pursue the contest in the Dobrudscha before the walls of Silistria.

* In a work entitled *Eastern Europe Illustrated*, published by Virtue and Co., London and New York, there is the following description of the present condition of this wall, and the appearance of its neighbourhood:—"In consequence of the steamer halting for a day at Tchernavoda, we took advantage of the delay, and set out to explore the Wall of Trajan. Our walk across the hills was delightful. In every green hollow were thickets of lilac and numerous flowering shrubs. In about an hour's walk, we came to the Roman wall, which once stretched from the Danube to the Black Sea. A camp, the dimensions of which may still be traced, formed its defence towards the river; and its high green vallum and accompanying ditch are seen running over ridge and hollow towards the sea. The whole of the next day, in our descent of the river, these were still visible on our right, till we arrived at our destination on the Euxine Sea."

We shall here take occasion to notice the more prominent incidents of the history of General Luders. He is an aide-de-camp general, a high degree of rank in the Russian service. He did not take any very prominent part in war until the Russian campaign in Transylvania, in the year 1849, but there greatly distinguished himself. A separate *corps-d'armée* of about 40,000 men was placed under his command, with which he defeated Bem, the celebrated Polish general, utterly routing his forces. The principal part in forcing Georgey to surrender, devolved also upon him. That campaign made the military reputation of Luders, and upon the breaking out of the present war it was proposed to place him in command of the army of the principalities.

The claims of Prince Gortschakoff prevailing, Luders was appointed to a high command under him, and as has been already shown in this chapter, he led a separate corps into the Dobrudscha, gaining some temporary *éclat* for the tarnished honour of the Russian arms. He was in the prime of life when conducting these operations. His name will frequently occur in the history of this war, throughout which, up to the grand results in the Crimea, he has been in active command. He is a remarkably handsome man, of noble expression of countenance, and commanding mien; intellectual, and of very superior military talents. General Luders is generally recognised as one of the best officers in the Russian service.

CHAPTER XIII.

DECLARATIONS OF WAR BY THE ALLIES.—COUNTER DECLARATION AND MANIFESTO BY THE EMPEROR OF RUSSIA.—RUSSIAN EFFORTS FOR THE STRUGGLE.

"*Pax queritur bello.*"*—*Motto on the coat-of-arms of Oliver Cromwell.*

WE again turn from the events upon the "dark rolling Danube" to those which occurred at home. The declaration of war by the Western powers, and the destinations of their expeditions, must necessarily influence the character assumed by the struggle on that great theatre of contest. The armies there confronting one another, looked with feverish anxiety for every scrap of intelligence from England and France; and as the Tartars and Bashibazouks were like carrier-pigeons for speed, not a regiment arrived at Malta, nor an article of prominent interest was published in the London and Parisian press, nor a speech delivered in the British parliament upon the subject of the war by any great leader, or eloquent member, the tidings of which did not reach the officers of both hosts. The further progress of the campaign it was felt by both the great leaders of the belligerent armies must be regulated by considerations arising out of the certainty of war being proclaimed by the Western powers.

The British government and parliament were intensely solicitous to be assured themselves, and to assure others, that the war was not of their seeking, and was inevitable. To this end two classes of state papers were demanded by the Commons, and produced by the government. One of these was the treaties between Turkey and Russia; the other the despatches connected with the ultimatum directed by the allies to the czar. It was necessary that by the perusal of the former, the country and the world should see that the Western nations were not encouraging Turkey in a breach of treaties, as

the czar had alleged; but that he had encroached upon the letter, and violated the spirit, of his treaties with the Porte. It was as necessary that by the other class of papers it might be equally plain that no just cause of offence was given personally to the czar; but that all the arts of deference and conciliation having been exhausted, the demand for satisfaction was firmly and temperately made, and that the allies were literally compelled to search for peace by a just, necessary, and unavoidable war.

In the third chapter of our history, we gave such an outline of the aggressions of Russia upon Turkey, as included some account of the various treaties wrung from the latter in her seasons of weakness, we shall therefore be excused if we omit the documents themselves, as likely to be tedious in the perusal, as well as necessarily occupying more space than we can spare.

The despatches connected with the ultimatum are part of the narrative, and a very exciting and interesting part; for they reveal to us the tone and spirit of the courts and cabinets immediately interested, and inform us of the actual interviews and transactions between those whose influence alone could secure the blessings of peace, or let loose upon a distracted and appalled world all the horrors of so general a war. The first of these to which we need direct the attention of our readers is that of the Earl of Westmoreland, our ambassador at Vienna, in which he gives to his government the Austrian explanations as to the missions of Count Orloff, which

* "Peace is sought by war."

excited so much speculation throughout Europe. There can be no doubt that the mission of Count Orloff was as the Austrian court represented it, at all events in part; whether the bearing of the Austrian government towards the Count were such as its minister represented to the British ambassador, may well be doubted.

THE EARL OF WESTMORELAND TO THE EARL OF CLARENDON.

(Received February 4, 1854.)

(Telegraphic.)

Vienna, Feb. 4, 1854.

COUNT BUOL has announced to the French Ambassador and to me, that Count Orloff's proposition to the Emperor of Austria was, that his Majesty should engage himself to a strict neutrality in the event of the war between Turkey and Russia, in which it appeared that England and France were about to take a part. The Emperor of Austria replied to Count Orloff, asking if the Emperor of Russia would confirm his Majesty's engagements not to pass the Danube; to evacuate the Principalities after the war; and not to disturb the general arrangement at present existing of the Turkish provinces? Count Orloff replied, that the Emperor of Russia could take no engagement.

The Emperor of Austria answered, that in that case he could take no engagement, as was proposed to him. He should remain faithful to the principles he had adopted in concert with the other three Powers, and should be guided in his conduct by the interests and the dignity of his empire.

Your Lordship will not be surprised, after learning this termination of Count Orloff's mission, and after having received the Protocol of the Conference signed yesterday, to hear that the Austrian Government have decided immediately to increase the cordon they have upon the frontier of Transylvania to 30,000 men.

Count Buol expected that Count Orloff would have left Vienna to-morrow; but he learns, with surprise, that he intends to prolong his stay for some days.

The next despatch which we deem it necessary to select, is an appropriate sequel to the secret correspondence—a despatch of Sir George Hamilton Seymour—almost his last diplomatic act before leaving St. Petersburg; and it discloses the finale of a long-sustained system of trickery and intrigue on the part of the court and government of Russia.

SIR G. H. SEYMOUR TO THE EARL OF CLARENDON.

(Received February 24.)

(Extract.)

St. Petersburg, Feb. 15.

IN the Russian *Projet de Protocole*, the Russian Plenipotentiary declares: "Que si divers actes de la Porte, et notamment à l'égard des lieux saints, ayant paru à l'Empereur indiquer des dispositions peu favorables au culte qu'il professe, avaient engagé sa Majesté à demander, en même temps que l'arrangement spécial des dits lieux, une garantie générale des droits, privilèges, et immunités religieuses accordées à l'Eglise Orthodoxe." These few words contain a tardy tribute to veracity.

In the early days of Prince Menschikoff's mission, it was stated to me repeatedly, and most positively, that he had no other object in view than to re-establish and secure the rights of the Greek Church at Jerusalem.

When the real motives which had carried Prince Menschikoff to Constantinople became known, I was next informed that I had no right to consider that I had been misled, inasmuch as what was claimed for the Greek Church was the necessary confirmation of the Greek rights at the Holy Places; and only now it comes to light that the special arrangement regarding the Holy Places is considered by the Russian Cabinet as a question quite

distinct from that of the guarantee to be demanded of the rights, privileges, and immunities of the Greek Church.

I feel grateful to the Imperial Cabinet for having made this admission before my withdrawal from St. Petersburg.

Upon the departure of Count Orloff from Vienna, the Austrian government spared no pains to make the British government believe in its sincerity, and even earnestness, to *force* Russia to reasonable and just terms of peace. It is obvious that the Earl of Westmoreland had implicit faith in all the assurances of Austria; and so plausible were they, that we cannot but admit that they were likely to impose upon honourable men. At all events, our government felt secure of Austrian support in the result of these communications; and believed that, when the moment for action came, Austria would be found as energetic in arms as she had been in protestations of her alliance.

THE EARL OF WESTMORELAND TO THE EARL OF CLARENDON.

(Received February 13.)

MY LORD,

Vienna, Feb. 8, 1854.

I HAVE just left the Conference to which Count Buol had this morning invited me, in conjunction with my colleagues. Upon our assembling, he stated that he had no proposal to make to us; but, in consideration of the perfect union existing among us upon the Eastern question, he thought he was forwarding our common objects by communicating the despatches he had addressed to Count Esterhazy, for the purpose of being submitted to Count Nesselrode.

Count Buol then read to us these despatches. The first gave an account of the proposal brought forward by Count Orloff, that the Emperor of Austria should, in conjunction with Prussia, take an engagement with the Emperor of Russia for the maintenance of a strict neutrality in the war now existing with the Porte, and in which the Maritime Powers seemed likely to take part. Count Buol, in his despatch, develops in the clearest and most distinct language, the impossibility of the adoption by the Emperor of any such engagement. He states, with all courtesy to the Emperor Nicholas, the obligations by which the Austrian Government is bound to watch over the strict maintenance of the principle of the independence and integrity of Turkey—a principle proclaimed by the Emperor Nicholas himself, but which the passage of the Danube by his troops might, by the encouragement of insurrections in the Turkish provinces, endanger. Count Buol therefore states that he cannot take the engagement proposed to him. The second despatch, to Count Esterhazy, relates to the answer which has been returned to the proposals for negotiations transmitted by Count Buol with the sanction of the Conference on the 13th ultimo.

In this despatch Count Buol states, with considerable force, the disappointment felt by the Emperor at the want of success which had attended his recommendation in favour of the Turkish propositions. He enters very fully into the subject, and renews the expression of the Emperor's most anxious desire that the Emperor Nicholas may still adopt the proposals which had been submitted to him.

The last despatch is one in which Count Buol replies to the reproach which was addressed to the Imperial Government that, by its present conduct, it was abandoning the principles upon which the three Governments of Russia, Austria, and Prussia, had hitherto acted for the maintenance of the established interests and independence of the different States of Europe; and that, by so doing, it was endangering the established order of things in Europe, and the security at present existing.

The answer of Count Buol to this reproach is very firmly and clearly stated.

It is impossible for me to give your lordship a more detailed account, before the departure of the messenger of these despatches; but I must add that they met with the entire approbation of the members of the Conference; that they were looked upon as most ably drawn up; and that, while using every courteous and friendly expression towards the Emperor Nicholas, they most clearly pointed out the present position which the Austrian Government would maintain, with the view of upholding the principles they had proclaimed, and the engagements which they had taken for their support.

After these communications, Count Buol stated that the Emperor, in speaking of the departure of Count Orloff, had inquired whether any suggestion could be made to him, in a confidential manner, by which the negotiations for peace might still be continued. Count Buol had subsequently given this subject his best consideration. He had gone to Count Orloff before his departure, which had taken place this morning, and, as a private suggestion of his own, and only verbally, had stated that if the Emperor Nicholas would accept the Turkish proposals, and, upon their general import, send to Vienna the form of preliminaries for peace which he would agree to, and which might be discussed by the Conference with Baron Meyendorff, who should be instructed to that effect, these preliminaries, if approved by the Conference, might be sent to Constantinople with the recommendation of the Four Powers.

The following telegraphic despatch is a still further apology for the confidence which both the allied governments were disposed to place in Austria. It is obvious that the efforts of Count Buol to stand well with the court of Paris, were as constant and as deceptive as those resorted to with the court of London.

LORD COWLEY TO THE EARL OF CLARENDON.

(Received February 23.)

(Telegraphic.)

Paris, Feb. 22, 1854.

COUNT BUOL assures M. de Bourqueney, that if England and France will fix a day for the evacuation of the Principalities, the expiration of which shall be the signal for hostilities, the Cabinet of Vienna will support the summons. M. Drouyn de Lhuys is of opinion that this should be done immediately, and that the two governments should write to Count Nesselrode to demand the immediate commencement of that evacuation—the whole to be concluded by a given time, say the end of March. Silence or refusal to be considered a declaration of war on the part of Russia. Whenever a decision is taken, M. Drouyn de Lhuys begs that you will inform me by telegraph.

Our government were not only ready to comply with the moderate request of M. Drouyn de Lhuys, but even to go beyond it, and give the czar a month's longer grace, if he were willing to take it. The object of the Austrian foreign minister was not to force the compliance of the czar, but to gain time for him, and avert, as long as he could, a declaration of war by the Western powers. While, however, he pretended the willingness of his government to unite in enforcing the withdrawal of the Russians from the principalities, he was, in truth, desirous that they should withdraw, in the hope that an Austrian occupation, with the consent of the allies, might supervene. There was no intention, whatever might be the reply of Russia, to proceed to extremities in support of France and England. Subsequent events have proved this; most politicians of eminence then

saw it; but our government was credulous, and were made more credulous by the influence of the French minister for foreign affairs, whose incurable blindness to the designs of Austria at last issued in his escapade at the Vienna conference, and the loss of office.

Upon the receipt of Lord Cowley's telegraphic request, Lord Clarendon, our foreign minister, wrote to the British ambassador at the court of Berlin, enclosing a copy of a despatch to Count Nesselrode, demanding the evacuation of the provinces.

THE EARL OF CLARENDON TO COUNT NESSELRODE.

M. LE COMTE,

Foreign Office, Feb. 27, 1854.

As the ordinary channels of communication between England and Russia have been closed by the recent interruption of diplomatic relations between the two Courts, I am under the necessity of addressing myself directly to your Excellency on a matter of the deepest importance to our respective Governments and to Europe.

The British Government has for many months anxiously laboured, in conjunction with its allies, to effect a reconciliation of differences between Russia and the Sublime Porte, and it is with the utmost pain that the British Government has come to the conclusion that one last hope alone remains of averting the calamity which has so long impended over Europe.

It rests with the Government of Russia to determine whether that hope shall be realized or extinguished; for the British Government, having exhausted all the efforts of negotiation, is compelled to declare to the Cabinet of St. Petersburg, that if Russia should decline to restrict within purely diplomatic limits the discussion in which she has for some time past been engaged with the Sublime Porte, and does not, by return of the messenger who is the bearer of my present letter, announce her intention of causing the Russian troops under the orders of Prince Gortschakoff to commence their march with a view to recross the Pruth, so that the provinces of Moldavia and Wallachia shall be completely evacuated on the 30th of April next, the British Government must consider the refusal or the silence of the Cabinet of St. Petersburg as equivalent to a declaration of war, and will take its measures accordingly.

The messenger who is the bearer of this letter to your Excellency is directed not to wait more than six days at St. Petersburg for your reply; and I earnestly trust that he may convey to me an announcement on the part of the Russian Government that by the 30th of April next the Principalities will cease to be occupied by Russian forces.

I have, &c.,

CLARENDON.

The following is the despatch of the British minister to Lord Bloomfield:—

THE EARL OF CLARENDON TO LORD BLOOMFIELD.

MY LORD,

Foreign Office, Feb. 27, 1854.

I TRANSMIT to your lordship herewith a copy of a letter which I have addressed to Count Nesselrode, requiring the evacuation of the Principalities; and I have to instruct your lordship to communicate it immediately to Baron Manteuffel, and to state that her Majesty's Government, having anxiously, but in vain, laboured for many months, in conjunction with the Governments of Austria, France, and Prussia, to effect an amicable settlement of the differences between Russia and the Porte, must now consider that negotiation is at an end; that the inadmissible terms upon which the Emperor of Russia will alone negotiate for peace, and the vast scale on which military and naval preparations are proceeding in Russia, leave no doubt as to the disastrous policy which his Imperial Majesty is determined to pursue.

The dignity of the Powers concerned in these recent transactions, and the great interests now suffering from suspense, forbid any further delay, and require that all doubt as to the future should be removed; and, as the forcible occupation of the Principalities was an injury inflicted upon Turkey and an offence offered to Europe by Russia, it has appeared proper to her Majesty's Government, and to that of the Emperor of the French, that the final issue should have reference to that act of aggression, and that the Government of Russia should be required within a given time to evacuate that portion of the Sultan's territory.

Both Governments, however, are animated by the sincerest desire of co-operating with Prussia. They acknowledge the paramount necessity of a cordial understanding between the Four Powers at this critical juncture of the affairs of Europe; and they are convinced that the all-important questions as to whether the war is to become general, or be confined within narrow limits, and whether the contest is to be protracted, or peace speedily restored, must depend on the policy of the Four Powers being decided, vigorous, and united.

They have consequently determined not to send forward the identical letter they have addressed to Count Nesselrode without previous communication to the Government of Prussia, in the conviction that that Government will appreciate the friendly confidence implied by this proceeding; and your lordship will earnestly request Baron Manteuffel to join in the requisition to Russia; or, if he should unfortunately decline to do so, that the Prussian Government will, at least, make known to the Cabinet of St. Petersburg that it has their sanction and support. It is impossible for your lordship to overstate the importance which her Majesty's Government attach to a decision upon which the best interests of Europe may depend.

Your lordship will place the messenger Blackwood at the disposal of Baron Manteuffel, and may for that purpose detain him for a few hours; but it is desirable that he should proceed on his journey to St. Petersburg with the least possible delay.

You will read this despatch to Baron Manteuffel, and you will give his Excellency a copy of it.

I am, &c.,

CLARENDON.

Lord Bloomfield's account of the way he discharged the duty thus imposed upon him, and the result of his efforts, are shown in his despatch in reply to the above.

LORD BLOOMFIELD TO THE EARL OF CLARENDON.

(Received March 7.)

(Extract.)

Berlin, March 4.

BARON MANTEUFFEL has just informed me that he had not failed to submit to the King the copies of your lordship's despatch of the 27th ult., and of the letter therein enclosed which you have addressed to Count Nesselrode, requiring the evacuation of the Danubian Principalities, and that His Majesty immediately ordered him to address an instruction to General Rochow in the sense desired by Her Majesty's Government.

This instruction, he said, was sent to St. Petersburg last night by the post, and was drawn up in very pressing language. It urged the Russian Government to consider the dangers to which the peace of the world would be exposed by a refusal, and declared that the responsibility of the war, which might be the consequence of that refusal, would rest with the Emperor.

Baron Manteuffel added that the King, in approving the draft of the despatch which had been laid before him, observed that he felt it to be his duty to give all the support in his power to any measure which might still hold out a hope, ever so slight, of the maintenance of peace.

The King of Prussia knew very well that there was but one way of securing peace, and that was the union of the German powers with the allies, in making the refusal of the auto-

crat to withdraw his troops from the provinces a *casus belli*. The czar would have obeyed such a summons. But the King of Prussia held political, as well as personal, relations with his imperial brother-in-law too intimate not to be well aware that the latter would endeavour to hold his vantage-ground in the principalities; and trust to a rupture between France and England, their embroilment with the United States on some questions connected with blockades, the sympathy of the German and Scandinavian governments, the success of a Greek insurrection, or such other unforeseen event as would paralyse the friends of Ottoman independence, and leave him free to act out the long-cherished dreams of his ambition. It would appear that privately the Prussian king was more candid than the despatch of the British ambassador would lead us to believe, for Lord Bloomfield sent a telegraphic communication previous to his despatch, that he had had an interview with Baron Manteuffel, who represented to him the probability of his Prussian majesty using his influence with the Russian emperor to induce him to evacuate the provinces, "but he did not think his majesty would take a part in active hostilities in the event of a refusal." At all events, if the king were not so candid the minister was, and the roundabout proceedings of the English foreign minister only conduced to loss of time, and aided the German governments to carry out their plans in assisting the czar by diplomatic intervention and delay. Still, when these papers were produced to the English House of Commons, they furnished proof to the most obstinately prejudiced of the Anglo-Russian party, that there remained nothing for the security of Turkey, or the honour of England, but war. The mode in which the czar received the ultimatum of the allies is detailed, with interesting and somewhat amusing minuteness, in the last of those papers which it is necessary to lay before our readers, and strengthened the feeling of the House that war was wisdom, however reluctant the country might be to the adoption of its policy:—

CONSUL MICHELE TO THE EARL OF CLARENDON.

(Received March 25.)

(Extract.)

St. Petersburg, March 19, 1854.

I BEG to acknowledge the receipt of the despatch which your lordship did me the honour to address to me on the 27th of February ult. This despatch, together with its enclosure from your lordship to Count Nesselrode, was delivered to me by the Queen's messenger, Captain Blackwood, at a few minutes after eleven o'clock, on the morning of the 13th inst.; and I lost not a moment in endeavouring to give effect to your lordship's instructions.

Within an hour after the arrival of the messenger, the despatch forwarded to me by his Excellency, Lord Cowley (enclosing a communication from the French Government to their Consul here), was placed by me in the hands of M. de Castillon; and, before the expiration of another hour, M. de Castillon and myself had presented ourselves

at the Imperial Ministry for Foreign Affairs, and solicited the honour of an interview with the Chancellor of the Empire, for the purpose of simultaneously presenting the Notes of the English and French Cabinets. Count Nesselrode, through the Director of his Chancellerie, expressed his inability to see us at that moment, but appointed twelve o'clock on the following day to receive the communications of which we were respectively the bearers. When I parted from M. de Castillon, about two o'clock, it was arranged that I was to call for him the following morning at half-past eleven, in order that we might proceed together to the Chancellor.

By two o'clock on the 13th, I had placed in the hands of his Excellency Count Valentin Esterhazy, the Austrian Minister at this Court, the packet of Despatches brought to me by Captain Blackwood, from his Excellency the Earl of Westmoreland, at Vienna; and by a little after two, I had communicated to his Excellency General Rochow, the Prussian Minister here, the purport of Lord Bloomfield's despatch, dated Berlin, 2nd of March inst.: viz., "that no packet had been received by his lordship from the Ministry for Foreign Affairs for transmission to St. Petersburg, but that despatches from the Prussian Government would be forwarded to the Prussian representative by their own separate courier."

A few minutes before the appointed hour (twelve o'clock on Tuesday, the 14th March inst.) M. de Castillon and I arrived at the Imperial Ministry for Foreign Affairs, and, after waiting a few minutes, it was intimated to me by the Director of the Chancellerie, "that Count Nesselrode would receive the English Consul alone," and I was ushered into his room.

Count Nesselrode received me with his usual courtesy. I handed to his Excellency your lordship's letter, and stated, from a memorandum which I had drawn up, the precise terms of your lordship's instructions with reference to the return to England of the Queen's messenger.

Count Nesselrode requested permission to peruse this memorandum, and I handed it to him. He then informed me that "the Emperor was not at that moment in St. Petersburg; that on His Majesty's return (which would probably be on Friday, the 5th (17th) inst.), your lordship's communication should be laid before His Majesty, and His Majesty's commands taken thereon; when a reply to your lordship's letter should be forwarded to me."

The Chancellor then remarked upon the length of time that had elapsed since the date of your lordship's despatch to me, viz., February 27th, and asked me what had detained the messenger so long on the road?

I explained that the Queen's messenger had not come direct from London to St. Petersburg, but had been the bearer of despatches for the British Ministers at Paris, Berlin, and Vienna, which latter capital Captain Blackwood left only on the 7th inst., and had arrived at St. Petersburg on the morning of the 13th, thus making a rapid journey, considering the very bad state of the roads.

On quitting Count Nesselrode, I was about to take with me the memorandum I had, at his desire, handed to his Excellency for his perusal, when he requested "that I would be kind enough to leave it with him." I said that I had merely transcribed your lordship's instructions for my own guidance, and to prevent any misapprehension of your lordship's intentions, with reference to the time fixed for the return of the Queen's messenger to England; that I had no instructions to make any written communication in presenting your lordship's note, but since his Excellency desired to retain this paper (which was only a transcript of your lordship's instructions to me relative to the precise moment for despatching the messenger to England), I felt that I should not be acting otherwise than in accordance with your lordship's wishes by rendering any misunderstanding on this head impossible; and accordingly I allowed the Chancellor to retain this memorandum, a copy of which I have the honour to send herewith.

The Emperor returned to St. Petersburg early on the morning of the 5th (17th) inst. from Finland, whither he had proceeded on Sunday evening, the 12th inst., in company with three of his sons, the Grand Dukes Alexander, Nicholas, and Michael, to inspect the fortifications at Wiborg, Helsingfors, and Sweaborg; the Grand Duke Constantine having gone to Finland some days previously.

At ten o'clock last night, I received a note from the Chancellor of the Empire inviting me to call upon him at

one o'clock, p.m., this day. I was punctual in my attendance; and on sending up my name to the Chancellor, I was informed that the French Consul was with his Excellency.

After waiting a short time, I was told Count Nesselrode would receive me. On entering the room, his Excellency's greeting was of the most friendly description. He said, "I have taken His Majesty's commands with reference to Lord Clarendon's note, and the Emperor does not think it becoming to make any reply to it." I replied, "M. le Comte, in a matter of so much importance, I am sure I shall be excused for desiring to convey to my Government the exact words employed by your Excellency." The Count at first used the words, "His Majesty does not think it becoming in him to give any reply to Lord Clarendon's letter (ne le croit pas convenable de donner aucune réponse à la lettre de Lord Clarendon)." Upon my repeating this phrase after Count Nesselrode, his Excellency said, "L'Empereur ne juge pas convenable." &c.; and I again repeated after him the entire sentence. After I had done so, the Count said, "Yes, that is the answer I wish you to convey to your Government:— 'L'Empereur ne juge pas convenable de donner aucune réponse à la lettre de Lord Clarendon.'"

Having delivered to me this official message, Count Nesselrode begged me to be seated, and explained to me that he had only waited the return of the Emperor to submit your lordship's letter to His Majesty. His Excellency then asked me, "When I proposed to despatch the Queen's messenger?" I told him, "This afternoon, provided his passport, &c., could be got ready in time." Count Nesselrode informed me he had already sent a courier's pass for Captain Blackwood to the Baron de Plessen, and then asked me, "Whether to-day was not the sixth day?" I said, "From his arrival at St. Petersburg it is; but had I been left without any reply, or without such an intimation as I have to-day received from your Excellency, I should not have despatched the messenger until to-morrow, the 20th inst., at twelve o'clock, when six entire days would have elapsed since I placed Lord Clarendon's despatch in your Excellency's hands."

In the course of our subsequent conversation I asked Count Nesselrode what the intentions of his Government were with reference to the consular arrangements between the two countries, in the event of a declaration of war? His Excellency replied, "That will entirely depend upon the course Her Britannic Majesty's Government may adopt; we shall not declare war."

INCLOSURE 1 IN No. 137.

MEMORANDUM GIVEN BY CONSUL MICHELE TO COUNT NESSELRODE.

IN pursuance of the instructions conveyed to me by my Government, dated the 27th of February ult., I have the honour of placing in your Excellency's hands, a letter from the Right Hon. the Earl of Clarendon, Her Britannic Majesty's Secretary of State for Foreign Affairs. In doing so, I am further instructed to acquaint your Excellency, that the Queen's messenger, who was the bearer of this communication, and who reached St. Petersburg only yesterday morning, will be ready to return to England, with your Excellency's reply, as soon as it shall be sent to me; but if, on the expiration of six days from to-day, your Excellency should not have sent me any letter to the Earl of Clarendon's address, or if, previously to the expiration of that period, your Excellency should inform me that the messenger need not remain at St. Petersburg, in either of these cases I am to direct the Queen's messenger to return to England with the utmost speed.

These scenes at St. Petersburg were soon brought to an end; the haughty Czar returned no answer. He treated with contempt menaces and friendly overtures. He desired to realize the representation which the professor of history at St. Petersburg gave of him—no doubt with the imperial sanction—that he needed not

to draw the sword to quell the disquieted in Europe, but, as all the world knew, he always chose the right juncture for interference—he had only to speak, and the nations submitted to his sublime will. He was now about to prove the truth of the oft-quoted aphorism of the great Napoleon, “There is only a step between the sublime and the ridiculous.” From the haughty prince, who would not condescend to notice the just demands of the mightiest states, he was about speedily to descend to the condition of the baffled and beaten tyrant; whose armies were chased from the field by undisciplined levies—whose fleets were obliged to cling for shelter to the moorage and anchorage of fortified harbours—whose most grateful allies feared to acknowledge him openly—whose subjects looked for the approach of his conquerors as their deliverers—and who, at last, was to sink in despair before the strength of the storm his own rage invoked. The czar gave no answer to the requisition of the united powers, and they, at last, goaded by the insult to a promptitude which his injustice ought sooner to have provoked, pronounced the fearful word which involved vast empires in a whirlwind of destruction.

On the 27th of March her majesty sent a message to the Commons House of Parliament. It was known to the public that such would be the case, and the house was crowded with members; the Speaker's, reporters', and strangers' galleries were filled; the lobbies were nearly as much crowded as the galleries, and all around the queen's palace, at Westminster, a vast concourse were assembled, some watching the approach of members to the House, and others collected in groups, discussing the event to which the expectation of the nation, the empire, the world, was directed. On great occasions, the English House of Commons presents an aspect of moral sublimity. The plain, unpretending air of the members, and of the house, as compared with the House of Lords, and as associated with the relative power of the Commons,—holding the supplies, and directly representing the richest, freest, and most intelligent community in Europe,—always impresses foreigners with an idea of British power, beyond what they acquire in our arsenals, or behold even in our fleets. The free-and-easy air which the House ordinarily maintains, always gives way on great occasions to one of deep earnestness and steady purpose. They are, and they appear to be, the representatives of a bold, rough, and manly people, stern in work or war, tenacious of purpose, fearless of dangers, and of a practical genius unequalled in the history of nations. After the usual buzz and bustle preliminary to an event in the Commons, the attention of the members was fixed, and every sound was hushed, when, at five o'clock, Lord John

Russell left the ministerial benches, and walked down to the bar of the House. The Speaker having requested him, in the usual form, to bring up the queen's message, he placed the document in the Speaker's hands, who proceeded at once to read it to the House. It is surprising (if we may be allowed this brief digression) how frequently fortune lays upon Lord John the conduct of great affairs. Of what memorable scenes in that house he has been the most prominent object—of what startling acts he has been the author or mover—of what important national or party conflicts he has been the hero! Lord John never, or at all events seldom, has appeared equal to the great occasions in which he has borne the chief part. His person, although pleasing, is not dignified; his bearing and manner cannot fail to leave an impression of cunning and ambition; and his eloquence is seldom earnest, except with a mere rhetorical earnestness, unless when a party cause is to be debated. The occasion of delivering her majesty's message made no exception to these general characteristics of the great commoner's appearance. He did not seem to transact his part in the great drama heartily.

The message read by the Speaker was as follows:—

VICTORIA REGINA.—Her Majesty thinks it proper to acquaint the House of Commons, that the negotiations in which Her Majesty, in concert with her Allies, has for sometime past been engaged with His Majesty the Emperor of all the Russias, have terminated, and that Her Majesty feels bound to afford active assistance to her ally the Sultan, against unprovoked aggression.

Her Majesty has given directions for laying before the House of Commons copies of such papers, in addition to those already communicated to Parliament, as will afford the fullest information with regard to the subject of these negotiations. It is a consolation to Her Majesty to reflect that no endeavours have been wanting on her part, to preserve to her subjects the blessings of peace.

Her Majesty's just expectations have been disappointed, and Her Majesty relies with confidence on the zeal and devotion of her faithful Commons, and on the exertions of her brave and loyal subjects, to support her in her determination to employ the power and resources of the nation for protecting the dominions of the Sultan against the encroachments of Russia.

The House deferred its consideration of her majesty's message, as is the custom, but the next day the declaration of war, by her majesty, appeared in the *Gazette*:—

DECLARATION.

It is with deep regret that her Majesty announces the failure of her anxious and protracted endeavours to preserve for her people and for Europe the blessings of peace.

The unprovoked aggression of the Emperor of Russia against the Sublime Porte has been persisted in with such disregard of consequences, that after the rejection by the Emperor of Russia of terms which the Emperor of Austria, the Emperor of the French, and the King of Prussia, as well as her Majesty, considered just and equitable, her Majesty is compelled by a sense of what is due to the honour of her Crown, to the interests of her people, and to the independence of the States of Europe, to come forward in defence of an ally whose territory is invaded, and whose dignity and independence are assailed.

Her Majesty, in justification of the course she is about to pursue, refers to the transaction in which her Majesty has been engaged.

The Emperor of Russia had some cause of complaint against the Sultan with reference to the settlement, which his Highness had sanctioned, of the conflicting claims of the Greek and Latin Churches to a portion of the Holy Places of Jerusalem and its neighbourhood. To the complaint of the Emperor of Russia on this head justice was done; and her Majesty's Ambassador at Constantinople had the satisfaction of promoting an arrangement to which no exception was taken by the Russian Government.

But while the Russian Government repeatedly assured the Government of her Majesty that the mission of Prince Menschikoff to Constantinople was exclusively directed to the settlement of the question of the Holy Places at Jerusalem, Prince Menschikoff himself pressed upon the Porte other demands of a far more serious and important character, the nature of which he in the first instance endeavoured, as far as possible, to conceal from her Majesty's Ambassador. And these demands, thus studiously concealed, affected not only the privileges of the Greek Church at Jerusalem, but the position of many millions of Turkish subjects in their relations to their Sovereign the Sultan.

These demands were rejected by the spontaneous decision of the Sublime Porte.

Two assurances had been given to her Majesty; one, that the mission of Prince Menschikoff only regarded the Holy Places; the other, that his mission would be of a conciliatory character.

In both respects her Majesty's just expectations were disappointed.

Demands were made which, in the opinion of the Sultan, extended to the substitution of the Emperor of Russia's authority for his own, over a large portion of his subjects; and those demands were enforced by a threat; and when her Majesty learnt that, on announcing the termination of his mission, Prince Menschikoff declared that the refusal of his demands would impose upon the Imperial Government the necessity of seeking a guarantee by its own power, her Majesty thought proper that her fleet should leave Malta, and, in co-operation with that of his Majesty the Emperor of the French, take up its station in the neighbourhood of the Dardanelles.

So long as the negotiations bore an amicable character her Majesty refrained from any demonstration of force. But when, in addition to the assemblage of large military forces on the frontier of Turkey, the Ambassador of Russia intimated that serious consequences would ensue from the refusal of the Sultan to comply with unwarrantable demands, her Majesty deemed it right, in conjunction with the Emperor of the French, to give an unquestionable proof of her determination to support the sovereign rights of the Sultan.

The Russian Government has maintained that the determination of the Emperor to occupy the Principalities was taken in consequence of the advance of the fleets of England and France. But the menace of invasion of the Turkish territory was conveyed in Count Nesselrode's note to Redschid Pasha of the 19th (31st) of May, and re-stated in his despatch to Baron Brunow, of the 20th May (1st June), which announced the determination of the Emperor of Russia to order his troops to occupy the Principalities, if the Porte did not within a week comply with the demands of Russia.

The despatch to her Majesty's Ambassador at Constantinople, authorising him in certain specified contingencies to send for the British fleet, was dated the 31st May, and the order sent direct from England to her Majesty's Admiral to proceed to the neighbourhood of the Dardanelles, was dated the 2nd of June.

The determination to occupy the Principalities was therefore taken before the orders for the advance of the combined squadrons were given.

The Sultan's Minister was informed that unless he signed within a week, and without the change of a word, the note proposed to the Porte by Prince Menschikoff, on the eve of his departure from Constantinople, the Principalities of Moldavia and Wallachia would be occupied by Russian troops. The Sultan could not accede to so insulting a demand; but when the actual occupation of the Principalities took place, the Sultan did not, as he

might have done, in the exercise of his undoubted right, declare war, but addressed a protest to his allies.

Her Majesty, in conjunction with the Sovereigns of Austria, France, and Prussia, has made various attempts to meet any just demands of the Emperor of Russia without affecting the dignity and independence of the Sultan; and had it been the sole object of Russia to obtain security for the enjoyment by the Christian subjects of the Porte of their privileges and immunities, she would have found it in the offers that have been made by the Sultan. But as the security was not offered in the shape of a special and separate stipulation with Russia, it was rejected. Twice has this offer been made by the Sultan, and recommended by the four Powers, once by a note originally prepared at Vienna, and subsequently modified by the Porte, once by the proposal of bases of negotiation agreed upon at Constantinople, on the 31st of December, and approved at Vienna on the 13th of January, as offering to the two parties the means of arriving at an understanding in a becoming and honourable manner.

It is thus manifest, that a right for Russia to interfere in the ordinary relations of Turkish subjects to their sovereign, and not the happiness of Christian communities in Turkey, was the object sought for by the Russian Government; to such a demand the Sultan would not submit, and his Highness, in self-defence, declared war upon Russia; but her Majesty, nevertheless, in conjunction with her allies, has not ceased her endeavours to restore peace between the contending parties.

The time has, however, now arrived, when the advice and remonstrances of the Four Powers, having proved wholly ineffectual, and the military preparations of Russia becoming daily more extended, it is but too obvious that the Emperor of Russia has entered upon a course of policy which, if unchecked, must lead to the destruction of the Ottoman empire.

In this conjuncture, her Majesty feels called upon by regard for an ally the integrity and independence of whose empire have been recognised as essential to the peace of Europe, by the sympathies of her people with right against wrong, by a desire to avert from her dominions most injurious consequences, and to save Europe from the preponderance of a Power which has violated the faith of treaties, and defies the opinion of the civilized world, to take up arms, in conjunction with the Emperor of the French, for the defence of the Sultan.

Her Majesty is persuaded that in so acting she will have the cordial support of her people, and that the pretext of zeal for the Christian religion will be used in vain to cover an aggression undertaken in disregard of its holy precepts and of its pure and beneficent spirit.

Her Majesty humbly trusts that her efforts may be successful, and that, by the blessing of Providence, peace may be re-established on safe and solid foundations.

Westminster, March 28, 1854.

DECLARATION.

HER MAJESTY the Queen of the United Kingdom of Great Britain and Ireland, having been compelled to take up arms in support of an ally, is desirous of rendering the war as little onerous as possible to the Powers with whom she remains at peace.

To preserve the commerce of neutrals from all unnecessary obstruction, her Majesty is willing, for the present, to waive a part of the belligerent rights appertaining to her by the law of nations.

It is impossible for her Majesty to forego the exercise of her right of seizing articles contraband of war, and of preventing neutrals from bearing the enemy's despatches, and she must maintain the rights of a belligerent to prevent neutrals from breaking any effective blockade which may be established with an adequate force against the enemy's forts, harbours, or coasts.

But her Majesty will waive the right of seizing enemy's property on board a neutral vessel, unless it be contraband of war.

It is not her Majesty's intention to claim the confiscation of neutral property, not being contraband of war, found on board enemy's ships, and her Majesty further declares that, being anxious to lessen as much as possible the evils

of war, and to restrict its operations to the regularly organised forces of the country, it is not her present intention to issue letters of marque for the commissioning of privateers.

Westminster, March 28, 1854.

In accordance with the last part of the declaration, the Russian merchants resident in England were informed that, so long as they obeyed the laws of the country, and abstained from giving any information to the enemy, they should remain unmolested. A similar concession to modern notions of humanity in war was made by the French emperor. How far the Russian and Greek merchants in England and France entered into the spirit of these concessions it is not easy to determine; but the public impression has been certainly unfavourable to them in this respect. Russia has been well informed of everything which transpired in England, in which she has had any interest.

On the 30th of March, Lord John Russell gave notice of motion for an address to her majesty, in reply to the royal message, and in support of her majesty's declaration of war. This announcement was followed by cheers, such as might be expected from a public meeting of citizens, but which, in the Commons of England, on an occasion of such gravity, proved the strength of feeling by which the country and its representatives were animated. On the 31st, Lord John Russell prefaced his motion by a long speech, in which he replied to the article published in the government journals of St. Petersburg, animadverting upon his warlike speech at the beginning of the session, and which was the occasion of bringing out from its privacy "the secret correspondence." The address, moved by Lord John, was adopted by the House, after a debate into which some warmth was thrown by a very eloquent piece of invective from Mr. Bright, one of the members for Manchester, to which Lord Palmerston delivered a reply, which, for calm dignity, lucid exposition, self-possessed authority, and cutting satire, has seldom been equalled in the Commons of England. The effect of this speech upon the House and the country was decisive, and conduced much to that increased confidence in his lordship's statesmanship, rectitude, and manly British feeling, which has since characterised the feelings of the country towards him.

The address adopted by the House was the following:

MOST GRACIOUS SOVEREIGN,—We, your Majesty's most dutiful and loyal subjects, the Commons of the United Kingdom of Great Britain and Ireland in Parliament assembled, beg leave to return to your Majesty our humble thanks for your Majesty's most gracious message, and for the communication of the several papers which have been laid before us, in obedience to your Majesty's command. We assure your Majesty of the just sense we entertain of your Majesty's anxious and uniform

endeavours to preserve to your people the blessings of peace, and of our perfect confidence in your Majesty's disposition to terminate the calamities of war, whenever that object can be accomplished, consistently with the honour of your Majesty's crown and the interests of your people. We have observed, with deep concern, that your Majesty's endeavours have been frustrated by the spirit of aggression displayed by the Emperor of Russia, in his invasion, and continued occupation, of the provinces of Wallachia and Moldavia; in the rejection of equitable terms of peace, proposed under the sanction of four of the principal Powers of Europe; and in the preparation of immense forces to support his unjust pretensions. These pretensions appear to us, your faithful Commons, subversive of the independence of the Turkish Empire; and we feel that the trust reposed in us demands, on our part, a firm determination to co-operate with your Majesty in a vigorous resistance to the projects of a sovereign whose further aggrandisement would be dangerous to the independence of Europe.

The same evening that this address was voted in the Commons, it was also moved in the Lords, by the Earl of Clarendon, after a speech which very much surpassed that of Lord John Russell in the Commons; justifying, in forcible and indignant terms, the course pursued by the queen and her government, in at last answering by war the duplicity, injustice, and insults of Russia. Lords Derby and Malmesbury expressed their strong discontent with the management of the Turkish question by the government, and Earl Grey peevishly refused his concurrence with the address. In the speech of the Earl of Derby reference was made to the memorandum of 1844, which was addressed by Count Nesselrode to the British government; and reminded Lord Aberdeen that as he was then foreign minister, and allowed this memorandum to pass without any expression of disapprobation of the designs upon Turkey, which it shadowed forth, it was not unnatural that, upon the noble earl (Aberdeen) assuming office, the czar would expect a conformity of the policy of the British government with his own. To this just critique Lord Aberdeen had the extraordinary temerity to reply, that he regarded the memorandum of 1844 with satisfaction, because it pledged the Russian government to do nothing without the concurrence of Great Britain!

Having already placed this memorandum before our readers, in connection with the secret correspondence, they can judge how little chance there was of the vigorous prosecution of a war against Russia, for its designs upon Turkey, by a minister who could express himself satisfied with a document so transparent in its spirit and intention. Its aim was to engage England, in connivance with Russia—if not participation—in her designs upon the Turkish Empire; and the whole secret correspondence was no more than an effort to bring out more fully the views of a minister, whose approbation of such a document inspired the czar with hope that, so far as the English government was concerned, there was reason to

believe that, for his interests and objects, "the right man was in the right place."

Notwithstanding the murmurs of the opposition against the cabinet, the vote was carried *nem. con.*, and the House of Lords was thus pledged to the war policy of the government.

On the 3rd of April, the House met soon after two o'clock, and a deputation of peers, in full dress, went in procession to the palace, and presented their address to her majesty. The queen returned the following reply:—

"My Lords,—I thank you for your loyal and dutiful address. It is highly gratifying to me to receive the assurances of your co-operation, in giving effect to the measures which I consider necessary for the honour of my crown and the welfare of my people."

Her majesty having intimated that she would receive the address of the House of Commons at three o'clock, the members waited upon her with it at that hour. She returned a similar answer to the one she had sent to the Lords.

The procession of the Commons excited more public attention. The way from the palace at Westminster to Buckingham Palace, was thronged with a multitude whose loyalty and enthusiasm were stimulated to the highest degree. The members were cheered as their carriages passed through the crowds, especially those most noted as approving of the war. The leader of the opposition was the object of much notice, the people paid discriminating compliments to his abilities, creditable to men many of whom apparently moved in the humblest walks of life. Colonel Sibthorp was the only exception to the popularity of the members; his carriage was followed by a low and boisterous mob, whose language was not calculated to add anything to the vanity of the gallant member. When the Speaker's carriage passed the entrance to St. James's Palace, the well-known countenance of Mr. Brotherton, the member for Salford, reminded the crowd of Cobden and Bright, and they inquired for those peace-loving representatives of the great industrial sections of the country, in terms the politeness of which might have been easily exceeded. As several of the members went in military or naval uniforms, they were objects of vigorous applause, whatever their political reputation. These indications of feeling and opinion on the part of the masses can never be overlooked with safety; had the members of her majesty's government been more attentive to these symptoms of the popular convictions and sympathies, they might have been spared a dishonourable retreat from office, their country been spared much suffering, and the loss of some renown. It is not from the highest circles, in a free state, that opinion finds its

way throughout the community; it rather ascends to those circles, supporting their influence, pervading their councils, or sweeping away their ascendancy. When we kindle a fire, we do not place the light at the top of the pile, but beneath it, and it will ascend by every crevice through which air can find an access, and finally envelop the whole. The working intellects of a nation are always nearer the masses than they are to the exclusive circles of high birth and courtly associations; and hence, generally, the popular crowd is affected with progressive opinions and great national sympathies, before the privileged classes are aware that the mind of any considerable section of the community is in motion, or that a public opinion is forming, which has the heart of the nation within it, and will assert itself, although governments and dynasties pass away before its power. The present generation of Englishmen has witnessed some scenes of vast and universal interest in this great metropolis, but never, hitherto, one so replete with momentous meaning, as the procession of their representatives from the queen's palace at Westminster to her palace at Pimlico. We shall never forget the scene, still less our emotions on beholding it, as the *cortège* passed us, when about to enter the palace gates. Metaphysicians tell us that it is a proof of the freshness and genuineness of feeling, when the impression is remembered more strongly than the incidents which occasioned it; and now, as we look back upon that brave pageant, its lines of carriages, its guards, its men of historic note, its popular leaders and men of action, all seem to vanish away from the retrospect into a dim and shadowy outline, while the emotions it awakened are as vivid as when they were formed. We felt that—however the men into whose hands the destinies and honour of the nation were committed, might trifle with the sacred trust—there were tokens in the utterances of that multitude, that they would watch their rulers with a constitutional jealousy, which would be satisfied by no pretences, and quieted with no excuses. The heart of the people was set upon the liberation of Europe from the apprehensions with which it was haunted concerning the gigantic force of an unscrupulous empire, ever prompt to wield that force to break down every safeguard of liberty with which the wisdom and valour of past ages had surrounded nationalities.

On the 29th of March, orders in council were promulgated, and published in the *London Gazette*, concerning reprisals, embargoes, and prizes. Amongst these one is worthy of being singled out, as it showed the desire of the government—a desire which was thoroughly approved of by the people—to make war bear a more humane aspect than it had hitherto borne in past struggles.

At the Court at Buckingham Palace, the 29th day of March, 1854. Present—The Queen's Most Excellent Majesty in Council.

HER MAJESTY being compelled to declare war against his Imperial Majesty the Emperor of all the Russias, and being desirous to lessen as much as possible the evils thereof, is pleased, by and with the advice of her Privy Council, to order, and it is hereby ordered, that Russian merchant vessels, in any ports or places within her Majesty's dominions, shall be allowed until the 10th day of May next, six weeks from the date hereof, for loading their cargoes and departing from such ports or places; and that such Russian merchant vessels, if met at sea by any of her Majesty's ships, shall be permitted to continue their voyage, if, on examination of their papers, it shall appear that their cargoes were taken on board before the expiration of the above term. Provided that nothing herein contained shall extend, or be taken to extend, to Russian vessels having on board any officer in the military or naval service of the enemy, or any article prohibited, or contraband of war, or any despatch of or to the Russian Government.

And it is hereby further ordered by her Majesty, by and with the advice of her Privy Council as aforesaid, that any Russian merchant vessel which, prior to the date of this order, shall have sailed from any foreign port bound for any port or place in her Majesty's dominions, shall be permitted to enter such port or place and to discharge her cargo, and afterwards forthwith to depart without molestation; and that any such vessel, if met at sea by any of her Majesty's ships, shall be permitted to continue her voyage to any port not blockaded.

And the Right Hon. the Lords Commissioners of her Majesty's Treasury, the Lords Commissioners of the Admiralty, and the Lord Warden of the Cinque Ports, are to give the necessary directions herein as to them may respectively appertain.

C. C. GREVILLE.

On the 31st of March, the ceremony of proclaiming war at the Royal Exchange was gone through, without any of the pomp which characterised that proceeding in former times. The proper officers, unattended, ascended the steps of the Exchange, and read the declaration. There was of course a crowd—for when is there not a crowd upon that great highway of Europe? The assemblage listened with respectful silence, gave three hearty cheers, and melted away into the common current of the great throng ever flowing by those old haunts of commerce which surround that world-noted spot.

The House of Lords, at the suggestion of the Earl of Roden, voted an address to her Majesty that she would be pleased to set apart some day for national humiliation and prayer. This motion naturally "called up" the Archbishop of Canterbury, who gave the sanction of his great name to the war as a just one, and one upon which the nation might, with clear conscience, invoke the blessing of God. Perhaps there is not an ecclesiastic in any Church, or in any nation, whose high character entitles him more to veneration and esteem than Archbishop Sumner: a man of the meekest and gentlest spirit, a lover and promoter of peace in the Church and in the world, whose liberal and unsectarian spirit has won for him the love of Christians of all sects, as his extensive learning, sound judgment, and elegant tastes, have won for him universal respect. Nothing could in-

duce such a man to pronounce a war just which he believed to be otherwise; and no language could be more clear, explicit, and solemn, than that which he adopted when committing his judgment to its defence. It is a vile slander upon such men, when the advocates of "peace at any price" represent the present contest as supported by those who delight in blood. War is terrible; but, as Lord Palmerston told the House of Commons, in answer to Mr. Bright, "there are calamities which nations may endure still worse than war, and there are things for which peace may be advantageously sacrificed."

It was not until the 26th of April that a day of fasting and humiliation was observed. In the meantime, the country was filled with warlike bustle, and troops were hurrying on by rail and ship to their destination in the land which their valour was expected to save. On the fast-day solemnity characterised the bearing of the population. Prayer ascended from thousands of sanctuaries and millions of worshippers, and their prayers were heard. Chastisements, not unmerited, fell upon the country ere such triumphs were granted as have since moved the old church bells of England to merry music, when the exultations of the people ascended with their peal; but the prayers of that solemn day were not offered to the Lord of Hosts in vain. This was a second proclamation of the war—a proclamation made by the whole people, and made from the thresholds of their temples. It was an occasion to awaken conscience, if the nation had any misgiving as to the justice of its cause; and it was one to revive the deep heart of a thoughtful and church-going people, that the enemy against whom their hosts went forth to battle, sought a universal and ruthless domination, before which, if not checked in his career, their

"Happy homes and altars free"

would be desecrated together. This day of solemnity was a call to the whole people from the churches where they worshipped, and the grave-yards where the dust of their fathers slept, to arm for the preservation of the great principle of national independence; for if this principle be violated with impunity upon the weaker by the more powerful states of Europe, England might herself be assailed by the aggressor in the pride and presumption of his strength.

Collections were made in all the churches on the fast-day, on behalf of the wives and children of those who had gone out for their country in the defence of her ally: these collections showed, by the universal liberality with which they were made, that a humane as well as resolute spirit animated the nation's heart.

Throughout the months of April and May

troops proceeded to the East, and reinforcements to the Baltic fleet were from time to time dispatched, as circumstances seemed to require. It would border on prolixity, after the details given of the embarkation of troops before the declaration of war was made, to recount the regiments afterwards selected for service, or the alacrity of the troops to depart for the field of duty. Our army was literally an army of volunteers. No conscription brought to its depots the unwilling and weeping rustic, torn from his obscure home and the circle of his family, unable to comprehend the causes or objects of such disaster. Nor were there parades of silent and depressed men, whose reluctant battalions went sorrowfully forward to encounter dangers which to them offered no glory. A sense of duty, animated by a gallant nature, made the whole army ready to offer themselves for foreign service. The memory of their great chief, so lately removed by death, and the assurance of victory which his command inspired, filled the imagination of the soldiery, and made them aspire to preserve the great renown his genius and their own valour had shed upon their arms:—

“That star of the field, which so often had poured
Its rays on the battle, was set;
But enough of its glory remained on their swords
To light them to victory yet.”

On the same day upon which the announcement was made by the Queen of England to the representatives of her people that peace was no longer possible, the Emperor of the French made a similar announcement to the *corps législatif*, to which body the minister of state read the message of the Emperor. A similar communication was made to the senate, which body rose, and with repeated cheers and cries of *Vive l'Empereur*, attested their zeal for the honour of France and the dignity of their chief. Thus the two nations buried together the rivalry of the past, and commenced a new rivalry, where success should consist in rendering the greater aid to the arms, and bearing the more generous testimony to the military virtue of each other. Waterloo was avenged, and avenged by the heir of his house whose power, but not greatness, perished on that field; and avenged, not by the vulgar violence of ignoble hatred, but by a competition of magnanimity and justice, subserving the welfare of mankind. Thus perish for ever the feuds of France and England! May they live only in the stories of their fatuity and misfortunes—of the individual and national greatness they called forth—and of the principles and aims which rent the fair bosom of Western Europe, scattered the resources of the most fertile lands, and engaged in mutual warfare two nations destined by Providence to grow great side by side, until the hour for mutual support should

come, and display their greatness together. A new convention between the two governments was signed in London on the 18th of April; the object of the two courts being the re-establishment of peace between the sultan and the czar, so as to guarantee the integrity of the Ottoman Empire. They disclaimed all exclusive advantages, and professed to desire only to protect the public interests of Europe.

To these proceedings the czar could not affect indifference. Every means that his personal cunning and the state-craft of his counsellors could adopt, was resorted to, for the purpose of inflating the pride of race, and intensifying the religious bigotry of the Russian population. The popes, as the Greek priests are called, were, however, his most effectual instruments. Whether the story was originated by the czar himself is uncertain, but there is no doubt that, with his connivance, a strange tale was circulated throughout all Russia by the popes. It was said that the emperor had a vision of St. Nicholas, his patron saint—the patron saint of Russia, and, very odd coincidence, the patron saint of thieves! For three successive nights the apparition of the saint was vouchsafed. He, upon the first appearance, questioned the czar as to his motives in undertaking a religious war against the Turks. The czar replied that he had only one motive—the desire to plant the Cross upon St. Sophia. The saint disappeared with a doubtful expression of countenance, as well he might, but seemed more disposed to push an investigation of the matter on his second apparition. The czar, after many pious asseverations, such as might satisfy any saint dead or living, disclaimed all motives of personal ambition, and professed the war to be a crusade for the orthodox Church. It was not, however, the Earl of Aberdeen, or the Duke of Wellington with whom his imperial majesty had to do this time: the saint was as inquisitive a visitor as Sir George Hamilton Seymour, and would not be put off with mere declarations, even on “the word of a gentleman.” Still, with an expression of dubious reflection upon his countenance, Saint Nicholas vanished, like other ghosts, on the last shadow of the retiring night. The third visit of the saint was marked by great solemnity: in tones of imperious but sacred authority, such as none other could think of using to a czar, he demanded whether, possibly, the grandeur of the enterprise, the richness of the possession, and an impatience of any independence in surrounding nations, had not influenced his imperial *protégé*. Nicholas, the czar, once again assured Nicholas, the saint,—with all that cunning persuasiveness which is said to belong to the family of Romanoff, and which De Cus-tine attributes to the whole Sclavie race,—that he was entirely free from cupidity or aggran-

disement, or any other feeling not approved of where St. Nicholas came from; but that he meditated what all saints, whether living in heaven or in holy Russia, must desire to see accomplished—the glory of the only true and orthodox Church. Wreathed with smiles brighter than the glory which surrounded him, the saintly patron of saintly Russia addressed its chief: “Go, my son! God will prosper you; your arms will be crowned with success; your name shall be associated with the triumph of the orthodox faith; God, who sent me to you, will give you the victory!” He then disappeared, leaving the devout czar still more devout, and resolved, under such a sanction, and with such prognostics of success, to defy the Moslems, the schismatic French, and the infidel English. This story prepared the minds of the devotees, and of the multitude, for the canting and hypocritical manifesto which followed fast upon its circulation.

MANIFESTO.

In the grace of God, we, Nicholas the First, Emperor and Autocrat of all the Russias, King of Poland, &c., &c., to all our subjects make known:—

Since the commencement of our difference with the Turkish Government, we have solemnly announced to our faithful subjects that a sentiment of justice had alone induced us to re-establish the violated rights of the orthodox Christians, subjects of the Ottoman Porte.

We have not sought, we do not seek, to make conquests, nor to exercise in Turkey any supremacy whatever that might be likely to exceed that influence which belongs to Russia by virtue of existing treaties.

At that period we already encountered distrust; then soon a covert hostility on the part of the Governments of France and England, who endeavoured to lead the Porte astray by misrepresenting our intentions. Lastly, at this moment, England and France throw off the mask, regard our difference with Turkey as a mere secondary question, and no longer dissemble that their joint object is to weaken Russia, to tear from her a part of her possessions, and to bring down our country from the powerful position to which the hand of the Supreme Being has exalted it.

Is it for orthodox Russia to fear such threats?

Ready to confound the audacity of the enemy, shall she swerve from the sacred purpose that has been assigned to her by Divine Providence? No! Russia has not forgotten God! It is not for worldly interests that she has taken up arms. She combats for the Christian faith, for the defence of her co-religionists oppressed by implacable enemies.

Let all Christendom know, then, that the thought of the sovereign of Russia is also the thought that animates and inspires all the great family of the Russian people—this orthodox people, faithful to God and to His only Son, Jesus Christ our Redeemer.

It is for the faith and for Christendom that we combat!

“God with us—who against us?”

Given at St. Petersburg, on the 11th day of the month of April, in the year of grace 1854, and the twenty-ninth of our reign.

NICHOLAS.

A much more important document than the above was also published under the alleged influence of the vision. The manifesto was for Russia; but it was necessary to issue a declaration of war counter to the declaration of the allies.

DECLARATION.

FRANCE and Great Britain have at last openly left the system of disguised hostility which they had adopted towards Russia, especially by the entrance of their fleets into the Black Sea.

The result of the explanations which they have given of that measure was of a nature to lead to a rupture of reciprocal relations between them and the Imperial Cabinet.

This last fact was shortly followed by a communication in which the two Cabinets, through their respective Consuls, invited the Imperial Government to evacuate the Danubian Principalities within a given term, which England fixed at the 30th April, and France, still more peremptorily, at the 15th of the same month.

With what right did the two Powers thus pretend to exact everything from one of the two belligerent parties, without demanding anything from the other? This is what they have not thought fit to explain to the Imperial Cabinet. To evacuate the Principalities, without even the shadow of a fulfilment, by the Ottoman Government, of the conditions to which the Emperor made the cessation of that temporary occupation subordinate—to evacuate them in the brunt of a war which the latter was the first to declare, whilst it is actively carrying on offensive operations, when its own troops occupy a fortified point of Russian territory—was already a condition inadmissible in substance. The two Powers wished that, in form, it should become still more unacceptable. They fixed a term of six days for the adhesion of the Imperial Cabinet, at the expiration of which a refusal, or the absence of any reply whatever, was to be by them regarded as equivalent to a declaration of war.

To a summons so partial in its tenour, as practically inexcusable as it was insulting in its terms, silence was the only reply compatible with the dignity of the Emperor.

Consequently, the two Governments have just publicly made known that Russia, by her refusal to accede to their demand, has constituted herself towards them in a state of war, the entire responsibility of which will rest upon her.

In the presence of such declarations, it only remains for the Emperor to accept the situation which has been made him, reserving to himself to employ all the means which Providence has put into his hands to defend with energy and constancy the honour, independence, and safety of his empire.

Independently of the message by which the Cabinet of London announces its resolution to the two Houses of Parliament, it has, in a supplementary declaration, explained the motives which induce it to take up arms, and has recapitulated the origin and the incidents of the question. The Imperial Government thinks it superfluous to return to a discussion on this subject. All its preceding documents seem to it to have exhausted the polemic. The recent memorandum of the 18th February, published on the occasion of the rupture of diplomatic relations, and which contains up to that point the whole historical exposition of the question, will have sufficed to demonstrate to whom, whether to Russia or the two maritime Powers, belongs the initiative of the provocations, and what disastrous (*funeste*) chain of circumstances the false position in which their first steps placed the two Cabinets, and led them on by degrees to take others still more provoking. Unprejudiced minds will have been able to discover there all the successive concessions made by Russia for the maintenance of peace, before as well as after the Vienna note, whilst the increasing exactions of the two Courts engaged them daily more and more still further in the path of a war with us.

The occupation of the Principalities, which is taken now, *après coup*, as a pretext for this war, did not prevent the opening of negotiations. It would not have any more prevented their continuation, or rather these negotiations would have led to something long since, if the Powers had not suddenly, without any good reason, completely changed the bases which they themselves had laid down in the first note concerted at Vienna. The objections made by the Porte to certain passages of that note were not sufficient either to nullify the rest. The essential substance remained intact, and the Imperial Government had the right to regard all the points which the Ottoman

Porte had not contested as acquired for any ulterior proposition. Such was not done. An attempt was made to impose entirely new conditions upon us; what had hitherto been admitted was declared inadmissible; the complaints of Russia were ignored, as also any claim on its part to an equitable separation, and all its counter-propositions rejected without discussion. At the same time, measures contrary to its rights as a belligerent Power coincident in the Black Sea with the conditions transmitted from Vienna, were adopted, as if to impress a character of compulsion to any adhesion on its part. Finally, all honourable retreat was cleverly cut off from it by an imperious summons, such as Russia never before received within the whole period of its history, even at the time when a conqueror at the head of armed Europe invaded its territory.

Not being able to close their eyes upon the insufficiency of the motives for a disastrous war, and upon the want of proportion which exists between its effects and its cause, the two Powers are obliged to exaggerate its object by bringing the most vague accusations against Russia.

They allege that their honour and material interests have been hurt—projects on our side of aggrandisement and conquest in Turkey—the independence of the Porte, and even that of other States; finally, the balance of power in Europe, which, according to them, is threatened by our excessive preponderance.

All these general imputations rest upon no foundation whatever.

We have never attacked the honour of the two Courts. If that honour has been placed in jeopardy, it has been done by themselves. From the very onset they have adopted a system of intimidation, which naturally would fail. They made it a point of *amour propre* to oblige Russia to bend to them; and because Russia would not consent to her own humiliation, they say that they are hurt in their moral dignity.

Materially, their interests have not been hurt by us either. They can only be so by the war which they wish gratuitously to wage against us. On the contrary, it is they who hurt our interests much more seriously by attacking us in the North and in the South, in our ports, and on different points of our coasts.

The policy of aggrandisement and conquest which they attribute to Russia, has been refuted by all her acts since 1815. Of her neighbours in Germany, and in the North, is there one which during the last forty years have had to complain of an attack, or even of an attempt at an attack, upon the integrity of his possessions?

As regards Turkey, although we have been at war with her, the peace of Adrianople exists to attest the moderate use we have made of our success; and since then, at two intervals, the Ottoman Empire has been saved by us from imminent ruin.

The desire of possessing Constantinople, if that empire should fall—the intention of forming a permanent establishment there—have been too publicly, too solemnly disavowed, for any doubts to be entertained on that subject that do not originate in a distrust which nothing can cure.

Events will shortly show whether the Powers or Russia have struck the most fatal blow, not only against the independence, but against the very existence of Turkey. As a price for the interested services given to her, she has already renounced by treaty the distinguishing privilege of every independent power—that of making peace, or declaring war, at its own free will, at the moment, and on the conditions it may itself deem most advisable. She will be forced to subscribe to an engagement which will give equality of civil and religious rights to all her subjects. Russia will sincerely applaud so important a guarantee, obtained in favour of all the Christians in Turkey, if it succeed in assuring it to them in a really efficacious manner. But in presence of a revolution which would so profoundly alter all the constituent bases of the Ottoman Government, Russia has the right to be surprised that an engagement by which the Sultan confined himself to confirm religious privileges already existing, and emanating from our treaties with him, should have been declared an attempt against his sovereignty and his independence.

It is for Europe—not for the two Powers—to decide if the general equilibrium really runs the risks which are attributed to it from the supposed excessive preponderance of Russia. It is for it to examine which weighs heaviest

to-day upon the freedom of action of states—Russia left to herself, or a formidable alliance, the pressure of which alarms every neutrality, and uses, by turns, caresses or threats to compel them to follow in its wake. Europe will also decide if, during the last years, it is from Russia that have come pretensions the most hostile to the rights of sovereignty, and to the independence of feeble states; if in Greece, in Sicily, in Naples, in Tuscany, it is for or against those rights that she has declared; whether in Germany, between the great Governments, she has sought to sow discord, or to re-establish union; whether, morally in Lombardy, and materially in Hungary, her efforts have not been consecrated to the maintenance of equilibrium; and whether the blows that are preparing against her, the isolation in which it is hoped to place her, by handing over the political world to a far different sort of preponderance, will not rather be the annihilation of that equilibrium.

We thus see to what the vague generalities urged against Russia are reduced. But the last especially of these grounds of accusation suffices to understand the true motive of a war for which, judged by its apparent grounds, there is no reason; and it is so contrary to the moral, industrial, and commercial interests of the entire world, that it will really accelerate the ruin of the very empire which it made the pretext to save from an imaginary peril. The true motive was publicly proclaimed by the English Ministers, when they asserted before Parliament, that the moment had arrived at last when it was necessary to abate the influence of Russia.

It is to defend that influence, not less necessary to the Russian nation than it is essential to the maintenance of the order and the security of other States—it is to sustain the independence and territorial integrity which are the bases of it—that the Emperor, obliged in spite of himself to embark in this contest, is about to devote all the means of resistance which are furnished by the devotion and patriotism of his people. He trusts that God, who has so often protected Russia in the day of trial, will assist him once more in this formidable struggle. He sincerely laments the infinite evils which are about to fall on humanity; but at the same time he feels it to be his duty to protest solemnly against the arbitrary pretensions laid down by the two Powers, which throw upon him alone all the responsibility of them. They are free, without doubt, to adopt against Russia such measures as may be convenient to them; but it does not belong to them to lay the consequences to his charge. The responsibility of the calamities of a war belongs to the Power which declares it, not to that which is bound to accept it.

St. Petersburg, March 30, 1854.

That the czar was not wholly indifferent to the opinion of Europe, was shown by the fact that, in the same issue of the *St. Petersburg Journal*, an elaborate reply was made to the allegations of Sir G. H. Seymour; and an attempt, utterly impotent and futile, to remove the prejudice created throughout Europe by the publication of the secret correspondence, engaged the conductors of that journal in several leading articles.

The declarations and manifesto were not empty boasts—practical efforts for war followed them on a gigantic scale. Never in the history of the world did a nation make such prodigious struggles for the efficient conduct of hostilities as Russia appeared to make, after thus “taking up the glove” which the allies had thrown down. Russia allows too little insight to her proceedings, in either war or peace, to enable us to present to our readers what, doubtless, would prove instructive, and reveal a new chapter in the history of oppression. Forced loans, conscriptions, impressments, and

even the plunder of her own subjects, were adopted to procure the men and material necessary. The most surprising thing about these proceedings was, the acquiescence of the people in their own degradation and suffering. However averse to military service, and anxious, individually, to evade the loans and escape the plunder, yet all seemed to take these things as a matter of course—done on the whole with the most excellent intentions—the only methods open to the czar to recruit at once his ranks and his exhausting exchequer, and essential to the ultimate glory of all Russians, and of their holy and orthodox Church.

The fortresses on the shores and islands of the Gulfs of Bothnia and Finland, already strong and well garrisoned, were reinforced with men and replenished with munitions of war. Every method that cunning, that *Russian cunning* could devise, was brought into requisition to encourage the men of the Baltic fleet. The emperor himself and his family visited Cronstadt and other fortresses, and his majesty painfully occupied himself with the detail of their defences. He organized means of resistance along the shores of his western frontier, such as he reasonably supposed might defy all the fleets, if not the armies, which the world could send against him. All this was accomplished while already the commerce of Russia was suffering, and heavy failures fell upon the great commercial houses of the two great capitals. St. Petersburg felt the crisis more than Moscow, but the commercial communities of both cities were suffering. Yet will it be believed that the mercantile interests, especially in Moscow, were for war! They not only made no remonstrance, such as they *indirectly* might have made against its ravages, but they of their own accord, where no forced loan fell upon them, supplied the government exchequer. The richer merchants of Moscow were among the most violent fanatics of the empire. A remarkable paper, published in the *Northern Bee*, of St. Petersburg, met with enthusiastic approbation from these classes, as well as from the army, land-owners, and priests:—

“The Emperor of all the Russias had at heart the unhappy fate of ten millions of orthodox Christians groaning under the infamous yoke of Islamism, and our great czar, in his quality of legitimate sovereign and guardian of orthodoxy, demanded from the sultan a guarantee for the welfare of the orthodox Christians subjected to his rule. The rights of our emperor date back several centuries. At the fall of Byzantium under the yoke of Mohammedans, when the reigning dynasty of the empire of the East was extinct, all the Greek authorities confirmed the solemn charter

of the Patriarch of Constantinople, Josaphat, who called to the throne John IV., Grand Duke of Russia, and recognised him as their legitimate and hereditary sovereign. The original of the said charter, which is written in the Greek language, and signed by the Patriarch Josaphat, thirty-four metropolitans, two bishops, and two archbishops, is carefully preserved at Choscou, in the archives of the minister of foreign affairs. It was drawn up in 1451.”

This publication, issued contemporaneously with the declaration and the manifesto, receiving the approbation of the people, and stimulating, as it was intended to do, their enthusiasm, is a curious comment both upon the grievances set forth in the declaration, and the avowals of opposition to an enlarged and independent Greek kingdom made by his majesty to Sir G. H. Seymour.

In the Black Sea, notwithstanding the presence of the allied fleets, the Russian navy was exerting itself contemporaneously with the events above recorded, in a manner characteristic of the energy, enterprise, labour, and vigilance, with which Russia everywhere prepared herself for the great encounter. From the *Invalide Russe*, we extract an article which shows the heartiness and spirit with which the Russian naval authorities in the Black Sea conducted their dangerous enterprises, and the contrast which, in this respect, they presented to the allied naval commanders, who seemed to make only a display of science:—

“After the occupation of the eastern shores of the Black Sea, in the last war against Turkey, the government had directed its attention to the suppression of the infamous traffic in women and children, who form the principal articles of commerce between the mountaineers of the Caucasus and the Turks. With this object, it had erected all along the coast between Ghelendjik and Gagri a series of temporary posts, and had established cruisers by means of galleys of a particular construction, manned by Cossacks from the Sea of Azoff. Thanks to this measure, fearlessly executed by the Cossacks, the object of humanity which the government had proposed to itself had been until now achieved.

“At present, the circumstances under which these posts had been built having changed, it became necessary to consider that in consequence of their position they had no land communication with each other, and that their garrisons, therefore, left completely isolated from the main body of our forces, could not be of any service in the general system of our future operations.

“On these grounds the Aide-de-camp General Prince Menschikoff was ordered to suppress

these posts, after having withdrawn the garrisons. Prince Menschikoff has accomplished this service with the success which accompanies all the operations of the fleet in the Black Sea.

"On the 3rd of March he dispatched from Ghelendjik the steamer *Modolots*, under the flag of Vice-admiral Serebriakoff, towing row-boats; the *Crimea*, under the flag of Rear-admiral Panfiloff, towing the *Mamai* transport ship; the *Odessa*, towing the *Bzyb*; the *Chersonese*, towing the *Gostogai*; the *Boiets*, towing the *Kodos*; the *Mogoutchy*, towing the *Tsemes*; and the *Argonaute*, towing row-boats.

"In coasting along the shores of Circassia, and whenever they arrived opposite a post, they left the vessels necessary for the embarkation of the garrisons; but on approaching Navaghinsk two steamers, the one French, the other English, were signaled. The embarkation was suspended, and measures were taken to prepare for action; however, the enemy's ships remained in the offing, passed before ours, and the embarkation was resumed.

"In the meantime, opposite the post Véliaminoff, these two steamers stopped the hired transport *Bzyb*; two officers hailed her, and addressed to her commander, Lieutenant Tchebyscheff, the following questions:—

"'What steamers have you seen near the post of Navaghinsk?' Answer—'Some Russian steamers of war.'

"'What are they doing at that point?' Answer—'There is an admiral there, and he has not told me his instructions.'

"'Who is burning the posts, you or the Circassians?' Answer—'We.'

"'Why do you burn them?' Answer—'Because such is the order given.'

"'Where is your fleet?' Answer—'I don't know, but I believe it to be at sea, and very near.'

"After having received these answers, the two steamers departed, having described themselves as the *Mogador* and the *Sampson*.

"On the 5th the whole expedition anchored at Novorossisk, where it disembarked the garrisons of the posts of Navaghinsk, Golovine, Lazareff, Véliaminoff, Tenginisk, and Novotroitsk.

"Storms had prevented the squadron of Rear-admiral Voukotitch embarking the garrison of the post of St. Esprit. The removal of this garrison took place between the 9th and 10th by means of the steamer *Gromonosses*, aboard which was sent Colonel Skolkoff, aide-de-camp to the emperor.

"From all these posts, besides the garrisons, which make up an effective force of 5000 men, they embarked all the families of the soldiers, the workmen, and a great part of the stores of the crown. The rest, as well as the build-

ing, were burnt, and the fortifications were blown up.

"Our military resources have thus been augmented by an important body of picked troops, accustomed to war by long service in the centre of an unsubdued country."

While so busy on all his frontiers, the czar found time and means to negotiate with Persia, and to menace and carry fear into the heart of Central Asia.

Anxious to have early intelligence of what passed in London and Paris, the electric telegraph had long been in operation between St. Petersburg and Warsaw, and for some time great numbers of men were employed in completing the line which was to extend from Warsaw to the Prussian frontier. But in order to make every avenue of information available, the czar caused the portion of the line already constructed to be connected with the Prussian telegraph near Mysłowitz, so as to place St. Petersburg at once in communication with the capitals of Western Europe. Before a regiment embarking in England, or a ship of war ordered to reinforce the fleets, could get out of the Channel, the czar's minister of war would be informed of its strength and destination. There was no reciprocity in these advantages, the Russian line was closed and guarded—used only for state purposes.

Let not our readers suppose from all this activity, and multiplication of offensive and defensive agencies, that Russia was as strong as such amazing efforts would indicate. The exertions were wonderful, but they were exhausting. Russia hoped by the energy she evinced, and the activity and vigilance she displayed, to awe the coalition, or at all events intimidate the vacillating courts of Germany. Every conscription told fearfully upon her wealth, as well as upon the numbers available for military service; and every gift, or coerced loan, which found its way to her treasury, embarrassed her commerce, for which her own capital is insufficient. The unworked natural resources of Russia are, like the extent of her territory, vast; but the available resources which she has at command for aggressive purposes are only great because, through successive reigns, her czars have laid up accumulations of naval and military appliances such as no nation ever before husbanded; that when the hour of resistance to her aggression should arrive, which she of course foresaw, she might appal the world by the state of preparation for defence or conquest in which she might be found. De Custine happily describes what Russia really is, as to her resources, when he banteringly says:—"Russia is a book, the table of whose contents is magnificent; but beware of going

further. If you turn over the leaves, you will find no performance answering to the promise; all the chapters are headed, but all have to be filled up. How many of the Russian forests are only marshes, where you will never cut a faggot! How many distant regiments are there without men; and cities and roads which exist only in project! The nation itself is as yet nothing more than a puff placarded upon Europe—dupe of a diplomatic fiction. I have found here no real life, except that of the emperor's; no constitution, except that of the court."

It will be seen by the least observant reader that the motto with which this chapter is headed is nobly applicable to the policy of the allies, but was reversed by Russia. They sought peace by war; Russia only permitted peace so long as she was not ready for war. Their aim was the consolidation of European independence; her aim the subjugation of the territory, and the freedom of all nations. May the allied governments continue the struggle under the glorious motto of the great hero who made it his own, and truly *seek peace by war!*

CHAPTER XIV.

THE CONDITION OF TURKEY WHEN WAR WAS DECLARED BY THE WESTERN POWERS.—DEPOSITION OF THE SHEIK-UL-ISLAM.—THE TURCO-GREEK INSURRECTION, AND RUPTURE OF DIPLOMATIC RELATIONS BETWEEN THE SULTAN AND THE KING OF GREECE.—CONVENTION BETWEEN THE ALLIES AND TURKEY.—OPERATIONS OF THE HOSTILE ARMIES ON THE ASIATIC FRONTIER.

"He, without fear, a dangerous war pursues,
Which, without rashness, he began before."—DRYDEN.

WHEN the news of the declaration of war by the Western powers reached Constantinople, all classes, from the vicinity of the sultan's throne to the boatmen who ply their oars upon the silver Bosphorus, were wild with joy. Turkish gravity gave way before the cheering influence of the occasion. The arrival of the tidings was opportune, for discontent with the allies pervaded the capital and the country. It was not believed that they were in earnest. So inexplicable was the conduct of the admirals, and so dilatory the proceedings of the governments, that the Turks lost all confidence in the zeal of their supporters. The demands of the Western powers for religious liberty to the Christians were very unpalatable to the old Turkish party, who resisted the concession as heartily as if they were under the guidance of Mr. Urquhart. Sincerity to the cause of Turkish independence was proved by the Western governments in at last declaring war, and this reconciled the people to those novel ideas, and enabled the sultan to carry into execution measures which it would otherwise have been vain for him to attempt. One of those measures which most excited the dissatisfaction of "the faithful" was a decree concerning mosque property. This decree was to the effect that "from the 27th of March the possessions of the mosques are to be declared the property of the state." The magnitude of this measure may be conceived when it is known that three-fourths of all the "real property" of the sultan's empire had become mosque property. This measure of the sultan's was one of questionable wisdom, and of doubtful justice also. Property in Turkey, but for the protec-

tion of the mosques, would be utterly insecure. The peculation and violence of the pashas have for a great number of years passed all bounds, and no persons could feel themselves beyond the reach of their plunder. But property dedicated to the prophet was sacred, and it became therefore customary even for "the rayahs" to "make over" their wealth to the Church nominally, but really to place it under such sure guardianship. The conditions upon which this guardianship was extended were never abused, and the trust was never violated. There are a thousand times more fraud, abuse of trust, and diversion of funds from their original designation, in the management of endowed charities and school property in England, than in the custody of all the wealth committed to the protection of the mosques. Never was the Church of any nation possessed of such vast treasures, and never were they so little abused, or a public trust so inviolably respected. The people, even the Christians, were the more disposed to place their property in the safe keeping of Mohammed, as the ulemahs, or ministers of the mosques, were not only the expounders of the prophet, but the lawyers of the State. Their counsel was not selfish; it was certainly profitable to themselves, but it was wise for their clients. Of course, "the clergy" were all in a state of revolt against so daring an infringement of the rights of the mosque; and much uneasiness was experienced by the Porte at this juncture, when the declarations by the allies powerfully diverted public attention to the new prospects of the war.

A still more dangerous experiment was made

by the sultan upon the extent to which his people would endure innovation. The chief of the ulemahs, the Sheik-ul-Islam, is the most powerful person in the empire, scarcely excepting the sultan. His veto decides all laws promulgated. He is at once primate and lord chancellor, and a court of legislation in his own person; in fact, one of "the estates" of the realm, or rather, he is the chief and representative of one of the estates of the realm—the ulemahs. The then presiding—we had almost written *reigning*—sheik, positively refused to carry out several of the sultan's decrees. He would never consent, he declared, to place the word of a true believer on a level with the testimony of a Giaour; and if the sultan persisted in doing so, and in subverting the laws of the Koran, he was no longer their padishaw, and ought to be deposed. On the ground of treason he was himself deposed, to the horror and terror of all the faithful. His chief abettor was Refaat Pasha, the president of the council, who was also dismissed, and Aarif Pasha appointed to that office; while the distinguished ulema, Farik Effendi, was nominated successor to the uncourtly sheik.

The astounding intelligence of the resolve of the great Western nations to confront the giant power of the North, rendered it impossible for sheik or ulema to raise an insurrection; and even the popular ferment in their behalf seemed to find its vent in the national purpose and enthusiasm which the decisive step of the mighty allies of Turkey excited.

Another and scarcely inferior source of danger was the Greek insurrection, which at this juncture reached the acme of its fury. On page 71 of this History we suspended our narrative of that outbreak, in order to relate contemporaneous events which transpired elsewhere; this is the proper place to resume our story of that wild and wilful revolt. The Russians were making as much progress by their propagandism among the Greeks, as they were by their feats of arms in the Dobrudscha. Indeed, it is scarcely credible that they would ever have tempted famine and failure there, if they did not hope by their onward movement, timed skilfully with their intrigues at Athens, to raise the Greeks throughout Bulgaria and Roumelia. The flame of revolt spread everywhere, but did not burn steadily; while raging fiercely in one direction, it flickered in another, and sank into a smothered and smouldering fire wherever the Turkish army was in force. We shall not weary our readers with accounts of the desultory and vengeful encounters and treacherous assassinations by which this insurrection was characterised. It was discovered that the government of Greece continued the complicity disclosed in an earlier portion of our History, and that a general massacre of Turks, in the districts where the Greeks greatly out-

numbered them, formed part of the insurrectionary plan, of which the Greek and Russian governments were both cognisant. Prince Menschikoff, the Russian commissary, Baron Oelamer, a certain dragoman in Constantinople, and the Russian minister at Athens, were all proved to have corresponded with the leading Greek ecclesiastics in Turkey and in Greece Proper, as well as with the government of Greece, in reference to the sudden rising of the Greek race, and the cowardly assassination of the Turkish population scattered among them. The Turkish minister of foreign affairs had made urgent representations to the allied representatives that some decisive measures must be adopted towards King Otho and his government; and it will scarcely be credited that the remonstrances and even menaces of the ministers of the allies were without effect, until force was employed and Athens was occupied by their troops. And even after the ships of the allies appeared in Greek waters, as a demonstration in support of the sultan, the King of Greece and his abettors contemplated resistance. An individual sent to the Greek government a plan for making fire-ships, for the purpose of setting fire to the squadron. The government took the proposition into serious consideration, and referred it to a committee of examination. The committee reported that the scheme was impracticable, but that the projector was entitled to a reward for having propounded the idea! While the Greek king, or rather the Bavarian king of the Greek kingdom, was alternately threatening to fight and to run away,—for he seemed to imagine that his departure would be as grave an event to the allies as his resistance,—he had an army of precisely the following magnitude: 4013 infantry, 327 cavalry, 363 artillery, 200 engineers and mechanics; 2412 irregular troops, composed of banditti and of men who only occasionally employed themselves in that profession; and the *gend'armerie* consisted of 1466 individuals—policemen, constables, and spies. Well might an able contemporary writer remark that, "next to Russia, the kingdom of Greece was the most remarkable national humbug in existence, or that ever existed; for nothing in that ill-fated realm appears to be real or productive of result—not even her intrigue, which is as sterile as her pretensions of classic regeneration. The Greeks have been unable to keep their country from becoming a toy in the hands of the cadet of a petty German court. Without a national government, Greece has shown no capacity for fulfilling or even comprehending national responsibilities. Her loan is a gibe; her patriotism is put down by the court, until the invasion of a neighbour reconciles that very court to insurrection; and the fidelity of Greece to her very founders is exhibited towards that one

alone whose patronage had an *arrière pensée* of selfishness and malice. The Greeks are not insensible to internal improvements or foreign commerce, but they cannot keep order at home, or faith abroad; and the national flag of Greece covers the skirmishers and scouts of Russia. This has been long evident, but especially since the arrival of Admiral Kornileff at Athens, when Menschikoff arrived at Constantinople."

In virtue of a protocol annexed to a treaty of alliance between England, France, and Turkey, the three allied powers addressed to King Otho a collective note, demanding the suppression of the outrages by Greek subjects upon the frontier provinces of Turkey; the Greek minister at Constantinople received his passports; Ali Pasha was sent on a special mission to the court of Athens, with a formal demand for redress. This not being given, Greek subjects were ordered to leave Turkey. As many of them were engaged in commerce within the Ottoman dominions great suffering was inflicted by this measure, for the proceeding was sudden and summary. The French ambassador interfered on behalf of Greek subjects of the Latin rite, and only succeeded in saving them from the operation of the decree by a threat of leaving Constantinople. General Baraguay D'Hilliers is a good officer but a bad politician, and his conduct on this occasion was arrogant and unjust; not very much less culpable than that of Prince Menschikoff, or of a former French envoy, M. Lavalette, by whose indiscretions Prince Menschikoff found a pretext. Still, there was ground for interfering on behalf of the Greeks of the Latin communion, for they had taken no part in the insurrection, and had given the sultan no cause of offence, but sympathised with him and his allies against the common aggressor. However severe the edict of the Porte against the Hellenists, it was provoked by the atrocity of the conspiracy, the whole plan of which had been disclosed. Baron Oelamer, the Russian spy, who for that disreputable office was paid 1000 piasters a month, had the folly to make a confidant of a Greek physician, named Oska. Oska, whether from love of reward, or horror at the contemplated butchery, revealed the plot.

The dexterity of the Queen of Greece extricated her husband from one complication after another, and enabled him to avert the impending storm which was gathering around him, until the 22nd of May, when an answer to the demand of the allies must be given. We must, however, again leave the affairs of Greece, with this short notice, until we can return to them in their chronological sequence.

The complicity of Russia in the insurrection of the Greek subjects of the Porte, and in the incursions of King Otho's subjects upon the

Turkish territory, was brought clearly to light by a circular of Count Nesselrode's, signed March 2nd (old style). This document, directed to the foreign agents of the czar, was intended to appeal to the imagination of the Greeks, both of Greece and of the Turkish Empire, and to stimulate those agents to fresh exertions, wherever their influence might be brought to bear upon that revolt. It is as follows:—

SIR,

St. Petersburg, March 2, 1854.

THE memorandum annexed to my despatch of the 18th of last month has enabled you to communicate to the Government to which you are accredited a faithful and circumstantial account of our difference with Turkey, of the negotiations by which we sought to bring the Porte to a more just appreciation of our demands, and of the complications which arise therefrom, in consequence of the passionate intervention of the Cabinets of Paris and London, and of the hostile attitude they assumed towards us at the very moment that they announced themselves as pacific mediators between us and the Ottoman Government. The events having acquired now the gravity which we feared for the tranquillity of Europe, we consider it a duty towards the Courts who have hitherto judged our acts without prejudice or partiality, to continue to provide them with data to enable them to judge with the same justice the situation in which some of the great Powers of Europe are desirous to place Russia in its future relations with Turkey, and the obligations thereby sought to be imposed upon the Emperor.

There is one especially which touches the conscience of the whole of Russia and of its Sovereign, that which relates to the position of the Christian populations subjected to Turkey, and upon whom the Mussulman Government and people, excited by fanaticism, and confiding in the sympathy and aid offered to them with so unjustifiable an eagerness by the Christian Powers, think themselves authorised to exercise the most cruel vexations.

Some of those populations, especially those which border upon independent Greece, driven to extremes, and losing all hope of better fate, have taken up arms to throw off a yoke which has become insupportable.

This rising, already for a long time foreseen and even announced, occupies and moves at the present moment the minds and the press of Europe. By a contradiction, which those who pretend to protect against us the power of the Crescent and the rights of the Sultan can alone explain, these same Powers, who declare war to us for the sole motive that we wished to maintain the religious immunities of the Christians of Turkey, say that they are disposed to obtain in their favour the same civil and political rights as are enjoyed by the Mussulmen.

We do not wish to draw sinister prognostics; but these tardy promises, so little in accordance with the acts of those who proclaim them, will have, we fear, no other result than to exasperate still more the oppressors against the oppressed, to provoke sanguinary reprisals, and to render for the future impossible the submission of those populations to Turkish rule.

For our own part, we never demanded from the Porte in favour of its Christian subjects but what was just, practicable, and confirmed by the acts of the Sultans themselves; but when others than ourselves come and raise up complications and calamities which fall with all their weight on our co-religionists, and drive them to an unequal struggle, we cannot surely refuse them our interest and our assistance.

If the rising we hear of should take greater extension—if it should become a war to the death, and of long duration, like that of the Greeks in 1821—we do not think that any Christian Power could assist in replacing these populations under the Ottoman yoke without offending its conscience. The Emperor will in no case lend his hand to it. During our war, as at the period when peace will be possible, their fate will be the object of the Emperor's care. We also hope that God will not allow that, from an unjust animosity against Russia, Christian Sovereigns shall permit their armies to join in the work of extermination, which the renegades assembled in the

camp of Omar Pasha meditate doubtless at this hour against those who have taken up arms for the defence of their hearths and their Church.

Such, Sir, is the point of view in which we think it right to consider the rising in Epirus, the possible consequences of which we regret, which we have the consciousness not only not to have excited, but which we were unable to prevent, though we desired to do so.

You will make use of the above indications to rectify the false rumours and malicious insinuations which will doubtless be circulated also on this occasion against Russia and her intentions.

(Signed)

NESSELRODE.

In keeping with the above attempt to preserve the agitation in Greece, the czar's agents in Montenegro made vigorous efforts to disturb that country. A proclamation was read in all the villages, appealing to the religious zeal of the people, and promising not to sign any treaty of peace until having obtained for them Herzegovina, the plains of Bosnia, and a part of those of Albania.

Just at this juncture the czar was obliged to forego the services of one of his chosen bands. A body of Wallachian fanatics of the Greek Church had been enrolled, under the designations of "the cross bearers" and "the champions of Christ;" but, in consequence of their unconquerable propensity for stealing, in gratifying which they did not spare even Russian officers, their services were dispensed with.

On the 12th of March a treaty of alliance was concluded by Turkey with France and England, by which the latter powers agreed to support the former by force of arms, until the conclusion of a peace which should secure the integrity of the sultan's rights and dominions. The Porte engaged not to conclude any separate peace with Russia, or any peace without the consent of the allies. The allied powers promised to evacuate the territories of the sultan at his request, and at the conclusion of the war. This treaty was to remain open for the acceptance of the other great powers of Europe; and, lastly, it secured to all the subjects of the Porte, without distinction of religion, a perfect legal equality.

The last clause gave rise to furious discussions, and to official changes, such as we have already described. The general exclamations of the old Turkish party were, "The Muscovites ask us for a part, and we refuse, and go to war with them; the Franks ask us for the whole, and we tamely acquiesce! Better to die, sword in hand, in defence of the faith, or abandon Europe, which our fathers entered as conquerors, than submit to have the Giaours placed on an equality with us." The liberal or modern Turkish party urged the sincerity of the allies, the requirements of the age, and the necessities of the occasion, and eventually triumphed.

There were two separate conventions, one relating to a loan of twenty millions of francs

by England and France to the Porte; the allies undertaking to pay all the expenses of the subsistence of their troops while engaged in defence of Turkey, and all other expenses whatsoever incurred in her defence. The second related to the reforms in favour of the Christians. The old Turkish party had no objection to the allies paying or fighting for their country, but they would not concede the smallest privileges to those professing the religious faith of those allies—thus exhibiting all the selfishness of intolerance in the very hour when they received from Christian nations the most generous aid.

While affairs thus proceeded with the government of Turkey, her Asiatic frontier was the scene of continued interest to herself and to her allies. The conduct of the superior officers of her armies at Kars, Erzerum, and, indeed, everywhere along the line of military operations, was utterly despicable. We can remember no parallel in history, unless it be the conduct of the superior Spanish officers during the struggle against France, when Wellington signalled his name by his exploits in the Peninsula. Cowardice, pride, obstinacy, stupidity, speculation, characterised the conduct of the Turkish generals. General Guyon was the life and soul of the army; everything would have gone to ruin but for him, and the few European officers who seconded his exertions. He was resisted by the Turkish officers, high and low, as he had been in the autumn of 1853. These men had no sympathy with the common soldiery, whom Guyon did all in his power to succour and encourage. From these poor fellows he received gratitude, and had he not been at last so effectually obstructed by the bigoted Turks, in quarters and at Constantinople, he would have made the Asiatic army a superior one, instead of being, as it remained, a rude mob of nominal soldiers.

The operations upon the boundaries of the eastern provinces of the belligerent empires, were, in the early months of spring, a series of razzias on a large scale, which the reports of the generals engaged, magnified into battles. The Russians had a salutary apprehension of the energy, bravery, and military skill of Guyon; but they regarded the Turkish pashas with undisguised contempt, for all their movements were evidently directed under the impression that these men might be safely despised. We must reserve our record of the progress of the war in these regions, until we have related the great events which transpired elsewhere. The Asiatic theatre of war was isolated, and continued so, until, as the struggle became more comprehensive and earnest, it too was comprehended in the common vortex of more fierce and more skilful strife, which involved all the northern and eastern shores of the Black Sea, and the Sea of Azoff. There was abundant

opportunity for those provinces which Russia had wrenched from her eastern rivals—especially from Persia,—to rise and assert their liberties; but their populations hugged their chains, under the influence of ignorance or priestcraft, and the waves of war ebbed and flowed around their habitations in vain, with regard to any advantage its changes and chances offered them. Russia beyond the Caucasus was, unfortunately, steadfast to its despotism; and there was no genius, valour, or address in the Turkish pashas, to turn to account the circumstances of the Georgian or Armenian populations, or their own military position upon these frontiers. There will probably occur to us no more suitable place than this, to present to our readers a glimpse of certain portions of these regions from the pen of M. Haxthausen.* This gentleman had peculiar opportunities for acquiring information (not unlike those of Captain Spencer, in another direction, elsewhere mentioned in this History), being under the protection of Russian officers of distinction, civil and military. Prince Paul Leiven, nephew of the former ambassador to this country, obtained for him every opportunity for investigating the social and economic condition of these fine regions. He throws considerable light upon the past history, as well as present resources, of Georgia; which, in the days of its historic glory, subjected Leghistan and Daghestan, where Schamyl, the renowned mountain monarch, now holds sway. As Georgia became enfeebled, the mountaineers, in their turn, became invaders and conquerors, and have left the traces of their incursions everywhere. Our author, when he parted with Prince Leiven, proceeded into Russian Armenia and Erivan, a place of some note in its indirect relation to the progress of the present war. The following abstract of his description of the country around Erivan, given by one of the ablest of his reviewers, will be of use to our readers when we conduct them to a future page of our History. His route to Erivan was “by the northern extremity of the Goktschai Degnitz (Blue Water), the highest of the three great Armenian lakes, it being no less than 5500 feet above the level of the Caspian Sea. This enormous piece of water, which is of about the size of the Boden-See, in Switzerland, performs a most important part in the country around Erivan. It is the source from which the canals are supplied with water for the irrigation of the whole district. Ten leagues from Erivan the river Seng (or Zengui) issues from the lake, and, after running past the city, ultimately falls into the Araxes. Canals

branch from it, and from the lake, in all directions, conveying water to the surrounding villages. The centre of the Erivan water-works is at a place called Kanakir, about two leagues off the city. From hence four principal canals take their rise, from which innumerable small channels branch off; and by this means sufficient water is provided for the irrigation of the land every ten days or a fortnight in the spring, and as often again in the summer, at a very small cost, the annual repairs ordinarily amounting to about 300 roubles only. Without these arrangements the whole of this country would be an uninhabitable steppe. The extensive valley stretching northward, between Ararat and the mountains which form the base of the cup containing the Goktschai Degnitz, is of the same nature. It is extremely hot and dry, both from its southern latitude and from its high elevation, the city of Erivan being nearly as high as the summit of Skiddaw. The soil, which everywhere exhibits traces of its volcanic origin,—in the lava and basaltic rocks with fragments of which the ground is covered,—is of extreme fertility when sufficiently watered, but, without regular irrigation, will not produce a single blade of grass. This southern climate, unlike Western Europe, is doomed for months together to continuous drought in the ordinary course of the seasons, and any remark on the fineness of the weather would sound as extraordinary on the banks of the Araxes as one upon the stability of the earth would on those of the Thames. This aridity, indeed, although not in quite so high a degree, is common to the whole of the valleys of the Kour and the Araxes. At Marienfeld, the number of days on which rain falls rarely amounts to forty in the course of the year; while in summer the thermometer stands at 30°, or even 32°, Reaumur (99° to 104° Fahrenheit), in the shade. Artificial irrigation is, under such circumstances, an absolute necessity. The Persians destroyed the canals and sluices in the district below Kakhetia in their invasion of 1797. There was no power to restore these; and the whole population necessarily left the country, which is now a steppe, tenanted only by tigers, leopards, and serpents.”

The unhappy social state of these countries may be gathered from the following passage, in which the Baron, notwithstanding his pro-Russian feeling, is constrained to admit the curse of Russian dominion:—

“It is probable that serfdom did not formerly exist among the peasantry in Georgia and Mingrelia, and was not introduced until the occupation of these countries by Russia; and that not by law, which would never have been sanctioned by the Emperors Paul, Alexander, and Nicholas, but in the ordinary course of administration. The Russian officers were accustomed

* Transcaucasia: Sketches of the Nations and Races between the Black Sea and the Caspian. By Baron von Haxthausen.

to regard the peasants in their own country as serfs, and naturally looked upon those living under the nobles and princes in Georgia in the same light. The crown peasants in Russia have been emancipated since the time of Alexander, and the same class in Georgia are consequently free likewise. The existence in all these countries (the Transcaucasian) of a certain system and constitution in family and communal life, arising out of manners and customs, and even sanctioned by law, however defective,—in Georgia, indeed, by the Vakh-tang code of laws,—was entirely disregarded by the Russian officials. They were far too indolent to study the existing social condition of the people, and followed only the laws and principles of administration to which they were accustomed, and which they brought from Russia; while their rule was not a little marked by arbitrary conduct, with occasional extortion and spoliation, the superintendence and control being naturally much feebler and more ineffectual in the Caucasian provinces than elsewhere. The entire administration was, at the same time, of a military character; and all complaints, even those of a merely civil nature, were referred to the general in command. As a natural result of this state of things, a bitter animosity to the Russians and the Russian government, grew up among all these Caucasian tribes. On occasion of a journey which the Emperor Nicholas made in October, 1837, through these provinces, it is said that the *tchinowniks*, or officials, issued an order that no petitions should be presented to him. At Akhaltzick, the inhabitants of an entire village were seen kneeling on the road in silence as the emperor drove past, and this circumstance recurred several times. The emperor inquired of the people what it meant? They replied, 'That they were forbidden to approach him with petitions.' He told them it was not true, and that they might fearlessly present any petitions. Thereupon the people poured forth to meet the emperor in such numbers, that during his journey only as far as Erivan, about 1400 petitions and complaints were preferred to him."

Such, however, was the hatred of the Christian to the Moslem, that many of the Armenian and Georgian peasants armed against the Turks; while the men of commercial property among the Armenians, and the higher orders of the Georgians, were generally ready to retire before the enemies of Russia, and identify themselves with its destinies. Neither the justice of the Turkish cause, nor the heroism and love of liberty inherited by the brave bands of Schamyl, had any charm for them. Sacerdotal intrigue, pecuniary selfishness, and the habit of submission, kept them true to the standards of their oppressor throughout 1854, as in the fierce campaign of the autumn of 1853.

While Constantinople was moved with deep excitement by the tidings which reached it from such remote countries, and by the news of insurrection almost at its gates—while on the Danube, along the Greek frontier, and in Asia Minor, the empire was at once invaded, and despatch followed despatch in rapid succession from pashas and commanders—the city itself became the theatre of new and strange scenes. From every portion of the sultan's wide dominions, and from countries beyond professing Islamism, volunteers to serve in his army came pouring in. From Central Asia and the frontiers of India—from Kurdistan and the frontiers of Persia—from Syria and the confines of Arabia—from Morocco and Tunis—from Asia Minor and Armenia, strange wild warriors came, undisciplined and diversely armed, to offer their service to the sultan as their prince or padishaw. There were stalwart Albanians, with pistols and yataghan; the old Asiatic Turk, with curved scimitar, highly polished and richly ornamented; the gigantic Affghan, bearing his long matchlock; and from the remotest Asiatic recesses men came with "bended bow and quiver full of arrows." But of all the wild braves that wandered through forest and over steppe, there was none so curious to look upon as Fatima, and none so grotesque as her motley bands. Fatima is queen (or was queen) of a wandering, and, we presume, somewhat predatory tribe, whose home is in the mountains of Cilicia, and who can muster 4000 cavalry for war. She is to them as sacred as Schamyl is to the Caucasians: she is prophetess and princess. Her age seemed to be about sixty, and nothing Amazonian in her appearance or bearing brought any attraction to her standard. Her attire was that of the sterner sex, if the other sex may presume to anything more stern than Fatima. She bestrode her horse like a cavalier; and if ferocious looks appertain to bravery or military efficiency, the followers of Fatima were good soldiers and heroes, or heroines, for it was hard to say to which department of the heroic race they belonged. Some of her troops were undoubtedly of the softer sex, if the term be not offensive, as incompatible with their profession of arms. It would have been a mournful duty had the "gallant Greys," or "far-famed Inniskillens," been ordered to charge this very original array of cavalry; military obligation, and that gallantry for the fair for which our troops claim a reputation, would be oddly at variance in such an event. It would constitute a case of conscience for the ablest casuists—among whom her majesty's dragoons are seldom found—to open up the solution of its intricacies. Fatima had her troops "well in hand," and quartered them in an old barrack in Stamboul, demanding for them "cup and stirrup fees,"

and a trifle of eighty piasters a month from the great padishaw, at whose feet they came to make their own prostrations, and to whose enemies they were to afford instructions to do likewise. Up to the time we write, this lady has performed no exploit which history can record: she may have rendered services agree-

able to both the sultan and the prophet, we cannot say where. Neither Brigadier-general Scarlett nor Earl Cardigan saw anything of her at Balaklava, where cavalry reinforcements were desirable, and where a force so original might have produced some previously unknown and uncalculated effect!

CHAPTER XV.

TREATY OFFENSIVE AND DEFENSIVE BETWEEN FRANCE AND ENGLAND.—CONVENTIONS BETWEEN THE ALLIES, AND AUSTRIA AND PRUSSIA.—TREATY OFFENSIVE AND DEFENSIVE BETWEEN AUSTRIA AND PRUSSIA.—PUBLIC OPINION IN BRITAIN.—EMBARKATION OF TROOPS FOR THE SEAT OF WAR.—REMARKABLE SPEECH OF SIR G. H. SEYMOUR.

“Hail to thee, Albion! that meet'st the commotion
Of Europe as calm as thy cliffs meet the foam,
With no bond but the law, and no bound but the ocean,
Hail, Temple of Liberty, thou art my home!”—MOORE.

As soon after the declaration of war as circumstances allowed, a treaty offensive and defensive between England and France was signed, the terms of which were few, brief, and clear; binding each against a separate peace, and pledging them to a united prosecution of the war, sharing all costs and eventualities. The progress of the allies in cementing their own union, and conciliating those powers which sympathised with Russia, became more rapid as their appeal to arms became an accomplished fact. Accordingly, on the 9th of April, the representatives of Austria and Prussia, at Vienna, united with those of France in signing a protocol, which is of too important a nature to be omitted from this History.

At the request of the Plenipotentiaries of France and of Great Britain, the Conference met to hear the documents read which establish that the invitation addressed to the Cabinet of St. Petersburg to evacuate the Moldo-Wallachian provinces within a fixed time having remained unanswered, the state of war already declared between Russia and the Sublime Porte is in actual existence equally between Russia, on the one side, and France and Great Britain, on the other.

This change which has taken place in the attitude of two of the Powers represented at the Conference of Vienna, in consequence of a step taken directly by France and England, supported by Austria and Prussia as being founded in right, has been considered by the representatives of Austria and Prussia as involving the necessity of a fresh declaration of the union of the Four Powers upon the ground of the principles laid down in the protocols of December 5, 1853, and January 13, 1854.

In consequence, the undersigned have at this solemn moment declared that their Governments remain united in the double object of maintaining the territorial integrity of the Ottoman Empire, of which the fact of the evacuation of the Danubian Principalities is and will remain one of the essential conditions; and of consolidating in an interest so much in conformity with the sentiments of the Sultan, and by every means compatible with his independence and sovereignty, the civil and religious rights of the Christian subjects of the Porte.

The territorial integrity of the Ottoman Empire is and remains the *sine qua non* condition of every transaction having for its object the re-establishment of peace between the belligerent Powers; and the Governments represented by the undersigned engage to endeavour in common to

discover the guarantees most likely to attach the existence of that Empire to the general equilibrium of Europe; as they also declare themselves ready to deliberate and to come to an understanding as to the employment of the means calculated to accomplish the object of their agreement.

Whatever event may arise in consequence of this agreement, founded solely upon the general interests of Europe, and of which the object can only be attained by the return of a firm and lasting peace, the Governments represented by the undersigned reciprocally engage not to enter into any definitive arrangement with the Imperial Court of Russia, or with any other Power, which would be at variance with the principles above enunciated, without previously deliberating thereon in common.

The sympathy of other continental states was very much promoted about this time by a most eloquent reply on the part of the French government to the Russian declaration. This document was extensively quoted in America, and gave the Russian chancellerie much annoyance, as was evinced by the nibbling and spiteful notices of it which the press of St. Petersburg contained. Seldom did a state paper attract in England more attention; and the ability of our great ally to write, as well as combat, became the subject of universal conversation. As the Russian declaration has been already placed before our readers, they can compare it with this masterly replication.

The Russian Government has just published a declaration, in answer to the summons addressed to it for the last time by France and England, and to which it has not consented to subscribe. We have not the intention to enter once more into an examination of the arguments refuted to satiety; we will limit ourselves to some observations on the new errors which that declaration is endeavouring to get accredited.

In the first place, the Russian Government demands by what title England and France pretend to exact the evacuation of the Principalities of the Danube. There is no one so ignorant as not to be aware how much their summons is founded upon right. The Powers who signed the acts of Vienna have themselves recognised them as such.

The Cabinets of Paris and London acted on this occasion in virtue of treaties, and their conduct had the approbation of other Governments.

How (says the declaration of the Russian Cabinet) could we evacuate the Principalities, without even the shadow of the conditions to which the Emperor had made subordinate the cessation of that occupation being fulfilled by the Ottoman Government? But these conditions which Russia required were manifestly unjust, and the Conference of Vienna had formally confirmed on that point the judgment of Europe.

The declaration adds, that the Russian armies could not evacuate the Principalities in the midst of a war which the Ottoman Government "had been the first to declare." The parts cannot be more strangely interverted. The invasion of the two Provinces of the Turkish Empire was, in the eyes of the whole world, an act of war. If the Porte has been recommended not to make it a case of war, it was because, in spite of the aggressive character of the acts of Russia, it was still hoped that there would be, on the part of that Power, a return to moderation and equity.

Russia has no better foundation for casting back on the two maritime Powers the initiative of the provocations. It is an affair already judged; and since the Cabinet of St. Petersburg brings to our recollection, on this subject, its memorandum of the 18th of last February, we can, in our turn, send it back to the whole of the documents which, in England as in France, have so completely placed the question beyond a doubt, that neither of the two Governments have thought it worth their while to occupy themselves for one moment with this memorandum, which has frequently been refuted beforehand. The initiative of the acts of war, as far as regards the Porte, as well as the provocations in matters touching the maritime Powers, belongs exclusively to the Power which invaded the Principalities of the Danube; and such is the opinion of all Europe.

The declaration of the Russian Cabinet remarks that the occupation had not prevented the negotiations from being opened, and that they would not have stopped their being followed out, if the Powers had not suddenly, and without valid reasons, changed the bases which they had themselves given in the first note drawn up at Vienna. The Powers had, in fact, laid down principles which, loyally admitted, might then have solved the difference; but the commentary which the note in question received from the Count de Nesselrode attested that the Russian Cabinet did not accept them, except by attaching to them a signification very different from the idea of the Conference of Vienna, as was admitted by all the Governments represented in that conference. It is, therefore, Russia herself which changed the bases of the negotiation, and compelled the Great Powers to seek for others. The Russian Government bitterly complains of the demand which the Cabinets of Paris and of London addressed to the Commander-in-chief of its naval forces at Sebastopol, in consequence of the aggression of Sinope. We admit that that demand was unusual, but it was called for by a state of things which was not less so; and it was not until after every means of conciliation which patience, moderation, and a sincere desire can suggest had been exhausted, that France and Great Britain had recourse to that extreme measure. It is true that the Russian Government attempts to lessen the proportion which "exists between the effects and the cause," adding, "that the two Powers are compelled to exaggerate the object of it by putting forth the most vague accusations against Russia." In order to prove the gravity of the cause, it is only necessary for us to call to mind the declarations made at Vienna in the documents of the Conference; and as to the object, the revelations contained in the English documents sufficiently prove that the accusations of France and Great Britain are far from being exaggerated. According to the declaration of the Russian Cabinet, we have less respect for the independence of the Porte than it has; and one of the proofs which it adduces for this is, that the Ottoman Government has renounced, by treaty, the power of making peace without its allies. In entering into that engagement the Porte only contracts a reciprocal obligation, on the footing of a perfect equality, and moreover in strict conformity to constant and general usage and the law of nations, when several unite together to pursue by arms a common object.

"The Porte (adds the Russian Cabinet) is about to be forced to subscribe to an engagement which would extend to all its subjects equality of civil and political rights." That assertion, far from being well founded, gives us an occasion of showing, in a striking manner, what is the difference of acting between Russia and the Western Powers in their relations with the Ottoman Empire. Russia has insisted on stipulating with the Porte, either in a treaty or by means of a note, for the maintenance of the liberties of the Sultan's subjects. The other Powers have not, for a single moment, thought of requiring from the Porte any such engagement, either in the form of a treaty or of a note. They have not, it is true, neglected any occasion to suggest to the Porte such measures as appeared to them best calculated to ameliorate the condition of the Christians in the Turkish Empire; but they never could have thought of restricting the sovereignty of the Sultan, when, on the contrary, they were taking up arms to defend it against the pretensions which were menacing it. "It is for Europe, and not for the two Powers (continues the Russian Government) to decide if the balance of power in Europe really runs any of the dangers which, it is pretended, arise from the excessive preponderance of Russia." On that point the wish of the Russian Cabinet is already realised. It is the great Powers of Europe, and not France and England alone, who have signed the acts of Vienna; and these acts declare loudly that the position taken by Russia on the Danube, places the general equilibrium in danger. According to the Cabinet of St. Petersburg, it is, on the contrary, France and England who are exercising at present on Europe a pressure of a nature to disquiet all the neutral Powers. Every one, however, knows that, far from manifesting any disquietude, the neutral Powers, on the contrary, applaud the attitude assumed by the two maritime Powers, and that at the present moment, from every part of the world, they send to thank the two Powers for the recent declaration which has just confirmed the *ensemble* of the principles under which they had in vain endeavoured hitherto to shelter their liberty in time of war. Finally, the Russian Government thinks that the isolation into which it declares it is about to be thrown, will only deliver the world up to a more dangerous preponderance than its own could possibly be. That Government forgets that not one of the Great Powers aims like it at exclusive advantages, or wants to act by itself alone. Far from permitting a preponderance of any kind to be established, a common action exercised by the Four Powers is for all the other States a pledge of security and impartiality. The influences which co-operate for the object in view constitute a just counterpoise of one to the other, and guarantee in advance to Europe that the general interest which has drawn the Four Powers together will not cease a single moment to guide their resolutions, and will be alone listened to to the end. The observations which precede will enable every one to judge of the new document published by the Russian Government.

As the conduct of the German powers will come frequently under discussion as we advance in our narrative, it is here necessary to notice that Austria and Prussia, immediately upon signing the protocol at Vienna, entered into negotiations between themselves for an alliance offensive and defensive; in order that, if the territories of the one were attacked by any of the belligerents, the other should regard it as a German question, and declare war against the power by which such territory might be violated. The ostensible object of this treaty was their mutual protection from Russia, in case the latter, offended by their Western alliance, should attack either; the real object was to afford a mutual support against the Western powers. Austria feared that if, in the complications which were sure to arise in her attempts to preserve neutrality, she should feel disposed

to give any moral support to Russia, France might invade her Italian provinces, and England, always formidable to Austria so long as she makes Malta a great naval station, and preserves a garrison in Corfu, might operate thence in promoting Italian revolt. Prussia regarded France as a most untrustworthy neighbour to her Rhenish provinces, so long as a member of the house of Buonaparte directed her government. Neither power had any real fear of Russia. Their trust was in the sympathy of the absolutism of the Russian government; and the King of Prussia cherished a paternal affection for the Emperor Nicholas, to whom his sister was married—a sister for whom he felt strongly the love of a brother. The following is the treaty between those two governments:—

[*Translation.*]

HIS MAJESTY the Emperor of Austria and His Majesty the King of Prussia, penetrated with deep regret at the fruitlessness of their attempts hitherto to prevent the breaking out of war between Russia, on the one hand, and Turkey, France, and England, on the other;

Mindful of the moral obligations entered into by them by the signing of the last Vienna Protocol;

In the face of the military measures ever gathering on both sides around them, and of the dangers resulting therefrom for the general peace of Europe;

Convinced of the high duty which on the threshold of a future pregnant with evil, is imposed, in the interest of the European welfare, on Germany, so intimately united with the States of the two High Parties;

Have determined to ally themselves in an offensive and defensive alliance for the duration of the war which has broken out between Russia, on the one hand, and Turkey, France, and England, on the other, and have appointed for the conclusion of it the following Plenipotentiaries:—

His Majesty the Emperor of Austria, the Baron Henry de Hess, his Actual Privy Councillor, General of Artillery, and Chef d'Etat Major-General of the Army, Commander of the Imperial and Military Order of Marie Thérèse, Grand Cross of the Imperial Order of Leopold of Austria, Chevalier of the Order of the Black Eagle of Prussia, &c.; and the Count Frederic de Thun-Hohenstein, his Chamberlain, Actual Privy Councillor, Envoy Extraordinary and Minister Plenipotentiary to His Majesty the King of Prussia, Grand Cross of the Imperial Order of Leopold of Austria, Chevalier of the Order of Leopold of the Red Eagle of Prussia of the first class, &c.;

And His Majesty the King of Prussia, the Baron Othon Théodore de Manteuffel, his President of the Council of Ministers, and Minister for Foreign Affairs, Chevalier of the Order of the Red Eagle of Prussia of the first class with oak leaves, crown and sceptre, Grand Cross of the Imperial Order of St. Stephen of Austria, &c.

The same having exchanged their full powers found to be in good order, have agreed upon the following points:—

ARTICLE I.

His Imperial Apostolic Majesty and His Majesty the King of Prussia guarantee to each other reciprocally the possession of their German and non-German possessions, so that an attack made on the territory of the one, from whatever quarter, will be regarded by the other as an act of hostility against his own territory.

ARTICLE II.

In the same manner, the High Contracting Parties hold themselves engaged to defend the rights and interests of Germany against all and every injury, and consider themselves bound accordingly for the mutual repulse of every attack on any part whatsoever of their territories; likewise also in the case where one of the two may find himself, in understanding with the other, obliged to advance actively for the defence of German interests. The agreement relating to the latter-named eventuality, as likewise

the extent of the assistances then to be given, will form a special as also integral part of the present Convention.

ARTICLE III.

In order also to give due security and force to the conditions of the offensive and defensive alliance now concluded, the two Great German Powers bind themselves, in case of need, to hold in perfect readiness for war a part of their forces, at periods to be determined between them, and in positions to be fixed. With respect to the time, the extent, and the nature of the placing of those troops, a special stipulation will likewise be determined.

ARTICLE IV.

The High Contracting Parties will invite all the German Governments of the Confederation to accede to this alliance, with the understanding that the federal obligations existing in virtue of Article 47 of the final Act of Vienna will receive the same extension for the States who accede as the present Treaty stipulates.

ARTICLE V.

Neither of the two High Contracting Parties will, during the duration of this alliance, enter into any separate alliance with other Powers which shall not be in entire harmony with the basis of the present Treaty.

ARTICLE VI.

The present Convention shall be ratified as soon as possible by the High Contracting Sovereigns.

Done at Berlin, the 20th of April, 1854.

ADDITIONAL ARTICLE

To the Offensive and Defensive Alliance between Austria and Prussia of April 20, 1854.

According to the conditions of Article II. of the Treaty concluded this day between His Imperial Majesty the Emperor of Austria and His Majesty the King of Prussia for the establishment of an offensive and defensive alliance, a more intimate understanding with respect to the eventuality when an active advance of one of the High Contracting Parties may impose on the other the obligation of a mutual protection of the territory of both, was to form the subject of a special agreement to be considered as an integral part of the Treaty.

Their Majesties have not been able to divest themselves of the consideration that the indefinite continuance of the occupation of the territories on the Lower Danube, under the sovereignty of the Ottoman Porte, by Imperial Russian troops, would endanger the political, moral, and material interests of the whole German Confederation, as also of their own States, and the more so in proportion as Russia extends her warlike operations on Turkish territory.

The Courts of Austria and Prussia are united in the desire to avoid every participation in the war which has broken out between Russia, on the one hand, and Turkey, France, and Great Britain, on the other, and at the same time to contribute to the restoration of general peace. They more especially consider the declarations lately made at Berlin by the Court of St. Petersburg to be an important element of pacification, the failure of the practical influence of which they would view with regret. According to these declarations, Russia appears to regard the original motive for the occupation of the Principalities as removed by the concessions now granted to the Christian subjects of the Porte, which offer the prospect of realization. They therefore hope that the replies awaited from the Cabinet of Russia to the Prussian propositions transmitted on the 8th, will offer to them the necessary guarantee for an early withdrawal of the Russian troops. In the event that this hope should be illusory, the Plenipotentiaries named, on the part of His Majesty the Emperor of Austria, Freiherr Baron von Hess and Count Thun, and on the part of His Majesty the King of Prussia, Baron Manteuffel, have drawn up the following more detailed agreement with respect to the eventuality alluded to in the above-mentioned Article II. of the Treaty of Alliance of this day:—

SINGLE ARTICLE.

The Imperial Austrian Government will also on their side address a communication to the Imperial Russian Court, with the object of obtaining from the Emperor of Russia the necessary orders that an immediate stop should be put to the further advance of his armies upon the Turkish territory, as also to request of His Imperial Majesty sufficient guarantees for the prompt evacuation of the Danubian Principalities; and the Prussian Government will again, in the most emphatic manner, support these communications with reference to their proposals already sent to St. Petersburg. Should the answer of the Russian Court to these steps of the Cabinets of Vienna and Berlin—contrary to expectation—not be of a nature to give them entire satisfaction upon the two points aforementioned, the measures to be taken by one of the Contracting parties for their attainment, according to the terms of Article II. of the Offensive and Defensive Alliance signed on this day, will be on the understanding that every hostile attack on the territory of one of the Contracting Parties is to be repelled with all the military forces at the disposal of the other.

But a mutual offensive advance is stipulated for only in the event of the incorporation of the Principalities, or in the event of an attack on or passage of the Balkan by Russia.

The present Convention shall be submitted for the ratification of the High Sovereigns simultaneously with the above-mentioned Treaty.

Done at Berlin, the 20th of April, 1854.

MANTEUFFEL.

This private treaty between the two great German powers rendered explanations necessary to the Western allies: they were not very satisfactory, and raised grave doubts as to the ultimate intentions of all the German governments, great and small. Austria and Prussia found it desirable to pacify France and England; and, consequently, on the 23rd of May, a conference was held at Vienna, by the representatives of the four great nations; and from this conference a protocol was issued, which was intended to reassure the governments of France and England of the loyalty of Austria and Prussia in the conventions into which they had mutually entered. The following is a copy of the protocol:—

[TRANSLATION.]

Present—The Representatives of Austria, France, Great Britain, and Prussia.

THE undersigned Plenipotentiaries have deemed it conformable to the arrangements contained in the Protocol of the 9th of April, to meet in conference in order to communicate reciprocally and record in one common Act the Conventions concluded between France and England, on the one hand, and between Austria and Prussia, on the other, upon the 10th and 20th of April of the present year.

After a careful examination of the aforesaid Conventions, the undersigned have unanimously agreed:

1. That the Convention concluded between France and England, as well as that signed on the 20th of April between Austria and Prussia, bind both of them, in the relative situations to which they apply, to secure the maintenance of the principle established by the series of Protocols of the Conference of Vienna.

2. That the integrity of the Ottoman Empire, and the evacuation of that portion of its territory which is occupied by the Russian army, are and will continue to be the constant and invariable object of the union of the four Powers.

3. That, consequently, the Acts communicated and an-

nexed to the present Protocol correspond to the engagement which the Plenipotentiaries had mutually contracted on the 9th of April, to deliberate and agree upon the means most fit to accomplish the object of their union, and thus give a fresh sanction to the firm intention of the four Powers represented at the Conference of Vienna, to combine all their efforts and resolutions to realise the object which forms the basis of their union.

A considerable portion of the British public were very unwilling that any confidence should be placed in the German governments; but, at that time, the power or weakness of Russia, in a military point of view, was not sufficiently developed for the Western governments to be indifferent to any alliances which it might be possible to form; and if, by skilful negotiation and address, the great German powers could even be preserved from aiding Russia, it would be a point gained of great value. In fact, at that period of the war, the Western allies dare not risk any measure which would throw Austria, especially, into the arms of the foe. The geographical position of Austria to the two empires originally at war, gave her a preponderating voice in the councils and conferences to which all were so ready to resort, with aims so widely different. The position which the armies of Austria could at any time assume in reference to Turkey, was also of the utmost importance in weighing her claims to consideration in the stipulations she proposed for even her carefully qualified alliance; for while an invasion of the Turkish territory by Russia must be always strategically difficult, an invasion from the Austrian frontier is strategically easy; and Austria, although with an indifferently replenished exchequer, possessed at this period a splendidly equipped and numerous soldiery.

A private letter from Vienna, in *Spencer's Journal*, contained the following statistics of the troops which Austria had under arms, in readiness to act on the Servian and Wallachian frontiers:—

“At the beginning of February, the 9th *corps d'armée*, under Lieutenant-general Count Schaffgotsch, part of which garrisoned the capital, was pushed to the south frontier of the Banat. These were followed ere long by a second army corps, formed from the troops of the first army, quartered in Bohemia, Moravia, and Austria (Proper). Each of these corps formed a total of 25,000 or 50,000 in all. At the beginning of March, the third army, cantoned in Hungary and Transylvania, was mobilised. It consists of the 10th and 11th army corps, under command of the Archduke Charles Ferdinand and Lieutenant-general Count Wengersky, in Hungary, and of the 12th army corps in Transylvania, commanded by Prince Schwarzenberg.

The amount of these three corps may be taken at 80,000 men, the half of which, with 20,000 *Grenz* troops, and 12,000 cavalry, are added to the south frontier army. So that of the remainder of the *Grenz* battalions, dislocated along the Croatian frontier upon the right flank of the grand army, the total will amount to more than 160,000 combatants, ready to advance at a moment's notice. But the preparations for eastern eventualities do not terminate here. Dalmatia, a point of great importance, is occupied by 20,000 men. Provision has also been made for an efficient reserve. This consists of half the 10th, 11th, and 12th army corps, about 40,000, and of the 6th army corps quartered in the Venetian territory. So that the south corps (*Schaffgotsch*), including the reserve, and the corps in Dalmatia under Lieutenant-general Mamula, present an effective force of 260,000 men ready for action in the East, and this independent of all other corps eschelonned in divers parts of the monarchy.

"As the words 'armies' and 'army corps,' employed in these details may give rise to confusion, it may not be irrelevant to observe that the Austrian military establishment is divided into four armies, subdivided into thirteen army corps, thus:—

"1st ARMY.—1st army corps, head-quarters at Prague; 2nd ditto, head-quarters at Brunn; 3rd ditto, head-quarters at Grätz; 4th ditto, head-quarters at Vienna.

"2nd ARMY.—5th army corps, head-quarters at Milan; 6th ditto, head-quarters at Treviso; 7th ditto, head-quarters at Verona; 8th ditto, head-quarters at Bologna.

"3rd ARMY.—9th army corps, head-quarters at Pesth; 10th ditto, head-quarters in West Hungary; 11th ditto, head-quarters in Transylvania; 12th ditto, head-quarters in South Hungary.

"4th ARMY.—13th army corps, head-quarters in Galicia and Bukowina.

"A 14th *corps d'armée*, then named the 4th, was made up of detachments for service in Holstein, but was broken up on the return of that special corps to Austria."

It would be a discussion as yet scarcely pertinent to our pages to enter upon the question of what the final results would be, if the German diet were to support any modification of the Russian pretensions, so as to unite their armies against the Western powers. We believe that eventually that coalition would be beaten, but not until Europe had been deluged in blood, from the shores of the Rhine to the defiles of the Balkan—from the banks of the Po and the Tiber to the shores of the Vistula, and the forests of Hungary. The war would, in such case, assume terrible proportions, and a struggle fierce and protracted would ravage the fertile fields, the commercial marts, and

the gay capitals of many kingdoms, until it would be mournfully told in all of them—

"Friend and foe the land hath harried,
And the surge swept o'er us, and destroyed us."

While the allied governments were thus cautiously guarding against all misalliance or extension of their quarrel with Russia to the states which most sympathised with her, the enthusiasm of the people at home rose to the highest fervour. All sects and all political parties supported the government, with the exception of the Society of Friends and the Peace Society. It was impossible to peruse the forms of prayer, or listen to the extempore effusions of the various religious denominations—not only on the day of fast and humiliation, but on the Sabbaths—in their different sanctuaries, without being struck with the high tone of religious feeling which pervaded them all. The most beautiful of all these devotional exercises, to which the perils and prospects of war gave rise, was undoubtedly that used in the Jewish synagogue. It is so peculiar and striking, as a composition, that we cannot refrain from presenting it to our readers.

The Chief Rabbi (Dr. Adler) issued and commanded the order of service and forms of prayer to be used in all the synagogues of the United Congregations of the British Empire. The original is in the Hebrew language. The following is a correct translation of the prayers and order of service:—

"The afternoon service having been read, the reader says—

"We approach Thee with supplication, for mercy and truth precede Thy presence. We beseech Thee grant us pardon, and send us salvation and mercy from Thy celestial residence. We come to implore forgiveness from Thee, O Thou most awful and tremendous Being! O Thou who art our Refuge in time of trouble, grant us life, and be gracious unto us, that we may invoke Thy name. O pardon us, and send us forgiveness and mercy from Thy celestial residence."

"Here the reader and congregation or choir shall read or sing the 27th Psalm of David:—
'The Lord is my light and my salvation.'

"At the conclusion of the Psalm, on the opening of the Ark, the following prayer to be said:—

"Almighty God! abundant in mercy and great in power, it is Thou who guidest by Thy strength the heavenly host. The numberless stars, in obedience to Thy command, pass not beyond their assigned course. But man hast Thou created in Thine own image, granted him freedom of will, so that there is no restraint to hinder him from choosing good or evil, life or death. How deep are Thy thoughts! The ignorant know not that Thou makest even the

folly of man an instrument to produce ultimate good.

“Thou hast chosen this land and its inhabitants. Thy providential care hath always watched over it, so that it occupies a high position, and has become the admiration of the world. It is this land, wherein mercy and truth meet, righteousness and kindness kiss each other, which enlightens the darkness of the earth, and teaches understanding to the wrong-doers.

“We humbly approach Thee, O Lord! this day, when our souls are overwhelmed. Thou knowest that our most gracious Sovereign, with great reluctance, has taken up arms in order to uphold the rights and independence of nations, which form the foundation of peace, to maintain justice and tranquillity in the dominions of her ally, which had been endangered through unprovoked aggression.

“Judge of all the earth! we bow down before Thy holy abode, and most humbly beseech Thee to turn the hearts of the aggressors, that they may forsake their designs. Renew a right spirit within them; dispose their hearts to justice; that they may know that the world was not created for destruction, but for the friendly intercourse of nations, so that the earth might be filled with the knowledge to exalt and magnify Thy glorious name. However, if Thou hast not so decided; if, in Thy fathomless wisdom, it is decreed that the earth's iniquities shall not be forgiven without bloodshed, encourage and strengthen the armies of our Queen, on the day of battle, by Thy might and Thy strength. Grant them victory when they fight on behalf of truth and righteousness; though hosts encamp against them, let them not fear; may they scorn danger, and prosper in all their ways and in all their doings.

“Thou who rulest the raging seas, be with the leaders and mariners of our fleets; inspire them with a spirit of wisdom and understanding, of counsel and courage, of meekness and compassion; be unto them a rock of strength, a refuge from the fury of the assailants, that they may maintain their ancient fame, and uphold their old glory. May they speedily return to their native shores with success and triumph; may then the sword return to its scabbard, and a permanent peace be established, and all mankind joyfully shout together: Let the Lord be magnified!

“Trust of Israel, and their Redeemer! we cast ourselves on Thy great mercy; grant us a heart to perceive Thy way in the sanctuary, that we may know the benefits we derive even from the calamities which befall our brethren, by returning unto Thee in humility and sincerity, and purifying our hearts from all our sins and iniquities. Grant that the remnant of Israel may henceforth rely on Thee alone in truth and uprightness, that the scattered flock

may repose in the shadow of peace, and never more be harassed.

“Open our eyes, that we may comprehend the good which the days of peril and perplexity bring forth in Thy beloved land and in Thy holy mountain; grant that it may no more be injured or destroyed, that many nations may flock thereto, saying: Come, let us go up to the house of the Lord, for from Zion shall come forth the law, and the word of God from Jerusalem. Amen.”

“At the conclusion of the prayer, Psalms exx. and exxi. are to be read or sung. Then the usual prayer for the Queen and the Royal Family, followed by Psalms xlvii. and lxvii., the service concluding with the prayer, ‘It is peculiarly our duty, &c.’”

The pulpit and the platform were occupied by the clergy of almost every creed in advocacy of the war as just and righteous, although in some cases “the peace principle” was advocated, and all war denounced as indefensible and wicked. A zealous member of the Peace Society, a distinguished dissenting minister in London, a man of well-established eloquence and great public ability, argued, in an address to his congregation, against the policy and righteousness of the war on the very original ground—at all events, for a member of the Peace Society—“that all nations should be allowed freely to develop themselves.”

But by far the most remarkable of all the religious addresses of the time, and we suppose also the most extensively potential, was that of Archbishop Cullen of Dublin, to the clergy and laity of his diocese, and read on the Sunday from the altars of all the Roman Catholic chapels in and around that city. The following is its principal and most peculiar passage:—

“For nearly forty years we have enjoyed the blessings of a profound peace, but now this empire is involved in a war of which no one can foresee the vicissitudes and final issue. It is a war against a most powerful monarch, who has been always a most dangerous enemy to our holy religion. In the countries subject to his sway he has renewed the scenes of persecution and confiscation against Catholics, of which our poor country was the theatre under Elizabeth and succeeding sovereigns. Acting on the same principles, and imbued with the same spirit with which the fanatics of this kingdom are animated, he, too, has persecuted nuns, destroyed convents, confiscated their property, and, in many other ways, afflicted the Church of Christ. The recent encroachments of this monarch on a neighbouring state have compelled our gracious sovereign and her ally, the Emperor of the French, to declare war against him in defence of the state which has been invaded. In the contest thus provoked, how many countries will be laid waste, how many cities pillaged and

destroyed, and how many thousands of human beings hurried unprepared to the bar of divine judgment! During the course of this momentous struggle it will be our duty to beg sincerely of God, to bring the war to a speedy and successful issue, and to restore the blessings of peace; nor should we forget to offer up a special petition for our own brave Catholic countrymen who have gone forth to fight the battles of the empire. Placed in the midst of danger, and exposed to great spiritual destitution, they stand in need of all the charitable assistance of the faithful. To render our prayers for them, and for the success of our arms, more efficacious, we enjoin on all the clergy of the diocese to recite, every Sunday, from the present date until further orders, after the other prescribed collects, the prayers taken from the mass, *In Tempore Belli*, as laid down in the Roman Missal. We may add, that it must appear to the children of Mary a good omen of the prosperous issue of the war, that the fleets of our ally have been placed under the protection of the mother of God, and that her image, sent by the Emperor of the French, has been inaugurated with great religious pomp on board the admiral's vessel. This solemn profession of Catholic faith, this act of tender devotion to the mother of God, cannot fail to be the source of inestimable blessings to the Church; they will also contribute, in some measure, to make reparation to the offended dignity of the Queen of Heaven for the outrages and insults that have been offered, within the last few years, to her name and images elsewhere."

When it is remembered how impressive the Irish are as a people, and how much under the influence of their clergy, especially of the episcopate, it will excite no astonishment, after the perusal of the above extraordinary pastoral, that the Irish Roman Catholics flocked to the standard of the queen in great numbers, that the recruiting depots were soon crowded, and that amongst those who perished before the gloomy bastions of Sebastopol, stiffened with cold or drenched in blood, so large a proportion were from the sister-land. Even that which in the above address of Archbishop Cullen is so little acceptable to Protestant associations, was all the more calculated to tell upon the people addressed, who felt that in serving against Russia, they were assisting the subjugation of a power by which their co-religionists in Poland had been persecuted.

Some of the most eloquent addresses ever delivered on public occasions from the pulpit, were at this time made in the churches and chapels both of London and the provinces. Those of the Rev. Dr. Cumming of London, the Rev. Dr. McNeil of Liverpool, the Rev. Archdeacon Sinclair of Kensington, and the Rev. Canon Stowell of Manchester, were well-calcu-

lated to direct and guide the national enthusiasm, and inspire the loyalty of the people with a spirit of piety, and a devout acknowledgment of the presiding hand of God in peace or war. It would not be a faithful history that omitted to notice these springs of thought and feeling among the people, which fed the exuberant valour, the dauntless endurance, and the steady loyalty, of those who served, and haply died, in the ranks of battle, or in the stormy bivouac.

During the month of April, troops poured forth to the great rendezvous in the East, from the shores of France and of the British Isles; and many scenes, similar to those which we have already described, took place as the various regiments embarked.

It can be no matter of surprise that the troops designated for the expedition went forth with cheerfulness and ardour, when we peruse such addresses as were delivered to them by the generals of the districts in which they had been quartered. No regiment which went abroad was more jealous of its renown than the 23rd Royal Welsh Fusiliers. They embarked from Southampton, and were previously thus addressed by General D'Aigular:—

"ROYAL WELSH FUSILIERS,—I am anxious to say a few words to you. I have great satisfaction in seeing you under arms on this interesting occasion, and in assuring you that I feel both pride and pleasure in being the colonel of so fine a regiment.

"You are about to proceed upon a service that has awakened, not only the interest of England, but of Europe. You are embarking in the cause of justice and humanity, as well as in defence of a people oppressed.

"Soldiers! the eyes of the world are upon you. The gallant exploits performed by you on former occasions, from the days of 'Minden,' down to those of 'Waterloo,' are the best security for your acquiring fresh trophies, and adding fresh honour to your renown. But remember, that to accomplish this you must persevere in the same steady course of discipline that has always distinguished you.

"It was an observation of our great Duke (not a passing observation, or casual remark, but an observation repeated so often, as to prove his desire to impress it as a principle), 'that no permanent success in war was ever achieved without discipline in peace, as well as in the field.'

"I charge you, therefore, in *his* name, and by *his* memory, which you all alike revere, to obey your officers and non-commissioned officers; to be orderly, temperate, and vigilant, in the performance of your duties; exercising the utmost consideration and kindness towards the inhabitants of the country in which you are employed—mindful that even an enemy ceases

to be an enemy when his sword is no longer drawn against you; but, above all, extending a hand of hearty co-operation and good fellowship to the gallant comrades with whom you are about to serve. Let it be a glorious and animating sight for you to see the flags of England and France united in the cause of justice and of the rights of nations; and let the only rivalry that exists between you be that of a generous and friendly competition in the path that leads to victory and honour. Soldiers! I must not detain you longer, for your time is short; but I cannot conclude without praying that 'God may defend the right, and bless your cause,' and bring you back with fresh devices on your colours, and with rejoicing, to the hearts of your friends, your wives, your children, and your country."

A Lancashire correspondent describes one of these demonstrations of public sympathy upon the embarkation of troops in the following graphic manner:—

"The departure yesterday of the celebrated Connaught Rangers (the 88th Foot) appears to have been marked by more than even the usual amount of enthusiasm. They left Preston about ten o'clock yesterday forenoon. They were accompanied to the station by thousands of the inhabitants of Preston, who most enthusiastically cheered them on their departure. The regiment, 850 in number, under the command of Lieutenant-colonel Shirley, arrived at the Tithebarn Street Station, Liverpool, about eleven a.m., by special train, and were received with the most vociferous cheers by thousands of spectators. Having formed into marching order, the band struck up 'Patrick's Day,' which was the signal of a tremendous cheer by the entire regiment; they then marched to the Exchange, a portion of which was kept apart for them. The entire of the windows of the Town-Hall, Exchange, and Underwriters' rooms, Stock Exchange, Police Office, and the various offices in the buildings, were crowded with spectators, of whom a large number were ladies, who added their quota of enthusiasm by the constant waving of handkerchiefs. Having formed into a circle round Nelson's monument, the band played with splendid effect the National Anthem, the spectators during the performance remaining uncovered, and at the close joined the gallant soldiers in three deafening cheers. The march was then resumed to the landing stage, where the Cunard steam-tenders, *Jackal* and *Satellite*, with two huge barges in tow, were in attendance to convey them to the *Niagara*, lying at her moorings in the Sloyne. About half-past twelve, all being on board, the tenders moved off, and the troops were all comfortably disposed of on board the *Niagara*. Judging from the enthusiastic and sinewy appearance of the 88th, it is most un-

likely that the fame so gloriously acquired by the Connaught Rangers, in the Peninsula, will be otherwise than bravely sustained in the East."

It was amusing to read, in the public papers of the day, the generous martial rivalry between the three kingdoms. What a gratification to the people of England—who are so much the more powerful members of the "*Tris juncta in uno*"—to perceive the sister-countries emulating them in a brave ambition to be great! Thus a paragraph from the *Scotsman*, in April, tells us:—

"It is well known that Admiral Sir Charles Napier is a native of Falkirk. The distinguished admiral of the fleet in the Black Sea is, in a sense, a native of Falkirk likewise. His father was Dr. Deans, who was for some time a medical practitioner in Falkirk, and who married Janet, daughter of Thomas Dundas, Esq., of Fingask and Carron Hall. The gallant admiral was born at Calcutta; his father having received a government appointment in India shortly after his marriage. Admiral Dundas married his cousin, the only daughter of Lord Aylesbury, a younger son of the Dundas family of Carron Hall, and after his marriage he obtained the king's permission to assume the name and arms of Whitley and Dundas, in addition to those of Deans."

And in the *Civil Service Gazette*, about the same date, there appeared the following amusing paragraph as to the birthplaces of the chief officers of the British expeditionary army:—

"A gentleman curious in such matters has made out the following statement:—Of the five who are to command divisions, all are of different birth: a Scotchman, a Hanoverian, an Irishman, a Canadian, and an Englishman. Thus, Sir George Brown is a native of Linkwood, near Elgin; the Duke of Cambridge was born at Herenhausen, in Hanover; Sir De Lacy Evans is a native of Moig, in Ireland; Sir Richard England, a native of Detroit, in Upper Canada; and the Earl of Lucan is the only Englishman of that rank; he is to command the cavalry, and is a Londoner by birth, though of course an Irishman by descent. So also it is remarkable, with respect to the fleets, how the two highest in command are not Englishmen. Sir Charles Napier was born near New Falkirk, in Scotland; and Admiral Dundas at Calcutta, though he also is a Scotchman by descent. Amongst the eleven Brigadier-generals it is interesting to observe: H. J. Bentinck (English?) of Dutch origin (on both sides—his mother having been a De Reede de Ginkle); Sir Colin and Sir John Campbell, of Scotch blood; Colonel Pennefather, a "Tipperary boy;" Colonel Yorke Scarlett, of Jamaican descent; while J. B. Estcourt is a Londoner, born near Portman Square; and Lord Cardigan, a native of

Hambledon; leaving only four unaccounted for, and of these H. W. Adams is probably a native of Warwickshire, since he is head of an old family in that county. William Eyre is probably of Nottinghamshire birth, and George Buller a Cornishman. Amongst the six assistant adjutant-generals, we notice the two Irish names of Doyle and Sullivan; and two Scotch, Maule and Gordon. The mixed nature of our population is here shadowed forth."

Amongst the home events to which the declaration of war gave rise, there was one which, commonplace enough in itself, was the occasion of bringing out some statements from Sir George Hamilton Seymour, the late ambassador to Russia, which were peculiarly interesting to the public. The occasion which called for these statements of Sir George was a dinner at the Mansion House, where, amongst the other notables of the day, Sir George figured. The secret correspondence had made him a very considerable man in public estimation, and, indeed, he appeared to advantage, intellectually and morally, in those transactions, which have now for ever associated themselves with his name. The Lord Mayor, of course, toasted the diplomatic service of the country, which "brought up" Sir George in acknowledgment of the honour. He delivered the following speech, which gives a better character of the spirit and genius of British diplomacy than it generally obtained; and he gave also a sketch of the spirit of Russian diplomacy, of the Russian chancellerie, and of the czar himself, which should be read and remembered by every Englishman, and by every man who would guard the freedom of his kind from the encroachments of a barbarous power.

"After returning thanks for the honour which they had done him in drinking his health, he said he could have been well content to sit down at once, as he was altogether unaccustomed to address large assemblies, but that he had a long story to tell. He might begin by remarking that the confidence which they were pleased to place in him, and the confidence they reposed in him, were due in great measure to the system of diplomacy adopted by the English government. That system was remarkably simple. It consisted in a man keeping his eyes as wide open as he could, and in writing home observations—not such as were most likely to please the English government, but such as they appeared to be to the man himself. That was the system universally adopted by English diplomatists; but, unfortunately, it was not followed abroad. In particular, it was not adopted by the Russian government, and the consequences were what they had all seen. Had the Russian government followed the same practice, he believed that none of the present evils would have come to pass. But, unfor-

tunately, a contrary course was adopted; for nothing could be more inexact, nothing more false, than the notions with regard to Europe in general that were circulated through Russia. What did they write with regard to the provinces of Turkey? They wrote that nothing but the greatest horrors prevailed—that the priests were murdered at the altar—that the Christian temples were burned—that the grossest sacrileges were everywhere committed—things that made his hair stand on end, till he found that he could not trace a single word of truth in the whole relation. What did they write from Constantinople? They wrote that that interesting invalid, the sultan, got worse and worse; that his flesh and his appetite were quite gone; and that his obstinacy was such that he refused to take the prescriptions which the imperial physician was good enough to send him. What did they write from London? They wrote that John Bull was a very material fellow; that he was immersed in the Three per Cents.; that he was very fond of the creature-comforts; and that he was most unwilling to interrupt his present flow of prosperity by meddling with affairs with which he had no direct concern. So much for England. He must say here that he was not alluding to mere diplomatic correspondence—to the despatches of Prince this, or of Count that—but to general reports sent from the country. What did they write from France? Why, they represented that country as having hardly escaped from one revolution, or political change, and as being only bent upon avoiding another; that the men of commerce were intent upon realising large fortunes; that the government was imperial in its sympathies; and, above all, the idea of a close connection between England and France was treated as a myth—as a thing to be talked of, but never to be realised (*hear, hear*). But it might be asked, what was the English minister about all this time? The English minister, he might tell them, was a very small man. He did what he could, but his voice was small; for it was not what was said to the Emperor of Russia in the English language that availed anything, but what was said to him in the Russian language; and he was persuaded that, if there had been any one among his advisers of courage or of character sufficient to tell his majesty the exact truth, his majesty would never have followed his present unfortunate course. The result was, that England was now plunged into a war with a country with which we had long been on the most friendly relations; a country that had many sympathies with this country—as might be expected when it was considered that half of its produce was not only purchased by England, but paid for beforehand;—and with a very

kindly people, for, he could not conceal it, that he had found there many kind hearts among the people (*cheers*); and when the present mists of prejudice had been dispelled, there were many friendly hands there which it would give him great pleasure again to shake (*cheers*). But if they had lost an ancient ally on the one side, the circumstances of the case had had the extraordinary effect, with regard to another country, of wiping away the results of centuries of jealousy and hostility, and of producing a state of friendly feeling which, he trusted, would be equally durable. He need not say that he alluded to their ally the French nation (*cheers*). In every language there were words of peculiar significance and importance. Thus, when they said in England that a man behaved himself like a gentleman, they bestowed upon him the highest compliment, and they meant that such a man would not only fulfil, but go beyond, his engagements. Now, in the French language, the words *loyal* and *loyauté* had the same significant meaning. And, in speaking of the French cabinet, he must say that, as far as his own powers of observation had gone, those terms were peculiarly applicable to the acts of the French government (*cheers*). As far as he had been able to observe, nothing had been more *loyal*—nothing more marked by *loyauté*—than the proceedings of the French government. He did not wish to go into any personal affairs; but there was one slight circumstance which occurred to himself, and which he thought, as regarded the conduct of the French government, had not attracted the attention it deserved. Among the arts that were used—dodges, he believed, was the modern word (*laughter*)—to separate the English and the French governments, the Russian cabinet meted out a very different treatment to the English minister from what was awarded to the French minister. For instance, he received one fine winter's morning the agreeable intimation that

his back was more agreeable to the government than his face—that his passports were ready—and that it was desirable he should set out from St. Petersburg as soon as possible. Nothing of the sort was done to the French minister. But it happened that this little act was foreseen and discountenanced at Paris; and it so happened that when the French minister heard of this, acting upon his instructions, he wrote to the Russian cabinet, requesting that a similar passport might be made out for him—and so, off he went (*cheers*). It was therefore possible, and he hoped it was probable, that the long centuries of hostility that have existed between France and England may now be succeeded by as many centuries of peace. Before sitting down, let him endeavour to point out the difference between the first and the second empires. The one appeared to him to rest upon war and upon a disregard of national rights; the other rested upon an extreme desire for peace, as long as peace could be preserved upon honourable terms, and upon the greatest respect for the rights and privileges of other nations. There had lately resounded through the streets of Paris the cries of '*Vive la Reine Victoria!*' '*Vivent les Anglais!*' He believed he was speaking the universal sentiments of his countrymen when he said that Englishmen would respond to those cries with the shout of '*Vive la France! Vive l'Empereur! Vive le défenseur des droits de l'Europe!*' (*cheers*). He would not detain them longer. If any observation had appeared in his speech tinged with asperity, he hoped they would excuse it. He dared to say that many of them, in travelling, had experienced the discomfort, when arriving at a station, of finding that they had left an umbrella or carpet-bag behind them; and they would therefore excuse any annoyance felt by a poor traveller like himself, who had left behind him the whole of his luggage, and who therefore naturally felt a little excitement on the subject."

CHAPTER XVI.

OPERATIONS OF THE ALLIED FLEETS IN THE EUXINE IN THE SPRING OF 1854.—BOMBARDMENT OF ODESSA, AND THE BATTERIES AT THE MOUTHS OF THE DANUBE.—APPEARANCE OF THE FLEETS BEFORE SEBASTOPOL.—GALLANT CONDUCT OF HER MAJESTY'S STEAMER "FURIOUS."

"Scathed and mournful, like a blasted pine-tree
Left alone when fire the land hath ravaged,
Now appeared the late so prosperous homestead."—*Songs of Finland*.

THE month of April opened with fair and genial weather on the Euxine, and the allied fleets, receiving intelligence, about the 9th, that war was proclaimed, prepared to do something more than merely cruise about as a sort of maritime police. They did not protect our

merchant vessels in the Danube, which one might have supposed within the scope of their commission, even while yet war was not proclaimed; before that ceremony was performed, the Russians repeatedly fired upon the trading ships in the Danube. The *Bedlington*

merchantman received no less than seventeen shots, and sunk in eight minutes; the *Crescent* received seven, and the *Annie* three shots. The two latter were boarded, and the crews taken prisoners, but were released again the following day. The master and crew of the *Annie* retook possession of their vessel, and arrived safely at Constantinople. The *Crescent* could not be brought into port; she was completely disabled, and was left stranded within three miles of the batteries.

An interesting combat between sailors and Russian cavalry, unusual antagonists, occurred at Kustangi. The steamers *Sidon* and *Magellan* were both anchored in that port, and the captain of the latter vessel, with some of his men, set out on a shooting excursion. Some Russian troopers were concealed in a wood, at some distance from the town, but were just discovered in time by the French commander and his men to place themselves on the defensive. They fired, and three of the troopers fell. The sailors steadily retired, showing face to the enemy whenever the latter pressed upon them. They would, however, have soon been overpowered by numbers, had not the affair been descried from the *Magellan*, from which a shell was directed, at the imminent risk of falling among their own little party, instead of the enemy. It fortunately fell in the right place, killing three more of the troopers, and creating such confusion among them as greatly to facilitate the escape of the ship's people. The cavalry recovered from their surprise, and were about to charge, when a shot from one of the long guns of the ship swept through them, disconcerting their movements; this shot was followed up by several others, all telling with admirable precision among the cavalry, who galloped off, leaving the captain and his handful of men a clear passage to their ship. The Russians however again took courage, and presented themselves within range, when another shot from a long gun strewed the ground with men and horses, and the rest dispersed pellmell.

On the 6th of April, an event occurred at Odessa which constrained the allies to inflict a severe punishment upon that city. We shall give it in the words of one who was, from his position and abilities, amongst those best qualified to describe it.

The following is an extract from a report sent in to the minister of marine and colonies by Vice-admiral Hamelin, commanding the French squadron in the Black Sea:—

On board the 'Ville de Paris,' at the anchorage of Batshi, April 10, 1854.

" The English steam-frigate the *Furious* had gone on the 6th instant to Odessa, in order to claim and take on board (*réclamer*) the consuls, and such of our fellow-subjects that

might wish to quit that city at the approach of hostilities with Russia. The *Furious* arrived here yesterday, and, in casting your eyes over the report of her captain, your excellency will see that, in spite of the flag of truce which she had hoisted, and which her boat for landing also bore, the batteries of Odessa—the numbers of which have been much increased since these recent events—fired traitorously seven cannon-shots upon this very boat a few moments after it had left the quay and the naval authorities. This is an unexampled proceeding in the history of the wars of civilised nations; we must go back to 1829, the period when the Dey of Algiers did the same to the *Provence* (and here also it was a ship), in order to find an analogous fact; that is to say, we must borrow the precedent from a war of barbarians. Admiral Dundas and myself are going to deliberate on the severe measures that such a proceeding requires."

As Admiral Hamelin intimates in the above despatch, the admirals consulted, and resolved to attack Odessa. Before we relate the circumstances of the event, it is necessary to give some description of the place.* According to Captain Spencer, it is fifty-four hours' steaming from Constantinople; but he must have had a tedious voyage, as it may be reached in a much shorter time. He describes it as having 100,000 inhabitants. Oliphant doubts whether its population reaches any such number; and other writers, with more probability as to correctness, compute it at 70,000. It is frequently said to resemble Brighton in its topographical aspect and position. A much more striking resemblance would perhaps be found, except as to size, in the small town of Youghall, in Ireland. In 1792, it was a poor Tartar village, called Hadji-bey. The Czarina Catherine II., that most talented and ambitious of princesses, saw at once the advantage of Odessa when she secured her Black Sea conquests, and founded there a city, which has risen to opulence and grandeur. Captain Spencer says, that few towns have risen in prosperity more rapidly than Odessa; but, both in Great Britain and the United States, the instances are not few in which a prosperity has been attained as yet beyond the reach of this town. The port of Odessa is free, and the result is that a concourse, gathered from almost all nations, may be seen crowding its streets, and its well-stocked and oriental-looking bazaars. The port, notwithstanding its prosperity, is a bad one. It is ice-bound two months in the year, and has nearly the worst anchorage ground in

* Our readers, who wish to have more extensive information about its history and progress, can consult Oliphant's *Russian Shores of the Black Sea* in 1852; or Kohl, the well-known German traveller.

Europe, but there is deep water. The harbour is much exposed to a keen east wind, which penetrates everything that can be devised as a protection against it. The climate is bad—in summer there is burning heat, in winter piercing cold. The neighbourhood of Odessa is unhealthy; the diseases of the Crimea prevail—the same fatal dysentery, and the same deadly ague. The impediments to commerce are innumerable, from quarantine, port regulations, dues, spies, and passports. Odessa is the great depot for the grain of Southern Russia, previous to exportation. To promote the commerce of this place, as the outlet for that grain, Russia has persisted, in spite of treaties, to block up the Sulina mouth of the Danube, and thereby check the rival commerce of Turkey and Austria. Odessa is ornamented by the mansions of wealthy merchants, Russian officials, and even nobles. Prince Woronzoff built a palace, the fame of which burthens the stories of most voyagers on the Black Sea and travellers upon its shores. The vicinity is not pleasing: the city is built on the shores of a great steppe, which stretches away from the sea far inland, and the prospect from the town (inland) is one of unmitigated gloom. This accounts for what, from a similar cause, is so unpleasant in the Crimea—the dust covering everything in dry weather, and in the rainy season the streets being literally knee-deep in mud. The town is wretchedly lighted, and the paving and cleansing neglected. The exaggerated accounts given of everything connected with this place, have probably arisen from the fashion of late years to laud everything Russian—a fashion which Russian agents have been assiduous to promote.

When the allied squadrons prepared to attack it, they found it well protected with heavy batteries scientifically placed. At the south-east of the town is a long mole, at the end of which is the light-house. This mole is regularly defended by a parapet, with embrasures for cannon. It is called the Quarantine. At the northern side of the cliffs stands the Imperial Mole. The Quarantine Mole encloses the ships of all nations; the Imperial Mole encircled the Russian ships, military and mercantile. There were here large barracks and military and naval stores; the allied squadron was ordered to spare, as far as possible, the Quarantine Mole, and the property it sheltered, which was British, French, or neutral. The barracks, stores, and shipping, at the opposite side, it was their object to destroy. Between the two moles there was a battery at the foot of the cliff. The citadel on the west side of the town dominates the port, which is formed by the moles above described. The number of batteries by which the place was defended was seven; four of which guard the entrance to the port. Of

these four No. 1 was on the Quarantine Mole, and was of twelve guns, this defended the entrance of the great roadstead; No. 2, of six guns, below the boulevard—this battery divides the entrance to the Quarantine; No. 3, of eight guns, is to the left of the steps, and is so erected as to cross fire with No. 2; No. 4, also of eight guns, on the quay of the “Port de Pratique,” below the palace of Prince Woronzoff. The other three batteries were thus situated:—one on the other side of the gulf of Odessa, at the village of Dohinafta, opposite, or nearly so, to the Quarantine Port; the second, to the south of the port; and the third in the same direction, near the cape of the Great Fountain.

Such was Odessa when, in consequence of the outrage named in the despatch of Admiral Hamelin to the French minister of marine, above given, three war-steamers, two English and one French, were sent to demand from General Baron Osten-Sacken, the military governor, an apology. An evasive answer having been given, a reply in writing was demanded, and the baron vouchsafed it in the following terms:—

“Aide-de-camp General Baron Osten-Sacken thinks it right to express to Admiral Dundas his surprise at hearing that shots were fired from the port of Odessa upon the frigate *Furious*, bearing a flag of truce.

“At the arrival of the *Furious* two guns were fired without ball, in consequence of which the vessel hoisted its national flag, and stopped her course beyond the reach of cannon-shot. Immediately a boat was sent out with a white flag in the direction of the mole, and the officer on duty, in answer to the question of the English officer, said that the English consul had already left Odessa. Without further question, the boat took the direction of the ship, when the frigate, without waiting for it, advanced towards the mole, leaving the boat at its left, and approached the batteries within cannon-shot. It was then that the commander of the battery of the mole, faithful to his order to prevent any vessel from coming within reach of the guns, thought it his duty to fire, not upon the flag of truce, which had been respected to the end of its mission, but upon a vessel of the enemy which had approached the land too nearly after having been twice fired upon without ball—the signal to stop.

“This simple explanation of facts, as they have been related to the emperor, ought of itself to destroy the supposition, otherwise inadmissible, that in the ports of Russia there is no respect paid to the flag of truce, the inviolability of which is guaranteed by the laws common to all civilised nations.

“BARON OSTEN-SACKEN,
“Aide-de-camp General to his Majesty the Emperor.”

ODESSA.

The letter of the governor being an artful evasion, the admirals wrote demanding "that all the British, French, and Russian vessels, now at anchor near the citadel or the batteries, must forthwith be delivered up to the combined squadron.

To this summons no answer was returned. After the manner of Russian officials, the demands of the admirals were treated with contempt. The baron knew that the allies could not effect a landing with the troops at their disposal, and, therefore, whatever the damage inflicted upon the place, the squadron would of course draw off, and his despatches would fill Russia with the tidings of a victory. Besides, he expected that the property most likely to be injured would be that of the allies and of neutral states. It is probable, also, that he regarded the demand of the admirals for reparation for the outrage offered to the British flag as a pretext, and that whatever course he might adopt, Odessa would be ultimately bombarded. He never could have supposed that a fortified city, sheltering ships of war, and a large mercantile navy, which had been used to convey provisions to the Russian armies, would be left unmolested, had no especial difference arisen about a flag of truce. As a great depot of supplies for the Russian forces, he had common sense enough to expect that it would have been treated, as our squadrons have since served similar places on the Sea of Azoff. But our government at home had no intention to carry on an earnest war with Russia, with the monarch and government of which they at heart sympathised; and, therefore, instead of destroying Odessa, as an act properly consequent upon the war, and as politic from its importance as a place of supply, both to the Russian forces in the Dobrudscha, and possibly to the garrisons of the Crimea, our admirals, not daring to exceed their orders, merely inflicted a chastisement by silencing the batteries and destroying the Russian ships; contrary to their intention, the city also suffered.

On the 22nd of April, the combined fleet neared Odessa, and a detachment of twelve steamers, six from the fleet of each nation, attended by a number of rocket-boats, commenced the bombardment. The rocket-boats stood well in, as they were smaller marks for the land artillery, which, besides, dare scarcely waste its fire short of the covering vessels. Thus the rockets, which were 24-pounders, were enabled, with impunity, to cast in a stream of destruction upon the Imperial Mole and the Russian shipping. The plan of attack was one of the most beautifully conceived in the annals of maritime war. The steamers moved in file, each tracking upon the wake of that which preceded it, in an ever-repeated circle, and each delivering her fire from that

place in her orbit which was nearest to the enemy, she passed on, making way for her successor in the revolving circle, until she again wheeled round in the precise period for another delivery of her fire. This movement was most happily described by one who witnessed it as a wild waltz of vengeance. Another as happily described it as the wheeling flight of some beautiful birds of prey, swooping at intervals each in turn upon the quarry.

The Russian guns from the Imperial Mole answered with some effect and great steadiness, and even rapidity of fire; but the *Terrible* stood in nearer to the town, using red-hot shot and rockets, some of which, falling through a shed behind one of the batteries, it caught fire, the flames spread, and after a short interval a terrific explosion sent volumes of smoke and broken and burning fragments high into the air—the imperial magazine had been fired, and the Imperial Mole on which it rested was rent and shattered with the shock. Three loud cheers from the squadron hailed this token of success. The battery on the Imperial Mole being silenced, signals were made for the ships to stand in closer. This was done, and the fire directed upon the Russian shipping. A Russian frigate was the first victim—a shell penetrated to its magazine, and it was blown instantly to atoms. Two new frigates, not yet removed from the stocks, and several other ships in progress of building were burnt. A brig, a sloop of war, and a heavily armed schooner, were riddled with shot and sunk. The attack upon the stores and dockyard was conducted by the rocket-boats. The troops in the garrison opened fire from their horse-artillery with spirit, but the artillerymen were literally swept from their guns, and several of the pieces dismounted. It was impossible to defend stores or dockyard—the shells and rockets flew like fiends conscious of their mission and eager for destruction; the dockyard was ignited, and the conflagration spread everywhere; explosion followed explosion as detached portions of ammunition were touched, and the flames burst up, in fierce and fitful gusts, above the exploding and burning masses which sunk with loud crashes within them. The town itself caught the spreading fire, which pursued its career, leaping from house to house, until nearly half the city was reduced to a pile of charred and scattered rubbish. The punishment was signal, and might have been complete. As it was, the fleet drew off, leaving a heap of ruins to rebuke the pride of the imperial representative. About fifty Russian sailors were captured, who were ultimately put on shore (very unnecessarily and very unwisely, for those men afterwards defended Sebastopol), thirteen vessels, laden with munitions of war, were cut out and captured, and about 1000 Russian sailors and soldiers,

the latter principally artillerymen, were killed and wounded. The loss of the allies was extremely light; only one man was killed and ten men wounded of the English, the French suffered but little more. Several of the ships incurred damage, especially the British steamer *Retribution*, and the French steamer *Vauban*. The latter was on fire, and had to steer out of action until her magazine was secured, when she returned to her part in the curious gyrations of these angry swallows of the deep.

Russian despatches, manifestoes, and circulars, are always "curiosities of literature"—and curiosities of lying. The ingenuity with which a defeated general, or admiral, will turn a defeat into a victory, or a terrible disaster into a matter for unmixed congratulation, is to be admired, if we can only divest ourselves of any idea of the morality of such conduct. Accordingly, "all the Russias" heard of the "repulse" of the allies, who could not silence the batteries of Odessa, but exercised their powers of destruction upon a peaceful city. The czar addressed an imperial rescript to the people of the battered town in these terms:—

To the Inhabitants of our well-beloved and loyal town of Odessa.

The Anglo-French fleets, entering the Black Sea, attacked some days back the peaceful city of Odessa, open to the commerce of Europe. General Baron Osten-Sacken, in speaking of the brilliant courage with which the attempts of the enemy have been repulsed by the military forces, has likewise informed us that, in the midst of the danger which menaced the inhabitants, public tranquillity was not disturbed a single moment; and that the people executed with exemplary zeal all the orders of the local authorities. Strict obedience to duty, as prescribed by our holy religion, and devotedness to the throne, animate all our well-beloved and faithful subjects. At Odessa, that sentiment, so worthy of praise, has been manifested to its full extent under the thunder of the enemy's cannon. The firmness and self-denial of the inhabitants of that town could not fail to attract our attention, and we feel pleasure in expressing, on this occasion, to all classes of the population our special kind feelings.

NICHOLAS.

St. Petersburg, May 8th.

The emperor also directed a decree to the commandant, in honour of the triumph gained by his troops, which he is represented as "leading" to victory. We imagine, as the St. Petersburgers read this decree in the columns of the *Invalide Russe*, they were persuaded that holy Russia had driven the infidels from her sacred soil.

"On the day when the inhabitants of Odessa, united in their orthodox temples, were celebrating the death of the Son of God, crucified for the redemption of mankind, the allies of the enemy of His holy name attempted a crime against that city of peace and commerce—against that city where all Europe, in her years of dearth, have always found open granaries. The fleets of France and England bombarded for twelve hours our batteries, and the

habitations of our peaceful citizens, as well as the merchant shipping in the harbour. But our brave troops, led by you in person, and penetrated by a profound faith in the Supreme Protector of justice, gloriously repelled the attack of the enemy against the soil which, in apostolic times, received the precursor of the Christian religion in our holy country. The heroic firmness and devotion of our troops, inspired by your example, have been crowned with complete success; the city has been saved from destruction, and the enemy's fleets have disappeared. As a worthy recompence of so grand an action, we grant you the order of St. Andrew.

'NICHOLAS.'

"The Russian government then decreed:—'The military stores, batteries, and all the other works of defence destroyed by a division of the combined squadron, shall be reconstructed at the expense of the city of Odessa.' It is added that the czar, in taking that decision, had merely acceded to the patriotic demands of the inhabitants."

This latter decree accounts for the previous flattery of the bravery, obedience, and sanctity of the citizens.

The combined squadron succeeded, in its progress to Odessa and subsequently, in taking a number of prizes, some of them of considerable value.

There was yet another exploit performed by the allied squadron, during the early spring, upon the shores of the Euxine. By the treaty of Adrianople, Russia was allowed to become the custodian of the mouths of the Danube. She acted especially as trustee, as it were, for the freedom of the Sulina mouth—the navigable mouth of that great outlet of the productions of many lands. Russia violated the engagements which this guardianship imposed upon her, as she always has violated engagements when she dare. Under the pretence of quarantine, to keep out cholera or plague from Bessarabia, she threw impediments in the way of the commerce of the river. Persons and ships not going to Bessarabia, were subjected to the same inconveniences as if about to touch Russian territory. In fact, Russia seized the mouth of the Danube, almost stopped up—or, contrary to treaty, permitted to be almost stopped up—its navigable mouth, and acted as if the czar were lord paramount of its shores and waters. This course of conduct was, as we have briefly intimated already, for the purpose of diverting the stream of commerce to Odessa. Turkey produces the same commodities as Southern Russia: corn, flax, hemp, and all the products of the soil of which Odessa is the outlet, can be cultivated in the Danubian provinces of Turkey, of which the Danube is the outlet. To stop up that highway

of waters is to check Turkish commerce and cultivation; to impoverish the exchequer and the soil of vast and rich provinces of the sultan's empire; and thus, by force, to divert all the commercial advantages which nature has so lavishly bestowed on these territories, to the czar's own provinces of Bessarabia and Podolia. The English government many times remonstrated against this violation of treaty, in which it was interested. The czar and his minister made the fairest promises, and with all that seductive persuasiveness for which the Selave race has credit; but there was no change; and England quietly submitted, when a spirited check to the pretension and power of her insidious enemy might have saved her millions of the treasure and much of the blood which have, in this war, been already expended. The batteries erected by Russia to control the navigation of the river were bombarded by a portion of the allied ships. This opened to the allies the command of the river in a military point of view, and constrained the Russian armies to retreat from the provinces, when they were driven, baffled and defeated, from the battered earthworks and broken walls of Silistria.

After the bombardment of Odessa, the allied fleets proceeded to Sebastopol, where the *Furious*, which took part in the destruction of the moles and batteries of the former place, signalised itself again and repeatedly. On one of these occasions she narrowly escaped capture, when her captain performed a feat of daring and dexterity, characteristic of the brave old times of the British navy. A letter from a naval officer thus describes the achievement:—

"Captain Tatham, of her Majesty's steamer *Fury*, has had the honour of opening the ball in the Euxine. He was sent by Admiral Dundas to reconnoitre Sebastopol, and on Tuesday night (the 11th) he anchored near Cape Loukoul, some fifteen miles north of Sebastopol, so

as to be able to run in towards the fortress just before daylight. Cossacks were seen riding towards the city to give information of his presence. At daylight, when about a mile and a half from the forts, he observed two man-of-war brigs standing out, followed by two merchant schooners. Being anxious to get information, he thought it desirable to make a prize of one of these schooners. He therefore hoisted Austrian colours, and stood right in for the harbour, passing these vessels. Having got inside of them, he put on full speed, turned round, chased one of the schooners, and ran alongside of her, with the intention of making her fast to the *Fury* without the delay of lowering a boat. In this he failed, and subsequently lowered a boat and sent his first lieutenant with the end of a hawser, made her fast and brought the crew out of her, and took her in tow. On running alongside the schooner, he changed the Austrian for the British flag. While so employed, two frigates and a steamer were observed to leave the harbour in chase, with a strong favourable breeze. Observing that they were fast gaining upon him, he found it necessary to cast off the schooner. For nearly three hours he was very hard pressed, and several shots were exchanged, but, by dint of good seamanship and misleading the enemy by signals, they eventually gave up the chase. He has brought in the master and crew of the schooner, from whom some valuable information has been obtained. Thus the enterprising little *Fury*, mounting but six guns, was honoured by a chasing force of some 120 guns, and has now safely rejoined the fleet."

All attempts to coax out the skulking navy of the enemy proved in vain, although "all odds" were offered to them. We must now leave our ships as sentinels before the entrance of the great arsenal, while we return to other scenes and another arm of the service.

CHAPTER XVII.

RECEPTION OF BRITISH GENERALS IN FRANCE ON THEIR WAY TO THE EAST.—FRENCH AND ENGLISH TROOPS AT MALTA.—THE ARRIVAL OF THE ARMIES AT GALLIPOLI.

"Adieu, adieu! my native shore
Fades o'er the waters blue;
The night-winds sigh, the breakers roar,
And shrieks the wild sea-mew.
Yon sun that sets upon the sea
We follow in his flight;
Farewell awhile to him and thee,
My native land—good night!"—BYRON.

In an earlier chapter, we gave a somewhat detailed account of the embarkation of the first troops dispatched for the East, on board the

Ripon, *Orinoco*, and *Manilla*; and of the various regiments by which the first detachments were speedily followed during the latter end

of February and the whole of March. The destination of those troops was Malta,* from whence they were, after a short stay, withdrawn for Turkey, and landed at Gallipoli. The first French detachments for the eastern expedition were also landed at Malta.

Many of the superior officers of the British army went by way of France, either to Malta or Gallipoli direct: the hospitalities shown to them in Paris and other cities of France, were of the most courteous and loyal kind. The Duke of Cambridge, who was appointed to the command of the first division of infantry, was amongst the last of the officers who arrived in the East, he having certain especial diplomatic functions to perform in Paris and Vienna. While in Paris, he was greeted by the people with enthusiasm, and received with the most marked respect by the emperor, and the heads of the army and the ministry. Lord Raglan, upon whom the command of the British army devolved, was a sharer with the Duke in these cordial manifestations. The following is probably the most exact account which appeared at the time, of the great military spectacle which the visit of the English chiefs occasioned. Paris was crowded with British officers of distinction, whose superior rank or age rendered their appointment to divisional commands unsuitable. Their critiques upon the appearance and discipline of the French troops, were such as to give our countrymen every prospect of sharing the glory of a great campaign with the finest army that ever left the shores of France:—

“The review given by the emperor in honour of the Duke of Cambridge, Lord Raglan, and the other high English officers now in Paris, was a most splendid spectacle. Since the great military display of delivering the eagles to the troops on May the 10th, 1852, nothing of so imposing a character as the present assemblage of troops has been seen in Paris. The weather, too, was on the whole favourable, for although

some rain fell for a short time after the proceedings had commenced, still the dust was laid, and the Champ de Mars rendered in good order for military exercises. By a quarter to one o'clock the whole army was in review order. The infantry formed a line extending nearly along the whole northern side of the Champ de Mars. The cavalry was ranged opposite the grand race-stand, being in the centre of the line, and the artillery was in the centre, with the Ecole Militaire in its rear. Almost as soon as the empress had taken her seat in the state compartment of the grand stand, the emperor and the Duke of Cambridge, followed by a brilliant and numerous staff, were seen galloping across the bridge of Jena towards the field. On arriving on the ground, however, the emperor immediately checked the pace, and, although it was raining hard, proceeded in a most business-like way to review the front of the infantry line at a walk. The Duke of Cambridge rode about half a neck behind him, and the mathematical precision with which this exact distance was kept throughout the day, showed the two royal equestrians to be perfect masters of their noble horses. The two uniforms formed a very pleasing contrast. The duke's scarlet uniform and white plume was an unerring guide to the position of the emperor, who, in the less conspicuous attire of a French general of division, would not otherwise have been always distinguishable from the crowd of officers about him. When the emperor had reached the upper end of the infantry line, he turned, and at the same slow pace proceeded along the rear of the front rank, to the surprise of many of the spectators, who were not prepared for this minute inspection. But, not content with this, and determined to give the English officers the fullest opportunity for criticism, he again turned, rode along the front of the rear rank, and then descended again by their rear, thus traversing the infantry line four times. Instead of a review, it was a searching inspection, such as a colonel would make of his own regiment on its private parade. The cavalry was afterwards inspected with nearly equal minuteness. One of the cavalry regiments played ‘God save the Queen,’ as the reviewing party passed by. The inspection over, the emperor led the way to the front of the grand stand, where he and the Duke of Cambridge saluted the empress. In a few minutes the filing past commenced. All the regiments marched exceedingly well, and being stimulated by the presence of the English officers, with greater precision than usual. When the filing past was finished, it was thought that the review was over, and a momentary disappointment was felt because no manœuvres had been executed. This disappointment was of short duration, for although the *defile* is

* Malta is so well known as an island in the Mediterranean, strongly fortified and garrisoned by England, that it is only necessary to notice, *en passant*, its situation or history. It is about twenty miles in length and twelve in greatest breadth. In ancient times it was little more than a barren rock; but has been made productive by the vast quantities of soil brought from Africa and Sicily, between which it lies. The number of inhabitants is about 100,000. Since the commencement of the present war, the population has increased very rapidly. The languages spoken are a very corrupt Arabic in the country, and nearly as barbarous Italian in the towns. The Knights of St. John of Jerusalem were here long established, the island having been given to them by Charles V., after the taking of Rhodes. It was attacked by the Turks in 1565, who made many dreadful assaults, from the 18th of May to the 13th of September, and were unsuccessful after having lost near 30,000 men. The Christians lost near 5000. Buonaparte took possession of it on his way to Egypt, in 1798; on which occasion an old officer of artillery remarked, “It was well there was some one inside to surrender it, or we could never have got in.” The reader may consult with advantage the Rev. Sheridan Wilson's work on Malta.

usually the conclusion of a review, it was not so to-day. Whether by a preconcerted arrangement, or in consequence of a request from the Duke of Cambridge, or a sudden thought of the emperor, I cannot say—a brilliant charge of cavalry was reserved for a *bonne bouche*. A few minutes after the filing past was concluded, the entire force of cavalry in the field appeared, as if by magic, in a single line at the furthest extremity. The word was given to charge, and they rushed forward along the whole length of the Champ de Mars, towards the opposite side, of which the grand stand is the centre. As the formidable line came rushing on to within a few yards of the Emperor, the staff, and the spectators, people rapidly reviewed in their minds a question much debated of late, whether cavalry would stop of themselves rather than go through a material obstruction. I, for one, confess that I was not easy about the theory at all; it seemed to me as if nothing could stop the impetuosity of their charge, and that in a few seconds Napoleon III., his marshals, the Duke of Cambridge, Lord Raglan, and the crowd of curious beholders immediately behind them, must inevitably be trampled upon under the hoofs of the advancing cohorts. However, at the word ‘halt!’ enforced, it is true, with great and apparently anxious energy by officers commanding squadrons, the imposing line drew up, still in line, within a few feet of the emperor’s horse. This brilliant conclusion of the day was the signal for deafening cheers from the tribunes. Lord Raglan, during the day, rode among the French general officers, a good way behind the emperor. Marshal St. Arnaud, and Marshal Vaillant, the minister at war, were immediately next to the emperor and the Duke of Cambridge.”

It was impossible to peruse the French papers of the time, without being struck with the high tone of admiration and respect for everything English. Strong as the favourable feeling of the English people to France and the French emperor then undoubtedly was, it was far surpassed in warmth and appropriateness of expression by the French, towards the army, government, and people of Britain. The *Pays*, then a very great authority, thus writes concerning the events above recorded:—

“The review at which the Duke of Cambridge was present yesterday was more than a brilliant military manœuvre: it had a political importance, which did not escape the notice of any of the numerous spectators who thronged the Champs de Mars. English uniforms, mingling with French uniforms, were for every eye the visible sign of that strict alliance which the same feeling of dignity and civilization, and the same interest, has cemented between France and England—an alliance so much the more serious and durable that it does not result

from those personal considerations, nor from those dynastic affinities which the slightest incident compromises and overturns, but rests on mutual sympathy and on a truly national policy. The presence of the English officers has besides been the occasion of manifestations altogether spontaneous, which attest at the same time the progress and the justice of public opinion. The acclamations which broke out on their passage have demonstrated in an undeniable manner that the union of the two nations is not less cordial than that of the governments. There remains at present nothing of the ancient prejudices which aroused such lively and such deplorable passions between England and France. All the classes of society in each of these two countries are well aware that France and England are, in the whole world, the most worthy and the most disinterested representatives of right, justice, and moral and material progress; that they have the same interests to carry out, and the same interests to defend; that in fine, as their contests have shaken all states, so their alliance confirms the general equilibrium, and guarantees the security of modern nations. The first effort of this new and generous alliance has for object to promote the right of Europe against the ambition of Russia, to maintain respect for treaties, to arrest in their invading march the heirs of Attila and of the Huns, and to oppose to the barbarism of the races of the north the impassable barrier of civilisation. The armies which march for the support of this noble cause may be proud of their mission; they will obtain not merely that glory of a military character which is sought for on the battle-field—they will also have that still more useful glory which great services merit, rendered to humanity by the triumph of principles which ensure universal peace. Such were the sentiments and impressions which yesterday filled every mind in seeing a Prince of England by the side of the Emperor of the French, and the superior officers of Great Britain and France confounded in the same ranks, at the same moment when they are about to undertake the supreme struggle of right against iniquity, and of the interest of all against the ambition of a single one.”

The only English paper published in Paris, *Galignani’s Messenger*, if less philosophical, was more graphic in describing what took place.

“The most remarkable part of this splendid pageant was not the appearance of the troops, however magnificent, but their bearing and that of the multitude of spectators towards the English. That our countrymen would be received with courtesy, no one could doubt, from the exquisite politeness and hospitality of the French. It was not, however, with mere politeness that they were greeted, but with marked and even affectionate cordiality. As the Duke

of Cambridge passed along the lines, loud and constant cries of '*Vive l'Angleterre! Vive le Prince Anglais!*' were raised both by soldiers and people, in conjunction with the shouts of '*Vive l'Empereur!*' and during the filing off, these cries were again repeated with marked enthusiasm by both. The bands, too, of most of the regiments frequently played 'God Save the Queen.' Amongst the pedestrians, that is to say the lower and most numerous part of the spectators, the friendly feeling towards the English was in fact so great as to occasion surprise. 'Which is the Prince?' 'Which is Lord Raglan?' were the universal inquiries, whenever the imperial *cortège* passed near; and whenever any good-natured fellow said—(with, by the way, as regarded the duke, a greater desire to oblige than, perhaps, his knowledge of English social distinctions warranted)—'*Voilà, Lord Cambridge, le Prince Anglais—celui-là à côté de l'Empereur!*' or, '*Voilà, Milord Raglan—celui qui n'a qu'un bras!*'—whenever such a reply was returned, up rose a shout of '*Vive le Prince! Vivent les Anglais!*' One would have said, really, that 'perfidious Albion' had never existed in the imagination of the French, and that French and English had been fast friends for ages!"

When leaving France, the Duke of Cambridge and Lord Raglan were received by the municipalities, and the people everywhere, as if on a triumphal progress. Whatever is animated in spirit, gay in mode, and artistic in taste—characteristic of the French people—was put forth upon these occasions. All France was eager to prove the *entente cordial*, and to show that, as in the days of Cromwell, the warrior and dictator, so, in the days of Victoria the peaceful, French and British, notwithstanding all their diversities of policy and taste, could fight side by side for the cause of European independence.

The arrival of the British expeditionary forces at Malta excited the utmost delight among the soldiers of the garrison, who thronged the formidable-looking battlements, awaking the echoes with their cheers, as the transports glided into the harbour. The first detachment of the brigade of Guards landed upon the 4th of March, and at an hour which allowed to the inhabitants and the garrison an opportunity for assembling to give them a hearty welcome. It was about two o'clock in the afternoon when they arrived; but so wretchedly wet and dismal was the weather, that comparatively few were there to greet them, beyond the troops in the vicinity. Four companies of the Guards were immediately quartered in Fort Manuel, three others in the Lazaretto, and one in Fort Tighe, at the entrance of the quarantine harbour of Marsamuscetta. The 28th landed a little later in the afternoon, when the weather was, if

possible, more gloomy. Three companies were placed in quarters in the Naval Hospital Store, in Beghi Bay, at the entrance of the grand harbour of La Valetta; two companies in St. Salvador, nearly adjoining; the head-quarters and two companies in the new works at Fort Verdela, within the Cattonera lines; and one company at Zabbar Gate. The next day, the remaining portions of the Guards landed at an earlier hour, and under a clear blue sky, such as the people of Malta often look upon, and always delight to behold. The day was clear and bright, and the searching spring light revealed every peculiarity in the uniform, mien, and bearing of these gigantic messengers of England's strength and valour. The soldiers looked as hale and fresh as before they embarked, and their gay uniforms, contrasted with the frowning walls of the place, presented a picturesque effect. Not an accident occurred to mar the beauty of the scene, or to afford the superstitious an evil omen in reference to the cause for which the force was sent forth. The soldiers, although more at home on shore, were profuse in their acknowledgments of Jack's hospitality, many of whose songs and "yarns" they had contrived to "stow away" in their memory during their brief sojourn upon blue water. Immediately upon the troops taking up quarters, the general issued an order that all officers should appear in uniform; and regulations were made of the most judicious nature, to secure the troops against coming into any collision with the inhabitants, whose hatred to the English government and nation is deep, rancorous, and unreasoning. Mingled hostility, of a political and religious nature, thus inflames the minds of the Maltese. There was, however, no manifestation of it to the expeditionary forces. On the contrary, the people seemed to catch the infection of loyalty by which the soldiers were inspired, and there were no available marks of kindness which they did not confer. The common people treated the common soldiers in the coffee-shops and divans, while the clubs were opened to the officers, and balls and parties became the order of the day. The men of "the force" showed a laudable curiosity, and lionized *con amore*: they were very ready to receive all the hospitalities offered, and gave promises in return—which the Maltese did not seem much to value—that they would thrash "them there barbarians," and "make master Nicholas let the poor devils of Turks alone."

As the *Manilla*, and other ships and troops arrived, it became very soon manifest that there was a great want of organisation, both on ship-board and on shore. The commissariat department even then gave way; and timely warning was afforded, that if it were not placed at once upon a better basis, the expeditionary army would

be the most inefficient, *as an army*, whatever the efficiency of individual corps or men, which ever left the ports of England. Various men and things were soon discovered to be wanting, that ought to have been brought from home; and there was such advertising in Malta as was never known in its history. Every person required was referred to Commissary Filder, or the assistant, Commissary-general Strickland. All sorts of tradesmen, from a tinker to a borer of rifles, was in request. Clerks, store-keepers, servants, interpreters, saddlers, harness-makers, tailors, musicians, smiths, wheelwrights, farriers, armourers, packers, shoemakers, were all wanted; while at home all these could be found in superabundant numbers, and at the cheapest rate. There was a great deal too much of very many things of indifferent utility; there was nothing to be had when many requisites of essential concern were sought.

The soldiers were daily made more perfect, during their stay at Malta, in the use of their weapons, especially in the practice of the Minié musket. The men of the British Isles, in all ages, have been renowned as marksmen. Neither Swiss nor Tyrolese possess the qualities calculated to make good riflemen in a greater degree than the soldiers of "the three kingdoms." From the days of Cressy to the wars of the Cape, the soldiers of England could take a deadly aim. A certain German military writer calls the British army, an army of grenadiers;—it seemed, at this juncture, to be the object of its chiefs to make it an army of riflemen. It was well that these exercises were insisted upon, as they tended to give a healthy tone to the men; who soon became addicted to the use of bad brandy and worse wine, and various execrable viands, sold in the cook or coffee-shops, which were injurious to their health. In March and April, notwithstanding the splendid spring days, and a sun hot as in Midsummer with us, the nights are cold and unhealthy, and especially to those not accustomed to the climate. The season, too, was unusually sickly; and there were indications in the English camp that colds and carousings were both doing their work: catarrh, alcohol, and a new climate, at a trying season, had spread the germ of sickness among the troops, which afterwards so fatally developed itself elsewhere. The island became a very busy and a very gay place while the army remained; trade was brisk, money circulated freely, every one was speculating in his line, and the Jews reaped a plentiful harvest amongst the spendthrifts. Moses did not, however, always succeed in fleecing his supposed victims—he was often fleeced himself; and we have had more than one amusing description, by an eye and ear-witness, of a Jew in his office, long after the departure of his debtors to other scenes, comparing the lists of casualties from the Crimea

with the names on his books, and denouncing as a disgrace to his country, in all the varieties of passion impelled by avarice, the fallen heroes who were in his debt; while those who escaped the rage of shot and shell, or were only slightly wounded, remained in his estimation true heroes, as they survived to honour his drafts.

The continued arrival of French troops, while the British expeditionary force remained at Malta, was the occasion of *scenes* which amused the Maltese a good deal. The soldiers of both nations were fired with an irresistible curiosity to see one another; and whether engaged at some little distance, or exchanging civilities, seemed never tired of mutual gazing. There was no end to their fraternisation. The little Zouave nestled under the arm of the big British grenadier, or strutted out before him, as if the latter was a big pet of his, and just then under his protection. Their abortive attempts to become intelligible to one another, were not the least amusing feature of the fraternisation of the soldiers of the two nations, to the observant Maltese. There, yonder, are a pair just now acting out the Western alliance in their own proper persons; one is a chasseur, well equipped, slight in figure, and nimble as a rat, or a roe, if it be a more complimentary comparison. He places his hand on his heart, his gesture is eager, and varied beyond all imitation; that burly guardsman smiles, and positively blushes! he raises his hand to his shako, as if he were saluting one of his own officers. The little chasseur rushes at him, embraces him, and rings the changes on all the customary phrases of compliment and satisfaction which his language supplies; the guardsman still blushes, and assures him he is glad to see him, and asks him, in approved cockney, if he will have a glass of porter, which he gratefully and somewhat boastfully informs him has been sent out to the troops. The Frenchman shakes his head, and repeats his phrases and gesticulations; but most expressively shrugs his shoulders, and declares that he does not speak English. An English sailor, who has been quietly surveying the interview with his hands in his pocket, and a quid going leisurely its rounds in his cheek, "can't stand this any longer," and goes up to the Frenchman, claps him on the back with a blow that seems a shock to the Frenchman's whole frame, seizes his hand and shakes it, as if he wanted to wrench it off, and tells him "that them ere sogers are very much like marines," to which the shaken French friend politely assents by a beatifying grin, which Jack takes for a compliment in turn, and seizing the Frenchman under his brawny arm, walks off with him to a brandy-shop, leaving the "non-plussed" grenadier in stately admiration and astonishment, mixed

in any proportions the reader pleases; while the chasseur, turning round, kisses his hand to his quondam friend, and reconciles himself to his new acquaintance, who seems to regard him with a sort of pity, as too little entirely for the profession of arms. A greater number of the English soldiers—especially among the non-commissioned officers—knew French than might have been supposed, or has been generally represented, and the admiration which the French entertained for these was boundless. In fact, these men were of great use, not only to their fellow-soldiers, but to their regiments, in transacting business, for which then a knowledge of the French language was so necessary. When the first meetings of considerable bodies of the two armies occurred, their cheers were vociferous, and their demonstrations of alliance animated by the warmest conceivable cordiality. If making Malta the first rendezvous for both answered no other end, it answered this—of giving the soldiers of both nations time to know something of one another, and form an acquaintance with those peculiarities to which they would afterwards to some extent be obliged mutually to adapt themselves. Yet there were circumstances which tried this newborn friendship. Upon the British regimental colours there are many inscriptions to perpetuate the memory of the battles won over their allies when they were enemies, but the British covered these ensigns with a good taste which the French appreciated.

Prince Napoleon, it was alleged, was so inveterately prejudiced against the English that he could never be engaged to countenance the policy of a united action; and although burning to revive the military prestige of his name and race, would not take a command in an army which was appointed to co-operate with an English army in the field. It was even alleged, that during the then recent visits of the English generals in France, *en route* to Malta, he left Paris in order not to meet them at the reviews given by his cousin the emperor for their entertainment. Happily, however, he belied all these evil allegations, for when he arrived at Malta, no French officer was more complaisant to the British than was the prince; thereby removing a source of uneasiness from both cabinets, if there were any truth in these reports concerning him; and, at all events, relieving the English people, and the officers of the army, from any apprehensions entertained about the interruption of good feeling between the troops of the two nations.

Such were the scenes in Malta during the short period that the troops were there, before proceeding to Gallipoli. A lady, who seems quite at home amidst military stir and occupation, thus sketches the picture:—"The Strada Reale was crowded. The pavement, occupied

by riflemen and red jackets of all sorts, looked like a double row of poppies, relieved here and there by the green leaves. The entrances of the hotels—the Imperial, Dumford's, and Baker's—were assailed by weary, gasping people, earnestly desiring shelter, and generally repulsed by the answer, 'No room.' Then private lodgings were tried; some of them of the most extraordinary kind, and in the most objectionable neighbourhoods. A swarthy householder would usher one into the newly-swept charcoal closet, with laudatory remarks on its security from noise and cold—he might have called it light and air. The *auberges* of the knights were filled; the forts of St. Elmo, St. Angelo, Fort Manuel, the new Lazaretto, were bursting with troops; so was it also with the new barracks at Valetta; in fact, it was only wonderful that the caverns of the rocks, the sheltering places of the milch goats of the island, had not been also thought of, and secured for the troops. Then the gossip! Every half-hour brought its news; the clubs, of course the nucleus. Greek mischief-makers, Russian spies, Turkish alarmists, were all busily engaged. The waiting-rooms of Muir and Goodenough, the two librarians of the Strada, were filled with inquirers all day long. Wonderful monster vessels, that had ploughed the Atlantic, and were never before heard of among us, came proudly into the stirring harbour of Valetta, and were away again ere morning light. Old, creaky, crazy steamers, patched for the time, were towed slowly out, laden with women, horses, and stores,—the spectators doubting whether any of them would reach their destination, and the destination itself involved in much obscurity. Then all Malta would be excited by the thunderings of a salute by the fort, which, reverberating among the rocks, was re-echoed by the men-of-war in harbour. Anon we all raced up to a *baracco*—an elevated sort of colonnade overhanging the Mediterranean, while beneath us rushed in a little steamer, carrying English or French colours, on which we at once ran down again to the Custom-house landing, to arrive with the guard of honour and the governor's carriage, and witness the disembarkation of a number of cocked hats and white feathers, belonging to the great men and staff of the allied armies. By this time the square in front of Government House was covered with Maltese, in their hanging capes and sleeve-depending coats; and people happy enough to squeeze into projecting windows, or out into the narrowest of all balconies, in time, might see a carriage filled with Algerine or other heroes, Marshal St. Arnaud with his beautiful wife, honest-looking Canrobert, or Prince Napoleon, the living image of his uncle. One soon sees all that Malta has to show:—St. Paul's Bay, Citta Vecchia, the gar-

den of St. Antonio, St. John's Church, and the Capuchin Morgue. After this people declare themselves tired; and I dare say they are, for one must naturally grow tired of standing on the steps of a club, to hear constantly contradicted news—of eating ices from the *Café del Commercio*, rather thawed by their transit—of going to the post-office, to find letters are not sorted yet—and of taking refuge in listening to a badly-performed opera, of which one cannot understand a word. All this monotonous becomes the more unendurable because of the panting anxiety there is to go forward and mingle in great events—in new scenes, to win shining honours or glorious memories."

Such wishes were soon to be gratified: and meanwhile Malta became a vast military depot—great at all times in this respect, it now became a wonder. Stores of every imaginable description were accumulated; resources were piled up, the destructive energies of which were appalling to contemplate, and yet all were soon to be consumed in the wild waste of war. Again and again were these vast stacks of balls and shells to be re-piled, as the exigencies of the contest diminished them. The magazines were filled with powder, which would soon prove to be but a small portion of the masses to be exploded in the cannon or in the mine; and when countless weapons, such as were ranged in these arsenals, should be scattered in fragments, still more formidable ranges must replace them.

After the arrival of the allied expeditionary forces, great pains were taken to strengthen the fortifications. It was resolved to place them in a condition to resist, with more certainty, the new naval armaments. So formidable were these arrangements, that the fine old 24-pounders, and finer 32-pounders, of St. Elmo and St. Angelo, were displaced by long fifty-sixes, and guns of still heavier metal. The fortified aspect of the place, during the stay of the allied troops, was graphically described by a popular writer, in these terms:—"To an inexperienced eye, those long lines of white stone curtains—those tiers of bastions, with their huge iron guardians peering above them—those serrated walls, all armed with grinning embrasures, which stretch all around the harbours and town of Valetta, and command the sea in every direction—appear calculated to defy the greatest navy that could be brought against them; but modern science has found them vulnerable, and the strong is made to replace the weak. Wherever you go outside the town, the eye of a cannon is gravely and steadily fixed upon you. Take a walk down that tempting slab of rock down by the sea-side—an 8-inch howitzer is investigating your proceedings from that embrasure and if you turn round, you will face his bro-

ther, looking at you out of another window directly opposite."

Mrs. Young thus describes the Maltese streets, people, and occupations:—"How pretty the Malta market is, with its wonderfully coloured fish, its marvellously-sized vegetables, tropical as well as European—its piles of purple figs, rich grapes, loquats, medlars, melons, oranges, peaches—a massing of rich colour, delightful to the painter's eye! So with the street stalls. I know nothing prettier, as the sun falls on it, than a street fruit-stall at Malta, resting against some portion of richly-carved stonework, with its gay awning, brown and yellow baskets, throwing east shadows on each other, and the white-teethed, bright-eyed, smiling, picturesquely-attired vendor. Altogether, the early mornings of Malta are charming. The fresh delicious air; the blue waters, with their many coloured passage-boats plying about the harbours, from Valetta to Sliema, Sliema to Pietà; the goats in large flocks, with red necklaces and silver bells, strolling from door to door, waiting to be milked; the Maltese ladies, kind-looking and soft-eyed, passing along in their black *pal-dettes* to the morning mass; the curious picturesque old green *calesses*, on two wheels, with sorry-nags, quite overpowered with heavy and antique harness—the drivers smoking, laughing, singing along, as they go jolting on the shafts to a neighbouring *casal* (village); the little carts passing in, laden with rich and monster clover; the large, handsome, gaily-caparisoned mules; the stealthy, handsome, sandaled Capuchin, on his way to St. John's; the merry children, each a study for Murillo;—each and all are pleasant items, and form a whole most agreeable to the eye of that too rare seeker for healthy enjoyment, the early stroller about Malta.

"One of the pleasantest modes of passing a warm morning at Malta, I found was to lounge in a comfortable chair, in the quiet library of kind Mr. Quintana, in the shaded Strada Straetta, and turn over books on Turkey. From Quintana's library I often hired a boat, at the especially disagreeable landing-stairs of the Marsamuscetta, and glided away across the quarantine harbour to Missida, where my friend Mr. Quintana had lately built a house, from the angle of whose flat roof floated the Spanish flag, in compliment to his nation. Here I was able to observe the process of making gardens out of hard rock; a matter, as I pondered over the aspect of our ocean barrack, as wonderful to me as any performance of Herr Döbler, Robin, or Anderson. Yet here and there the marvel is seen of a beautiful, luxuriant, and well-kept garden in the rocky fastnesses of Malta; while about Missida and the *casals*, generally, the wild flowers are beau-

tiful and abundant, springing in masses about the pretty rock, like a dream of the Trosachs, and reminding one of Richardson's Highland pictures of the New Water-colour."

At last the order came for the first division to embark for the shores of Turkey, while other bodies of troops from home were to take up their quarters, and some were dispatched from the ports of France and England directly to Gallipoli. In Malta, the scenes which were presented upon the departure of the troops for Turkey were more exciting, and inspired more emotion, than those which had occurred on their landing.

Account for it how we may, there was a very general foreboding on the part of the wives, and officers, and soldiers, when the troops were ordered to Gallipoli. It was not merely the sad feelings of parting, such as, under any circumstances, the families of soldiers would feel, as those they loved went forth to the campaign—there was an ominous gloom over almost every heart. Neither superstition, nor an over-formidable estimate of the foe to be encountered, caused this gloom; for it rested on the minds of those who were strangers to superstition; and no confidence could exceed that which was felt in the extent of our resources, the sufficiency of our armies, and the justice of our cause. Such was the complexion of mind with the sojourners at Malta, when, as the interesting little work, *Our Camp in Turkey, and the Way to it*, presents the debarkation to us:—"Malta must be left, and heavy were the hearts as the day approached; the troopship is declared in readiness; and poor women, whether wives of officers or soldiers, were left with streaming eyes on the *baracco*, while the fine ship glided on towards her eastern point, and those whom God joined were put asunder—when again to meet?"

"I remember coming in from a country ride in a *calesse*, when the *Himalaya* was going out laden with troops; the sun was shedding its golden light over the blue water, and that deep purple tone was rising in the horizon peculiar, I think, to Malta in early spring. A crowd was scattered about the rocky hillocks at Florian, watching and wishing well to the noble ship. Among them was a pretty young Englishwoman, a soldier's wife, with two little smiling rosy children at her feet, gathering daisies. 'Get up, children,' said the mother, 'and kiss your hands to father.' 'I don't want to, mother,' said the elder, intent upon its little pastime. 'Oh, you naughty child!' answered the woman, snatching it in her arms, and hurrying to the wall under which the ship lay; 'you'll likely never see him again!' I turned away,—the truth was so sorrowful, so full of pathos! How few of the brave hearts now beating with hopes of glory on the deck of

that fine ship, would ever feel again the loving pressure of wife or child! But such is war! 'Tis well it has its bands and colours, flags and music, to hide the tears in manly eyes, and drown the sobs of woman's voice!"

Upon the arrival at Malta of the declaration of war, the dispatch of troops for Gallipoli was continued with redoubled energy.

The first portion of the expeditionary force left Malta in the *Golden Fleece*, on the 31st of March, and entered the Dardanelles on the 5th of April. As the first detachment of our troops, on their way out, landed at Valetta amidst gloom and showers, so did they re-embark for their onward course in similarly depressing weather. There was consequently none of that boisterous cheering from fort to fort by the soldiery, nor waving of hats and handkerchiefs by the population, which marked the sailing away of the subsequent detachments. But there were tearful eyes which watched them in that sullen mist, and bleeding hearts that yearned over their departure, and loving lips that blessed them, until the good ship left the harbour, and was lost to sight in the dim atmosphere. The vessel made its way through drenching rain, and foaming waves, and pelting storm, until night closed tranquilly around it; and upon the clear heavens the soldiers, and more superstitious tars, were surprised to see the well-known portent of war from all antiquity—a comet. Although something of the nature and history of such celestial phenomena are now known, even by our poor soldiery, yet this only modified the superstitious feeling which the bright wanderer, so unexpectedly appearing to them on such an occasion, was calculated to excite. They knew that its mysterious revolutions were fixed by definite and unerring laws; but they know also that the hand which moved it in its eccentric course, directed also the revolutions and changes of the earth beneath, and of its multitudinous peoples; and they could not therefore divest themselves of the association between the fiery sign and the fierce enterprise upon which they were intent. Still it was observable, even amongst the Irish soldiers in the rifle-brigade, who, in their dark uniform, stood discussing the nature of the phenomenon, that amongst the most superstitious portion of our troops the portent was favourably regarded—

"Saw ye yon blazing star?"—

The heavens look down on Freedom's war,
And light her torch on high."

When the Morea was desecrated, the terrestrial prospect was as much a matter of interest to the officers, as the heavenly apparition had been to the men. The classic associations of the land past which the vessel steamed, could not fail to awaken, in educated minds, associa-

THE DARDANELLES.

tions of taste and genius, beauty and glory. The days when Greece was young would start up from the pages of classic story, and live again in the imagination of the beholders. The scenes where gods and men held strange counsels, and lived, or waned, in the long vista of bright and fadeless memories, were too much identified with the classical education of British gentlemen not to thrill upon the heart, as they beheld the rocks, the shores, the isles, the capes, the headlands, storied in the beautiful annals of a remote and glorious antiquity. However busy our younger officers, especially, may have been with what they learned of Greece at Eton or at Harrow, they gave no heed to the Grecian counsel, for "him who doubled Cape Malea to forget his home;" for while the *Golden Fleece* battled fearlessly with the winds and waves, which, in olden time, sent so many adventurous mariners beyond the reach of all future storms, "Home, sweet home," was the theme with those who sought glory as eagerly as they remembered home tenderly. There is a peculiar disposition of the mind, in the stillness which, in night or calm, so frequently occurs at sea, to indulge in retrospection the scenes of childhood; and even if bent upon some proud enterprise, engrossing our ambition, and stirring up our whole courage and purpose, we feel ourselves again and again softly murmuring—

"My native land, good night!"

During this voyage it was a banquet to the pride of the warlike and educated Englishmen, that the old Morea echoed, for the first time, the music of the patriotic and loyal strains of England, as the bands of the ship and troops played "Rule Britannia" and "God save the Queen." An eye-witness trippingly describes a portion of this voyage thus:—"The ship, having run safely through all the terrors of the *Ægean* and its islands, dashed away right for the entrance of the Dardanelles.* Smooth seas accompanied the ship as she steamed past Mitylene. On the left lay the entrance to the Gulf of Athens—Eubœa was on our left hand—Tenedos was before us—on our right rose the sunny heights of Mount Ida, and the Troad (atrociously and unforgivably like the Bog of Allen) lay stretching its flat brown folds from the sea to the mountain side, for miles away. Athos (said to be ninety miles

distant) stood between us and the setting sun—a pyramid of purple cloud bathed in golden light; and, as if to complete the utter confusion of ideas, and the dislocation of all association, the *Leander* frigate showed her number, and went right away down from the very waters that lay between Sestos and Abydos, past the shadow of the great mountain, stretching away on our port beam until lost to sight."

We have before us, as we write, the experience and observation of several voyagers with the expedition, who, being on board different ships, and entering the Dardanelles at different hours, viewed sea and shore under various aspects, and arrived at their destination at a time when Gallipoli was being so rapidly transformed, as to give each of these accounts a rich novelty when read after any of the others. The correspondent of the *Times* arrived in the Dardanelles at night, with the *Golden Fleece*. "She was not fired at, as of yore; but, as she ran up higher, the sentinels on the European side screeched horribly and showed lights, and seemed to execute a convulsive *pas* of fright or valour on the rocks. Our only reply was the calm sounding of the tattoo on our bugles—the first time the blast of British light infantry bugles broke the silence of these antique shores. After midnight we arrived at Gallipoli, and anchored for the night."

The description given of the passage through the Dardanelles to Gallipoli, by the lady of an officer, is more graphic, daylight favouring her voyage. It was five weeks later than the arrival of the *Golden Fleece* :—

"We came on the entrance of the Dardanelles. How pretty it was! under that lovely sunlight, with the curious forts of Seddul Bahr on our left, the fine four-masted steamer across our bows, and a fleet of beautiful vessels, crowded with canvas, entering the straits like a flock of sea-birds! The town at the entrance of the Dardanelles is interesting. The houses we see have overhanging eaves, which give them a very chalet-like appearance; and being covered with tiles of a very pure bright red, and surrounded by cypress foliage, the power of contrasting colour in this clear atmosphere adds materially to the sunny effect. Within the straits, under some very beautifully-coloured hills, we saw a succession of singular erections of white stone: their graduated size and form negatived the idea of their being old windmills. The straits were crowded with boats and transports, with the French and English colours flying: during the morning we counted some sixty sail, all bound for the East. One or two barques only were beating down; and from time to time a Turkish boat, with the crimson flag of the sultan, would cross our stern, with all sail set, and a speed that was

* Lieutenant O'Reilly, of her Majesty's ship *Retribution*, describes the great guns of the Dardanelles at Chanek Kalesi, the residence of the governor, thus:—"In the works of the castle on the Asiatic side of the Straits, there are 171 embrasures, and 102 guns mounted. The size of the guns are enormous; six British midshipmen crawled into one of them: the diameter is twenty-eight inches. This gun unscrews at the centre, and traverses on a fixed raised platform: it is shotted with granite shot, which in loading are placed in slings, and then raised to the muzzle by a tackle and crane. The weight of the shot is 800 lbs.; that of a charge of powder 110 lbs.

the admiration of our blue jackets. Beautiful, too, were the smaller Greek craft, flying along on a side-wind, lying fearfully over, and the white foam dashing from the bows. It was a lively sight, the Hellespont, that sunny day! and one scarcely knew which most to admire—the various, numerous and beautiful craft on the smooth waters, or the picturesque beauty of the shore, with its bold rugged masses of grey rock, interspersed with beautiful plains of intensely brilliant verdure, studded with patches of dark underwood. Some little openings of this sort were peculiarly lovely, and came on the eye so unexpectedly, surprising one with a sense of sweet repose, that the effect on the feelings was as agreeable as turning to the melodious voice of Scott, after the rugged force of Carlyle—or floating into a calm, sunlit harbour, after near escape from oceans' turbulence. We had just passed some gigantic boulders of dark rock—over which, at times, pent in this narrow channel, the angry sea beats furiously—and came on a lovely lawn, as it were of green sward, dotted with trees, resembling delicate young ash; some half way up the gorge stood one of the pretty chalet-like houses the Turks so much admire; and, running up on either side, woods of bright oak, whose rounded form and bright colour were admirably relieved by the presence of tall dark cypresses, not too numerous, but breaking simply the monotony of the general foliage. There was little appearance of animal life: here and there were a few shepherds tending their flocks, usually with a small tent, attesting the nomad habits of the people; but altogether the habits of the villagers and the inhabitants were, I thought, remarkable. About mid-day on the 9th of May, our attention was attracted by a large steamer (large at least in proportion to ours), rapidly gaining on us; and, despite the volumes of smoke from the funnel, we soon distinguished the royal flag, and hurried to drop ours in all courtesy. We were near the shore, but the *Caradoc* passed inside, having the Duke of Cambridge and staff on board; and his royal highness, on the paddle-box, acknowledged the prolonged cheering of our crew with his usual urbanity. Soon after this pleasant little excitement had passed, we arrived at the entrance of the straits, which is five miles broad, and opens into the Propontis, or Sea of Marmora, guarded by the castle Chanuli Kalessi (or Asia) on one side, and Castle Europe on the other. The date of these celebrated castles is 1659. They are extremely strong, and very picturesque. A few small tents were pitched on the slope below the fortifications of Castle Europe, on a bright bit of sward; and a few English soldiers, from the Gallipoli force, were employed in throwing up an embankment. In the afternoon we came in sight of the French

camp at Gallipoli, spread out on one of the sloping hills of the classic land—the ancient Chersonesus. From our bows Gallipoli itself soon appeared, having the effect of two promontories, with a range of low purple hills in the background,—the harbour crowded with shipping, steamers of all nations, huge, dirty transports, and magnificent three-deckers, with all colours flying, in honour of the *Caradoc*, which, having beaten us, was lying at anchor under the odd, staring, yellow house of the French consul. Gallipoli, which crowns the first of the two promontories, looked of some size from the shore; and on the hills inland the camps were visible, studding the slopes. The great red sun sank beneath the low line of deep blue hills; the great four-masted ship, the *Victoria*, towing a lesser steamer, took a great sweep round the harbour, and glided forth for Stamboul; the men of the three-deckers burst patriotically forth with the national anthem as the *Caradoc* went out; the moon rose—the little boats passed less frequently—the cold was distressing, and I, left alone on the deck, with the goat, the water-cask, and the caffar, humbly went down to tea. There was not much to do that evening, unless to listen to the Frenchman's chaunt—'*Vive l'amour, et le bon vin!*' that sounded until a late hour through the open ports; and, in the meanwhile, the Turks had returned, carefully attended by some ten other Turks, in remarkably dingy sheepskin jackets; who, having set our Turks quite up again with radishes and onions, departed.

"About midnight our friends came on board, with a dismal account of having rowed along every ship in the harbour in search of us, and having been nearly fired into by every Turkish crew in consequence—*would* have been, indeed, but for shouting 'God save the Queen!' to show themselves English, a watchword the Turk now knows right well. However, midnight is an admirable time for gossip, and so, pleasantly enough, we heard all about it. All agreed that Gallipoli was a most filthy place—filthy beyond the usual filth that we consider characteristic of towns Turkish; that the English were more popular than the French, because we committed oppressive acts more politely; that our poor women suffered dreadfully on landing, lying about in ditches, with a soldier's blanket over them, houseless, starving; that the greatest unanimity existed between the services—French soldiers wearing the caps of the English, and a Highlander being occasionally brought in a state of inebriation before his commanding officer, attired as a Zouave. So lasted the pleasant chat till morning, when our friends left us, and the little *Army and Navy* steamed out into the beautiful sea of the Marble Isles, bright, smooth, as the calmest

lake. The impression those lovely waters made on me I shall never forget, as we glided over their silvery blue and most tranquil surface, with the great dolphins, so revered by the Turks, rolling in playful mood on every side. To describe the sea as being smooth as a mirror, was no longer a phrase of hyperbole, as descriptive of this rippleless surface. Not a vapour floated on the sky, and a peculiar atmosphere softened the scene—just as one might view bright colours shaded by the most transparent gauze;—a woman's comparison, but it best expresses the tone, certainly not a haze, that was so exquisitely lovely there. The island of Marmora, with all its forms, shades, and cast shadows, was perfectly reflected from base to summit; and the only effect I ever remember to have seen of a similar kind, though for atmospheric effect far inferior in beauty, was the inverted portrait of Mont Blanc in the Lake of Geneva, on a still, warm, summer evening. I have passed over the Sea of Marmora under other circumstances, and at other seasons; but were I a poet, and desirous of feeling all the exquisite beauty of which an Eastern sea is capable, I could desire no more than the power to recall at will, with the full force of the original impression, the aspect of that most lovely sea, when, in its placid hour, I passed over its surface on my first visit to the 'City of the Sultan.' At midnight the charm was broken; the moon, which had so gloriously risen, was obscured by dense vapour; and when at early dawn I hurried on deck, to catch the first long-wished-for view of the glories of Stamboul, I saw but the tips of minars above the rolling mists, the heights of Scutari in deep shadow, and the Maiden Tower lying like a dark blot before us upon the waters."

Our allies had reached Gallipoli before the first detachment of British troops arrived, and they quartered themselves as advantageously as possible, showing the national tact and adroitness in such matters. Their debarkation at Gallipoli was admirable—the regularity which marked every movement—the rapidity with which they executed the most intricate arrangements—the ease with which everything was found when wanting, were in striking contrast to the deficiencies which showed themselves in the debarkation and on-shore movements of the British. The latter were quartered in the upper and healthier portion of the town, but amongst a hostile population, who regarded them as enemies, the supporters of a despotism from which Russia was warring to deliver them. The French placed themselves amongst the Turkish population, who regarded them as allies, and treated them accordingly. Nothing was left to chance, all their arrangements were preconcerted. They sent out efficient officers, who organized all requi-

sites for the landing and billeting of a large force. They did not stand upon much ceremony with corrupt pashas or cheating dealers, Jew, Greek, or Armenian; they plainly, although politely, intimated that they came to fight for the sultan, not to starve for him—they would pay for what they received, but would punish all attempts at extortion, with or without the consent of bey or pasha. They were accordingly well treated. The Oriental understood men who adopted such a line of conduct—it was intelligible in itself. The British neither knew how to land a large body of troops, nor to provide for them when landed. All was disorder and confusion. Scarcely were the soldiers put in quarters, when scarcity of food, absence of medical care and of medicine, extortionate prices by the market people, in consequence of the neglect of regulations for the mode of supply, and speculation in every form, afflicted the men. Lieutenant-general Brown, who was in command before Lord Raglan's arrival, was opposed to all new notions. He paid great attention to the shaving department, but the feeding department belonged to Commissary Filder, or somebody else—it was beneath the notice of a British general to attend to groceries and butcher's meat. Never were troops kept in better drill, but when sick it was no business of the general's to look after the like. Lieutenant-general Brown was as humane and generous as he was brave, but he was there as the representative of a system—the clean chin and tight stock system—the system of hard fighting and hard fare—and it was not to be expected that a British general would be so sacrilegious as to break through forms consecrated by the sanction of generals, colonels, and clerks of the ordnance. Besides, why should a lieutenant-general be confounded with a surgeon-general, or a commander-in-chief be turned into a chief apothecary? It is true the men must die if their food were bad in quality or insufficient in quantity, or if the physicians were few, careless, and unskilful; but that was not his fault;—better to lose men, than that *the system* should lose its high and long-established *prestige*. Commissaries, chirurgeons, and correspondents of newspapers, were the proper persons to fidget about camps, and talk of "the condition" of troops. So long as their chins were clean, their stocks stiff, their heads erect, their shakos of orthodox weight and dimensions, and their hearts and hands ready for the fray, the general in command, being British, and an officer of rank who knew his own place and the system, had no further concern.

Let us just contrast the account given by the Paris *Moniteur* and the London *Times* of the conditions of the two armies, in the matters so essential to their efficiency, and our readers can form a clear notion how, at the very outset of

the Eastern campaign, their respective military systems worked. The *Moniteur* says:—

"The government has received reports from General Canrobert, on the arrival of the French troops at Gallipoli, and on their installation in the environs of that town. These first accounts are very satisfactory. A Turkish commission, presided over by Ibrahim Pasha, had preceded at Gallipoli the arrival of our first detachments, in order to make itself acquainted with our necessities, and to satisfy them as far as possible. The general has had much cause to be satisfied with this intervention. The pasha of Adrianople had come at the same time to Gallipoli to support with his authority the execution of the measures to be taken; thus all the resources were turned to use, and our soldiers at their disembarkation received all that was necessary for them. A proportional part of the resources of the town had been reserved for the English army. This division has been effected between them with the most cordial understanding. General Canrobert has reconnoitred all the Peninsula; he has fixed upon the spots where the different corps will encamp, and will form themselves into brigades as they disembark. The troops will be there in good condition, at the smallest distance possible from Gallipoli, and in localities abounding with water and wood. The country is very healthy, and the necessities of the sick have been provided for by the installation of a temporary hospital at Gallipoli. Localities have also been prepared in the town to serve as magazines, and to receive provisions of all kinds sent from France for the army. Our installation has therefore commenced on the best conditions, and, in a short time, the first three divisions will be united in the camp of Gallipoli, with all the *matériel* of artillery, engineers, provisions, hospitals, and encampment, destined for the expeditionary corps. All those immense stores have been embarked from the shores of France and Algeria, and, without doubt, the greater portion has by this time arrived at its destination."

The *Times* correspondent describes matters thus:—

"The French came first, and like all first-comers they are the best served. When the *Golden Fleece* came in on Thursday night there was no pilot to show her where to anchor, and it was nearly an hour ere she ran out her cable in nineteen fathoms water. No one came off to her, for it was after midnight, and there was something depressing in this silent reception of the first British army that ever landed on the shores of these Straits. As we entered the portals of the Dardanelles, and rushed swiftly up between its dark banks, crowned with mountain ridges looming through the darkness, we tried to catch their form, and discern the out-

line of the villages on its shores. The sentinels on the forts and along the ridges challenged loudly, shouting to each other to be on the alert—the band of the Rifles all the while playing the latest fashionable polkas, or making the rocks acquainted with 'Rule Britannia,' and 'God save the Queen.' But all these things ceased at Gallipoli, and when morning came we only felt sorry that nature had made it a desirable place for us to land at. The tricolour was floating right and left, and the blue coats of the French were well marked on shore, the long lines of bullock-carts stealing along the strand towards their camp making it evident that they were taking care of themselves. As it happened, our active, intelligent, and able consul, had gone to the tower of the Dardanelles to look for us, but we had escaped him in the dark. The first thing that happened after the visit of the commissaries was characteristic. The general desired to send for the consul, but the only way of doing so was by water, and the only vessel available for the purpose was a small Turkish imperial steamer near us. The consul's dragoman, a grand-looking Israelite, prepared to go on the expedition, but the engineer on board had just managed to break his leg. He therefore requested the loan of our engineer, as no one could be found to undertake the care of the steamer's engines, and after a successful cruise, he returned in the evening with the consul, Mr. Calvert, on board. Mr. Calvert went to the Turkish council, reminded them that there were British troops yet to come, and succeeded in having half of the quarters in the town reserved to him for their use. Next day he visited and marked off the houses; but on his return the French authorities said they had made a mistake as to the portions of the town they had handed over to him, and he of course had to yield and give them up. They have the Turkish part of the town, close to the water, with an honest and favourable population; the English have got the Greek quarter, further up the hill, and perhaps the healthier, with 'dextrous' tradesmen, and a population which hates them bitterly, and regards them as foes quartered on them by force of arms.

"Sir George Brown, commanding first division British expeditionary army, Colonel Sullivan, assistant-adjutant-general, Dr. Alexander, first class staff-surgeon, Captain Whitmore, aide-de-camp, &c., the rifle-brigade, and two companies of Sappers and Miners, under Lieutenant-colonel Victor, arrived, as we have seen, on Wednesday night (Thursday morning), but it was mid-day on Saturday ere the troops were landed and sent to their quarters. Why was this? Because nothing was ready for them! The force consisted of only some thousand and odd men; and, small as it was, owing to the fault

of 'somebody or other,' it had to lie idle for two days and a half, watching the sea-gulls, or with half-averted eye regarding the ceaseless activity of the French, the daily arrival of their steamers, the rapid transmission of their men by the paddle-box boats of their vessels to shore, and the admirable completeness of all their arrangements in every detail; hospitals for the sick, bread and biscuit bakeries, waggon trains for carrying stores and baggage, every necessary and every comfort indeed to be had the moment their ships came in—not a British pendant was afloat in the harbour! Our great naval state was represented by a single steamer belonging to a private company. Well might a Turkish boatman ask—'Oh, why is this? Oh, why is this, young man? By the beard of the prophet, for the sake of your father's father, tell me, oh, English lord, how is it? The French infidels have got one, two, three, four, five, six, seven ships, with fierce little soldiers; the English infidels, who say they can defile the graves of these French (may Heaven avert it!), and who are big as the giants of Asli, have only one big ship. Do they tell lies?' (Such was the translation given to me of my interesting waterman's address).

"On Thursday there was a general hunt for quarters through the town. Mr. Calvert, the consul, attended by dragoman and interpreter, and a train of lodging-seekers, went from house to house, but it was not till the eye had got accustomed to the general style of the buildings and fittings that any of them seemed willing to accept the places offered them. The general got a very fine place in a *beau quartier*, with a view of an old Turk on a counter looking at his toes in perpetual perspective. Colonel Sullivan and staff were equally successful. From one learn all. The hall door, which is an antiquated concern—not affording any particular resistance to the air to speak of—opens on an apartment with clay walls of about ten feet high, and of the length and breadth of the whole house. It is garnished with the odds and ends of the domestic deity—with empty barrels, with casks of home-made wine, buckets, baskets, &c. At one side a rough staircase, creaking at every step, conducts one to a saloon on the first floor. This is of the plainest possible appearance. On the sides are stuck prints of the *Nicolaus ho basilens*, and of the Virgin and Child (after the Greek school), with wonderful engravings from Jerusalem. There is no other furniture. It may be observed, that as the schism between the Greek Catholic and the Roman Catholic churches arose out of the discussion of an intricate question on the subtlest point of theology, they fight bitterly on matters of very fine distinction yet. Thus the Greeks are iconoclasts, and hate images, but they adore pictures. A yellow Jonah, in a crimson

whale with fiery entrails, is a favourite subject for these artists, and doubtless bears some allegorical meaning. From this saloon open the two or three rooms of the house—the kitchen, the divan, and the principal bedroom. The floors are covered with matting, but with the exception of the cushions on the raised platform round the wall of the room (about eighteen inches from the floor), there is nothing else in the rooms offered for general competition to the public. Above are dark attics—*voilà tout!* My apartment would form a study for Dr. Reid or Mr. Gurney. If they want to understand the true principle of keeping up a current of fresh air everywhere, let them at once come out to Gallipoli, and become my successors in the possession of this remarkable chamber. True, the walls are of mud and straw, and the staircase has been devised expressly for the purpose of entrapping the first heavy Turk who may happen to stride up. It is the thinnest wood-work possible. Water is some way off, and the philosophers, if not provided with servants who can speak the language, and an allowance of rations from her majesty's stores, may be seen soon after their arrival stalking up the street with as much dignity as is compatible with the circumstance of their carrying a sheep's liver on a stick in one hand, some lard in the other, and a loaf of black bread under their arms—at least your correspondent had to adopt that course or die of hunger the other day. There is not such a thing as a pound of butter in the whole country, meat is very scarce, fowls impossible, but the country wine is fair enough; eggs are not so rare as might be imagined from the want of poultry."

The result of all this was the very early development of disease and depression of spirits among the British, and although ultimately the more hardy sons of our stern isles suffered less in proportion than the French from disease and death, that proportion would, from that very hardihood of constitution which characterised them, have been much smaller, had the soldiers not been deprived of just and generous care. An authority in all such matters, Colonel Leach, of the Old 95th, one of the regiments of the celebrated light division in the Peninsula War, has said concerning the losses by disease attendant upon defective commissary arrangement, and the actual stroke of battle—"40,000 were killed or died of wounds; 120,000 of disease; and 120,000 more were by disease unfitted for service." Sir Charles Shaw, whose experience in outpost duty in the wars of Don Pedro, in Portugal, and of Don Carlos, in Spain,—a kind of service exposing men to both disease and conflict,—made these remarks in consequence of having his attention called to the want of proper physical care of the troops in Turkey:—

"During the first years the French were in

Algiers, their annual loss averaged about 5000 by shot, and 15,000 by disease; but when they brought into use the '*tentes à l'abri*,' or sack tents, the loss by disease was much diminished. The British authorities might have adopted these 'sack tents,' and our brave fellows, in coming to a bivouac, might have found themselves as well cared for as their French allies. But no change has taken place. There can be no objection as to weight, as the French soldiers, as heavily weighted as ours, carry them with the greatest pleasure; and consider them their greatest comfort. If a pair of flannel drawers and waistcoat were to be carried in the square bag, there would be no additional weight and more comfort. The sack tents weigh 2 lbs., and cost 2s. 6d. The price of the soldier is, say £130; this 2s. 6d. being no great extravagance to preserve his health, as it is a hot sun on a halt by day, and the dews by night, which fill the hospitals."

These words were written at a later period of the mismanagement of the British authorities, and the sufferings of the soldiers; but they were applicable upon the very first experiences by the troops of the mal-arrangements of those to whose incompetent care and blind officialism they were entrusted.

Much discussion was excited at the time as to the fitness of Gallipoli and its neighbourhood for the encampment. Of course, this discussion could only be conducted in a clear light, with a full knowledge of the true aims and plans of the allied governments. If they had well-grounded hopes of peace, the selection of Gallipoli, all sanitary considerations apart, was prudent. That they did suppose themselves justified in entertaining such hopes, the world learned only when unparalleled misery to our troops had resulted from such delusion. The faith of the French minister for foreign affairs rested upon the fidelity of Austria, and the terror which he supposed the junction of the Austrian armies with those of the Western allies would inspire. The faith of Lord Aberdeen, and the section of his colleagues most intimately associated with him in politics, was in the moderation of the Emperor Nicholas, his esteem for England, his friendship for Lord Aberdeen himself, his sympathy with the Conservative section of the British cabinet, and the impression to be produced at St. Petersburg by a *demonstration* of the allied forces. All these grounds were baseless, and can only be explained upon the theory that the Conservative sympathy of the Aberdeen part of the ministry, and perhaps of the whole ministry, blinded them utterly to the character of the Emperor Nicholas, and the prevailing policy of his court, and feelings of his people. It is difficult to believe that Lord Palmerston shared with his colleagues the confidence in

czarism and the czar; but he held at this time an office in the ministry which gave him less influence in the conduct of the war than any other minister; and it is now well known that he but coldly supported the half-measures and empty demonstrations, which proved the strength of the enemy, and the destruction of so many of the noblest soldiers that ever crowded round the standard of England. It has also been alleged, that not foreseeing the gallant resistance of the Turks at Silistria, and not believing that Turkey possessed so much military virtue, it was deemed expedient that the expeditionary forces should first secure the capital, and await the chances of war and the progress of events for the next enterprise. The government undoubtedly wished the British public to believe that this was their policy. We are certain that it was the policy of the French Emperor, who never partook in the confidence which his able foreign minister placed in Austria. The Palmerston and Russell section of the English ministers regarded the matter in the French Emperor's point of view; but their colleagues believed that no real war would ensue; that the Russians would never stay to hear the beat of an English drum; that Gallipoli, or anywhere else on the shores of the Bosphorus, would do for *the purpose* of the expedition; and that even the government of their ally would have proof of their sagacity, originality, intimate knowledge of the czar's character, and personal influence with him, in the speedy return of the armies, without firing at anything more formidable than a refractory Bashi-bazouk, a sea-gull, or an insurrectionary Greek. They made war on a principle and with prospects which rendered Gallipoli far enough out of the way, and, therefore, a suitable place for the troops to imitate the manoeuvre so celebrated in satire—

"Marched up the hill, and then marched down again."

Indeed, there was no knowing that the fire-eating autocrat might not eat ship biscuit with Admiral Napier, and the redoubtable Menschikoff see the troops home from the East, and dine in company with Lord Raglan and the Duke of Cambridge at the hospitable board of the French Emperor, and that of the greatest dinner-giving official of this realm, the Lord Mayor of London. Even that Othello of the host, Sir George Brown, might, in such case, own without a sigh his "occupation gone."

Supposing it even necessary to defend Constantinople, what were the advantages of Gallipoli, or of the camp which was formed some seven miles from the port of supply—an inconvenience so disastrous subsequently in the Crimea? It was alleged that Marshal Vaillant chose the neighbourhood, and Sir John Burgoyne the site; the former in his office in Paris, the latter

after ten minutes' inspection of the ground chosen to pitch our tents upon. A world of controversy on these points, never very satisfactorily adjusted, and various conflicting opinions among military men, still leave them vexed questions for the general public. The opinion given by Mr. Russell, whose sagacity deserves as much commendation as has ever been lavished upon the qualities of his style, is thus expressed:—"The geographical accidents at Gallipoli would lead one to think the army placed there is intended for occupation and defence. It would be within such a distance of Constantinople that, if the capital were in the smallest danger, the troops could be sent there in a few days, artillery, baggage, and all, while it effectually commands the Dardanelles and the entrance to the Sea of Marmora, and makes it a *mare clausum* as it lists. But there are other considerations not to be overlooked, and which become significant enough when it is recollected that a small town, on a spit of land opposite the mouth of the Maritza, on the coast of Turkey, to the north-east of Samothrace, was surveyed and examined for an encampment by French and English engineers. I mean the town of Enos. It is obvious that if some daring Muscovite general, forcing a passage across the Danube, beat the Turks and crossed the western ridges of the Balkan, he might advance southwards with very little hindrance to the very Ægean; and a dashing march to the south-east would bring his troops to the western shores of the Dardanelles. An army at Gallipoli could check such a movement, if it ever entered into the head of any one but the person who is now writing of it. Gallipoli is in effect situated on almost the narrowest portion of the tongue of land or peninsula which, running between the Gulf of Saros on the west and the Dardanelles on the east, forms the western side of the Strait. An army encamped here commands the Ægean and the Sea of Marmora, and can be marched northwards to the Balkan, or sent across to Asia or up to Constantinople with equal facility."

The selection of Gallipoli and neighbourhood was much against the opinion, both of the Turkish authorities and people, and greatly contributed to the distrust which the Turks felt towards the allies.

On the arrival of the *Himalaya* with troops on the 13th of April, General Brown, unable to make any arrangements for their accommodation, sent the vessel on to Constantinople; the troops it carried were quartered at Scutari. The immense size of the *Himalaya* attracted the attention of soldiers and people, both at Gallipoli and at Constantinople, and impressed Turks, Greeks, and even French, with the naval superiority of England.

Ultimately, the authorities considered it

judicious to direct the great body of the English troops, as they arrived, at once to Scutari. The arrival of the allied generals soon increased the stir and bustle of camp and city. Lord Raglan arrived on the 28th of April at Constantinople; on the 30th Prince Napoleon arrived at Gallipoli; on the 7th of May Marshal St. Arnaud landed at the former place; the Duke of Cambridge, as we have already seen, in our notice of the arrival of the *Caradoc*, landed at Gallipoli on the 9th of May, but remained only a short time, re-embarking for Constantinople.

The immense barracks at Scutari were given up to the possession of the English, but so horribly was the place infested with vermin, that the troops could not occupy them, but were obliged to pitch their tents behind, at some distance. Scutari is situated on the Asiatic side of the Bosphorus, opposite Constantinople. The "Green Palace," at Keuatscheschme, was appropriated to the superior officers. The view of Scutari from Constantinople is very fine, and seldom has it been more happily described than in the following passage, from the pen of one who has witnessed the best and brightest scenery of many lands:—

"It is impossible for the eye to fall upon a more perfectly lovely picture than that commanded by the upper rooms of the Hôtel d'Europe. Immediately below are clusters of the Pera houses, interspersed with foliage, and rich with every variety of warm colouring—in some cases the effect of age, in others of the pink and orange tints of the original stucco. On the right are the beautiful mosques of Stamboul, rising among the dark cypress trees, and seeming to form a shining barrier between the Golden Horn and the Sea of Marmora, whose islands stretch away, far as the eye can reach, in a mystery of soft blue haze; while immediately opposite the eye, is the great barracks of Scutari, backed by the hills of Asia."

From the same pen we give a description of Scutari, and the neighbourhood of the camp there:—

"At the time of which I write, there were twelve regiments encamped here, in addition to three battalions of the Guards and some horse artillery. At one of the even hours destined for the departure of the little military steamer, we made our way to the Tophana bridge, and took our places for Scutari. A wonderful matter is that Tophana bridge! Uniting Galata to Stamboul, it is constantly traversed by the population of the old and new city; while, on the side next Scutari, all the steamers for Buyukdere, Therapia, and all points of the Bosphorus, receive and leave their passengers. To arrive at the camp we passed the general hospital, a large, well-built brick building, said to be one of the finest in Europe; but I imagine that when completed, l'Hôpital des Français,

at Pera, will alone deserve to hold that rank. On the grass-plot in front of the hospital were pitched the tents of Lady Errol, with one or two others, occupied by the staff-surgeons; and passing on, we came upon one of the finest scenes Turkey has ever boasted—the great encampment of the British forces. The Highlanders happened to be on parade, and made the scene more effective. Its great charm, however, apart from patriotic feeling, arose from the extreme beauty of the position which had been chosen for this great array of the national power and purpose. Before us lay the beautiful Bosphorus, with the shining city of the Osmanli; to the rear, the fine mountains of Asia, and the dark cypress woods of the Champs des Morts; around, on the undulating plain, stretched lines of the British tents—the promise of freedom to the darkened people of this most lovely land. Parties of men in varied uniforms, under process of drill, were gazed at by Greeks and Turks with intense interest; horsemen galloped about in the picturesque costumes of oriental cavalry; and even Turkish ladies in their *arabas*—ostensibly on their way to some tomb sacred to the memories of their friends in the neighbouring cemetery—could not resist the temptation of stopping for a time to see the ‘*Englese*.’

“A very pretty *maison de campagne*, belonging to the sultan, was to be seen among rich foliage at the rear of the encampment of the Guards. We were told that it had been offered for the occupation of the duke, who declined it; and when it was suggested that the same offer should be made to Lord Raglan, the sultan’s reply had been to the effect, that none but one of England’s royal blood should sit in the saloons of the Brother of the Sun.

“Passing round the walls of the Scutari barracks, we came upon the most wretched mud-huts imaginable, which had been erected for the soldiers’ wives. These edifices, more resembling the plasterings of mason-wasps than anything intended for habitation, were so low as to prevent the possibility of any one standing in them; and were simply patched against the wall, with a bit of matting over the doorway, and a small hole to admit air and light. It was of course impossible that women could wash in such places as these; consequently, the poor creatures, with blistered arms and faces, and often bare-headed, were standing exposed to the burning sun outside the tents of the men.

“I know nothing, whether at home or abroad—whether in the lanes and alleys that spread infection, moral and physical, over London, or in the distant heathen lands where slavery prevails, and of which religious philanthropists consider it their duty to preach—that so loudly and so justly appeals to the sympathies of the men and women of England, as the condition of the soldier’s wife.”

While the camps were increasing in the East, and the depots were gathering strength at home, two captains, two lieutenants, and two ensigns, were added to each battalion of infantry; and the cavalry regiments were proportionably strengthened by an increase of officers.

Several officers of engineers and artillery visited by command the head-quarters of Omar Pasha, and reconnoitred the Russian Danubian army. These duties were performed with great skill and daring, and conspicuous amongst those endowed with genius and heroism was Lieutenant Butler, doomed so soon and so nobly to fall.

CHAPTER XVIII.

GALLIPOLI AND CONSTANTINOPLE DURING THE OCCUPATION OF THE ALLIES.

“The European with the Asian shore
Sparkled with palaces; the ocean stream
Here and there studded with a seventy-four;
Sophia’s cupola with golden gleam;
The cypress groves; Olympus high and hoar.”—BYRON.

It was with pleasure the troops at Gallipoli were gradually moved forward to Constantinople; and those regiments which were sent directly to the latter from Malta, or from home, congratulated themselves on escaping the uncomfortable quarters of either town or camp. Gallipoli has been, perhaps, more frequently described than any other place equally tumble-down—if such a place there be in Europe out of Turkey. Above them all, unquestionably, stood that of the *Times* correspondent for accuracy and graphic effect:—

“Take dilapidated out-houses of the farmers’ yards in England, remove rickety old wooden tenements of Holywell Street, Wych Street, and the Borough—catch up, wherever you can, any seedy, cracked, shutterless structure of planks and tiles that have escaped the ravages of time in our cathedral towns—carry off sheds and stalls from Billingsgate, and add to them the huts along the shores of the Thames between London Bridge and Greenwich, bring them all to the European side of the Straits of the Dardanelles, and having pitched on the most

C. H. P. 1871.

THE CITY OF

THE THRACIAN BOSPHORUS.

exposed portion of the coast, on a bare round hill, sloping away to the water's edge, with scarcely tree or shrub—tumble them 'higgledy piggledy' on its declivity, in such wise that the streets may resemble, on a large scale, the devious traces of a bookworm through some old tome—let the roadway be very narrow, of irregularly varying breadth, according to the bulgings and projections of the houses, and filled with large round slippery stones, painful and hazardous to walk upon—here and there borrow a dirty gutter from a back street in Boulogne—let the houses in parts lean across to each other so that the tiles meet, or that a few planks thrown across from over the doorways unite and form a sort of 'passage' or arcade—steal some of our popular monuments, the shafts of various national testimonials or Irish round towers, surround them with a light gallery about twelve feet from the top, put on a large extinguisher-shaped roof, paint them all white, and having thus made them into minarets, clap them down into the maze of buildings—then let fall big stones all over the place—plant little windmills with odd-looking sails on the crests of the hill over the town—transport the ruins of a feudal fortress from northern Italy, and put it in the centre of the town, with a flanking tower extending to the water's edge—erect a few buildings of wood by the waterside to serve as *café*, custom-house, and government stores—and when you have done this, you have to all appearance imitated the process by which the town of Gallipoli was created. The receipt, if tried, will be found to answer beyond belief. To fill it up you must, however, catch a number of the biggest breeched, longest bearded, dirtiest, and stateliest old Turks (to be had at any price in the Ottoman Empire); provide them with pipes, and keep them smoking all day on little wooden stages or platforms about two feet from the ground, by the water's edge or up the main streets, as well as in the shops of the bazaar (one of the 'passages' or arcades already described); see that they have no slippers on, nothing but stout woollen hose, their feet gear being left on the ground below; shawl turbans (one or two being green, for the real descendant of the prophet), fur-lined flowing coats, and bright-hued sashes round the waist, in which are to be stuck silver-sheathed yataghans and ornamented Damascus pistols—don't let them move more than their eyes, or express any emotion at the sight of anything except an English lady; then gather a noisy, picturesque, and active crowd of fez-capped Greeks in baggy blue breeches, smart jackets, sashes, and rich vests—of soberly dressed Armenians—of intellectual-looking Jews, with keen flashing eyes; Chasseurs de Vincennes, Zouaves, British Riflemen, Vivandières, Sappers and

Miners, Nubian slaves, camel-drivers, commissaries, officers, and sailors, and direct them in streams through the streets round the little islets in which the smoking Turks are harboured, and you will do much to populate the place. It will be observed there are no women mentioned, but children are not by any means wanting, on the contrary, there is a glut of them, in the Greek quarter particularly, and now and then a bundle of clothes, in yellow leather boots, and covered at the top with a piece of white linen, may be seen moving about, which you will do well to believe contains a woman neither young nor pretty. Dogs—so large, savage, tailless, hairy, and curiously-shaped that Wombwell could make a fortune out of them, if aided by any clever nomenclator—prowling along the shore and walking through the shallow water, in which stands a herd of bullocks and buffaloes waiting till the *araba* or cart is ready for them; six French steamers, and three French transports, with the tricolour flying, and the paddle-box boats full of troops on their way to land, a solitary English steamer, with the red ensign, at anchor in the bay, and some Greek *polaccas*, with their beautiful white sails and trim rig, flying down the Straits, which are here about three and a half miles broad, so that the villages on the rich swelling hills of the Asia-Minor side are plainly visible; all these must be added, and then the picture is tolerably complete. In truth, it is a wretched place—picturesque to a degree, but like all picturesque things or places, horribly uncomfortable."

The desire of the army to reach the city of the Golden Horn was intense; the men expected to find there realities corresponding to the scenes depicted in oriental fable. The officers spent a good deal of time in "reading up." Turkish histories and Turkish travels were almost the only books in vogue among the readers. The bright visions of those whose day-dreams were tintured by the *Arabian Nights*, and kindred productions, were painfully dissipated by the realities of the place. There were many things which to their occidental habits were irreconcilable with comfort, convenience, or good taste: there was no disposition evinced among the troops of either of the Western nations to adopt the faith of Islam, from any of its advantages exemplified in the manners and customs of its professors. Still, so great a city as Constantinople could not fail to interest men of enterprise and inquisitiveness, such as composed the two fine armies quartered in its vicinage. The city possesses about 650,000 inhabitants. Of these, a moiety are Turks and Mohammedans of various nations. The Christian population is composed of Franks, Copts, Armenians, Nestorians, a few

Protestants, besides Greeks, who vastly outnumber all these together. The government and social institutions have already been glanced at by us in our sketch of Turkish history.

The city is miserably lighted, if it may be said to be lighted at all. There is no attention paid to sewerage, drainage, or cleansing; the dogs, which are innumerable and common property, being the only scavengers. No city could be better situated for sanitary advantages, none was ever more neglected in respect to many of them. Yet there are things in which even the metropolis of England might take example from the City of the Sultan. Great care is taken in the decent burial of the dead. The place of graves is one of the most interesting objects to the visitors of Constantinople. A vast area of turbaned tombs is cared for with the tenderest feelings; a deep reverence for the place of the dead pervades the Turkish mind. It would be impossible to find a man amongst all the ulemahs, softis, dervishes, or reverends of any degree of dignity, who, like Archdeacon Hare, would think of advocating the maintenance of churchyards in populous places, as in the great cities of England, desecrating all the associations which love and reverence connect with the departed. Even the London Necropolis Company, with all its praiseworthy exertions to ensure a place of beautiful and sacred sepulture, can scarcely elevate our public to the ideas of Turkish veneration and respect for the dead. The great burial-place of Constantinople is truly beautiful, and after the seraglio, bazaars, mosques, and great thoroughfares, have ceased to occupy the eager interest of the traveller, he may love to linger—

“Within the place of thousand tombs
That shine beneath, while dark above
The sad but living cypress glooms,
And withers not, though branch and leaf
Are stamp'd with an eternal grief,
Like early unrequited love.”

While the Turks are to be commended for their care of the dead, and for the beautiful taste which characterises that care, and much as they excel us in these particulars, there is one unhappy circumstance connected with their burials in which they perform a part too closely resembling our own conduct. Church-yard intolerance is gradually growing odious among us, although our cemeteries and burial-grounds still exhibit distinctions repugnant to piety, tolerance, and common sense. Sectarian sections in places of burial are not confined to us—the Mohammedan can be as bigoted as the Christian in the “city of the dead.”

“The Turks carry their contempt of the Christian even beyond the grave. The funeral cypress, so singularly beautiful in its native East, is permitted to throw its dark shadows

only upon turbaned tombstones. The Armenian *rayah*, the oppressed Greek, and the more hated Jew, slumber in their unprotected graves on the open heath. It almost reconciles one to the haughtiness and cruelty of the Turkish character, however, to stand on one of the ‘seven hills’ of Stamboul, and look around upon their own beautiful cemeteries. On every sloping hill-side, in every rural nook, in the court of the splendid mosque, stands a dark necropolis—a small city of the dead—shadowed thickly by the close-growing cypresses, that the light of heaven penetrates but dimly. You can have no conception of the beauty it adds to the landscape. And then, from the bosom of each, a slender minaret shoots into the sky as if pointing out the flight of the departed spirit; and if you enter within its religious darkness, you find a taste and elegance unknown in more civilized countries—the humblest headstone lettered with gold, and the more costly sculptured into forms the most sumptuous, and fenced and planted with flowers never neglected.

“In the East, the graveyard is not, as with us, a place abandoned to its dead. Occupying a spot of chosen loveliness, it is resorted to by women and children, and on holidays by men, whose indolent natures find happiness enough in sitting on the green bank around the resting-place of their relatives and friends. Here, while their children are playing around them they smoke in motionless silence, watching the gay Bosphorus or the busier curve of the Golden Horn, one of which is visible from every cemetery in Stamboul. Occasionally you see large parties of twenty or thirty, sitting together, their slight feast of sweetmeats and sherbet spread in some grassy nook, and the surrounding headstones serving as leaning-places for the women, or bounds for the infant gambols of the gaily-dressed little Mussulmans.

“Whatever else we may deny the Turk, we must allow him to possess a genuine love for rural beauty. The cemeteries we have described, the choice of his dwelling on the Bosphorus, and his habit of resorting, whenever he has leisure, to some lovely scene, to sit the live-long day in the sunshine, are proof enough. And then all over the hills, both in Anatolia and Roumelia, wherever there is a finer view or greener spot than elsewhere, you find the small *sairgah*—the grassy platform on which he spreads his carpet, and you may look in vain for a spot better selected for his purpose.”

The water supply of a great city is an important feature of its civilization. In this respect London is far behind the metropolis of Islamism. The *Builder*, a scientific and yet popular periodical, thus describes the advantages of Constantinople in this particular:—

“The Turkish capital offers the peculiarity that good and salutary regulations exist where

سلطان عبدالعزیز خان

SULTAN ABUL MEJID KHAN.

a mere chaos was hitherto supposed to occupy their place. According to late calculations, based on correct observations and tables, the fifteen systems of sources and water wells which surround Constantinople, and from which numerous aqueducts and cisterns are alimented, yield a daily supply of 249 *lulehs* of water, which is equivalent to 12,267,532 kilogrammes; and as the population of the Turkish capital is calculated at 600,000, a daily supply of 2044 kilogrammes for every person indiscriminately is resulting therefrom. The administration and service of this water supply is confided to an especial class or order of men, the corps of the *Su-Jaldshi*, or well-masters. This regularly organised corps exercises a licensed art, and if they possess no theoretical knowledge, still they practise their art according to some traditional rules and principles. To this corps all works relating to the searching after water, its conducting and distribution, as far as want and even comfort are concerned, are confided. The corporation of the *Su-Jaldshi* now consists of about 300 Turks and 100 Albanese Greeks, who are exclusively selected from some families of the district of Drinopolis, in the Epirus. The inhabitants of five or six villages emigrate for the sake of occupying the situations of well-masters in Constantinople and other Turkish cities."

"*Detur dignissimo*," to the sultan personally, the city and its inhabitants are especially indebted for the maintenance of what is valuable, and the preservation of whatever meliorates the condition of the people, and improves their great city. Although without genius, and in almost every respect destitute of the energetic qualities of his immediate predecessor, his amiable and benevolent disposition impels him in the course of improvement, and he is not destitute of the courage requisite to enter or persist in the path of innovation where his whole people are benefited, however much he may thereby offend the bigotry, political or religious, of the Turkish party *par excellence*. Perhaps the most precise, although attractively-coloured description of him, is given by Lamartine, in the introductory chapter of his *History of Turkey*.

The sultan had appointed a meeting with the poet at "a small pavilion or retreat, wherein he loved to meditate, remote from the noise and pomp of his palaces at Stamboul." Lamartine was then on his travels, and he copies this description, made at the time, from his note-book. The interview took place several years after Abdul-Medjid succeeded his father, who died in 1839:—

"On entering the kiosk, I looked around for the sultan. He was standing almost invisible in the shade between the door and window, at the corner the least lighted in the room. The sultan Abdul-Medjid is a young man from

twenty-six to twenty-seven years old, of an appearance rather more mature than his age. His figure is tall, elegant, and slim. He bears his head with that gracefulness at once supple and noble, which the length of neck gives to the bust of Alexander in his early youth. The features are regular, the forehead high, the eyes blue, the eyebrows arched as in the Caucasian races, the nose straight, the lips well cut and parted; the chin, that foundation of character in the human countenance, is firm and well set; the aggregate leaves an impression rather attractive than imposing; you see a man who wishes to be loved rather than to be feared; he has the timidity of modesty in his general air, melancholy on his lips, and a precocious lassitude in the attitude; you perceive that this young man has thought and suffered before his time. But the feature that predominates is grave and meditative sensibility. You say to yourself:—'This man carries something weighty and holy in his thoughts, like the interests of a people, and he feels the weight and sanctity of the burden.' Nothing of levity, nothing of youth in the expression. It is the statue of a young pontiff, rather than a young sovereign. The countenance inspires a certain tenderness of heart. You are haunted with the thought, despite of yourself, that here is a man sacrificed to supreme power, who is young, handsome, all-powerful, who will be doubtless great, but who will be never free; never without care, never happy. You pity—you love him, for amid his greatness he feels vividly his responsibility. Every man in his empire may be happy except himself. The throne has taken him in his cradle. His apparel was simple, uniform, almost a mourning suit. A tunic of dark drab reaching down to the knees, the neck bare, loose linen pantaloons over dark-coloured half-boots, a sabre without ornament on the hilt. His countenance alone could have discovered him to the crowd. I felt moved, attracted, affected, by the melancholy of his majesty. While I was speaking to him, he turned several times the pommel of his sword, upon which he was leaning, in his hand. He blushed, and looked down as if he had the bashfulness of his virtue. We attended him to the examination that he went to make in person of the military youth in an adjoining institution."

An American traveller gives the following description of the sultan's father, whose career exercised so important an influence upon the destinies of Turkey, and to whom Constantinople is indebted for much of what is valuable in its present condition:—

"I had slept on shore, and it was rather late before I remembered that it was Friday (the Moslem Sunday), and that Sultan Mahmoud was to go in state to mosque at twelve. I hur-

ried down the precipitous street of Pera, and, as usual, escaping barely with my life from the Christian-hating dogs of Tophana, embarked in a caique, and made all speed up the Bosphorus. There is no word in Turkish for faster, but I was urging on my *caikjees*, by a wave of the hand and the sight of a *bishlik* (about the value of a quarter of a dollar), when suddenly a broadside was fired from the three-decker, *Mahmoudier*, the largest ship in the world, and to the rigging of every man-of-war in the fleet through which I was passing, mounted, simultaneously, hundreds of blood-red flags, filling the air about us like a shower of tulips and roses. Imagine twenty ships of war, with yards manned, and scarce a line in their rigging to be seen for the flaunting of colours! The jar of the guns, thundering in every direction close over us, almost lifted our light boat out of the water, and the smoke rendered our pilotage between the ships, and among their extending cables, rather doubtful. The white cloud lifted after a few minutes, and, with the last gun, down went the flags altogether, announcing that the Brother of the Sun had left his palace.

"He had but crossed to the mosque of a small village on the opposite side of the Bosphorus, and was already at his prayers when I arrived. His body-guard was drawn up before the door, in their villanous European dress, and, as their arms were stacked, I presumed it would be some time before the sultan reappeared, and I improved the interval in examining the *handja-bashes*, or state-caiques, lying at the landing. I have arrived at my present notions of equipage by three degrees:—the pope's carriages at Rome rather astonished me; the Emperor of Austria's sleighs diminished the pope in my admiration; and the sultan's caiques, in their turn, 'pale the fires' of the Emperor of Austria. The *handja-bash* is built something like the ancient galley, very high at the prow and stern, carries some fifty oars, and has a roof over her poop, supported by four columns, and loaded with the most sumptuous ornaments, the whole gilt brilliantly. The prow is curved over, and wreathed into every possible device that would not affect the necessary lines of the model; her crew are dressed in the beautiful costume of the country, rich and flowing, and with the costly and bright-coloured carpets hanging over her side, and the flashing of the sun on her ornaments of gold, she is really the most splendid object of state equipage (if I may be allowed the misnomer) in the world.

"I was still examining the principal barge, when the troops stood to their arms, and preparation was made for the passing out of the sultan. Thirty or forty of his highest military officers formed themselves into two lines from the door of the mosque to the landing, and be-

hind them were drawn up single files of soldiers. I took advantage of the respect paid to the rank of Commodore Patterson, and obtained an excellent position, with him, at the side of the caique. First issued from the door two Georgian slaves, bearing censers, from which they waved the smoke on either side, and the sultan immediately followed, supported by the capitan-pasha, the seraskier, and Haleil Pasha (who is to marry the Sultana Esmeh). He walked slowly down to the landing, smiling and talking gaily with the seraskier, and, bowing to the commodore in passing, stepped into his barge, seated himself on a raised sofa, while his attendants coiled their legs on the carpet below, and turned his prow across the Bosphorus.

"I have perhaps never set my eyes on a handsomer man than Sultan Mahmoud. His figure is tall, straight, and manly, his air unembarrassed and dignified, and his step indicative of the well-known firmness of his character. A superb beard of jetty blackness, with a curling moustache, conceals all the lower part of his face; the decided and bold lines of his mouth just marking themselves when he speaks. It is said he both paints and dyes his beard, but a manlier brown upon a cheek, or a richer gloss upon a beard, I never saw. His eye is described by writers as having a *doomed darkness* of expression, and it is certainly one that would well become a chief of bandits—large, steady, and overhung with an eyebrow like a thunder-cloud. He looks the monarch. The child of a seraglio (where mothers are chosen for beauty alone) could scarce escape being handsome. The blood of Circassian upon Circassian is in his veins, and the wonder is, not that he is the handsomest man in his empire, but that he is not the greatest slave. Our 'mother's humour,' they say, predominates in our mixtures. Sultan Mahmoud, however, was marked by nature for a throne."

Miss Pardoe, in a brief paragraph, has expressed what must have been the impression of the officers of the allied forces, as they rambled through the streets and environs of the queenly city:—

"The great charm of Constantinople to a European eye exists in the extreme novelty, which is in itself a spell; for not only the whole locality, but all its accessories, are so unlike what the traveller has left behind him in the West, that every group is a study, and every incident a lesson; and he feels at once the necessity of flinging from him a thousand factitious wants and narrow conventional prejudices, and of looking calmly and dispassionately upon men and scenes wholly dissimilar to those with which he had been previously acquainted."*

* Eastern Europe Illustrated.

Constantinople is not 'only interesting for its natural beauties, singular associations, past history, and present relation to the politics of Europe and the "balance of power;" its position must always make it important in a commercial point of view, and the key of Eastern influence.

Sir A. Alison says that it "is the only capital in the world which can never decline as long as the human race endures, or the present wants of mankind continue." This is the opinion which a great historian formed of its importance and prospects; but whatever may have been the elements of this conviction with him, we have no hesitation in pronouncing it possible that Constantinople might become as silent as the sepulchres of Scutari, if held by a people whose moral condition—and whose government, consequently—unfitted them to make use of its great natural capabilities. Except so far as the reforms of the present sultan and of his predecessor tend to avert the downward tendency, the decline of Turkey has been so rapid during the present century, that could the Ottoman power only maintain possession of the fine countries which its crescent has blighted, even this place, so well suited by situation to become the emporium of nations, might sink rapidly into silence and ruin, ere some new conqueror carried his arms over the classic realms which surround it, and again gave to it the gay and busy life its beauty and its site are so adapted to maintain.

It is natural that Britain should regard with great political interest this famous seat of empire. It was, as its name implies, the city of Constantine, who was proclaimed emperor in Britain, and as some affirm was of British descent; his mother being daughter of a king who reigned over Essex, so we are informed at all events by Gibbon, whose authority is not impaired even by grave errors of fact, and graver errors of opinion.

The Ottoman race have always entertained a partiality for the English, arising from an impression of their tolerance for the Mohammedan religion, and from a tradition that Mohammed was prevented by death from converting the English to the faith. It is certain that no other nation possesses so completely the confidence and respect of the Turks as the English.

To the English interests in India it must always be a vital consideration by what power Constantinople is held. If by an aggressive and great naval and military power, England may tremble for her dominions in "the land of the sun." The question of who is to possess Constantinople can never be separated from the speculations of English politics. It is impossible that the British government can

look with indifference, or with any feeling short of apprehension, upon the approaches of such a power as Russia to the possession of this city, which, not only since the days of Peter the Great, as we are often told, but since the Scandinavian descent upon Novogorod, has been insatiably coveted. When the possibility of fixing their standards within its walls would have appeared to other nations the wildest dream the barbarous Russ could cherish, it *was* the dream which filled their ambition: and, as if urged on by some mighty instinct thitherward, their savage chiefs conducted their hordes—scarcely less savage than themselves—across the "silvery Danaw," beyond the mazy forests of Bulgaria, through the forbidding passes of the Balkan, and more than once their wild war-shout was echoed from the walls of the imperial city.

The feasibility of a rapid and sudden conquest of Constantinople by Russia has been much discussed of late. With the possession of the Crimea, such an arsenal there as Sebastopol became, a large fleet of war steamers and steam transports, and with such a point of support as Odessa, it is astonishing how any one could doubt that a blow might be hurled against Turkey in some season of civil confusion, Greek revolt, foreign war, or national apathy, which would bring down seraglio and mosque together, and enable Russia to have in her own keeping what her Emperor Alexander I. so naively told Napoleon I., was the "key of his house." Captain Spencer, who, as an engineer officer as well as an experienced traveller gave this subject his earnest consideration, represents in strong terms the practicability of a well equipped Russian navy so co-operating with an army upon the Bulgarian frontier, as to make it possible in a single campaign to overthrow the empire of the Osmanli. It would be easy to quote naval and engineer officers of the highest authority, both French and English, in confirmation of this opinion.

To write anything original of Constantinople is next to impossible: everything there—castle and caïque, camp and café—has been described over and over again by travellers. We redeem the promise made in an early chapter of this History, by selecting a few of the more graphic pictures presented on the page of travel.

"The Golden Horn" is an arm of the sea, curved so that the broadest extremity meets the Bosphorus, and forms the harbour of Constantinople; the other extremity tapers away, until it is lost in the Valley of Sweet Waters: "It curls through the midst of the city, and you cross it whenever you have an errand in old Stamboul. Its hundreds of shooting

caiques, its forests of merchantmen and men-of-war, its noise and its confusion, are exchanged in scarce ten minutes of swift pulling for the breathless and Eden-like solitude of a valley that has not its parallel, I am inclined to think, between the Mississippi and the Caspian. It is called in Turkish *khyat-khana*. Opening with a gentle curve from the Golden Horn, it winds away into the hills toward Belgrade, its long and even hollow thrived by a lively stream, and carpeted by a broad belt of unbroken green sward swelling up to the enclosing hills, with a grass so verdant and silken that it seems the very floor of faery. In the midst of its longest stretch to the eye (perhaps two miles of level meadow) stands a beautiful *serai* of the sultan's, unfenced and open, as if it had sprung from the lap of the green meadow like a lily. The stream runs by its door, and over a mimic fall, whose lip is of scalloped marble, is built an oriental kiosk, all carving and gold, that is only too delicate and fantastical for reality.

"Here, with the first grass of spring, the sultan sends his fine-footed Arabians to pasture; and here come the ladies of his harem, and in the long summer afternoon, with mounted eunuchs on the hills around, forbidding on pain of death all approach to the sacred retreat, they venture to drop their jealous veils, and ramble about in their unsunned beauty.

"After a gallop of three or four miles over the broad waste table plains in the neighbourhood of Constantinople, we checked our horses suddenly on the brow of a precipitous descent, with this scene of beauty spread out before us. I had not yet approached it by water, and it seemed to me as if the earth had burst open at my feet, and revealed some realm of enchantment. Behind me, and away beyond the valley to the very horizon, I could see only a trackless heath, brown and treeless, while a hundred feet below lay a strip of very Paradise, blooming in all the verdure and heavenly freshness of spring. We descended slowly, and crossing a bridge half hidden by willows, rode in upon the elastic green sward (for myself) with half a feeling of profanation. There were no eunuchs upon the hills, however, and our spirited Turkish horses threw their wild heads into the air, and we flew over the verdant turf like a troop of Delhis, the sound of the hoofs on the yielding carpet scarcely audible. The fair palace in the centre of this domain of loveliness was closed, and it was only after we had walked around it that we observed a small tent of the prophet's green couched in a small dell on the hill-side, and containing probably the guard of its imperial master.

"We mounted again, and rode up the valley for two or three miles, following the same level

and verdant curve, the soft carpet broken only by the silver thread of the Barbyses, loitering through it on its way to the sea. A herd of buffaloes, tended by a Bulgarian boy, stretched on his back in the sunshine, and a small caravan of camels bringing wood from the hills, and keeping to the soft valley as a relief to their spongy feet, were the only animated portions of the landscape. I think I shall never form to my mind another picture of romantic rural beauty that will not resemble the *khyat-khana* of Constantinople."

The minarets, and the general aspect they give to the city, especially from an elevation, have been thus described:—

"I think the most beautiful spire that rises into the sky is the Turkish minaret. If I may illustrate an object of such magnitude by so trifling a comparison, it is exactly the shape and proportion of an ever-pointed pencil-case—the silver bands answering to the encircling galleries, one above another, from which the muezzin calls out the hour of prayer. The minaret is painted white, the galleries are fantastically carved, and rising to the height of the highest steeples in our country (four and sometimes six to a single mosque), these slender and pointed fingers of devotion seem to enter the very sky. Remembering, dear reader, that there are two hundred and twenty mosques and three hundred chapels in Constantinople, raising, perhaps, in all, a thousand minarets to heaven, you may get some idea of the magnificence of this seven-hilled capital of the East."

The mosques are amongst the beauties of the city of Constantine, especially that of Sophia; and the visitor cannot fail to be interested in the forms and manners of Turkish devotees, amongst whom the dancing dervishes are the most remarkable. Their chief devotional exercises, as they may with great propriety be called, consist in fantastic leaps and genuflections, and tramps in a circle—a sort of dance, certainly without any poetry of motion, and which increases in rapidity and wildness as devotion is inflamed, when it becomes a furious round of contortions of face and form, continued until the exhausted performers lose strength to pursue any longer a work of piety involving such requirements.

The bazaars are among the beauties and wonders of the place. There Jews and Turks, Armenians and Greeks, sit cross-legged and smoking in front of their stalls all day. Every calling has a separate street, so that the visitor may pass from arcade to arcade of shops, under cover of the fantastic roofs beneath which they are arranged.

It is very inconvenient, that while purchasing a shawl, a turban, or a pair of slippers, your merchant may suddenly retire to his dormitory,

perform his ablutions, and return only to spread out his carpet in the direction of Mecca, and proceed with his devotions. This he does five times a day, no matter how business may be interrupted. A traveller observes:—

“The Frank purchaser attracts a great deal of curiosity. As he points to an embroidered handkerchief, or a rich shawl, or a pair of gold worked slippers, Turkish ladies of the first rank, gathering their *yashmaks* securely over their faces, stop close to his side, not minding if they push him a little to get nearer the desired article. Feeling not the least timidity, except for their faces, these true children of Eve examine the goods in barter, watch the stranger's countenance, and if he takes off his glove, or pulls out his purse, take it up and look at it, without even saying ‘by your leave.’ Their curiosity often extends to your dress, and they put out their little henna-stained fingers and pass them over the sleeve of your coat with a gurgling expression of admiration at its fineness, or if you have rings or a watch-guard, they lift your hand or pull out your watch with no kind of scruple. I have met with several instances of this in the course of my rambles. But a day or two ago I found myself rather more than usual a subject of curiosity. I was alone in the street of embroidered handkerchiefs (every minute article has its peculiar bazaar), and wishing to look at some of uncommon beauty, I called one of the many Jews always near a stranger to turn a penny by interpreting for him, and was soon up to the elbows in goods that would tempt a female angel out of Paradise. As I was selecting one for a purchase, a woman plumped down on the seat beside me, and fixed her great, black, unwinking eyes upon my face, while an Abyssinian slave and another white woman, both apparently her dependents, stood respectfully at her back. A small turquoise ring (the favourite colour in Turkey) first attracted her attention. She took up my hand in her soft fat fingers, and dropped it again without saying a word. I looked at my interpreter, but he seemed to think it nothing extraordinary, and I went on with my bargain. Presently my fine-eyed friend pulled me by the sleeve, and as I leaned toward her, rubbed her fore-finger very quickly over my cheek, looking at me intently all the while. I was a little disturbed with the lady's familiarity, and asked my Jew what she wanted. I found that my rubicund complexion was something uncommon among these dark-skinned orientals, and she wished to satisfy herself that I was not painted! I concluded my purchase, and putting the parcel into my pocket, did my prettiest at an oriental salaam, but to my mortification, the lady only gathered up her *yashmack*, and looked surprised out of her great eyes at my freedom. My Constanti-

nople friends inform me that I am to lay no ‘unction to my soul’ from her notice, such liberties being not at all particular. The husband exacts from his half-dozen wives only the concealment of their faces, and they have no other idea of impropriety in public.”

The lunatic asylum, the churches, the cafés and restaurants, the divans over-hanging the waters of the Bosphorus, are all objects of deep interest to the wanderer within this charmed place. There are many objects of attraction for the antiquary, such as the remains of the ancient wall, the ruins of Greek churches, of baths and theatres, and the relicts of a civilization which has crumbled to decay beneath the haughty power of the Osmanli.

The student of ethnology would find much to engage him: no city in the world has such a motley population. Turks, Egyptians, Copts, Syrians, Albanians, Greeks, Kurds, Nestorians, Arabs, Armenians, Georgians, Tartars, and men of every oriental and European nation in lesser numbers.

Our space will not permit us to linger longer in descriptions of the city which, with the exceptions of Jerusalem, London, Rome, and Pekin, is more interesting than any other in the world. As we proceed in our History, however, we shall frequently have to refer to events in Constantinople, and we shall then take occasion to depict scenes and peculiarities upon which we must not now tarry.

When our troops landed at Gallipoli, while they were encamped, and when quartered at Scutari, they suffered much from cold, and from deficiency of food, even when there was abundance to supply them. These sufferings were caused by the imperfect management of the commissariat, which, however, was frequently mitigated by the intelligence and exertions of the officers of engineers—a department of the service more neglected by the Horse Guards and the government than any other. In peace or war no arm of the service has been so well conducted and so efficient, in all respects, and in none is promotion so slow. Few of the very highly-born enter the engineer service or the artillery; and therefore, while men without military knowledge or experience rapidly rise in the cavalry and infantry, in those branches promotion is a forlorn hope. Frequently by the officers in these departments of the army—as at Tariffa, Cabul, and Moultan—have disasters been averted or mitigated; and, as in these instances, so in almost all others, have staff-officers, little entitled to it, borne away the honours. But the heaviest censures that popular indignation could express, and the severest punishments that legislative justice could inflict, ought to be visited upon the heads of these in the direction of the medical department, whether at home

or in Turkey. There were literally no arrangements deserving the name for the sick soldiery during the stay of the army in Turkey. Men landed sick from Malta were obliged to lie in camp beneath a tent, with a single blanket for covering, although the nights of April are always, or nearly always, cold in that climate, from the causes which we explained when treating of Turkey in our second chapter. The authorities of Malta sent on great numbers of women whose sufferings were horrible; many of these were sick when they left Malta, and many too delicate when in their best health to enter upon the fatigues of campaigning. How far Sir William Read, the governor of Malta, was responsible for this it is impossible for any but the authorities in Whitehall to say; he certainly displayed more capacity for elegant hospitalities, although a colonel of cavalry, than for aiding or counselling the conduct of the expedition. As the troops arrived, the Turkish pashas received the superior officers with every mark of distinction; but it could scarcely fail to be observed that while the British ambassador and British civil and naval functionaries were treated with more respect than those of the French, the French military authorities received more marked tokens of deference than did those of England. The common Turkish soldiery regarded the soldiers of both armies with looks of stupid astonishment, and invariably treated them with great courtesy, and a sort of cautious goodwill.

By the end of April a very considerable body of troops of both nations were quartered in Turkey; not less than 30,000 French had by that time landed. There was then, both at Gallipoli and Constantinople, a large proportion of the British contingent. At the former place, the rifle brigade, and the 4th, 28th, 44th, 50th, and 93rd, constituted a force of about 5500 infantry. The 18th, 49th, 77th, 88th, and other regiments at Scutari, exceeded that number, while nearly an equal force was quartered at Unkier Skelessi. During April and part of May the French and British were engaged in raising defences, which might enable them to keep possession of the Chersonesus, in case of any sudden successes by the Russians. These defences were formed at Bulari, and were about seven miles in extent; a third portion of the work being assigned to the English, who, although less at home in such operations than their allies, made up for their ignorance by their vigour, and excited the admiration of French and Turks by their brawny appearance and physical powers.

With rare exceptions, the Turkish officials were incompetent for any business whatever, and the extravagance of the Turkish court kept pace with its poverty. Instead of providing food

and other necessities for the troops of its allies, or even for its own, the Porte lavished an indefinite number of piastres in entertaining the allied officers, and in all sorts of pompous receptions of the civil functionaries of the allied nations. General Canrobert, with that indignant and fearless honesty which characterises his noble nature, is said to have rebuked this selfish extravagance, when upon one occasion he observed jewelled pipes and gemmed cups in most costly profusion at the reception given him. The language of the French general is represented to have been—"I am much obliged by your attentions, but you will forgive me for saying I should be much better pleased if all these diamonds and all this gold were turned into money to pay your troops; and if you sent away all these servants of yours, except two or three, to fight against your enemy."

Frequent reviews, both at the camp near Gallipoli and at Scutari, made the armies better acquainted with each other, as to their mode of directing movements on a great scale, and no doubt contributed much to that facility of co-operation in actual battle, which, in the Crimean campaigns, became so noticeable in armies so differently constituted.

Mr. Russell, the correspondent of the *Times*, in his letter, dated May the 11th, 1854, gives a graphic description of the scenes presented at such reviews in the neighbourhood of Gallipoli. We give the description at length, as any attempt to curtail it would destroy its picturesque character:—

"On the previous Sunday, Prince Napoleon, with General Canrobert and the whole of the French *état major*, reviewed all the disposable French troops quartered in this district, and the English general and staff attended on the occasion. For two or three hours in the morning long black columns of men might be seen marching through the corn-fields, and filing along the narrow lanes that intersect them, or toiling up the hilly ridges of land in apparent confusion, or at least without much visible order. The spectator who selects a high point of land on the undulating country round Brighton, and looks across the valley below, can form a tolerable idea of the terrain around Gallipoli. Crossing the hills around in all directions, and piercing the ravines between them, he must remember the dark masses of French infantry advancing from their numerous encampments, formed for miles around on every sloping plateau. Presently the shrill trumpets of the Zouaves are heard sounding a wild and eccentric march, and these fierce-looking soldiers of Africa, burnt brown by constant exposure to the sun, with beards which easily distinguish them from the native Arabs, come rushing past, for their pace is so quick

that it fully justifies the term. The open collars of their coats allow free play to the lungs; the easy jacket, the loose trouser, and the well-supported ankle, constitute the *beau idéal* of a soldier's dress; their firelocks and the brasses of their swords and bayonets are polished to a nicety. Each man is fully equipped for the field, with greatcoat strapped over his knapsack, canteen by his side, a bill-hook, hatchet, or cooking-tin fastened over all. In the rear, mounted on a packhorse, follows the *vivandière*, in the uniform of the regiment, with natty little panniers and neatly-polished barrels of diminutive size dangling over the saddle; and then comes a sumpter-mule, with two wooden boxes fastened to the pack, which contains small creature comforts for the officers. The word is given to halt—stand at ease—pile arms. In a moment the whole regiment seems disorganized. The men scatter far and wide over the fields collecting sticks and brushwood, and it seems incredible that they have gathered all those piles of brambles and dried wood and leaves which they deposit in the rear of the lines in such quantity from the country that looked so bare. The officers gather in groups, light cigars, chat and laugh, or sit on the ground while their coffee is being boiled. From the moment the halt takes place, off come the boxes from the mule—a little portable table is set up—knives, forks, glasses, and cups, are laid out—a capacious coffee tin is set upon three stones over a heap of bramble, and in three minutes (I timed the whole operation) each officer could take a cup of this refreshing drink after his hot march, with a biscuit and morsel of cheese, and a *chasse* of brandy afterwards. The men were equally alert in providing themselves with their favourite beverage. In a very short space of time two or three hundred little camp fires are lighted, and send up tiny columns of smoke, and coffee tins are boiling, and the busy brisk *vivandière*, with a smile for every one, and a joke or box on the ear for a favourite *vieux moustache*, passes along through the haze, and fills out tiny cups of cognac to the thirsty soldiers. Pipes of every conceivable variety of shape are lighted, and a hum and bustle rise up from the animated scene, so rich in ever-shifting combinations of form and colour that Madise might look on it with wonder and despair. Regiment after regiment comes up on the flanks of the Zouaves, halts, and repeats the process, the only remarkable corps being the Indigènes, or native Zouaves, who are dressed exactly the same as the French, except that jackets, trousers, and vest, are of a bright powder blue, trimmed with leather, and their turbans or the fold of linen round the fez are of pure white. In an hour or so the crest of the hill on which

we stand, and which extends in undulating folds for two or three miles, is covered by battalions of infantry, and they may be seen toiling up the opposite ridge, till before us there is nothing visible from its one extremity to the other but the broken lines of these stalwart battalions. There was a ready, dashing, serviceable look about the men that justified the remark of one of the captains—'We are ready as we stand to go on to St. Petersburg this instant.' There was a vivacity, so to speak, about the appearance of the troops which caught the eye at once. The air of reality about this review distinguished it from sham fights and field-days, and all holiday demonstrations of the kind. Ere twelve o'clock, there were about 22,000 troops on the opposing ridges of hills—an excellently appointed train of artillery of nine-pounder guns, with appointments complete, being stationed in the valley below. The columns taken lineally extended upwards of eight miles. Shortly before twelve o'clock a brilliant staff—it did indeed literally blaze in gold and silver, brass and polished steel, as the hot sun played on rich uniforms and accoutrements—was visible coming up the valley from the direction of the town. They were preceded by four videttes, French Dragoons with brazen helmets and leopard-skin mountings; the various staff officers in advance; then Prince Napoleon in the uniform of a lieutenant-general, and General Canrobert, in full dress and covered with orders, on one side, and Sir George Brown on the other, both somewhat in the rear. The effect of the *cortège* as it swept past, the vision of prancing horses and gorgeous caparisons, of dancing plumes, of gold and silver lace, of Hussar, Dragoon, Artillery, Rifle, Zouave, Spahi, Lancer, of officers of all arms, dressed with that eye to effect which in France is very just as long as men are on horseback, was wonderful. It flashed by like some grand procession of the stage, if one can so degrade its power and reality by the comparison. As the videttes came in view, the drums of each regiment rolled, the trumpets and bugles sounded, and all the men who had been scattered all over the ground in disorderly multitudes came running in from all sides, and dressed up, unpiled arms, and with great celerity fell into lines three deep, with bands, *vivandières*, mules, and smoking fires hastily extinguished, in the rear. As General Canrobert came up to the first regiment he raised his cocked hat, and shouted lustily, '*Vive l'Empereur.*' The officers repeated the cry, and three times it ran along the line of the regiment. The band struck up, the men presented arms, and the prince rode past bowing and raising his hat in acknowledgment, and again the band, out of compliment to the English general, played

'God Save the Queen.' Then there was profound silence as the prince approached the next regiment, till coming in front of its leading files the salutes were repeated. In this way the staff passed along the ridge of one hill till they came to the extremity of the lines, then descending, they passed the artillery in the valley, spurred up the opposite hill, and in like manner passed in front of the columns which crowned it. The inspection lasted two hours."

Having presented our readers with a French review, we shall, by the same able pen, place also in review before them, the troops of Britain:—

"On Saturday, the 7th, Sir George Brown had a similar inspection of the regiments under his command before his departure for Scutari. Soon after daybreak the tents of the rifle brigade, of the 50th regiment, and of the 93rd regiment, forming the working brigade at the camp of Bulari, were struck, and the whole encampment was broken up. At the same time the 4th, 28th, and 44th regiments struck their tents at the Soulari encampment, about two miles from the town of Gallipoli, and proceeded on their march towards Bulari, there to take up the quarters vacated by the other brigade. Let us climb up one of the hills, near the scene of the French review, and watch the march of our regiments. They came on solid and compact as blocks of marble, the sun dancing on their polished bayonets and scarlet coats with congenial fierceness. The gallant '—th' halt close by—all the men are as red in the face as turkeycocks—they seem gasping for breath—they are indeed sorely distressed, for a rigid band of leather, rendered quite relentless by fibres and buckles of brass, is fixed tightly round their throats, and their knapsacks are filled to the pitch of mortal endurance, so that it requires the aid of a comrade for each man to get his on his back; while the Frenchman, unassisted, puts his knapsack on in an instant. The coat is buttoned tightly up also to aid the work of suffocation, and belts and buckles compress the unhappy soldier where most he requires ease and the unrestricted play of the muscle. Regiment after regiment reaches the parade-ground, and falls into its place with admirable precision. The lines of these red and blue blocks seem regulated by plummet, and scarce a bayonet wavers in the long streaks of light above the shakos. The Rifles, too, stand compact and steady as a piece of iron. Thus they stand under the rays of the morning sun, till at nine o'clock Sir George Brown and staff, accompanied by the French general, and a number of officers, Mr. Calvert, our consul, &c., ride along the lines, and, after a brief inspection, dismiss them. The Rifles and 93rd regiment continue their march to the shore, where

they are to embark for Scutari. The 50th follow to their new camp at Soulari, and if one follows them, he will see how men drop out, exhausted and half-smothered, and at what a vast amount of physical inconvenience all this solidity and rigidity of aspect are acquired. Take one fact:—In a single company which left Bulari forty-five file strong—ninety men—so many men fell out on the march to Soulari, a distance of six miles or thereabouts, that the captain reached the camping-ground with only twenty men—the rest straggled in during the forenoon. The halts were frequent for so short a march, and the rush to every well and fountain showed how the men suffered from thirst. On arriving at the beach they found all their troubles cease, for the French admiral had, with the greatest promptitude, sent the launches and boats of the fleet to the piers, and in about one hour the whole of the two regiments, consisting of about 2000 men were embarked."

The following, from the same pen, presents the British army in its loyalty and discipline, after its arrival at Scutari:—

"The queen's birthday was kept yesterday with all honour, and was celebrated by a splendid military spectacle. At a quarter to eleven o'clock all the regiments in barrack and camp were paraded separately, and afterwards marched to the ridge which bounds one side of the shallow but broad ravine of which I have already spoken, as separating the camp of the brigade of Guards from the camp of the other brigades. The total force on the ground consisted of about 15,000 men, and for weight, stature, and strength, could not be matched probably by a like number of any troops in Europe. As they marched from camps and barracks in dense columns, converging on the ridge, the eye refused to believe that they could be condensed into so small a space as that they were ordered to occupy.

"The continued apathy of the Turks, which becomes absolutely disgusting to any more excitable race, was astonishing on this occasion. There were present some three or four gentlemen on horseback, with their pipe-bearers, and two or three native carriages full of veiled women; but though Scutari, with its population of 100,000 souls, was within a mile and a half, it did not appear that half a dozen people had been added to the usual crowd of camp-followers who attend on such occasions. The Greeks were more numerous, and Pera sent over a fair share of foreigners all dressed in the newest Paris fashions; so that one might fancy himself at a fashionable field-day in England, but for the cypress groves, and the tall minarets glancing above in the distance. At twelve o'clock, Lord Raglan, attended by Sir George Brown, the Duke of Cambridge, Sir De Lacy

Evans, the Earl of Lucan, the Generals of Brigade—Bentineck, Sir C. Campbell, Pennefether, Airey, Adams, Buller, their aides-de-camp and majors of brigade, and Lieutenant-colonel de Lagondie and Chef d'Escadron Vico, to the number of thirty or forty, appeared on the ground in a perfect blaze of gold lace and scarlet and white plumes. They were received by the bands of all the regiments striking up 'God save the Queen,' but not with that unanimity which would be desirable in order to give a perfect effect to the noble strains of our national anthem. Lord Raglan having ridden slowly along a portion of the lines, wheeled round and took his post in front of the centre regiment. After a short pause, just as the guns of the *Niger* were heard thundering out a royal salute from the Bosphorus, the bands struck up the national air again, and down at once fell the colours of every regiment drooping to the ground. The thing was well done, and the effect of these thirty-two masses of richly-dyed silk, encrusted with the names of great victories, falling so suddenly to the earth as if struck down by one blow, was strange and inexpressible. In another minute a shout of 'God save the Queen,' ran from the Rifles on the left to the Guards on the right, and three tremendous cheers, gathering force as they rolled on with the accumulated strength of a thousand throats from regiment after regiment, made the very air ring, the ears tingle, and the heart throb. Some of the regiments pulled off their shakos, and waved them in the air in accompaniment to the shouts; others remained motionless, but made not less noise than their fellows. After the cheering had died away, leaving, however, a strange sensation in many an English bosom, as we thought how soon their voice might be silenced for ever, the march past began in quick time. The Guards, who were in great good humour, possibly because their necks were free and all prisoners had been let out as an act of grace, marched magnificently. The Highlanders were scarcely a whit inferior, and their pipes and dress created a sensation among the Greeks, who are fond of calling them Scotch Albanians, and compare them to the Klephtic tribes, among whom pipes and kilts still flourish. Some of the other regiments did well, others not so well, and on leaving the ground all marched off to their respective camps, and the proceedings of the day were brought to a close, so far as the authorities were concerned. The Guards, however, had their games—racing in sacks, leaping, running, &c., in the afternoon, and the regiments played cricket, and indulged in other manly sports, in spite of the heat of the day. In the evening, a handsome obelisk, erected in the Guards' camp, was crowned with laurel, and surrounded with fireworks."

The complaints of neglect, especially where the sick were concerned, which reached England by the correspondents of the London daily press, and from officers and soldiers in their private letters, agitated the public mind, and led to repeated discussions in both Houses of Parliament. The defence offered by the government was, that nearly all these representations were false, and such as were not wholly so were exaggerated. The Duke of Newcastle, in the House of Peers, and Mr. Sidney Herbert, in the Commons, adopted an indignant and injured tone of reply to the interrogatives addressed to them. Mr. Herbert betrayed great bitterness, and by both the plausible duke and the tart commoner, warm denunciations were uttered against all who put such complaints into circulation. Subsequent events proved that neither of these directors of the war department adopted proper precautions in the arrangements they professed to superintend; and that, with the exception of the duke himself, but little industry was exercised by any one connected with any branch of the war office, whether superior or subordinate. The complaints were reiterated, and, for a time, stores of all kinds arrived in great abundance in the East, although the management of distribution there continued disorderly and inefficient. In fact, however censurable the neglect of the government, they were imposed upon by the officials in whom they confided. The reports were "cooked" as effectively as railway accounts when dishonest managers have had to encounter meetings of shareholders. There was little honesty on the part of many entrusted with the charge of most responsible affairs. As was said long afterwards by Mr. Layard, in reference to this fraternity, "what we want is *more truth* in every department."

During the encampments on the Bosphorus the officers did not always possess unobjectionable quarters. Even the chiefs of the allied armies, although in so great a capital, were not lodged in palaces. The habitation of the British commander-in-chief was very homely. It was of wood, situated on the beach, about three-quarters of a mile from the barracks. In front of it was a pretty wooded knoll, covered with rich grass, above which might be seen the tops of grave-stones. Before this knoll, and nearer to the sea, was a group of pine trees, surrounding a Turkish fountain. It did not appear to be a healthy situation, as the waters on the shore, nearly stagnant, were loaded with dead dogs and offal, and the stench that ascended thence, and filled the neighbourhood, was such as must injure the health of any who might frequently be brought within its influence. Near the beach, also, were slaughter-houses, which sent out their reeking abominations, tainting the atmosphere to a great distance

Before the troops left the shores of the Bosphorus for Varna, the commanders-in-chief, and several ministers of the Porte, visited Omar Pasha at Shumla, and held a consultation with him, which lasted three days.

It must not be supposed that the whole time of the army was spent in camp and barracks, or that a monotonous resort to mosques and minarets, bazaars and baths, consumed their leisure. Pleasant excursions to the surrounding country, and delightful boating parties on the Bosphorus, had all the enjoyments which such trips possess at home, and all the additional interest belonging to places consecrated by the genius of history, and having the indescribable charm of scenes amidst which great enterprises had commenced. The Valley of the Sweet Waters, already described by us, was the frequent resort of the officers of every rank, and often under the bright moonlight, or during the soft and fading light of evening, parties of officers and civilians, with their ladies, wives, and daughters, would row about in the gliding caiques, enjoying the balmy air, and the ever-changing scenery. The lady of an officer, already quoted by us, thus recalls her impressions of such seasons of pleasure, the zest for which not even the reports of battle from the Danube, nor the incessant preparations for participating in the strife, could repress in our people:—

“On the evening of the 11th the minarets of the mosques were illuminated; and the effect of these rings of light, rising above the dark cypress trees of Seraglio Point, was excessively beautiful. The Turkish vessels in harbour had also each a lamp at the mast-head; a three-decker had wreathed all her masts with lamps; and the result told so well in the darkness of night on the broad waters, that it was proposed to row about among the Turkish craft, fully to enjoy the illumination. But the men on watch challenged so angrily, and it was so very troublesome to be constantly repeating verses of the national anthem, to persuade the Moslems that we were ‘*Englese*,’ that we gave up our marine stroll by mutual consent; and were content to observe from our own deck, how beautifully these lines and circles of light marked all the leading features of the Moslem city. On the following morning (Friday), the sultan went to the mosque in his gilded caique with the crimson awning, three other caiques following; but this is a religious pageant which has been described so often, that I feel it would be mere impertinence to say another word about it. The reader may be disposed, however, to accompany me to the ‘Sweet Waters of Europe,’ which has ever been a favourite resort of the Turks on this their holiday; and though also often described, will now be seen under a different aspect. Objecting very much to mingling with a crowd, to be jostled about on

the waters of the Golden Horn in these canoe-like caiques,—which draw only about two inches of water, and that little more than in the centre,—we consented to the bathos of the washerman’s boat—a broad, slow, ugly tub of an affair, promising great safety and immense delay. We had sofa-cushions and coverlet laid in the bottom of it; and hanging a few shawls over the stern, to look as festal as we could, reposed ourselves therein after the Turkish fashion. Having passed the two bridges over the Golden Horn, we soon found ourselves among a fleet of gay caiques, and were continually passing little garden *cafés*, where on high stools were seated lines of solemn, smoking Turks, apart from the ladies, who, clustered together, with their children, were—Turkish, Armenian, Greek, and Jewish—all laughing and gossiping gaily, under the shade of innumerable blue and pink parasols.

“Our friend the washerman seemed desirous of persuading us that one of these was the spot we were in search of; but seeing caiques, not only with fezzes and parasols still passing us, but with the shakos of field officers, we insisted on proceeding, and were eventually floated through a swampy creek, and landed at a cool, shaded nook, which we, with much simplicity, believed to be the celebrated ‘Sweet Waters.’ Under a fine group of trees were a few gilded arabas—the large white bullocks, in all their glory of crimson housings and innumerable tassels, quietly chewing the cud by the side of them, and looking, with their wise eyes, as if they thought the rural pleasure of the scene by no means increased by that party of noisy fiddlers, or by the shrieking *sacki* (water-carrier), who appeared to consider it everybody’s duty to be thirsty. We strolled up a stony, winding road, not very unlike the high-street of Pera, as affected its convenience for traffic, and met several very fine gilded arabas, bumping and jolting over the stones, to the intense amusement and refreshment, as it seemed, of the veiled ladies within, who, half-smothered in piles of soft cushions, shrieked with laughter at every new jolt. Our presence appeared not by any means to be a restraint to the ladies, for they clambered in and out of their carriages, with their slippers in their hands, displayed their yellow boots, chatted with their slaves, played with their children, and were in no way disconcerted by our presence in their suburban retreat. It was quite evident, however, that this was not the spot we were in search of: and, walking round the creek, we were soon repaid, by the most beautiful and attractive scene imaginable. It was like a dream from Boccaccio, and one that Finden would have gloried to depict. How then can I describe it? The reader must be good enough to assist me: and, with the full force of poetic fancy, fill up

the very cold, bald outline that I am capable of tracing.

"The sun was shining most brilliantly; and the air, soft and delicious, was fragrant with sweet odours, and vocal with the notes of larks innumerable. The narrow waters of the Golden Horn, here a mere streamlet, flowing gently between flowery meadows, were covered with caiques, filled with festive groups, mummers, and musicians. On the banks, under fine trees, were spread carpets and cushions of every hue, on which reposed groups of Turkish ladies, surrounded by their slaves and children; while beyond them passed trains of splendid arabas, and parties of Turkish nobles, their spirited steeds trapped with the most gorgeous Mameluke array.

"It will readily be supposed, that to the officers of the allied force this was a scene full of attraction, and I fancy there were few who were not present. The Duke of Cambridge, with Lady Errol and his staff, passed on in the Austrian ambassador's boat; and then, taking horse, rode back to Stamboul. White plumes were gleaming, staff uniforms flashing, in all directions; and knots of young officers waited impatiently for a glimpse of the sultan's harem. Many soon had that gratification. I was standing on a little grassy knoll by the wayside, when the araba containing the sister and two of the wives of his Imperial Majesty Sultan Medjid, followed by five carriages filled with the ladies of the harem, stopped for their fair occupants to admire the varied scene. Some of the ladies wore the *yashmack* of material so slight that it only served to give additional delicacy to their semi-Circassian complexions. Evidently, the Stamboul ladies have great recourse to art for the supposed improvement of the charms by which they seek to retain position. The eyebrows, carefully arched, were sometimes united in the centre, and a slight dark line pencilled within them; the large almond-shaped eyes owed an expression of additional softness to the darkening of the lashes with *soormai*; and the rouge of the cheek, sometimes rather too strong, gave to many complexions the effect of what has been described as like a bunch of fresh roses dipped in cream.

"The general impression, however, I believe was, that the beauty of the Turkish women has been exaggerated very much, and that the mystery of their position has tended to give them an undue interest. The lack of exercise and fresh air, the abundant use of sweetmeats, and the habit of perpetual smoking, must tend to injure beauty, even the mere beauty of form and colour; and where intellect is dormant, and the feelings rendered passive by the influences of Moslem tyranny, fine as the almond-shaped eyes of the fair daughters of the prophet usually are, they would be found deficient in

attraction, I think, if compared with those of an educated, kind-hearted sensitive Englishwoman, whose blush mounts from her heart, and whose eyes sparkle with the love of purity, and the hope of conferring happiness on all around her.

"It was remarkable, in this scene, to observe how completely Mohammedan etiquette had power to prevent any vulgar expression of natural curiosity or surprise on the part of these fair dames. They sat like veiled statues, these ladies of high degree; and even when the duke with his brilliant *cortège* passed their carriages, the eyes of the ladies remained fixed on the perspective of the distance. Their horses walked or stopped; red coats or white plumes dashed by; English ladies in strange Parisian fashions pressed near, yet the ladies of the sultan and the pashas noted nothing of all this, but preserved the same unchanging aspect, which I had always considered a sort of trick peculiar to Indian fakirs, to aid in the persuasion of a crowd of noisy worshippers that their power of religious abstraction was complete. Such, however, is the result of Turkish etiquette; and I have heard it said of the sultan, that were a pistol fired at his ear, this 'cousin of the sun and moon' would not appear conscious of the sound.

"I am sorry however to say, that this self-restraint was not effectually imitated by ourselves. We all certainly suffered curiosity to overcome courtesy, and gazed upon the ladies and their attendants with much ill-bred pertinacity. One officer, indeed, after looking long into the carriage of the sultan's sister, at length took off his cap, next bowed, then smiled, and gradually commenced a respectful advance, still smiling and bowing; on which a particularly unprepossessing-looking African gentleman opened the carriage-door, took a jewelled knife from beneath the seat, flourished it in the face of our somewhat alarmed courtier, directed the coachman to proceed, and, with a most terrific scowl, adding clouds to his anything but sunny countenance, took his place in front of the araba."

During the occupation of camp and quarters during April, May, and June, by the allied armies in the neighbourhood of Scutari and Gallipoli, their conduct was such as to merit the highest commendations. It is true that both French and British committed some excesses. Some Zouaves actually forced their way into certain harems, and paid a terrible penalty. The British soldiers did not always respect the sacred things of the Turks, and perhaps oftener committed offences than the French; this may be explained by the fact that, generally, our army is recruited from a less respectable class; but the unnecessarily severe punishment had a tendency to deter

riorate the moral as well as physical condition of the men. Flogging in the army had been greatly mitigated, in consequence of a strong public opinion in England, and much against the will of the officers, who cling generally to all old customs, until the ridicule or the anger of civilians, or the power of parliament, forces an alteration. As soon as this spirit pervading the officers as a class had full scope, flogging was resorted to and practised with fierce pertinacity. Some of the men were hardened by it; some felt degraded; and all were discontented with the debasing instrumentality of punishment. It was administered upon occasions when the offence was so trivial, that were the like to occur at home there would have been "agitation" from one end of the country to the other. Sir De Lacy Evans so directed the discipline of his division, all through its service under his command, as to exclude flogging except in cases where any civilian would have inflicted it.

A very excellent proclamation by Lord Raglan, soon after he landed in Turkey, had a very good effect upon the conduct of the soldiery, especially as at that time the commander-in-chief was exceedingly popular:—

"The queen having been graciously pleased to appoint General Lord Raglan, G.C.B., general commander of the forces to be employed in Turkey in support of her ally his imperial majesty the sultan, all reports are to be made to him, through the channels prescribed by her majesty's regulations.

"The commander of the forces avails himself of the earliest opportunity to impress upon the army the necessity of maintaining the strictest discipline; of respecting persons and property, and the laws and usages of the

country they have been sent to aid and defend, particularly avoiding to enter mosques, churches, and the private dwellings of a people whose habits are peculiar and unlike those of other nations of Europe. Lord Raglan fully relies on the generals and other officers of the army to afford him their support in suppression of disorders; and he confidently hopes that the troops themselves, anxious to support the character they have acquired elsewhere, will endeavour to become the examples of obedience to order and of attention to discipline, without which success is impossible, and there would be evil instead of advantage to those whose cause their sovereign has deemed it proper to espouse. The army will, for the first time, be associated with an ally to whom it has been the lot of the British nation to be opposed in the field for many centuries. The gallantry and high military qualities of the French army are matters of history; and the alliance which has now been formed will, the commander of the forces trusts, be of long duration, as well as productive of the most important and the happiest results. Lord Raglan is aware, from personal communication with the distinguished general who is appointed to command the French army, Marshal St. Arnaud, and many of the superior officers, that every disposition exists through their ranks to cultivate the best understanding with the British army, and to co-operate most warmly with it. He entertains no doubt that her majesty's troops are animated with the same spirit, and that the just ambition of each army will be to acquire the confidence and good opinion of each other."

The date of this order was the 30th of April, 1854.

CHAPTER XIX.

EMBARKATION OF THE ALLIED ARMIES, AND LANDING AT VARNA.—OCCUPATION OF VARNA.—INACTION OF THE ALLIED GENERALS.—PESTILENCE IN THE CAMP.—GREAT CONFLAGRATION, SUPPOSED TO BE CREATED BY GREEK PARTIZANS OF RUSSIA.

"Where'er we gaze—around, above, below,
What rainbow tints, what magic charms are found!
Rock, river, forest, mountains, all abound,
And bluest skies that harmonise the whole."—BYRON.

Much discussion has been maintained as to the origin of the movement to Varna. The *Moniteur* of Paris contended in several elaborate articles that the landing of the expedition at Varna was part of the general plan of the Emperor Napoleon, contained in the instructions given to Marshal St. Arnaud on assuming the command of the French expeditionary army. The *United Service Gazette* attributes to Major-general MacIntosh the ideas

of first landing at Gallipoli, afterwards at Varna, and finally in the Crimea, south of Sebastopol. It is probable that the emperor, upon perusing the work to which the *United Service* calls attention, formed his plans to a certain extent in conformity with its suggestions. In his instructions to the marshal, dated 12th April, 1854, the emperor indicated Gallipoli as the best point at which, in the first instance, to disembark, and as suitable

for a grand depot for the army. He also recommended what was carried into effect promptly by the generals—the occupation of the large barracks near the water at Constantinople, but that he would prefer acting towards Adrianople from Gallipoli to making Constantinople his base. He, however, notices that it is by the Black Sea that infantry and *matériel* must be conveyed to the neighbourhood of the Balkans. Proceeding in his directions upon the principle that the Turkish capital and the Dardanelles were to be defended against a powerful Russian invasion, he points out that if the French army was obliged to retreat from the Balkans upon Adrianople, it might, if that place were untenable, divide into two forces, one retreating upon Gallipoli, the other upon Constantinople. Twenty thousand men the emperor considered sufficient to hold the entrenched camp at Gallipoli, and the remaining 40,000 (estimating the French auxiliary army at 60,000) might join in defending the line of the Carassou, in front of Constantinople, and which he had proposed to be left in possession of the Turkish troops, the French force operating more actively to secure the position. His majesty finally recommended the marshal to confer with Omar Pasha and Lord Raglan, whether to march through the Balkans and confront the Russians in Bulgaria, or to conquer Odessa, making it a basis of operation in the Russian rear; or if they fell back across the Danube and the Pruth, a basis of operation against the left wing of their army; or to proceed as soon as the defence of Constantinople was thought secure to the Crimea.

The enterprising but prudent marshal did not fail to submit these recommendations or instructions to the British and Turkish chiefs, and, as we noticed in our last chapter, while the latter was defending the Dobrudscha, or rather keeping the Russians shut up in its morasses, Marshal St. Arnaud and Lord Raglan, with the Turkish ministers visited Shumla, the head-quarters of the Turkish general, who accompanied them to Varna, and urged upon them the occupation of that place. His desire was that the allied armies should occupy the whole country between Varna and Shumla, and to advance gradually as they were reinforced, menacing the Russians from Cherraveda to Kustendje; in this way to co-operate with him in pushing the Russians back upon Wallachia, and to act upon the offensive along the whole line of the Danube. It was Omar's opinion that aided by the fleets, and with Varna as a basis of operation, the allied troops would prove invincible, provided a cautious, vigilant, and yet vigorous course of action were maintained.

Accordingly, the allied troops were embarked

early in June for that destination. The voyage from Constantinople to Varna is one of deep interest to the lover of the picturesque. The passage into the Black Sea through the Bosphorus is, in times of peace, one of tranquil and soothing loveliness; but the first detachments of the British army were not destined to see much of its beauty. The light division was first moved, and struck their tents with order, ease, and rapidity. Their embarkation was effected with admirable care and skill. Amidst fog, mist, and darkness, they sailed into the Black Sea, and without encountering accidents or Russians, reached the bay of Varna in safety. The division was landed with the same skill with which it had been embarked, and thanks to the admirable foresight and tact of Omar Pasha, arabas drawn by bullocks, and sometimes by horses, were ready, in considerable if not sufficient numbers, to aid the first movements of the troops. The Turkish general had dispatched detachments of cavalry from Shumla, who prepared the country people along their line of route to send provisions to the new camp, which in consequence soon became well stocked, and good food was abundant, and consequently moderate in price. Such of the troops as remained on board the first day, were delighted with the band on board the ship of Lord G. Paulet, which, in compliment to General Brown, who was his lordship's guest, performed national melodies and pieces from our best composers. Amongst no class is the influence of music more beneficial than amongst soldiers. The strains of military music fire their patriotism, and their national and professional pride, and inspire them with eagerness to meet the enemies of their country on the field. The privations of camp life are forgotten, and the gloomy bivouac, the dreary and fatiguing march, leave no unpleasant memories of their inconveniences and pain, when the sweet melodies which call up the images of home and country, joyously yet softly, are wafted over the plain or the waters where their tents are pitched, or their barks repose.

An impression very unfavourable to the loyalty of their Turkish allies was produced among the British soldiery in this part of the expedition. As they embarked, there were no kind farewells, no blessing from Allah, pronounced upon them. The smokers smoked, the children played heedlessly, the boatmen leaned listlessly on their oars, no cheers rang upon their ears, except such as were raised by their own brethren in arms, so soon to become sharers in their dangers and their sufferings. When about to land at Varna, as they reared the shore, they hailed the Turkish troops with warm British cheers, but met with no response; the Turkish soldiers watched them—if the glances they occasionally directed towards them

could be so described—with quiet indifference. Some of these troops were Egyptians, but they might as well have been Egyptian mummies, for any sympathy with their newly-arrived allies which they appeared to feel. Perhaps the long delay of the arrival of these troops might account for this. The Turkish armies had fallen back from the Danube upon the Wall of Trajan, Silistria was beleaguered and sorely pressed, and yet the allies lingered on the verdant shores of the Bosphorus, or of the Sea of Marmora. This caused probably much of the coolness evinced towards the troops by even Turks of distinction throughout the whole month of May. One Turkish gentleman, having been present at a review of the British at the lines of Gallipoli, after witnessing their celebrity and precision of movement, quietly asked, “Do they like this?”—“Yes, certainly,” it was replied, “they like it.”—“Ah,” said the dignitary, with quiet sarcasm, “I suppose they do, for the Turks are fighting the Russians.” The unaccountable inaction of the army filled it with shame in presence of the men whose cause they came to defend. It was not then understood by the troops that the war was directed by a ministry whose sympathies were with the enemy, against whom they made a reluctant declaration of war, which war they carried on as if the defeat and destruction of the army they sent forth to wage it, would be the surest element of good policy and success.

The cool reception which the light division met with at Varna did not slake their thirst for glory, nor repress their ardour in the cause. Never was an army animated by a finer spirit, never did soldiers confide more in their officers, never did officers lead men more prepared to follow them wherever they might lead.

Immediately after the landing of the light division, General Canrobert and his staff arrived, and were followed by small detachments of the French army. His arrival was the signal for every cordial demonstration which the British officers and soldiers could present of respect, esteem, and confidence. This officer was from the first peculiarly popular with the British; his open, frank, manly, honest appearance, language, and bearing, won him, at all events so far as the British were concerned, “golden opinions from all sorts of men.”

Detachments of British cavalry, the 8th and 17th Light Dragoons, and some guns, were landed with the light division, or immediately after. Before we notice the further proceedings of the troops, we require to give some notice of the place selected as their base of operations.

Varna is one of the largest towns on the European shores of the Black Sea; it stands where the Dwina and its lakes empty themselves into the sea in a broad open valley gently

undulating, and covered with orchards and vineyards; it contains about four thousand houses, and the population is variously estimated at from fifteen to twenty-five thousand persons. The Greeks have here a bishop, and the Turks a pasha. In the Russian invasion of 1820, desperate efforts were made for its conquest under the direction of Prince Menschikoff, the same whose haughty demands at Constantinople produced the present war. He was wounded, and resigned the command to Prince Woronzoff, who succeeded in bribing the Turkish pasha in command of the garrison. Until treason constrained surrender, the defence was most obstinate, and is memorable in this respect in the annals of sieges.

Colonel Chesney, a British officer of distinction, thus describes it as a fortified place:—“The circumference of the city is about three miles, and before the removal of the guns from the sea-face for the defence of Silistria, there were 162 pieces of mounted cannon of various calibres. Inside the works the ground rises to some height, both at the western and eastern quarters of the town. The hills thus form a slope towards the sea, near which stands a Byzantine castle, defended by high square turrets. The castle serves as a magazine, as well as a kind of keep or citadel. Since the siege of 1828 these works have been increased, and the whole has, in 1854, received the advantage of the skill of European engineers.” Baron Moltke gives a more full and detailed account of this celebrated place. He describes the northern side of the valley, in which the town is situated, as rising above 1000°, and having exactly the same formation as the mountains of Shumla. It falls suddenly with a rocky precipice from the flat Bulgarian plane, and then gradually slopes down to the level ground. The distance of these hills from Varna is about three miles; the southern edge of the valley is nearer, rises more abruptly, and displays the pointed hill-tops and fine forests of the real Balkan. The heights nearest to the fortress, and overlooking it, are above 3000 paces distant. The place therefore is not commanded on any side within some distance, but neither does it fully command the surrounding ground within range. From the above descriptions by Colonel Chesney and Baron von Moltke, it is plain that the eloquent correspondent of the *Times*, Mr. Russell, errs in saying, “the hills at the back completely command the place, and make it a poor military position.”

The light division under the command of its general, Sir George Brown, proceeded from Varna to the neighbourhood of a village called Alwyn, about nine and a half miles distant, where they encamped on a plain close to a fresh-water lake. The cavalry, which con-

sisted of the 8th Royal Irish Hussars and the 17th Lancers, continued their march nearly nine miles further still from Varna, where they pitched their tents by the village of Devno. The line of march from Varna to the latter place was marked by rich and diversified scenery, but the whole district, except at the villages mentioned, was utterly deserted. This arose partly from the paucity of population, and partly from the fear and hatred which the Bulgarians bear to the Turks: they almost to a man sympathise with Russia, and regard the czar as their only deliverer from the execrated tyranny of the Moslem.

The Guards and Highlanders arrived at Varna on the 13th of June, under the command of the Duke of Cambridge, who was extremely popular with his division, and indeed throughout the army. The 5th Dragoon Guards, direct from Cork, had previously arrived in excellent condition, both men and horses. On the 14th, the Guards and Highlanders landed, and the discipline of this fine division was exemplified in the order and celerity with which all orders were executed, and the debarkation made. It was from no relaxation of discipline that their commander attained his popularity; but the duke eschewed the character of a martinet, while he spared no pains to ensure the efficiency of his men. Here, as at Gallipoli, and indeed everywhere else throughout the war, from Malta to Sebastopol, the contrast between the French and British commissariats was painful to the national pride of Englishmen. The organization of the French at Varna was perfect; that of the British was not only bad, but so desperate that a gentleman writing thence declared there was no way of bringing a sick man from the camp to Varna that would not endanger his life, and no means in the camp at all adapted to his treatment. General Canrobert superintended everything with personal vigilance and activity. Lord Raglan was ill at Scutari. General Brown was as active as General Canrobert, and looked well to the attire and discipline of the troops—stocks, moustaches, and ill-regulated or improperly-covered caps and shakos, were detected by him as quickly as the hawk spies its quarry. The two generals were equally on the alert, but the scope which their alertness took was as different as possible. The common soldiers of both armies entered keenly into these things, and discussed them in groups, and with an earnestness heightened by the embarrassments and wants the British so soon began to feel.

Lord George Paulet continued to do good service to the allied cause by entertaining the officers most hospitably, and bringing the leading men of both nations frequently and pleasantly together. The conduct of the

French common soldiers to the British was generous; they most effectively assisted the first division in their debarkation, and showed an alacrity to serve and oblige whenever an opportunity presented itself. The men acted voluntarily in the assistance they rendered, their officers not interfering with them in the matter. There were of course occasional differences between the English and their benefactors, but as the falling out of friends is vulgarly thought to increase esteem, so it proved in these cases; the disputants, or combatants, were speedily the objects of renewed cordiality, which was all the sweeter for any little interruption it had experienced.

The first division had been scarcely landed a week, when both in it and the light division, and also among the cavalry and artillery, cases of diarrhœa became extremely common. In fact, the men had only coarse and indifferently baked dark bread and water for breakfast, ration beef and the same sort of bread again for dinner; and no other food was served out to them the remainder of the day. As long as the men were well fed they did not suffer from disease; but the bad water of the country, and the coarse and insufficient food, soon told upon them, and their health gradually gave way. The porter sent out from England was not impartially distributed, but when it could be had the men were most grateful for it, and its use was beneficial. By June the 21st, nearly the whole British army was in Bulgaria. The country all around Varna was one vast camp; British, French, Turks, and Egyptians, formed a host of nearly 60,000 men. Lord Raglan, Sir De Lacy Evans, and the other superior officers of the British force, were quartered in the town.

French troops continued to pour forth from Burgas,* where many of them were landed, and also from Adrianople. When the French

* Captain Spencer, in his *Narrative of a Voyage from the Danube to Constantinople*, thus notices Burgas and the neighbouring coasts:—

“On leaving Varna, the coast of the Black Sea became highly interesting. The great ridge of the Balkan mountains was already distinctly developed on the distant horizon; and the shelving hills, diversified by valleys, forests, bays, and promontories, formed a variety of the most beautiful landscapes. We next passed Burgas and Sizopoli, the ancient Apollonia. This town has a most commodious harbour, and being the only one that really offers a safe and convenient anchorage on the whole line of coast from the mouth of the Danube to the Bosphorus, any other people than the Turks would have rendered it long ago a rendezvous for their naval force in this part of the Black Sea. It is situated on a small peninsula, and, judging from the ruins of a wall, was at one time fortified. Varna, it is true, from being built at the confluence of several small rivers, or rather an extensive marsh, has decidedly an advantageous position, and, if properly fortified and well defended, might prove a strong bulwark against an invasion of the Russians; but the bay does not offer a safe anchorage for large vessels. At Sizopoli we became distinctly sensible of the current of the Bosphorus, which is computed to run at the rate of four miles an hour; and as its course is from the north to the

landed at Gallipoli, they detached a portion of the force to Adrianople,* and at the juncture of which we write, the troops quartered there were ordered to Varna. It was now midsummer, when the climate of Bulgaria, so cold in winter, is intensely hot, and the midsummer of 1854 was especially so: the troops of both armies found this heat intolerable, diarrhœa increased, and many cases of dysentery appeared. However much the tact and organization of the French deserved praise, yet their army was not in a suitable condition to take the field any more than our own. The French infantry suffered from want of shoes, an article with which the British were well supplied. British officers from Scutari and Varna were hunting the

south, it materially facilitates an invasion of Constantinople by Russia, should she at any time choose to take advantage of wind and current; the temptation is still greater when we remember that its whole length does not exceed twenty English miles, and might be traversed in little more than an hour by a fleet of steam-boats. The current continued to increase in force on passing Ignada, and at length we entered this far-famed strait. It is impossible to come to any other conclusion on viewing this breach in the Thracian mountains, than that it was formed by some dreadful convulsion of nature."

* "Adrianople, the second city in European Turkey, called *Edreneh* by the Turks themselves, is in the province of Roumelia, on the river Maritza—known anciently as the Hebrus, which here unites with the Toonja and the Ada. The town is named after the Roman emperor, Adrian, who restored and greatly embellished it, and it stands 135 miles N.W. of Constantinople. Adrianople rises gently on the side of a small hill from the banks of the Hebrus and the Toonja, and is about five miles in circumference. Its streets are narrow and irregular, but it is well provided with baths, and contains forty mosques. One of these, that of Sultan Murad I., was once a church of Christ; another is built principally of porphyry; and a third, the mosque of Selim II., and the great attraction of the town, chiefly of materials brought from the ruins of Famagosta, in Cyprus. It consists of one great apartment, like a theatre, terminating in a cupola, surrounded by four large minarets, to the highest balcony of which there is an ascent by 380 steps. A large aqueduct supplies the baths, mosques, and fountains with water. The bazaar of Ali Pasha, near the mosque of Sultan Selim, is one of the constructions most interesting to a traveller. It has two long well-built porticoes, walled with brick or stone on each side, and securely arched overhead, so as to resist fire or rain. The shorter of these porticoes is allotted to the shoemakers, and adjoins the mosque; the other, being about 400 paces long, and six broad, contains shops of every description. In 1701 it also contained a mad-house, which Chiswell tells us was kept scrupulously neat and clean; and its inmates, for the prevention of mischief, were all fastened by an iron chain encircling their necks, and keeping them fast to the ground! Adrianople contains many traces of Roman building. The trunk of a colossal statue, about twelve feet high, and several inscriptions, have been lately discovered. It contains manufactures for silk, woollen, and cotton stuffs, establishments for dyeing—which excel particularly in their well-known red dye—tanning leather, and distilling rose-water, and other perfumes, much esteemed and used by the people. Among its chief exports are fine wool, leather, and wax; and the river Maritza being navigable for small craft up to the city itself, contributes greatly to the facilities of its commerce. The population is 130,000, of whom 30,000 are Greeks. Mr. Alexander, a recent traveller, computes it at only 100,000. In the campaign of 1829, when the Russians invaded Turkey and crossed the Danube and the Balkan, they advanced under General Diebitch as far as Adrianople, where peace was concluded in September of that year."

shores of the Black Sea, and the towns and populous districts of Roumelia, for bullocks, mules, and draft-horses, to enable the army to advance—but it was too late; these exertions should have been made long before, and means of land transport sent from home, if it ever were intended by the home authorities that the army was to march to the relief of Silistria; which resisted all the fierce assaults directed against it until hope of resistance had nearly perished, while a vast army of allies remained idly and ingloriously within two days' march of the besieged, for whose succour they had landed on these shores.

At the end of June, the British army advanced from its former position in the direction of the Danube. The Earl of Cardigan with his light cavalry reached the confines of the Dobrudscha. He had under his command a squadron of the 8th Royal Irish Hussars, two squadrons of the 11th Prince Albert's Hussars, and two squadrons of the 13th Light Dragoons. Within an easy march of the advanced position occupied by these light troops, a troop of the 17th Lancers, and detachments of the 1st Royal Dragoon Guards and the 5th Dragoon Guards, remained in support. The Earl of Cardigan scoured the country through a considerable district, losing many horses from overwork, heat, and inadequate food. The light infantry division broke up its camp at Aladyn, and proceeded to Devno; and the first division advancing encamped upon the site quitted by the light division, and the second division and that of Sir Richard England gradually followed the first. The troops in all these movements continued to suffer extremely from the heat, but the order to march was nevertheless always welcome, as they murmured at the inactivity to which they were consigned, and the ever varying beauty of the scenery cheered their way. It is to be regretted that the fame of the British soldiery was sullied by acts of violence upon the people, which rivalled the outrages of the Bashi-bazouks and the Cossacks. The result was that the hostility of the Bulgarian peasantry to the cause of the allies was much inflamed, and the difficulty of procuring food and fodder in the country increased, as the people fled in every direction from the route of the British army, who speedily fell nearly to the level of the Turk in their estimation. The generals of division and brigadiers used every exertion by moral suasion to check these excesses, but it is painful to narrate that the provost-marshal and his sergeants were found to be the most useful in repressing them. In proportion as the people, Turks and Bulgarians, found that acts of plunder or intimidation were visited with penalties by the authorities, they returned to their homes, and be-

GENERAL SIR GEORGE BROWN, G.C.B.

From a Photograph by F. Virtue

came more willing to hire themselves and their arabas, for reasonable remuneration, in the service of the commissary and transport departments.

A useful and pleasing incident occurred while the divisions of the Duke of Cambridge, Lieutenant-general Evans, and Lieutenant-general England were at Aladyn. Mr. Strickland, the Assistant Commissary-general, obtained the boats of the *Simoon* and of some other ships, and, freighting them with provisions and stores, sent them to the camp up the lake by the sides of which the army marched to the camp; and along which route, over wretched roads, and with inadequate vehicles, stores had been previously conveyed. It was a curious and pleasant sight to see these English craft impelled by sails upon the inland waters of Bulgaria, where a British keel had probably never before ploughed, and over which the British flag had never before floated.

In consequence of the bad faith of contractors, and the want of proper assistants to the commissaries, the men were obliged to eat salt provisions, although encamped in a country that might have afforded both milk and fresh meat.

We have offered in the foregoing pages some strictures upon the martinet tendencies of Sir George Brown, it is but justice to state that no officer, whatever his rank, manifested a more untiring vigilance and zeal for the service. Sir De Lacy Evans and the Duke of Cambridge handled their divisions more scientifically in reviews and in quarters, or on the march showed more skill in studying the soldier's character, caring for his health, husbanding his strength, and yet securing discipline while conceding a large share of liberty; but neither of these gallant and skilful generals possessed the indomitable energy which characterized Sir George. He seemed as if he possessed ubiquity. To ride twenty, and not unfrequently twice twenty miles in the day, unattended by his staff, under a burning sun, on the most important and anxious business, was a work which seemed to suit the health, and display the vigour of the sturdy stern old general. On more than one occasion he rode sixty miles during the day, giving orders, seeing to their execution, reconnoitring roads and camp-grounds, looking after commissaries, contractors, foragers, stragglers, arabadriers, doctors, and every conceivable thing and person. It is not implied that there was any peculiar sagacity in his arrangements, nor any very thoughtful concern for the sick, and the due provisioning of the troops: Sir George, as we have elsewhere shown, would not interfere with the heads of the commissary or hospital departments, except so far as he thought immediately within his province. If, however,

he gave directions, he would see that they were attended to, at whatever personal inconvenience or risk,—if, indeed, toil and vigilant attention could ever be said to inconvenience the severe and stirring veteran.

During the first week of July, there were several of those inspections which tire the soldier on active service, and which are of doubtful efficacy. There occurred also some of those events which enliven camp life, and divert the soldier from its monotony. Omar Pasha had been to Silistria after the retreat of the Russians, in connection with those exciting events which we have reserved for another chapter, because occurring on another field of operations, and requiring a separate and detailed narrative. He intimated his intention of visiting Varna, and would pass the encampments thither and on his return. There existed the greatest curiosity among officers and men to see the glorious old Turkish general who had foiled the plans and defeated the armies of the invader. The appearance of his equipages, far off in the dusky plains beneath the encampment, was the signal for a general turn out and a grand review. The pasha, attended by the British generals, surveyed with deep interest the red lines of the British infantry. The Guards, those "Anakims" of the British army, were in fine condition, and the general quietly looked upon them with a steady and admiring gaze. The Highland brigade excited a smile, and their simple evolutions evidently delighted his highness. The cavalry, however, most interested him. The general has a peculiar *penchant* for this arm of the military service, as he plainly showed upon the occasions of his visits. Again and again did the light cavalry parade before him; he appeared as if he could not tire in beholding them. The heavy cavalry were watering their horses when the general arrived, at his first review, and he had no opportunity then of beholding that fine body of men, which, with the divisions of Guards and Highlanders, he inspected on his return. His compliments were few, and not at all in oriental style; but he expressed himself with much strength and energy in the eulogies he passed upon the splendid appearance of the whole of the British army, but more especially the small bodies of cavalry passed in review before him. The visits of the renowned pasha produced great excitement among the soldiers; the weather being splendid, and the scenery varied and beautiful, the general effect was gorgeous. The whole manner and appearance of the Turkish captain was unassuming and unostentatious, and he left behind him among the troops a feeling of confidence in his talents and admiration of his achievements. It was upon his second visit, as before intimated, that he saw the heavy cavalry, under the honourable Bri-

gadier-general Scarlett. He wore upon that occasion no other ornament than a star upon his left breast. When the heavy cavalry charged past him, he exclaimed, "With one such regiment I would grind to dust four regiments of Russians at least,"—a proportion which, at the celebrated heavy cavalry charge at Balaklava, was subsequently sustained by the same men. The pasha was especially pleased on this occasion with the British Horse Artillery, who, having been pretty well accustomed to grand reviews at home, performed to admiration, receiving and deserving the general's best commendations. It was observable that he paid close attention to the cloths, weapons, horses, horse caparisons, and in fact to the minutiae of military apparel and arms. He left, not for Silistria, whence he came, but for his headquarters at Shumla; and, as a field-officer of cavalry remarked as he retired, he appeared "every inch a general."

Near to the British encampments, a force of 3000 militia and Bashi-bazouks pitched their tents: the conduct of the whole of this legion of Asiatic ruffians was as bad as that of the exceptional criminals in the British army, who, upon the arrival of the troops, behaved so badly. General Beatson, of the Turkish service, aided by several other British officers, especially by Captain Green, who organised the famous Scinde horse, in connection with our East Indian army, made his appearance in camp, and remained a short time, *en route* to Shumla, where he undertook to organise a very disorganised body of 4000 Bashi-bazouks, more given to plunder and murder the Bulgarians than to do battle with the Russian foe. Many of these unworthies were dismounted by Omar Pasha, and sent to serve, *volens volens*, in the regular infantry. Many deserted, and scattered themselves in groups along the road from Shumla to the camp, as common highwaymen, bringing the revolvers of our officers into frequent requisition, and sometimes robbing our commissariat and killing its servants. The British dealt too leniently with these gentry, from respect to the Turkish authorities; but the French, *per fas et nefas*, seized them upon proof of any damage done, and shot or hanged them, according to their notions of the crime perpetrated, or the convenience of those who inflicted the penalty.

During the early part of July, the French continued quartered in the town of Varna, and in tents in the vicinity; while the English gradually pushed on to more and more advanced positions. Lord Cardigan returned about the 10th from his reconnaissance in the Dobrudscha, during which he and his men suffered from exposure to the climate and inadequate supplies. They were repeatedly within view of the Russians under General Luders, who regarded

them through his telescope with great interest, but never opened fire upon them, although more than once within range of his guns. For nearly three weeks, his lordship and his brave followers bivouacked upon the open plain, having no tents, and seldom finding any shelter.

The camps received some strange visits, which relieved the *ennui* of tent-life not a little. Either the Fatima noticed by us in a former chapter, or some minor chieftainess, imitating the military ardour of the former, at the head of a troop of ragged, robber-like Bashi-bazouks, encamped at a little distance from the British lines. A deputation to invite her highness (if such she were) to pay a visit, was received with no favour. She contemptuously dismissed the "Giaours," and proceeded on her way to Shumla, to the head-quarters of Omar Pasha.

An English officer, a Mr. Walpole, formerly of the navy, at the head of a troop of picturesquely-attired orientals from some far off land of the sun, made his appearance soon after Madam, or Princess Fatima, so scornfully passed by. Mr. Walpole's troop were Mohammedan natives of some western province of India, who, being on their pilgrimage to Mecca, heard of the war of the great padishaw and the czar, and came to offer their swords in the service of the former, and were placed under Mr. Walpole's command. They proceeded to Shumla, and became General Beatson's body-guard. They were elegantly attired and accoutred, well mounted, and presented a military and dashing appearance.

About the middle of July, a French division struck its tents at Varna, and moved towards the Dobrudscha, with what object it was difficult to determine, unless the generals desired to put some stop to the murmurs in the French camp by an appearance of a movement in the direction of the enemy. About this time there was great hurrying to and fro of officers between Varna and the British encampments, as if some general movement was contemplated. A council of war was held at Varna, at which all the officers of distinction eligible to participate in such a matter were present: the admirals were also there. In the result of this council, Sir George Brown, attended by Captain Pearson, Colonel Lake, of the Royal Artillery, Captain Lloyd, of the Royal Engineers, and other officers, proceeded to the fleet at Baltschick. General Canrobert, and a numerous French staff, proceeded to the same destination. These generals went on board the flagships of the fleets of their respective nations, and soon afterwards the whole of the united fleet stood out to sea, and directed its course to the Crimea.

At this juncture it was discovered that the tools sent out for the engineers, and sappers and

miners, were utterly worthless. One of the great hindrances of the Duke of Wellington in the Peninsula War, was the defective quality of the tools supplied to his army. The men, in fact, fought fiercely to make captures of the enemies' tools, because they could not work with their own. The jobbing which disgraced the home government, the Horse Guards, and the Ordnance, during the struggle which the Duke maintained in the Peninsula, would have been repeated while the British were quartered in Bulgaria, were it not that the press agitated the subject, and that the public voice was then more potential than in the days of the Duke's campaigns. Even under the improved popular feeling in England, and notwithstanding the sense of greater responsibility felt by modern officials, it was not until much discussion, and a considerable amount of murmuring at home, alarmed the Board of Ordnance, the Commander-in-chief, and the War-office, that any effectual means were taken to remedy so great an evil.

At the end of July and beginning of August there were repeated flittings of the officers second in command in both armies between Varna and the fleet at Baltschick, and between Varna and the Bosphorus. By these movements it was obvious to all observers that some expedition of great interest was planning, or had been resolved upon, and the means of accomplishing which were under discussion. Various were the comments made by the officers upon every indication, however trifling, of a general movement; some believed that there would be an advance upon the Danube; others thought that Odessa would be the point of assault, as forming an important basis for an army intended to expel the Russians from Bessarabia, and aid Omar Pasha, and perhaps the Austrians, in crossing the whole line of the Pruth, and invading Russia; the Crimea was with others the point upon which the thunders of war would be launched. Opinions were very nearly equally divided between Odessa and the Crimea; and these discussions penetrated from the officers through all grades of the rank and file, until the youngest drum-boy had something to say concerning the intended expedition. To move upon the Danube, and by that route attack Russian territory was impracticable; neither army possessed the means of land transport essential to such an undertaking.

It is here our painful duty to notice the appearance and progress of pestilence in the camps. The first victim was a British rifleman, early in June, and, as is usual where Asiatic cholera makes its appearance, a few cases at intervals of several days followed. About the middle of July diarrhoea was very prevalent in the British camp, with many cases of dysentery. In the French, the type of the disease

called *cholérine* by them, was extensively prevalent; dysentery, also, and numerous cases of Asiatic cholera, which rapidly increased. The disease then fell, as it were, upon the camps and the country from Shumla to Varna, from Varna to Silistria; along the sea-shore; along the river's banks; by the skirts of the marshy lakes from Varna to Aladyn, and Aladyn to Devno; throughout the arid and pestilential Dobrudscha;—and, in fact, all over Bulgaria.

Around Varna it seemed to concentrate itself with intensity. The inhabitants of town and country, soldiers in camp, soldiers in quarters, French and British, men and officers, all ranks and classes fell fast under the fearful infliction. The writer of this History has seen much of this disease, and can write with confidence, that all the ingenuity expended in accounting for its appearance at Varna was thrown away. The laws which regulate the advent, prevalence, and disappearance of the malady elsewhere, were in action in Bulgaria and other parts of Turkey: the disease was epidemic, extending over all Turkey, European and Asiatic,—except, as is usual in its capricious progress, in certain cities, places, and districts, which it seemed to shun, although every reason that could be adduced for its probable appearance anywhere might be as certainly affirmed of them. It raged in Scutari and Gallipoli; it followed the troops subsequently to the Crimea; it was felt at the foot of the Balkans, where no troops were congregated, and swept with havoc to the shores of the Arctic Sea. If the theory which has lately obtained credence, that the infection, whatever its source, is bred in the waters of rivers and marshes, and thence spreads through the low lands and valleys, and to a *certain* height above them, be sound, Varna and its neighbourhood were well adapted to produce and nourish it. The sea, whether by the shore or at a distance from land, is favourable to the production of this pestilence, and along the sea-shore by Varna it prevailed with great virulence. The ships also were visited with it, nor did much good result to the crews by putting to sea. *Pro rata*, the French lost more men than the English, and the civilians in Varna and neighbourhood more than either. The Turkish and Egyptian troops suffered terribly, and the disease seemed to have a peculiar passion for the Bashi-bazouks, amongst whom it ran with appalling mortality. Many of the men of all these forces sank rapidly and languidly away, as if the heart were at once chilled by the cold finger of the invisible avenger. It was remarkable that this class of victims seemed in death as if in slumber, and bore an expression of repose upon their countenance, in striking contrast to the anxious expression

during collapse, reminding one of the language of Leigh Hunt—"A corpse seems as if it suddenly knew everything, and was profoundly at peace in consequence." There was much discussion provoked in England as to the choice of Varna for the site of a camp. As a basis of military operation, to relieve Silistria and operate against the Russians on the Danube, we have already shown that it was well chosen; the situation of the camps was as picturesque as could be desired, justifying the application of the motto chosen for our chapter; but the vicinage of Varna is, as already described, marshy, and subject to marsh fever. Lieutenant-general Brown, in a speech made at Elgin, in September, 1855, denies that there was any marsh near the camp. This was true as to Devno, but Aladyn was so situated as to expose the troops to such evils as generally arise in certain seasons in that climate from lakes and bodies of comparatively still waters. The French camps, in which the disease first appeared with any severity, were not healthily situated; and one division, that of General Canrobert, when it advanced from the vicinity of Varna to Bazardzhik, passed through a marsh where a number of Russian horses and even men lay in decomposition, and that night cholera broke out among the troops. During the occupation of Kustendje the division was reduced from ten to six thousand men by cholera, dysentery, and fever.

Throughout the months of July and August the pestilence brooded over city and country, but the rage of its influence continued for about three weeks, ending on the 10th of August, the night of the great conflagration. As when, in individual cases, recovery from cholera is generally attended by a dangerous and very often fatal reactionary fever, so, where the disease was most severe in a district, its removal was attended by the appearance of a low fever, which assumed an epidemic character, and caused many deaths. There were some affecting instances where it proved fatal to individuals, officers and men. Many of the latter charged the chaplains and orderlies to communicate with their families in terms the most touching; the love of home was strong in them, and, falling victims to disease so far away, their last words were of fond remembrance to the beloved whom they should never more behold in this world. It was singular to behold this tenderness and sentiment with men who, in their reckless hardihood, could not be induced to use any precaution against the malady. Amongst the officers, some of the best and bravest perished. A lady, whose son was an officer in the artillery, and whom, with a mother's love, she persisted in following amidst the dangers of a campaign, hoping to administer to his comforts,

was laid by him beneath the turf of the Greek burying-ground in Varna.

On the 8th of August there was a very general buzz of satisfaction among the troops at the prospect of embarking for the Crimea, a report to which effect having run through both armies. Nearly 400 sail crowded the harbour, and indications of a speedy embarkation were everywhere apparent. At Constantinople and at Baltschick vigorous arrangements were proceeding for transporting the army to their destination. Their hopes of embarking were, however, speedily repressed by increase of cholera in the fleet. When the disease had passed the turning point of its power on shore, it burst forth with redoubled fury in the naval squadrons, and the flagship of Admiral Dundas so suffered, that in the crisis of the disease 150 men were ill, after 100 had perished. It was impossible—however forward the expeditionary arrangements may have been, and however eager the spirit of enterprise—to embark the troops on board ships which were floating charnel-houses. Delay was thus necessitated by events over which neither admirals, generals, nor ministers at home, could have exercised any control. Much discussion has been maintained as to the blameworthiness of the generals in selecting the site of the camps at Varna. Since the author commenced writing this chapter, General Sir George Brown and the *Times'* correspondent have exchanged fire about the matter; a sort of logomachical duel has been fought by these very remarkable persons, notwithstanding the distance between Elgin and Sebastopol, where they were respectively "placed." The *Times'* correspondent affirmed while on the spot, that "notwithstanding the exquisite beauty of the country about Aladyn, it is a hotbed of fever and dysentery. The same is true of Devno, which is called by the Turks, the Valley of Death; and had we consulted the natives ere we pitched our camps, we assuredly should never have gone either to Aladyn or Devno, notwithstanding the charms of their position, and the temptations offered by the abundant supply of water, and by the adjacent woods. No blame is perhaps to be attributed to any one for neglecting to ascertain the sanitary peculiarities which counterbalanced these great advantages. Whoever gazed on these rich meadows for long miles away, and bordered by heights upon which the dense forest struggled in vain to pierce the masses of wild vine, clematis, dwarf acacia, and many-coloured brushwoods,—on the verdant hill-sides, and on the dancing waters of lake and stream below, lighted up by the golden rays of a Bulgarian summer's sun,—might well think that no English glade or hill-top could well be healthier or better suited for the residence of man. But these meadows

nurture the fever, the ague, dysentery, and pestilence, in their bosom; the lake and the stream exhale death, and at night fat unctuous vapours rise up, fold after fold, from the valleys, and creep up in the dark, and steal into the tent of the sleeper, and fold him in their deadly embrace. So completely exhausted on last Thursday* was the brigade of Guards—these 3000 of the flower of England—that they had to make two marches in order to get over the distance from Aladyn to Varna, which is not more than ten miles. But that is not all: their packs were carried for them. The Highland Brigade is in better condition; but even these fine regiments are far from being in the health and spirits in which they set out from Varna. The French have their cholera camp about two miles from the town; it is only too extensive and too well filled. Horrors occur here every day which are shocking to think of. Walking by the beach one sees some straw sticking up through the sand, and scraping it away with his stick, he is horrified at bringing to light the face of a corpse, which has been deposited there with a wisp of straw around it, a prey to dogs and vultures. Dead bodies rise up from the bottom in the harbour, and bob grimly around in the water, or drive in from sea, and drift by the sickened gazers on board the ships, buoyant, upright, and hideous, in the sun. A boat's crew go on shore to put a few stones together to form a sort of landing-place on the sand; they move a stone, and underneath is a festering corpse."

Sir George Brown, evidently with this and similar letters in view, although not naming the particular person, discharged an oratorical shot at the calumniators of beautiful Varna, and of the sanitary excellences of the camp. These comments reaching the "correspondent" amidst the ruins of Sebastopol, he showed that he still remembered both Varna and Sir George, and made a retort which we think puts the general *hors de combat*. The correspondent gives a true picture, in his replication, of the topographical and sanitary peculiarities of the neighbourhood, and places Sir George in the light of one who grows no wiser by experience, and will not be taught. He is borne out in his testimony by another credible witness, who says, "I at last passed the general hospital, and made my way through the sally-port. Here I began to get a better notion of Varna. It is situated on a dead flat; and between the lake and the sea the ground is all marsh, giving out the most deadly effluvia."

To us there appears little difficulty in settling this vexed question. Both French and English were too arrogant in opinion to consult the natives, although the French generals and medical staff showed much skill and experience.

* Letter dated August 19, 1854.

Our "besworded medicals" spurned all advice from civilians of their own profession; and neither generals nor doctors had given attention to the sanitary conditions essential to a healthy encampment. We differ from the *Times'* correspondent in acquitting the authorities of blame. How to choose an encampment in a sanitary point of view ought to be a matter of earnest study with generals, doctors, and engineers. The great Napoleon, and latterly the great Duke, paid much attention to such matters. In India, the neglect of such considerations formerly sacrificed large numbers of our troops; and the history of the British army abounds with warnings to which it was Lieutenant-general Sir George Brown's especial duty to have attended, while second in command at Varna; for so little did Lord Raglan interfere with anything, that the command virtually devolved upon his more active and energetic lieutenant. The French, although from other causes they suffered more eventually, certainly did choose more healthy sites, and eagerly remonstrated with the English upon the bad judgment they evinced in pitching their encampments in situations of sanitary peril, assuring them that suddenly pestilence would arise and smite their troops with sickness and death. It was in vain, however, that the older French officers appealed to their experience in Africa; the *vis inertiae* of our nation was not to be overcome by the gesticulations or vehement assurances of our sincere and scientific allies; and generally, with the concurrence of our medical officers, the generals distributed the men in situations exposed necessarily to the marsh fever. The consequences were seen even after the cholera abated, for men and officers in great numbers, who escaped that scourge and the attendant diarrhoea and dysentery, were so exhausted by this particular disease as to be unable to accompany the expedition to the Crimea, and had to return home, or to linger through weary months of weakness at Therapia, Scutari, or Malta.

Not only upon the sites chosen for encampments have we had revived discussions by men of great public merit since these pages went to press, but also in connection with the hospital arrangements, and the food of the men. Dr. Smith, upon whom so much responsibility rested in these matters, and other medical men of inferior note, have, by letters, published through the media of the daily journals, justified everything done by the officials, and arraigned by the public. On these questions we shall give evidence of a nature beyond all suspicion—the testimony of an eye-witness, the wife of a colonel, who commanded a regiment of British infantry during the whole time the allied army remained in Bulgaria:—

"We had the toughest mutton, the most stringy beef, the hardest pork. Vegetables were as traditions, and the bread was a mixture of half-baked dirt and corn, about the colour of gingerbread. At first the hospital was altogether deficient in sick comforts; there was neither sago, arrowroot, nor any material for making gruel; neither a bottle even of port wine. The deputy-inspector at length sent six of these; but if a man was not able to eat his rations of elderly mutton, caoutchouc-like beef, and supersaline pork, the alternative was obvious. The water, too, was always questionable. Rice was sometimes procurable; but the sick were unfortunate in not having a cook that could improve upon his materials. The medicine chest was well supplied; the lack was of comforts—those things which often do more for the recovery of the sick than the skill of the physician. Our hospital wanted wine, good bread, pure water, &c.; it wanted good cooks to make some of them, and good nurses to administer all. Our nurses were untaught regimental orderlies, one to each ten patients; and the cook, I am sure, could not have made an eatable bread-pudding, if his life had paid the forfeit of a failure. It may be asked, Where were the women of the regiment all this time? Why did *they* not act as nurses? Several of these women had been cooks as well as nurses in the families of officers at home; but *it is not the system* to allow them to be useful in an hospital. The soldier, as he did here, lies upon a bed of cut grass, and takes his tenth share of the attendance of an ignorant, unpractised soldier like himself; and the women are working in the sun, or drinking to drown misery, or quarrelling about the right to some wretched shelter, or doing some bad thing or other, to which their previous bad training and present suffering urge them. How much wiser it would have been to form such women as were allowed to accompany the men into a band of "administration," as the French call it? To have given specific duties to them—such as those of cooks, nurses, needlewomen, washers; to give them encouragement, and the reputation of having a character to support; to have provided proper shelter for them in the exercise of their duties, proper protection against the evils prominent in their stations; and so, by adding to their comfort, and making them responsible for the performance of womanly duties, have originated an idea in these women's minds of the true value of character, and of their real importance. If every regiment had taken this view, and judiciously acted upon it when they left England, what immense good might have been done, what enormous sums saved! We, in Turkey, should not have witnessed vice going hand in hand with misery; we should not have seen the

rays of a burning sun beating down on the heads of our unhappy women, and driving them half-frenzied to intoxication for relief. Our ears would not have been assailed with the language of blasphemous despair, and utter recklessness as its result. Nor should you in England have had your feelings harrowed by accounts of the want of woman's hand to raise and succour."

At a later period of her Varna experiences, the same talented lady observes:—"How the tough old fowl or the morsel of mutton *was ever boiled in the dirty water*, or brought to us in the smutty pan, day by day, remains quite an open question. Of course the bread had still more of Turkish soil, and still less of Turkish corn, in it than of old. And as water seemed to clear itself by percolating through all the solids it came in contact with, of whatever nature, the bread so dulled the fires that were intended to bake it, that our ration loaf resembled rather a block of soil from a Lincolnshire fen, than any portion of the staff of life—in fact, it became uneatable."

As our sick men so generally died from want of suitable food, care, and nursing,—as their illnesses were greatly promoted by the want of a sufficient commissariat, and the deficiency in skill of the superior officers in managing large bodies of men in camp,—so the horses of our army also suffered from unskilfulness, and the want of provident preparation for the sustenance and care of so important an appendage to an army in the field. On subjects of this kind the historian must of course depend upon the testimony of others; facts cannot be dressed up as original speculations may be, for the entertainment of the reader. We have preferred quoting from persons not correspondents of the London or Paris press, and not identified with politics, unless where they alone have related the incidents which it is our duty to record; we therefore give, as our authority in this matter, the truthful and eloquent writer of *Our Camp in Turkey*:—

"The camp (of Prince Napoleon's division) was very large. We arrived first among the cavalry. The lines were formed of 'bowers;' each horse was picketed in a bower; and these long double avenues of green stables were the prettiest things I had ever seen of the kind. The French lost fewer horses than we did in proportion. Our chargers had no stables of any kind, and suffered terribly at Gallipoli and Varna, both from the sun, the dews, and the flies, who drew blood with the least bite; our horses were nearly maddened from this cause. The best we could do, was to dig square pits for them to stand in, with some little protection of rugs and mats. But almost all the horses we brought from England failed; and the officers replaced them with Turkish horses, which were

strong, cheap, and capable of enduring the climate. General Eyre lost a splendid charger at Varna after a few minutes' illness only; and a horse of one of our officers died at length, after intense suffering, from universal swelling of the head, as if from the bite of a snake, though there was no appearance of anything of the sort. These strange accidents were common with us, but the French appeared safe; whether this arose from the superior hardiness of their animals, the greater care observed, or the better management, is not evident."

On the whole, life and health were wonderfully preserved among the chief officers during the pestilence; but it was noticeable that when it subsided, many of them became ill from the other prevalent diseases, and a considerable proportion died. Thus the Duke of Cambridge was attacked with erysipelas, but bravely kept to his post; Lord De Ros left ill for Therapia; and the army expressed considerable discontent that, while soldiers and officers of inferior birth were sick and dying, a doctor should have been removed for his especial benefit. What a noble contrast to this is presented by the conduct of Lord Beresford in the Spanish Peninsula, who, when dangerously wounded, refused to have his wounds dressed until the common soldiers near him were first attended! General Cater was also removed to Constantinople as an invalid; Colonel Doyle, an officer of skill and activity, was invalided; General Tylden was unable to attend to his duties; Colonels Elliot and Ferguson fell victims to the malarious influences of the neighbourhood. Others, whom it is needless to enumerate, sunk beneath the general influence of the climate and the place, and the nervous exhaustion caused by the terrible scenes through which they had passed.

It was salutary to the moral feelings of both armies that they had been brought together through so much suffering, and it also tended to cement the kindly feelings of the men. Companions in a time so trying to the calm fortitude of all, they were the more likely to feel a friendship for one another when upon the field of war. Even the Turks, with all their apathy, were moved to a warmer sympathy with their allies by those scenes of suffering and sorrow. There is no avenue to the Turkish mind more easy of access than that of sympathy with those who lose by death those dear to them, so that even they put aside their reserve, and often attended as mourners at the grave-side of our English brave. When the pestilence was at its height, and the French and Tunisians were suffering more than we did, it was common for both to attend the burials of British officers and soldiers with tokens of kindly sympathy and manly regret. Indeed, this feeling showed

itself at the very beginning of the allied occupation. The first British officer who died was followed to his grave by many of our allies. The account of this first funeral of a British officer, as given by a clergyman to the writer from whom we have last quoted, is touching in the extreme:—

"Captain Wallis, who died from a fall from his horse soon after the arrival of the allied forces at Varna, was to be buried in a little sort of cemetery near the sea, where one or two Christians were already laid. Before the funeral party started, a Turkish band was observed hurrying across the plain in the direction of the cemetery; and when the troops arrived, they heard a wild, pathetic sort of melody, which the Turkish musicians were playing in honour of the dead. It was said to be strangely touching, that low wail of sorrow; and as the ceremony continued, the Turkish musicians from time to time played airs so sweet and sad, that our chaplain, who spoke of it, said that he had never been more strangely affected than with the deep solemnity of this Moslem compliment.

"Soon—attracted as they always are by any bustle or excitement—a party of Zouaves arrived, followed by groups of Bashi-bazouks and Algerines: many hundred soldiers of the line, belonging to the French camps, were of course assembled; and all the members of this large and motley crowd stood reverently and silently around, hushed into the deepest stillness.

"The ceremony commenced, and every eye was fixed upon the chaplain. As they observed him bow his head in reverent homage to the name of the Christian's Saviour, the Turks, Zouaves, and even the Algerines, followed the obeisance. To the Turks the word was familiar, as the name of a great prophet, whom they hold in respect only second to their leader Mohammed; but with the Algerines the matter was different perhaps. The mercenary troops of Africa, and yet less the Bashi-bazouks, make religion but little their study; and the action with them, as an imitative one, was simply the result of the influences of the moment originating a feeling of propriety, respect, and sympathy.

"Captain Wallis was the first English officer of the force who had died at Varna. He was beloved and regarded by all who knew him personally; and those who were acquainted with him only by report loved him for his reputation. He was a good man and a brave officer; and even in his brief sojourn in the place where accident, as it seemed, had struck him low, he had earned golden opinions from even men formed of such moral material as those in the mixed crowd who sought to honour him in his grave. Moreover, order and

gentleness pervaded the entire mass. Common sympathy with the universal and inevitable, excited the best feelings of men ordinarily indifferent in peace or ferocious in war, and drew the Turk, the Arab, the Syrian, and the Englishman together, sympathizing with and respecting each other."

On the 10th of August, a conflagration occurred in the town of Varna of great extent, by which vast stores were consumed, and not less than two hundred houses. The accounts given of its origin are conflicting. The *Times'* correspondent was then at Constantinople, and could only relate what he had subsequently heard, when many false stories were put into circulation by the Greeks, to disguise the truth, whatever it might be, and to embarrass the allies. Miss Pardoe, assuming as probable that the fire had its origin with incendiary Greeks, thinks the object was to prevent the expedition from sailing to the Crimea until too late in the season, so that it might be exposed to the boisterous weather which, late in the autumn, prevails in the Euxine. Others do not describe the probable actors as so far-seeing, but as prompted only by the hatred they bore to the allies as the coadjutors of Turkey, and desirous, therefore, to injure their property, and by blowing up the magazines inflict loss of life upon the troops. That the Greeks were the incendiaries there can be little doubt; although they were aided by others, to whom one might address the words so often quoted, "Thou Greek in soul, though not in creed." That class of the population at Varna were capable of any act of revenge or assassination for which there was a tolerable prospect of impunity. The Greeks in England zealously exculpated their co-religionists; but several of the Bulgarian Greeks, and speculators or spies from Roumelia and Greece proper, were shot down by the French soldiery while attempting to extend the fire, and one who succeeded in igniting a large quantity of spirits was cut down by a sabre-blow from a French officer into the flames he had enkindled. All the efforts of the soldiers to check the progress of the fire were fruitless, until a considerable portion of the town was destroyed, and immense stores of valuable material for both armies. The English lost 19,000 pairs of boots, some clothing, and medical stores. The French lost large quantities of flour and biscuit; it was in the baking department of the French commissariat that the fire broke out. The progress of the conflagration was appalling; the wooden houses feeding it as it rapidly flew from one row to another, overleaping the Varna streets, and sending up streams as if from fountains of inexhaustible flame. When the destructive element approached the powder magazine, the joy of the Greeks mastered their prudence; they forgot their danger, and, with loud cries of

satisfaction, endeavoured to impede the efforts of the soldiery to extinguish the torrent of fire which rushed with fierce impetuosity in the direction of the dreaded spot. Some of the Greeks, aiding the extension of the conflagration, were pushed by the bayonets of the French back into the burning houses. The French engineers displayed their usual skill, and were obeyed by the working parties with an intelligent alacrity: trenches were dug round the magazine, and the further progress of the devastation in that direction was arrested. Far inland, the Bulgarian peasantry beheld the sky lurid with the reflection of these fierce fires, and many were the rumours which spread through the country, even to Shumla and Silistria, before the truth arrived. The general impression was, that the fleets were consumed by fire-ships sent amongst them by Greek emissaries of Russia; and although the Bulgarian people were not unfriendly to the allies, such were their sufferings beneath the relentless yoke of the Ottoman, that they even wished it so. In some directions the report was spread that the allies, quarrelling, set fire to the city in their contest. Far out at sea, the scene was also discerned, and as the flames were flung up from the bursting stores of spirits and other combustible material, the sudden flashes of light across the sky appeared to the mariner to proceed from some volcanic eruption, which had suddenly gushed forth near the Bulgarian shores. Until the retreat of the Russian armies, long afterwards, from southern to northern Sebastopol, the allied troops witnessed nothing—amidst all the fitful scenes of war—so grandly terrible as the conflagration at Varna.

Soon after the decadence of the cholera, and a more healthy state of the troops was generally indicated, Varna became again lively. Gay merchantmen crowded the harbour, and the town assumed a business air; the hum of commerce was heard in its streets, strangely blended with the din of arms. The soldiers found it easier to make their purchases, having collected scraps of Turkish; and some of the officers, but more especially the non-commissioned officers, regularly studied the language. A private soldier, named O'Flaherty, of the 7th Royal Fusiliers, so far mastered Turkish, Greek, and the Bulgarian *patois* of the province, that he passed examination for a third-class interpreter.

Many of the traders who attended the troops at Gallipoli, followed them to Varna, where rather motley bazaars were set up, and where the oddest associations of commodities were sold in the same shop: saddles and pickled ham, French brandy and woollen stockings, soups and mud-boots, were to be found in the most inappropriate juxtaposition. The costumes of the frequenters of this curious

commercial mart were as odd as the arrangements of the trading establishments. Officers riding queer flat-shod ponies, with enormous straw hats like those worn by American planters, haversacks over their shoulder, boots reaching to the thighs, and uniforms and mufti villainously commingled, so as to give the wearers the air of "*Messieurs les Bashi-bazouks*," might be seen toiling in daily to make purchases,—or toiling out again, winding their intricate and careful way round long lines of arabas and oxen—a goose swinging to the saddle, or a small sack of vegetables thrown before them across the animals they bestrode. The Highlanders presented the queerest *tout ensemble* of all the queer comers to Varna market. Under the best aspects, their appearance on horseback was very singular, but sometimes the figure they cut was droll beyond all description. Take as a sample, a stalwart Celt, his naked knees clutching the sides of a restive mule, a large green wide-awake on his head, and the dress jacket of a French Hussar on his back; a huge loaf under the bridle-arm, and a bundle of rusty-looking vegetables—most precious commodities—tenderly guarded by the other! After him comes a little Egyptian, mounted on a Turkish pony, a Mameluke head-gear, the dress jacket of an English artilleryman, and a Highland kilt over his own trews! These are really *samples*, not exaggerations, of what might be called the crowd at the Varna fair.

It would be difficult to say whether the miseries of camp or town were the worse during the whole period of the occupation. The state of the town or city of Varna may be judged by the following piece of domestic experience:—

"The reader can have no idea of what our sufferings were at Varna. The ceiling of the rooms was of new wood, like the doors and press, and the walls fresh whitewashed. Nothing could be purer-looking than they were; and after what we had heard of the barracks at Scutari, and of Turkish houses, we congratulated ourselves on our mansion in Belgrave Square, Varna, as *that* at least was *clean*.

"Sorely wearied, I went to bed. Patter, patter, patter! What could it be? Surely it rained, and the leaky roof allowed the drops to fall on my face and coverlet. To ascertain the fact, the lucifers and candle came into requisition; and then a scene appeared which I thought even a Turkish house could not have produced. The walls were covered thickly with vermin of the most objectionable class; the white coverlet showed hundreds, the planks of the floor seemed to pour them out in streams; and when morning came, and I described what seemed a horrible sort of phantasmagoria, my friend laughed a wild sort of half-frantic laugh, and said, 'Oh! you must sprinkle Italian powder over the floor and bed, and suspend a

tarpaulin over-head.' Neither tarpaulin nor powder had any effect; and at last I tried placing lighted candles round, till I could have fancied myself one of the royal family lying in state."

Take, from the same pen, an ordinary interruption of camp quiet:—

"One morning we were much agitated by the dashing in of a Bashi-bazouk, who, with his short stirrups, sharp bit, and fiery little Koor-dish horse, made a great spatter among the tents. He had come to complain to somebody—he did not know who—of an outrage; and was so excited that the hair was nearly shaken from his head; the pendulous sleeves of his posteen fluttered wildly behind him, and the rags which formed his costume threatened to separate from one another every moment.

"Some one, whose tent-ropes he had especially outraged, came forth to inquire and remonstrate; on which the Bashi-bazouk sprang from his horse, and commenced a series of gesticulations perfectly terrific to a nervous person. Yet, as the explanation was given in a Maronite, or an Urmean, or a Dara-en, or some tongue or other, of which provincial dialect we were profoundly ignorant, the injured man rushed on his horse again, and dashed over the plain, bounding from side to side, seeking a safety-valve for his rage, till he looked in the distance like the forked lightning of the drama.

"We hoped he had gone. Certainly he had, but only to return in a worse form. He brought an interpreter with him, who spoke the remarkable language of that land, for which our friend was probably too good; and it then appeared that the Bashi-bazouk charged one of our men with robbing him of five francs; and he seemed desirous of not only having that sum rendered him again, but the offender—soul, body, and uniform—given up to his views of immediate vengeance.

"Here was a difficulty; and the complainant, appearing to believe it originated in the interpreter, expressed his opinion of him in that decided and pithy way common to this fiery class of auxiliaries. It was therefore necessary to restore him to his own people as promptly as possible; and the interpreter was told that proper investigation should take place, and restitution and punishment follow, as circumstances might warrant.

"A court of inquiry was ordered for the following morning, and the presence of a French officer, in command of some portion of our gallant friends the Bashi-bazouks, requested, with such witnesses as he might consider proper. The officer, however, came without these worthies. He was a peculiarly agreeable man, full of intelligence, and acute in observation, as French officers, I think, usually are; and he ended proceedings at once, by saying that the

charge was absurd,—that it was most unlikely that any robbery had been committed,—and if it had, that the Bashi-bazouk must certainly have stolen the five francs ten minutes before from somebody else.”

The dress of the allies was a constant source of amusement to each other. The British would gaze quietly at the wide red trousers of the French, and take off their little red *casquettes*, and place them on their own broad heads, and try to make them sit jauntily. The French soldier would take the Englishman by his stock, and pretend to choke him, and then, taking off his own blue scarf, whisk it over his head in triumph, occasioned by its superiority to the “choker” of his British comrade. It was also common for the Zouaves to challenge the British to imitate them in the freedom of movement which their loose and easy-sitting apparel allowed. The Turks would stand in stupid wonder at these antics; but when any thing similar was performed upon themselves, their look of bewildered amazement, as they slowly shook their heads and uttered, “No, *buono* Johnny,” was utterly ludicrous.

The love of music greatly prevailed in both armies, but it was encouraged only in the French. Prince Napoleon particularly fostered it. Vocal as well as instrumental bands were established in his division, and they proved a source of much delight to the performers and to the whole of the soldiery. The British were pleased exceedingly, whenever opportunity allowed their enjoyment of these French bands; and their regrets, we had almost said murmurs, were frequently expressed that their own regiments were deficient in this particular.

It is impossible to praise too highly the honesty of the French. However unwilling to present any portion of our own troops in a light unworthy of their glorious courage, historical integrity demands the admission that, while the French soldier rarely—we might, perhaps, write never—robbed his English ally, the British soldiers frequently perpetrated this offence against the French, and upon one another. They often committed theft in their own camp, dressed in the garb of the French. A French soldier, *apparently*, having committed some thefts in the camp of the second division, he was pursued by the servants of a superior officer. Some other French soldiers stopped him, and brought him back to the persons who sent out the pursuit. The culprit, however, to the surprise of the person plundered, exclaimed in broad Scotch, “I’d been drinking with a comrade, and didn’t know a bit what I was at.” The cutting remarks of the French soldiers were, “*C’est un Anglais!*” “*Un vrai Anglais!*” And one of them muttered in English as they withdrew, “A soldier begins ill by being a thief—he will live to be shot!”

During the last week of August, the men were rapidly moved from the camps in the interior to the shore. They were delighted with the change, and with the prospect of glory in some great and brilliant enterprise. The line of march resounded with their songs; and it was curious to mark the different character of these effusions, according to the varied nationalities of the regiments: “Dumble dum dary,” and “li tol de rol,” were ever more heard during the march of the English regiments; while “Rory O’More,” “Nora Creena,” and “Tatter Jack Walsh,” were in high request with the Irish. It is hardly to be accounted for that the Highlanders were more silent, both as to song and talk, than their comrades of the sister nationalities; they marched along with a silent, steady, but cheerful air, while the ranks of the 88th were resonant with loud laughter and song. The bagpipes of the Highlanders were brought into very useful requisition, for the men intensely enjoyed them.

Horrible scenes were occasionally presented to some of the troops in the neighbourhood of Devno. Where the cholera victims had in great numbers been buried, it was observed that they had been torn up by the Bulgarian peasantry for the purposes of plunder; and the ill-will to the allies of the Moslem was so great that, to the detriment of their own health, the plunderers left the corpses exposed to the dogs and vultures. The stench from the bodies of dead men, and from dead horses, was unsupportable, and for miles around tainted the atmosphere. Perhaps such scenes had some influence upon the fact that a number of officers of great promise died of cholera when most of the troops had embarked for the Crimea. The popular surgeon of the 88th; one of the most effective captains of the 8th Hussars, who had given Earl Cardigan great satisfaction during the reconnaissance by the troops of the latter towards the Danube; and Colonel Boyle, so well known as a generally popular member of the House of Commons, were cut off by the destroyer within a few hours after being attacked. It was sad to see the check put upon the buoyant courage of the troops by the sudden death of so many brave and popular officers. When the graves of these officers were near, rudely marked with rough stone or broad board, the wooden crosses more tastefully erected by the French soldiery upon the beach, the men looked on with evident depression. This was still more observable when the body of Colonel Boyle, by direction of his relative, Admiral Dundas, was taken out in a little boat to sea, and consigned to the deep. Yet one of his poor soldiers took this consolation from his burial-place—“The dogs, the vultures, or the Bulgarians, will not tear

him up, at all events!" This was, however, a poor solace; for the bodies of men and officers of the fleet, which had been cast overboard, rose to the surface of the water, and appeared, with contorted faces, to look out from their ghastly eyes. The corpse of a French soldier, who had been a man of gigantic stature, floated about day after day, notwithstanding various efforts to sink it, and presented an appearance so grim and terrible as made many a brave man sicken with disgust and shudder with horror.

Amidst scenes and circumstances such as these, the commander of the cavalry division, the Earl of Lucan, complained in a formal order of the day of the dirty appearance of the division, ordering that ochre and pipe-clay should be plentifully used in dressing up belts, leathers, and facings, so as to give a clean and smart appearance to the men. The soldiers could procure neither pipe-clay nor ochre in Varna, and even General Brown failed to bring out sufficient quantities, if the matter did not escape him altogether; so that his lordship's men could not borrow or beg from the light division, any more than from any other. This order of Lord Lucan's was very much of a piece with his orders generally while his division was in Bulgaria, and he did not improve during his command in the Crimea. If the strictures published by General Bacon upon Lord Lucan's cavalry management, discipline, and orders, be just, it would appear that his claims for so important a command were not considered when he was appointed, but that rather his influence with the Horse Guards and the government secured him that honour. Alas! that so many brave men, officers and soldiers, should so often perish needlessly in the service of the British army, in consequence of the appointments to high command being more frequently made to depend upon family connexion than upon competency! It is of no use for the people of England to protest against this by public meetings, and through the press; they must organise opposition to such appointments, and to the officials who promote them. This is due by the public to its own honour, to the reputation of our free constitution, and to that justice which ought to characterise the nation's conduct to an army so loyal, so enduring, and so brave.

After the army had mainly withdrawn from the camps, an intelligent military traveller, one who knows Turkey and her provinces well, thus describes the country where our troops had been:—

"We met long trains of waggons on the road, carrying provisions for the army; they were all drawn by bullocks, and looked weird and barbarous, creeping along in the morning twilight, and the still solemn lake* sleeping

* The lake between Varna and Devno.

beside them. Now and then we passed a French or British officer, coming down from Bucharest, and more or less knocked up. There seemed to be a good deal doing to strengthen the sinews of war in these parts, and certainly there appeared no want of activity. What was done was, however, said not to be very well done. It was painful to notice, as we rode on, the bare and deserted state of the country, even by the highroad side. We went for miles and miles without seeing a sign of cultivation, or of a human habitation; the solitary little village we descried at rare intervals, seemed lost in the wilderness around. If the curse of God hung over the land, it could scarcely seem more desolate. The footprints of the rude soldiery of bygone days, who have swept like stormy torrents one after the other over these fertile plains, have left their deep marks everywhere; the exactions of pashas, the insecurity of property, melancholy misgovernment, have done the rest. Hope and energy have been palsied from men's hearts; for who would care to sow, knowing that he would never reap a harvest?

"From Devno to Pravida is a gentle ride of about three hours; but the only persons we met on the way, though the day was fine, were a company of tall staunch Bulgarian women, going out to labour in the marshy fields near Pravida. They were dressed in bright red jackets, and looked at a distance like a detachment of British grenadiers. We were expecting a shout of welcome, therefore, from some old acquaintances; but these Bulgarian beauties only showed a white line of teeth, stretching across their bronzed and rich-complexioned faces. Pravida is a dirty little straggling Turkish village, and the few houses I entered were miserable one-roomed huts, though the ample hearths and bright fires told of the inhabitants of a cold country, who had long learned a salutary respect for their national weather. The villages were agricultural barns, with no apparent individuality among them. We had intended to get on to Shumla by a sort of forced march; but there was no moon, and night overtook us at Jeni Bazaar (New Market), a place which had been recently occupied by Lord Cardigan, and the gay jackets of the 11th Hussars."

From the time the troops were concentrated about Varna, the men were practised in the work of quickly embarking and debarking cannon and stores, and to this discipline very much of the perfection evinced in landing in the Crimea is to be attributed.

We must now leave the armies at Varna, preparing for the great campaign, while we turn our thoughts to other portions of the vast theatre of action, where contemporaneous events occurred.

CHAPTER XX.

OPERATIONS ON THE DANUBE.—OMAR PASHA AT SHUMLA.—SIEGE OF SILISTRIA.

“ And there the volleying thunders pour,
Till waves grow smother to the roar.
The trench is dug, the cannon’s breath
Wings the far-hissing globe of death;
Fast whirl the fragments from the wall,
Which crumbles with the ponderous ball;
And from that wall the foe replies,
O’er dusky plain and smoky skies,
With fires that answer fast and well
The summons of the Infidel.”

BYRON.

As early as the 14th of April, the erection of batteries on the north side of the Danube, opposite Silistria, and the opening of a heavy bombardment, announced the siege of that fortress. Three weeks elapsed before the Russians completed the investment, their troops gradually converging upon the place. The right wing of their army had been greatly weakened by the withdrawal of troops to support the incursion made by their left upon the Dobrudscha, and the Turkish left followed, actively and energetically, every movement of the foe. Nor was the left wing of the invader left unassailed while his troops were gradually enclosing Silistria; for on the 19th of April, Omar Pasha encountered it, and by an ingenious stratagem inflicted a disastrous blow. Omar, during the action, detached a body of Turks beyond his right, and the day being misty, the Russians, hearing troops advancing upon their extreme left, naturally supposed that they had come from the sea, and believed them to be the allies. It was alleged that Omar, to aid such a misapprehension, upon which he calculated, made use of the British flag; it is certain that the Russians, conceiving the outflanking Turks to be British, were seized with panic, broke away from their ranks, and fled in disorder, pursued by the Turkish irregular cavalry, who made great havoc. A loss of several hundred prisoners, and a thousand killed and wounded, was admitted by the Russians.

While the two armies thus confronted one another along the whole line of operations, great suspense hung over the Turkish capital; for it was known that a war *à l’outrance* had been determined by the czar, and that the capture of Silistria at any cost was essential to an advance upon the Balkan. The feeling in Constantinople may be judged by the expression given to it at the time by a leading organ of opinion in that city:—“The latest and most trustworthy accounts from the head-quarters of Omar Pasha prove the urgent necessity of the allied forces arriving on the theatre of war without loss of time, if there be a desire to avoid, as General Baraguay d’Hilliers is said to have expressed it in one of his despatches, the

repetition on land of the catastrophe of Sinope. A competent person, who has very recently examined, and with the greatest attention, the line of the Danube from Widdin to Rassova, and who has very minutely scrutinised the positions of the two armies, declares that unless help be speedily sent by the allies, the Russians must reach the Balkan.” Omar himself did not keep the field after the above check given to the enemy, but committing to his lieutenants the execution of his plans, he retired to his headquarters at Shumla, and thence directed the general movements. That this was good policy on his part the results proved. Sir George Larpent, in his work entitled, *Turkey, its History and Progress*, does only justice to the Turkish general, when he thus characterises his military policy throughout the Danubian campaigns:—“Omar Pasha has most brilliantly refuted the croaking predictions of the friends of Russia. His position, from the Black Sea to the Austrian frontier, has gained the approbation of all military men. How correctly he judged when he selected Little Wallachia as the point of attack, and made Kalafat the *tête du pont* of Widdin, is proved by the desperate exertions made by the Russians to regain this position. There is a certain touchstone, by which it can be discovered which of two commanders is superior in talent: it is the one who, through his operations, undertakes the management of the war, and forces his opponent to follow his movements. Omar Pasha has undoubtedly acted this part. In another point he has also shown his superiority: he has never suffered himself to be deceived by pretended attacks, which was frequently the case on the Russian side, more especially when Omar Pasha intended to take up his permanent position at Kalafat, and crossed the Danube and attacked the Russians at other points; so that they neglected the position which it was so important to their clever opponent to obtain. In addition to this, his management of the war is based on a very correct estimate of what the troops on either side are able to do. He chooses those modes of fighting in which the Turks are superior to the Russians. The Turkish soldier is a good *tirail-*

leur, which the Russian never learns, for he is nothing but a machine. The Turkish soldier defends walls and entrenchments with a love of the sport, in which he is only probably surpassed by the Spaniards; while the Russian is perfectly helpless in an attack on strong places. In accordance with these qualities of the opposed troops, Omar Pasha regulates his plan of campaign, carries on an interrupted little war, and intrenches himself when larger bodies are marched against him."

While, in the above critique upon the strategy of Omar, the writer does him bare justice, we think the comparison of the Turkish with the Spanish soldier unfair to the former. The Turkish soldier either in the field or behind works is incomparably better than the Spaniard. A false estimate of the value of the Spanish soldier for the defence of fortified places has arisen from the prestige of Saragossa, and Sir G. Larpent contributes to that erroneous impression by this comparative disparagement of the Turk. During the celebrated siege of Saragossa, the besiegers were not so numerous as the besieged, and yet none of those sorties by which a numerous garrison will always seek to embarrass the assailants characterised the defence of that place. At Silistria, on the contrary, the enemy was eight times as numerous as the garrison; and yet the latter adventured a series of sorties which, for brilliancy and heroic spirit, have never been surpassed by the garrison of a beleaguered fortress.

At Shumla, about fifty miles from Silistria, and rather more distant from Varna, Omar concentrated a large force, variously computed at from 55,000 to 70,000 men; where, even if Silistria had fallen, he could have made a formidable defence, and, preserving his connection with the allies when they landed at Varna (as narrated in the last chapter), it is inconceivable that Paskiewitch, even with an army double the strength of that which he commanded, could have forced his way to the Balkan. In order that our readers may form a just conception of the importance of the capture of Silistria by the Russians, it is necessary to describe Shumla, and its relation as a place of support to the beleaguered fortress, and as a place of defence against an invading army, seeking, by way of the Dobrudscha, to penetrate to the passes of the Balkan. Shumla is "a maiden city," having never been conquered, even in 1828-9, when the Emperor of Russia in person advanced against it at the head of a powerful army.

There is no military authority on the whole so available as Moltke. His descriptions of the fortified places of Bulgaria were aided by Sir J. Burgoyne and other British and some German officers, and his language is as little tech-

nical as a due observance of military accuracy would allow:—

"Shumla lies at the eastern foot of a group of hills, completely separated by the valleys of the Kamshik from the main chain of the Balkan. The flat upper plateau of this group of hills, on which Shumla is placed, is raised about 600 or 800 feet above the Bulgarian plain: the sides of this plateau fall in a precipitous wall of rock and then sink, at first with rapid and afterwards with decreasing steepness, into the plain below. Shumla is built in a short horizontal valley which ends in precipitous ravines. The hills lying to the east are precipitous towards the town, but slope towards the outside like a glacis, so that from a distance the houses of Shumla are visible, but are lost sight of on approaching within two and a half miles. The place is unfortified, but at the distance of 1000 or 1500 paces the connected lines of the fortified camp run along the crest of the mountain, resting on the left upon the precipitous heights of Strandcha, on the right upon those of Tchengell, which surround Shumla on the north and on the south. The Turks have thought it necessary to continue these lines in their rear and along the steep declivity, where they can be of no use. These lines were mere earthworks without masonry,* and with a narrow but deep ditch cut with a small slope into the hard ground. The extent of the lines from Strandcha, as far as the junction with the heights of Tchengell, is about 8000 paces. On the northern side, near Strandcha, the lines were double, and comprehended the camp where the infantry was lodged; the cavalry was placed in a valley traversed by two brooks. Thus these troops were completely protected. The town contained about 40,000 inhabitants, three parts of whom were Mussulmans. It had several fountains, five mosques, and three baths, and could draw plentiful supplies from its rear. The forts of Tchally-Sultan and Tchengell-Tabiassi did not exist when the Russians first sat down before Shumla, but were erected by degrees. They were narrow earthworks, with ditches, of which the escarpments were not lined with masonry; but they were easily defended from the camp, which was not 1000 yards off, and afforded an excellent *point-d'appui* for the sorties of the Turks. On the other hand, there remained since the former war, on the road to Constantinople, the fort of Ibrahim-Nasiri (now called Feddai-Tabiassi), and the Turks were erecting two large redoubts at the village of Tchengell.

"The main road from Rustchuk and Silistria

* The author nowhere found a trace of the walled towers mentioned by travellers; and as Shumla was never entered by a hostile corps, it can hardly be assumed that they could have totally disappeared had they ever existed.

to Constantinople does not cross the mountain-ridge, but turns towards the east to Strandcha, Shumla, and Tchengell. Besides the track to Tchengell, passable only for horsemen, the roads from Trudcha Kotesch, Novosil, Bular, Gradehti, and Dormus, converge to it. By all these roads convoys of provisions and men could be forwarded to the Turkish army from districts not occupied by the Russians. They had, moreover, no reason to fear any attack from these quarters, as the upper surface of the plateau is so covered with thick brushwood that it would be impossible even for a single horseman to advance except by the narrow pathway; even skirmishers would find it difficult to penetrate the thicket. The few roads run through long defiles in which it would be impossible to manœuvre.

"The most assailable point of this strong place was and still is that which looks the strongest, the ridge of Strandcha, which falls precipitously towards the south, but has a gradual ascent to the north. The fort built on this spot is faced with masonry, but the profile is weak and by no means secure against an escalade. The heights can be reached from Gradehti and Dormus through the valley of Kurtboghas (wolf's glen). In the campaign of 1810, General Kaminski occupied the rocky wooded hills to the north of Strandcha, and it is surprising that this advantage was foregone on that occasion, as from these heights troops might approach along the slopes behind Shumla; and the enemy once in possession of the heights commanding the town, it could no longer be defended. But now Strandcha was included within the lines of defence. The advance of a detachment through the Kurtboghas would have met with most serious resistance from the Turks, whose mode of fighting is well suited to a rocky and wooded district. But supposing that the Russians succeeded in starving out the garrison—and this could never be effected, owing to the various and distant means of access to the mountain fastness—the possession of Shumla would be of no use to them, as the strategical front of this post is towards the north, and could only be maintained by a large army, which the Russians could not command. Shumla would not open the passage of the Balkan; the subsistence of the Russian army could not be secured in that direction, and they must always fall back upon Varna."

From the above it is obvious that while Varna and the sea were in possession of a powerful ally of Turkey, the conquest of Silistria would not suffice to open the way to the Balkan, and it would have been utterly impossible for a much larger Russian army to have forced the lines around Shumla, which were far more formidable when occupied by Omar

than when in the campaign of 1828 it presented so formidable a barrier. In April, 1854, European engineers, under Omar's immediate direction and inspection, strengthened the formidable lines in every direction, while within Shumla large stores of provisions and munitions of war were carefully collected. On the roads to Varna, Silistria, and Rustchuk, detachments of troops were posted at considerable distances beyond the lines of defence. A British engineer officer thus briefly describes the relation of the Turkish general's head-quarters to the Danubian fortresses and to the Balkan passes:—"Silistria may be termed the citadel of the Danube, forming, as it does, with Rustchuk and Shumla, a connected triangle, which must be taken before any enemy could attempt the passage of the Balkan in this direction with safety."

Few discussions connected with Turkey have of late years occupied so prominent a place, as the defence afforded by the Balkan range of mountains against a Russian army. It would certainly be a very defective history of a war in which Russia invaded the Danubian provinces, entered Bulgaria, and pushed her advanced troops between Varna and Silistria, which omitted to notice this discussion. However important to the defence of the Balkan Shumla may be, it does not close any of the passes; for the entrenchments are situated at the foot of a group of hills separate from that range, round which a detour may be made, through an open country, by an army advancing from the north, both from Rustchuk and Silistria. From the former, to the right, through Eski Djumna, and Eski Stamboul to Tschalekavak; from the latter, to the left, through Bulavick, Murade, and Smadova to Tschalekavak. There are various rivers in either direction, but easily fordable. From Tschalekavak the difficulties would begin, but would not be insurmountable. The grand difficulty would be to get to the last-named place unmolested by the troops occupying the entrenched camp around Shumla.

The other passes are—first, that from Tirnova to Kasaulik. Perhaps this is the most facile of any, but could be defended not only in the pass, but in the beech forests and acclivities before the narrow passage was attained. The southern slopes would, in this direction, afford a comparatively easy descent through a delightful country, rendering useful supplies. Rich orchards crown the plateau, and the plain beneath blooms with roses and lilies; it is rich in corn and cattle, and the water is pure and abundant. There is another road from Tirnova by Demeskapu to Slievno, but it crosses a lofty part of the main ridge. There is a third road from Tirnova by Staraveka to Kasan, and this forms a junction with another road to Kasan

from Osman-Basari. This would be a most difficult and hazardous route—rocks, brambles, forests, floods, deep ravines, and frowning precipices mark it.

Second, from Kosludja to Pravadi, and by Koprykoi to Aidos. Formidable obstacles would present themselves in these directions, obliging the penetrating army to pass in some places by single file, and in others through a narrow lane of rocks, against the passage of which the defenders might easily block up the way of their invaders.

Baron Von Moltke, after reviewing these routes, and some others of lesser note and less likely to be attempted, is of opinion—"That so long as Varna and Shumla, or even only one of them, can maintain itself, passing the Balkan will always be a hazardous undertaking."

M'Culloch, who believes everything possible to Russian power and greatness, and who seems to have made up his mind that the destiny of Turkey is already indicated by her contiguity to the great empire, expresses his surprise that the Balkans should be considered a formidable barrier against a Russian army. He quotes Keppel's *Journey across the Balkan*, in confirmation of his views, but omits to show that Major Keppel assumes the practicability of a Russian army penetrating the Balkan passes only when Bulgaria was conquered. In fact, the passes of the mountain range may be said to be defended by strategical positions, before even the lower line of hills are approached which rise between them and the great Bulgarian plain; such as Kalafat, Widdin, Rustchuk, Silistria, Varna, and Shumla. It is true that the passes are, as M'Culloch represents, without fortifications, but it is also true that every crag could be made a breastwork, and that generally so precipitous and difficult of ascent are the elevations above these passes, that it would be extremely difficult—especially for Russian soldiers, so unsuited to mountain warfare—to take the defenders in flank. There is no doubt that the Balkans have not been impregnable any more than the Alps: as Hannibal, Charlemagne, and Napoleon I., conquered the one, so has the conquest of the other been associated with great names, and with some of but little—or little merited—renown. If we may not give credit to all the alleged exploits of the Persian, Darius Hystaspis, B.C. 506, or to those of Stavaslas, when the Russians even conquered Roumelia, in A.D. 967, we cannot doubt the accredited deeds of the great Alexander, who (B.C. 335) forced this barrier from the south. The Turkish Sultan, Amurath I., crossed in 1390; Hunyades, in 1443, at the head of his crusaders, marched from Sophia to Philippolis, penetrating the gorges of the mountain in his course; and Diebitch, in 1828, pushed his way to Adrianople, arriving

there in such a condition that had not the English foreign minister, Lord Aberdeen, prevailed upon the divan and the Sultan Mahmoud to sue for peace, the Russian army must have perished. Had not gold and disorganization demoralised the Bulgarian garrisons and their chiefs, Diebitch would not have made the attempt. Even while the Russian army lay before the lines of Shumla, their position was well-nigh desperate. A treaty at Adrianople would never been made in the presence of a Russian army, had not the representations and importunities of the English minister stricken the gallant Mahmoud with despair. It was well for the Russians that the treaty secured them liberty to retire in safety, otherwise it is doubtful if the Bulgarian slopes had been ever trodden by a returning Russian of that army. The audacity of Diebitch won for him a just renown. The moral effect of his appearance upon the Roumelian slopes was felt by the western and German governments and diplomatists, more than by the intrepid sultan or distracted Porte. Diebitch conquered the diplomatists and European ministers by the rash hazard of the pass, and hence a political victory ensued upon a dangerous and even desperate violation of strategical principle. A consideration of the military history, as well as the military positions of the Bulgarian fortresses and the Balkan line, convinces us that, opposed by a general such as Omar Pasha, sustained vigorously by his government, no army which Russia could send across the Pruth, would ever arrive upon the plains of Roumelia. It is in the Turks, not Turkey, that the want of adaptation for defence is found, and in the pashas and the system of the Ottoman rule which creates them, and not in the inferior military qualities of the Turkish soldiery. As when Omar looked from the heights of Turtukai upon the sanguinary contests at Oltenitza, so from Shumla he regarded the whole line of defence throughout its vast extent, keeping himself well informed of every movement; and watching, not so much the operations upon his right, where most men supposed his attention ought to have been concentrated, but, in spite of the perils of Silistria, his mind eagerly turned to his far-off left, which, with Widdin as its pivot, wheeled against the Russian right, driving it back in battle after battle, until, when the Russian left recoiled from Silistria, the whole of the enemy's forces, bleeding and broken, retreated behind the Pruth.

On the Russian left, Silistria was, after the 19th of April, the only point of contest. Skirmishes there were, until clouds of Cossack horse swept over the whole surrounding country. This description of force was of great utility to the Russians at this juncture,

although in the presence of regular cavalry it is worthless.*

Meanwhile, every preparation for the conduct of the siege was made by Prince Paskiewitch, aided by Gortschakoff, the most notable artillery officer in the Russian army; by Schilders, the most eminent of its officers of engineers; and by Luders, who, since his Hungarian campaign at the head of a separate *corps d'armée* against Bem, had a reputation for eminent strategy, which his recent successful passage of the Danube increased. The Russian army, at first about 30,000 strong, increased as the siege progressed to probably twice that number. The garrison was numbered variously between 8000 and 12,000. It was commanded by the best artillery officer in the Turkish service; although the artillery of the defence was under the immediate direction of a Prussian lieutenant. Two British officers, skilled in engineering, volunteered their services—Captain Butler and Lieutenant Nasmyth. Upon these four dauntless and skilful men fell the main responsibility of preserving this fortress in the face of a whole army, led by the most renowned, gallant, and experienced generals of which that army could boast. The double-headed eagle, once the cognizance of the emperors of Constantinople, and now appearing as if prophetically chosen by an army whose destination was the seat of that once proud dominion, hovered in vain around the ramparts, frail in themselves, but made impregnable by the skill and dauntless intrepidity of those by whom they were defended. Silistria was appointed by a just Providence to be the grave, not only of many thousands of Russians, but of the military honour of the invading army; and to furnish, in the history of its successful resistance, a watchword of hope and courage, wherever the brave and free throw a barrier, however feeble, across the path of the oppressor.

The military position and resources of the place, when the bombardment was directed against it, may be described with brevity. The position is deemed important strategically. An invading army, whether directed against Varna or Shumla, must first take Silis-

tria, as otherwise a strong place would remain in the rear, and in a position, if well garrisoned, to interfere with the supplies and communications of the advancing army. Until Silistria is gained, a Russian army can do nothing vital on this part of the Danube, unless cowardice and folly were utterly to paralyse its defenders. Military men of eminence consider it, unfavourably situated for fortification, especially if an enemy possess the command of the Danube, and have a flotilla, as was the case when the Russians invested it in 1828. On that occasion, however, a small flotilla of a dozen vessels, in the service of the Turks, was a serious annoyance to the enemy; although batteries could have commanded them at 1000 paces from where they were moored, no effectual damage was inflicted upon them throughout that siege. The neighbouring heights are very formidable. The table-land of Bulgaria, near the Danube, is flat. Some of the heights which rise from it are at a distance of only 600 paces from the main wall of the place. From the opposite bank of the Danube the town was within range of the comparatively inferior artillery used by the Russians in 1828-9. On the whole, engineer officers, foreign and British, report unfavourably of its adaptation for the purposes of a fortification; yet, for nine months, with a garrison of 12,000, it resisted 50,000 Russians, in the memorable war terminated by the treaty of Adrianople. The dilapidations which the place suffered from the Russian cannon in 1810, and again in 1828-9, were not fully repaired in 1854. They were, to some extent, in the same condition as when Sultan Mahmoud visited it in 1836, and ordered the breaches, then filled up with wattles, to be rebuilt with masonry. Happily, during the latter part of 1853, and beginning of 1854, important works, both of earth and stone, were added, and the general defence established on new principles; but even when the Russians approached, much labour was required to throw up suitable works in eligible situations. The *new* fortifications were not only strong, but were skilfully arranged as to their relative importance. A distinguished Polish officer having presented to the Porte superior plans, writers, in treating of the siege, have been misled by supposing these plans as having been actually executed. The fortifications are semicircular. There are five bastions by the river, and five landward, exclusive of those at either corner. The scarps and counter-scarps are of stone. It was, however, in the detached forts that the strength of the place consisted. The strongest of these was called Abdul-Medjid, which is situated on the hill of Akbar. It is at the back of the town, and supported by other forts to the right and left. This fort is the key of Silistria; for it

* In O'Brien's "Principalities" the Cossacks are thus described:—"The lance which the Cossack carries is not longer than the English one, and has no flag; besides this, his other weapons are a heavy carbine slung at his back, a pistol stuck in his belt, and a long sword. His uniform is a blue frock coat, buttoned up to the throat, and wide trousers of the same colour. He wears a high conical-shaped shako of black oil-skin, without a peak, which is kept on his head by a strap fastened under the chin. The Cossack's horse is generally a wiry animal, of about fourteen and a half hands high. His bridle is a plain snaffle, without side bars; and his saddle is of a very rude construction. When the Cossack trots or gallops he leans forward in his saddle, with the upper part of his body quite straight; an attitude, one would suppose, the least suited for comfort; but he nevertheless sits his horse with extraordinary closeness."

and the flanking forts by which it is supported, and which it also dominates, are connected in the plan of defence with the bastions of the town. It was constructed by Brigadier Gutzkavsky; and is described by an officer of skill in this department of military science, as of "a semi-octagonal form, and situate on the chief eminence that dominates Silistria. In the centre of the base, or section of the semi-octagon next Silistria, is a beautiful redoubt, all shell-proof, semicircular in plan, as may be understood by the term; the vaulting of the extremest solidity, so as to afford a secure refuge in the severest bombardment. Outside this is an esplanade, and then the pentagonal rampart, beyond which is a wall loopholed for infantry, completely sunk between the rampart and the covered way, with three shell-proof block-houses (two on the shoulder angles and one on the base), each mounted with two 12-pound howitzers to sweep the fosse with conical balls, according to the new system. Fort Abdul-Medjid is supported by three forts on neighbouring eminences, which preclude a *locus standi* for an enemy, and yet are commanded by Medjid itself. Down in the plain, two forts, Tchair and Liman, shut in Silistria to the west on the side of Turtukai; another, Dairmem, or the Windmill, shuts in the plain to the east; and, lastly, one also to the east, close to the Danube, not only commands the breadth of the river, but also the passage whence gun-boats might debouch from the islands in the Danube, being mounted with bronze 42-pounders."

Before the place was invested, a very heavy bombardment was maintained. Not only were powerful batteries, already referred to, erected on the north side of the river, but 50,000 men crossed over and established themselves on the south side, who, by the 28th erected very formidable batteries there. The cannonade was directed more especially against the south-west. On that side of the fortress the ground rises in a series of plateaux, which the Russians were intent upon occupying, but which the Turks as strenuously resolved to prevent,—for the skilful occupation of these by the enemy must paralyse the defence. The Russians also erected a twelve-gun battery upon a small island nearly opposite the river face of the town, and kept up a communication between it and the mainland by a pontoon bridge. The chief bulwarks of the Turks proved to be two great earthworks, thrown up after the Russians appeared on the northern banks of the river. One of these was called Arab Tabia, and the other Illanli. The Russians could not storm the fort Abdul-Medjid—the key of the place, as already described—till these earthworks were first in their possession. Efforts the most desperate were made for their

conquest. Vast bodies of men were precipitated upon them after they were silenced by repeated bombardments, but always met with decisive and sanguinary repulse. During the heavy cannonade directed against these mud forts,—as they may with propriety be called,—the superiority of the Turkish artillery was very obvious. The leaders of the Osmanli were good officers of artillery and engineers, and proved more than a match for Gortschakoff, the great artillery captain of the Russians, and Schilders, their redoubtable engineer, who first won his laurels before Silistria a quarter of a century before. The Turkish artillery was inferior in calibre, but so precise was its fire that the Russian batteries were repeatedly dismounted, and thousands of men fell around the guns. It was estimated that a number of Russians equal to the whole of the defenders fell in working the guns against the Arab Tabia and the Illanli. The slaughter in attempting to storm these earthworks would be incredible, if not attested by witnesses the most competent and honest. The Russians came on in close column. The Turks, who, burrowed in holes behind their works, and thereby escaped the balls and shells of the Russians, in a manner unparalleled by troops exposed to such a fire, sprung up as soon as the tramp of the heavy Russian columns was heard, and poured upon them a deadly volley, every shot of which told. The Arab Tabia was defended mainly by well-disciplined Egyptians, many of whom were armed with French Minié rifles, and by Albanians armed with long-range guns, often matchlocks. These latter first directed a desultory fire upon the columns of Russians *coming up in slow time*, as if they sought martyrdom as much as victory; for as they dropped in numbers, others fell in, and the advance preserved the same steady character until the Egyptian Minié musket opened lanes through the dark and compact masses. The Egyptians, then leaping forth, charged the disorganized columns with the bayonet, pouring in a fresh volley almost as their bayonets touched them; while the irregulars, armed with yataghans, scimitars, huge dirks, and even knives, closed with agility upon the heavy accoutred Russ, inflicting deadly slaughter. Sometimes these Albanians pursued the Russians to their very batteries, the regular Egyptian infantry covering them with their fire as they retired. It is remarkable how strikingly the mode of assault directed by the Russians exemplifies the power of a system. They advanced in the same way as upon the assaults of Oltenitza, and suffered in the same way; and yet, to the end of the siege, they conducted their numerous assaults without any modification of the mode, although that mode exposed them to so vast a destruction. With

inconceivable rapidity the battered and scattered earthworks were repaired, embrasures re-made for the cannon, the pits behind, which had been ploughed up by the Russian shells, were re-formed, and Copt and Albanian were only visible by turban or fez, until the moment for their deadly spring upon the enemy arrived, and they once more literally grappled hand to throat with the grenadiers of the czar.

The intrepidity of the Russian officers, on occasion of these assaults upon the earthworks, merits praise; waving their swords, they challenged as it were their men to follow, who, with step dogged and slow, silently advanced to meet, at the hands of the sultan's soldiers, defeat and death. Although many Russian officers perished, it was a miracle how so many escaped. "Fortune," it is said, "favours the brave:" these men seemed to prove the aphorism, with courage such as the history of war has seldom related. In the course of these desperate attacks upon the earthworks the Russians had recourse to mining. They pushed their sap in regular form against these armed banks of clay, sod, and billet. The deep mine was laid, and in due time exploded; still this did not secure victory: as one line of earthwork after another was blown to atoms, it was found that their defenders had opportunely retired, and were throwing up fresh lines in the rear with desperate energy. Nor did the moment of explosion favour the Russian assault:—amidst the showers of falling earth and stones and trunks of trees, the glorious defenders made their sally, and into the very breasts of the Russian infantry discharged their small arms, rushing upon them on the instant with dirk, bayonet, and scimitar—so that the confusion fell upon those who sought to profit by the explosion. The presence of mind and courage of the besieged endured through every form—again and again renewed—of bombardment, mining, and assault; and high above the roar of battle, the hissing of the revolving shell, and the close death-volleys of the musketry, the cry of "Allah, Allah!" was heard, as courage, patriotism, military enthusiasm, and fanaticism, found a voice in the war-cry of the dauntless host—

"Who, few and faint, were fearless still."

Nevertheless, the Russians persevered in mining, and did so with a reckless sacrifice of men, and with a pertinacity worthy of any cause. This display of skill and perseverance produced a disheartening effect on the besieged, who had a great awe of these mining operations, which they could not entirely comprehend. At this juncture the intelligent Nasmyth, and the indomitable Butler, were in themselves a host. They exhorted the

Turkish soldiers to constancy, assuring them that their enemies might be beaten, even at their own great resource; that it was possible to countermine, and destroy the Russians in their own mines. The garrison heard these tidings with amazement and renewed courage, and with shouts of "Allah is great! Allah is great!" they resumed the pick and the shovel, and proved their unconquerable energy in the mine as behind the breastwork or the trench, or in the desperate *melee*, when assailant and defender mingled and parted only as the vanquished fell. Countermines were well worked, and, under the direction of Nasmyth and Butler, skilfully laid; and just as the Russians, who did not suspect so intelligent a defence, made sure that the Arab Tabia and its defenders would be cleared away together by the terrible explosion, the countermine was sprung, and the assailants themselves were hurled from their approaches, blasted and blackened in death. Exclaiming that Allah was indeed wonderful, the Moslem soldiery were ready to follow wherever the genius and valour of the brave young Irishman and the gallant Scot, who taught them these terrible resources of defence, might lead. So great was the ascendancy which these officers obtained over them, that the poor soldiery believed them invulnerable: they might also have been excused if they believed them immortal. In the breach, in the charge, these British heroes were always first. Standing upon the shattered ramparts, a mark for every ball, Captain Butler would observe the enemy as if his were a charmed life. Nor was this glorious young soldier less diligent than skilful and brave: often with his own hand did he direct the match-lock and repair the embrasure; and more than once, with the coolness of matured age, did he take up the shell, and, before its burning fuse could ignite its contents, cast it away where its pent-up missiles might harmlessly scatter. Where all were heroes, he was

"The bravest of the brave."

The efforts of these British officers were ably aided by the Turkish officer second in command—a mulatto of huge stature, long armed, and great breadth of chest. This man possessed herculean strength, and performed prodigies of valour. He frequently accompanied Butler in leading the sorties from the Tabia—if such the rushing charges upon the masses of Russians could be called. On these occasions his sword dealt slaughter around; he is alleged to have repeatedly cloven to the chin the Russian officers who fell beneath his hand: he himself escaped.

On two occasions the Russians penetrated the works, but the defenders did not flinch for a moment; on one of those instances of partial

success, the assailants placed ropes with hooks attached to them to the guns, and were actually dragging them away, when a small reinforcement from the town arriving, a desperate rush was made by the defenders, which saved the guns, and killed or expelled the invaders from the works. Indeed, the siege of Silistria was the siege of the Arab Tabia. The Russians had constructed eight batteries, armed with the heaviest guns, and forming a concave curve towards the defence. Besides these batteries, they erected earthworks, as they did in the siege of 1829; these earthworks were connected, so as to give mutual support, and were so constructed and armed as to be very effective against sorties. The army on the south side of the river posted itself on one of the plateaux south-east of the Arab Tabia. All the works were solid and well placed. Their workmanship, like that at Sebastopol, was very complete; and no portion of the army behaved so well as the sappers and engineers. Their artillery was wretchedly served, and to this defect, in great part, may be attributed their failure. All the communications were secured, and good roads existed in every direction.

The attack consisted of a series of alternations of bombardment and assault. The superiority of the few Turkish guns mounted in the embrasures of the Arab Tabia was extraordinary; but it was from the fire of the musketry, and the hand to throat conflicts, that the Russians mainly suffered. The peculiar character of the Arab Tabia as a defensive work, and the peculiar character of the troops that garrisoned it, were mutually well adapted. A scientific foreign officer thus describes the fort:—

“The Arab Tabia is, technically speaking, nothing more than a *flèche*, consisting of a front some fifty paces in length, with flanks of about the same extent, thrown back at a sharp angle. The rear is entirely open, and was never even palisaded. In and immediately behind the defences there were never more than 1000 men at one time, a number very considerable in proportion to the extent of the work. The profile of the rampart and ditch may be considered strong (we have not obtained the measurements). No part, however, has been faced with masonry, and the embrasures alone were fitted with gabions. The work was armed with no more than six guns, most of which had a calibre of from twenty to twenty-two *okas*, the *oka* equalling two and a half pounds. These were fired through embrasures. In other respects the work was simply adapted for infantry defence. A circumstance, however, which materially increased the capabilities of the work for resistance was, that a kind of trench had been cut to the eastward and westward, which followed the declivity of

the slope till it reached the nearest part of the adjacent valley. No accurate information is before us as to the extent of these trenches, which commenced from the flanks of the Arab Tabia; but, to judge from the numbers of the irregular troops actively employed within them, their length must have been considerable. The ground to their front was swept by the artillery fire of the flanks of the main work. In spite of some unfavourable features, such as a gentle rise in one quarter to the south, the ground may be considered, from its barrenness of surface, as, on the whole, favourable to the fire of the defence. The work was in communication with two other detached earthworks, situated on the two heights eastward and westward.”

The same officer describes the irregular troops stationed in this bulwark, especially the Arnauts, who shared the glory with the Albanians and Egyptians:—

“In the first place, they are lightly clothed and carry no baggage. Their side-arms, and all that they carry about them, are supported by a sash or broad leather waist-belt. A long flint musket, of good workmanship and extensive range, with a thin iron butt curved to fit the shoulder, and without bayonet, is slung over the shoulders in close action. Their other weapons are a pair of flint-lock pistols of large bore, the ‘handschar’ slightly curved, some two and a half feet in length, with the inner edge sharpened like a razor; and the yataghan; all of excellent workmanship, and, in the hands of these desperadoes, deadly instruments. The other irregulars, as well as the Arnauts, are generally armed more or less in like fashion, but their firearms are usually inferior to those of the Arnaut. The quality of the Arnaut’s weapons is fully matched by his skill in using them in close fighting. He is an excellent shot, and, like the Circassians and other tribes who have to provide their own ammunition, and fit it to the various calibre of their arms, he is very sparing in his use of it. He reserves his fire till the critical moment, but then his aim is deadly. He is not less dangerous with the cold steel, both edge and point, springing like a tiger on the enemy who advances over ditch or breastwork. It is on these occasions, when the heavily-loaded soldier, trained and accoutred mainly for infantry fire, is clambering over obstacles and meets with a resistance which hardly allows him to use his bayonet, that his inferiority to such an enemy becomes apparent.”

We have already described the siege as a series of alternating bombardments and assaults. On the 11th of May, the Russians cannonaded the place with great fury; their shot and shell fell fast within the town. The houses were greatly injured and several were burned. Many

of the unarmed inhabitants fell that day. The cries of women and children could be heard above the crashing timbers and the booming of the cannon. The casualties in the town were the less numerous because the inhabitants collected their goods and disposed them, together with their persons, in subterranean chambers, previously prepared with foresight and great labour. Before sunset the streets were silent and deserted, except when the beat of the Turkish drum and the tramp of soldiers disturbed the stillness. For four hours, the showers of iron shot fell amidst the streets and houses. The Russians, so eager to claim exemption for the dwellings and inhabitants when their fortresses are attacked, showed no mercy to the poor Silistrians: the balls fell as if the aim of the bombardment had been rather to destroy the habitations and the people, than the armed batteries by which their city was defended.

On the 15th, an encounter between considerable bodies of besiegers and besieged occurred in the open field. A detachment of Russian troops was coming from Rassova; against these a brigade of Bashi-bazouks was directed to harass their advance. The *avant garde* of the Russians came upon this force at the bridge of Bustehaok; the Bashi-bazouks skirmished, and retired upon the Turkish outposts. The following night was an anxious one, as an assault was expected, the besiegers being considerably reinforced; all however passed off quietly, it was a night of peculiar calm: the little air stirring was wafted from the island of Hoppa, where the Muscovite soldiery spent the dark hours in festivity and song. On the 16th the island batteries opened against the town. The shot and shell began their havoc at five in the morning, and continued to fall fast into the streets throughout the entire day. Russian reinforcements arrived, which, as on the previous day, were assailed by irregular troops from the garrison. The Turkish cavalry skirmished with courage, and fell back, when it was necessary to do so, with celerity, yet fighting as they retired. On this day terms of capitulation were offered to Mussa Pasha the commandant. The scene which occurred on this occasion was characteristic of the spirit of Russian bravado, and the honour and heroism of the Turkish general. The latter was informed that the czar had given to his excellency Prince Paskiewitch command to take the place, and it must be taken. The intrepid Mussa replied that he also held a commission from his sovereign to keep the place, and he was determined to fulfil the trust reposed in him, and preserve it for his master, or perish in the ruins. A sign was then made to him by the Muscovite negotiator, intimating that if he would accept a bribe, a large amount

should be forthcoming. The Turk with dignity replied, "The conversation under white flags is now over; let the interview cease." The "Muscovs" (as the Turks call them) hoped to gain Silistria as they gained Varna in 1828, under Woronzoff, by bribery; but Mussa was as incorrupt as brave, and Providence crowned his courage and constancy with success, although he did not live to hear the shout of victory, but fell in the glory of his struggle.

The 17th was similar to that which preceded it; the reverberation of cannon from morning until night shook the city, and shot and shell sped through its streets, tearing up the causeway, shattering buildings, and destroying life.

On the 18th, 19th, and 20th, the bombardment continued, and the Arab Tabia sustained a tremendous fire, or rather the brave defenders sustained it; for as often as this work crumbled beneath the stroke of the iron hail, the redoubled labour of these braves replaced it. So powerful was the fire from the heavy siege artillery of the enemy that the spirits of the defenders began to sink, and it required not only the countenance and example of Mussa and his lieutenant, and of the British officers, to encourage them, but the hope also that help would speedily come from Shumla or Varna, or both. The allies could not move from want of transport, and, decimated by sickness, they were incapable of any great undertaking; but these apologies are insufficient to account for their neglect of the little garrison of Silistria: Mussa Pasha wanted help before sickness had made any progress in the allied camps, and none was either sent or promised, and no effort of any kind was made to render it. A French division under General Canrobert entered the Dobrudscha, as we have already shown, and Lord Cardigan and his "mounted blue-jackets" effected a reconnaissance of the army of General Luders; yet there was no attempt by French or English to save Silistria. In like manner Omar Pasha remained at the head of a very great army at Shumla, and, until the case of the besieged was desperate in the extreme, *he* made no effort to send them succour. His means of communication were easy; he was actually supplying arabas and horses to the allies, to enable them to march from one camping ground to another. He found no difficulty in the transport department when at last he did send relief. How is it to be accounted for that from the 14th of April until a few days before the siege was raised, 8000 men were left to the forlorn hope, as it then appeared, of defending Silistria, while two armies, each as numerous as the besiegers, were within two days' march of the garrison placed in such straits? We cannot resist the conviction that the opinion expressed at the time by many

officers at home and abroad was correct—that from political, not strategical motives, help was withheld. Probably had Silistria fallen, we should have had peace. The Russian armies, we have shown, could not penetrate to the Balkan with Varna and the whole country to Shumla in possession of the allies, and Shumla and its entrenched camp occupied by 70,000 men, the flower of the Turkish army; while away to the west, with Widdin as its point of support, another Turkish army operated, sufficient in number to cope successfully with the Russian right. Had Silistria fallen, the czar would possibly feel that his honour was saved, and he would, in great condescension, have offered such terms as he knew would then have been gladly accepted both by occidental and Turk. If this view of the case be true, the French and British ministers were guilty of a great crime against the honour of their nations, and pursued a policy calculated, by flattering the czar's vanity and assumption of power, to inflate it still more. They were laying the foundations for a prolonged war by the tricks of diplomacy to which they resorted, for the purpose of bringing it to a termination in a way acceptable to their revered friend the aggressor. The French foreign minister was quite as ready as our own cabinet to worship the great Nicholas as the god of "order," to pacify him, and save his self-respect at the expense of principles which were too sacred to be brought into competition with the interests, pride, or prejudices of kings. It is wholly incredible that Omar would of his own judgment have remained at Shumla, as if an indifferent spectator, while the handful of his own noble soldiers left in Silistria seemed doomed to perish if help failed. In vain did this brave band look with longing eyes to Varna, aid never came thence; and in vain did they look to Shumla, until Omar refusing, it is believed, any longer to be kept quiescent by diplomatic intrigue, burst the cord by which his genius and freedom of action were tethered, and sent an army to the relief of Silistria. Meanwhile, terrible was the warfare around its broken ramparts, and daily conflict raged between them and the batteries of the foe—

"Hapless town,
Far flashed her burning towers on Danube's stream,
And redly ran her blushing waters down."

On the 28th of May, a fierce bombardment began at daylight, and continued while daylight lasted. This was the severest with which the place had been as yet visited, and the object of it was to prelude a night attack, which commenced on the 29th, soon after midnight of the 28th. This assault was on the left face of the Arab Tabia, already described; and so silently did the "Muscovs" come on, that before

they were heard they had actually entered the redoubt. The officer commanding the assault was the first to enter, and to cut down with his own hand the lieutenant of artillery on duty. The death of the latter was instantly avenged, for with a handspike his skull was cloven by one of the working-party then on duty. A fierce and confused conflict then took place; the Russians were pushed back into the ditch, and while there, fell under a close fire of musketry; they were finally repulsed, retiring under heavy discharges of grape and canister, which literally swept through them as they endeavoured to keep some order in their retreat. Scarcely did they reach their own batteries when a fresh column advanced in their stead, with drums beating, and in quicker march than Russian troops usually observe in such undertakings. They were again repulsed; the grape and canister repeatedly sweeping away the head of the column as it came on towards the redoubt, which it never reached. The slaughter here was appalling. A very short pause was allowed when the discomfited column reached its own lines before new columns were launched against the left and front faces. They advanced to the muzzles of the Turkish guns under a sure and unrelenting fire; they could do no more, the musketry rung out volley after volley in murderous proximity; and before the Turks leapt from their defences, the enemy was so disorganised as to fall an easy prey to the bayonet and scimitar. The Albanians pursued them into their own batteries. Many of these Albanians belonging to the working parties were armed with hatchets, by which the Russian artillerymen were hewed down under their own guns. The Russians were nearly three to one in this assault, or series of assaults, which lasted two hours and a half. As day dawned, the scene around the fort was appalling; the Russian dead were scattered over the whole space between the opposing batteries, and lay in heaps below the sides of the fort which they had in such numbers assailed. In the fort itself also a great number had fallen both of the assailants and defenders.

While this signal slaughter was enacted within and before the left and front faces of the Arab Tabia, the Illanli was also assailed. The assaulting column advanced hesitatingly to the ditch, and then turned and fled, pursued by the little garrison. The unwillingness of the Russians to come on against the Illanli, and their sudden flight, arose from a report made by a spy that the fort was mined. There was a great store of arms, accoutrements, and clothes, gathered and brought in by the Turkish soldiers; the enemy at first allowing them to do so unmolested, but afterwards directing their rifles upon those so

engaged. This 29th of May was indeed a terrible day for Silistria. So determined were the assaults, and so numerous the assailants, that we can scarcely believe that the resistance of the little garrison could have proved successful, had not their fanaticism been wound up to the highest pitch by the date (the 29th of May) being the anniversary of the day upon which their forefathers effected the conquest of Constantinople. This inspired the soldiery with great enthusiasm, and nerved their valour for such long and desperate endurance. The bombardment, which prepared the way for these assaults, lit the whole heavens with flame as the bursting shell and fiery rocket formed their red arch above the combatants,—

“And in the Danube’s waters shone the same,
A mirror’d hell! The volleying roar, and loud
Long booming of each peal on peal, o’ercame
The ear far more than thunder; for heaven’s flashes
Spare, or smite rarely—man’s make millions ashes.”

The 30th was memorable in several respects. On this day the brave Mussa Pasha fell. A few hours before the fatal blow, he received a message from the sultan with the order of Medjidié. He refused to receive the decoration publicly. After privately accepting it from the hands of the officer commissioned to convey it, he retired to prayer near the Stamboul Gate, when a splinter of a shell struck him in the back, and immediately killed him. The energetic Hussein Bey being second in authority assumed the command of the garrison, and seemed with his increased responsibility to acquire even greater energy and daring. On this day the gallant Butler volunteered to lead a sortie of a few men, volunteers like himself, to spike a gun which was often fatally directed against the Tabia.

In the morning the Russians exemplified the treachery so characteristic of them. A flag of truce was sent out from the garrison with a working-party to collect the Russian dead and convey them to their lines, as it was impossible for the Russians to face the fire of the besieged for such a purpose. The Russians allowed the flag of truce and the party who conveyed it to approach, but as soon as they commenced their generous and humane task, the perfidious foe fired upon them, killing several; and no man of the party would probably have escaped, if a Russian officer had not interposed, and prevented a result so disgraceful to the Russian name. The conduct of the garrison at Odessa, and long subsequently of the ambush at Hango, were, therefore, but too faithfully characteristic of the only European army capable of such dishonour.

The tidings of the chivalry and fortitude of the brave garrison on the 29th, reached Omar Pasha at Shumla on the last day of May. He immediately sent a Tartar to Constantinople,

and messengers were also sent to Varna. What were the subjects of these communications it is impossible to say; but subsequent events seemed to indicate that the sympathy and soldier’s honour of the brave old chief were thoroughly roused, and that he could no longer allow so much patience and valour to be subjected to such ordeals. He resolved to send assistance, and never did beleaguered city more require it. The soldiers had become so attenuated with watchings and labour, that they moved like spectres amidst the stricken city; seeming as if they would gladly lay them down to die, if creed, country, and the soldier’s duty did not demand that their last spark of life should expire flashing defiance upon the foe. It was not until the 4th of June that Omar dispatched his succours. He then directed 30,000 men to march upon Silistria. To prevent certain Russian troops opposite to Rustchuk, and quartered on the island of Mogan, from joining the besieging army at Silistria,—as they were likely to do when a relieving army should approach that place,—he directed the garrison at Rustchuk to attack the works on Mogan. This, which probably was only intended as a diversion, proved to be a success. The works at Mogan were assailed with such suddenness and effrontery, that the surprised Russians made a confused resistance; many fell, many were captured, and the fortifications were razed to the ground. This drew off a considerable body of Russian troops to that neighbourhood. Meanwhile the relieving army took up positions in the vicinity of Silistria. The advanced guard of this army stole through the besieging lines, on the night of the 5th, with such rapidity and quietness, that they alarmed the garrison, who at first mistook them for the enemy. The point at which they sought an entrance, and the well-known sound of the Turkish voice, reassured the sentinels and pickets, and a force of 1000 men was thus introduced to aid the garrison in its exigency. Mehemet Pasha, already noticed for his services elsewhere, effected this skilful movement. On the morning of the 6th, Mehemet, who did not himself enter with the detachment the night before, endeavoured, at the head of a fine brigade, to force his way through the besieging lines; but he was repulsed with loss. Having retreated, he again stole gradually forward, dispersing his men, to their great risk and his own; and he contrived to inform the garrison of his intention to effect an entrance as soon as they, by a skilful sally, should give him the opportunity. This opportunity occurred on the 8th. About midnight the Turks sallied out in their usual manner, and another thousand of the relieving troops entered, making a passage through the Russian lines over many slain.

On the 10th of June the left face of the Arab Tabia was blown away by a mine, and the Russians immediately entered the works in great numbers. The musketry of the garrison caused them to retreat; and then Hussein Bey, the terrible mulatto, leading on a desperate band of volunteers, charged the retiring masses, and carried slaughter to the muzzles of the Russian cannon. On the 13th of June, by previous arrangement with the besieged, effected by their spies, another successful attempt was made to relieve the place. The proceedings of this day were complicated, and were conducted with the utmost audacity when the well-concerted measures were once resolved. Selim Pasha made a feint upon Oltenitza, which distracted the attention of the enemy, and kept his troops on the alert all that day. Said Pasha crossed the Danube, and so suddenly fell upon the Russian garrison at Giurgevo, that they were driven out of the works; but, as Said Pasha was not strong enough to hold them, and as it did not form a part of the general plan that he should attempt to do so, he retired, and the Russians re-occupied their positions. Hussein Bey ordered a sally; and when his troops were selected for the enterprise, he, although now chief in command, with a noble rashness, refused the offers of his lieutenants to lead them, but placing himself at their head, attacked the enemy with impetuosity, and even fury. Many of the besiegers fell back before the frenzied valour of this attack without firing a shot, or pointing a weapon; but, relying upon their numbers, and the scientific arrangement of their lines, they soon presented a formidable resistance. Through the compact bodies of infantry opposed to him Hussein cleared his way, nobly followed by the adventurous desperadoes of the irregular forces. Within a narrow space fell crowds of the enemy, and not a few of those who dared this hazardous sally. To the extent reached by the sortie the besiegers trenches were choked with Russian dead. Hussein and his fierce and motley crowd of followers fell back to their lines, the enemy not daring to pursue. While all this was going on under the ramparts of Silistria and up the river, another detachment of the relieving army entered the place. Several of the enemy's mines were sprung during this conflict, and the earthworks of the attack were trampled down and scattered. The relieving force, breaking in, destroyed the portions of the works that obstructed them; and everywhere the invaders were smitten with a carnage unprecedented in any of the murderous struggles of assault and sally which had previously taken place.

But amidst all the glory of this day—and there was much glory—no man was more conspicuous for self-possession and usefulness than

Captain Butler, who was wounded, and disabled from further assistance in the defence. It was by him the sortie was planned; and while standing upon the parapets of the Arab Tabia, which but for his energy could not have sustained the defence, a conical rifle ball, which glanced from a piece of masonry near, grazed his forehead. The wound did not appear dangerous; and there was no apprehension of the result. But so worn was his constitution by the fatigue and vigils of the siege, that it yielded to the shock; fever ensued, and nine days after he was no more. Thus fell one of the most gallant soldiers that ever drew a sword for England, or stood in the breach for the independence of an ally. It was a singular occurrence that, shortly after he expired, it was discovered that the Russians had retreated from before Silistria. Upon the skill, courage, and military zeal of this man depended one of the most important events in the history of this war, and of the Turkish Empire. We know of no parallels, except those of his fellow-countryman, Lieutenant Eldred Pottinger, by whom the defence of Herat was successfully directed against a Persian host; and the intrepid Sidney Smith, by whom the great Napoleon was baffled before the walls of Acre, in 1799.

The Russians now prepared all their remaining force for a last effort; and the Turks, having been succoured to a great extent on the 13th, and receiving additional reinforcements next day, resolved on the 15th, if possible, to anticipate the expected attack. Another sortie was made, and another portion of the relieving army took occasion to enter the place; and, at the same time, falling upon a detachment of Russians above Silistria, compelled them to cross the Danube. The Turks gained access to the islands, drove out the garrisons, and turned the guns upon the Russian batteries on the northern bank of the river. New batteries were also thrown up on the night of the 15th, which strengthened the defence, for the Arab Tabia was so completely shattered as to be only a heap of rubbish.

The final assault took place between the 13th and the 22nd; and so conflicting are the accounts, even of the best authorities, that we are unable to fix upon the day. No two narratives agree. Typographical error may excuse this in some cases; but when Lieutenant Nasmyth and the government organs at Constantinople differ in the relations they give, and officers and "own correspondents," afterwards gathering information on the spot, give representations different from both, it is difficult to decide.

On the morning of the day fixed for the last assault, the Russian infantry remained doggedly

in their ranks, and neither exhortations nor menace could induce them to move on to the attack. Prince Paskiewitch rode up to the column designated for the duty, and in stinging terms reproached them; they remained silent and downcast, and not a man moved. The assault was necessarily postponed to the next day, upon the morning of which a proclamation was distributed, signed by Prince Gortschakoff, declaring that if Silistria was not taken that day *the rations of the troops should be stopped*. Whether this, or the heroic example of the son of Count Orloff (the celebrated diplomatist), produced the desired effect, is not known; but the columns, after some hesitation, advanced. Orloff, raising his hat, waved his sword and went before them, exhorting the men to follow by every appeal to country, creed, and ambition likely to touch a Russian heart. The assault was similar in all respects to others of which we have given account, and the repulse also similar to the repulses which the assailants had previously experienced; nor was the ratio of slaughter different; the Russian soldiers fell in masses under the death-giving volleys of those who were now more numerous and full of confidence. As the assailants fell back, the Turks attacked them with more system than in the desperate sorties which we have recounted. The Russians were completely defeated at every point. The officers, who had so wonderfully passed unscathed through the scenes of previous carnage, fell in great numbers. Almost all the grand staff of the army were killed or wounded. Prince Gortschakoff, who directed the cannonade under cover of which the assault was offered, was wounded severely. Prince Paskiewitch, who remained on an elevated position directing the movements of the day, was wounded desperately, almost mortally. General Luders, who showed prodigies of valour and commanded the assault, had his jaw-bone carried away. General Schilders, who, as chief of the engineers, directed the columns upon what was deemed the most practicable portions of the defence, was struck by a cannon-ball, which carried off both his thighs; and Orloff, who heroically led the forlorn-hope, fell dead beneath innumerable wounds.

On the 22nd, a little before midnight, the last cannonade was opened; it continued until three in the morning, when the clearness of the day permitted the garrison to behold the rearguard of the besiegers crossing the river. The bombardment of the previous night concealed their retreat. The siege was raised. The loss of the Russians has been estimated in figures widely different; at the lowest computation, their own, it was 20,000; at the highest, that of the Turks, 50,000; the Prussian officer of artillery, Lieutenant Grach, computed it at 30,000. It probably somewhat

exceeded the last number. Nearly 4000 men were lost by the Turks within and around the fortress; perhaps another thousand fell in the diversions effected by the relieving army. So disorderly was the retreat of the Russians, that had they been pursued, as in all likelihood they would have been had Mussa Pasha and Captain Butler survived, the whole army might have been destroyed, or compelled to lay down their arms. An army the most boastful that ever made war was obliged to retire in discomfiture and shame, leaving without support the corps which had forced its way into the Upper Dobrudschæ, and which fell back afterwards in view of such French and British troops as had advanced in that direction; but who were too much wasted with sickness and fatigue, and too little informed of the real circumstances of the enemy, to effect anything against them.

Thus ended one of the most remarkable sieges of either ancient or modern times, and the shouts of triumph and joyous hum of citizens displaced—

“The sound

As of the assault of an imperial city,
The hiss of inextinguishable fire,
The roar of giant cannon;
The clash of wheels, and clang of armed hoofs,
And crash of brazen mail, as of the wreck
Of adamantine mountains; the mad blast
Of trumpets, and the neigh of raging steeds,
And shrieks of women, whose thrill jars the blood;
And one sweet laugh—most horrible to hear—
As of a joyous infant waked and playing
With its dead mother's breast; and now more loud
The mingled battle-cry—ha! hear I not
‘*Ev rouvq Nika!*’—Allah, ilah, Allah!”

We cannot close the exciting incidents of this chapter without a more minute notice of Captain Butler, whose name will ever be historically associated with the siege of Silistria. He was a younger son of Lieutenant-general the Honourable Henry Edward Butler, and cousin to the present Earl of Carrick. The Butlers, originally English, have long held an influential position in Ireland; several noble houses in that country, as well as that of Carrick, bearing the name. The subject of this brief memoir is descended from a common ancestor with the Marquis of Ormond. His father is a gallant soldier; he served in Egypt and in the Peninsula, and was wounded at Busaco.

The military spirit of the father was early infused into his children, several of whom entered the army, and two of them have fallen in the present war. Mr. James Butler received a military education on the continent—in France and Germany—and completed it at Sandhurst. He was gazetted to a commission in the 90th regiment of the line while yet a boy, and before he attained the age of manhood he fought in the Caffre War of 1846-7. Having, after several years' active service, received

an unattached company, he returned home; but, on the breaking out of the war, set out to join the British expeditionary army as a volunteer. On his way out, admiring the conduct of Omar Pasha and the gallantry of his troops, Captain Butler turned his course to the Danube, and offered his services to Mussa Pasha, at Silistria. The veteran had discrimination to recognise the intelligence of the young volunteer, and welcomed his assistance, consulting him on all occasions. He was accompanied and aided by Lieutenant Nasmyth, who survived the siege, and has been promoted for his gallantry and skill to the rank of Major, and by Lieutenant Bullard, of the East India Company's service. He died on the 22nd of June, aged twenty-seven years, and was buried in the Armenian cemetery. Officers from every regiment in the Danubian army attended his funeral, and the highest military honours paid by the Turks to the remains of the departed brave were rendered at his grave. Omar Pasha wrote to Lord Raglan, then at Varna, expressing himself in terms of admiration and regret; his concurrence with which the commander of the British expeditionary army cordially conveyed in a dispatch to the Duke of Newcastle. The following letter from Lord Hardinge to the bereaved father is a well-earned tribute to the son's valour:—

"Horse Guards, July 17, 1854.

"Sir,—I have heard with the deepest regret of the loss which you and the army have sustained by the death of your distinguished son, Captain J. A. Butler, of wounds and fatigue at the siege of Silistria. During the whole of that memorable siege your son displayed very

rare qualities, combining with the skill and intelligence of an accomplished officer the intrepidity of the most daring soldier—at one moment gaining the confidence of the garrison (over which he had only the authority of a very young volunteer) by the example of his personal valour; at another, prolonging the defence of the place by the prudence and firmness of his counsel; and on all occasions infusing into those around him that spirit of heroic resistance which led to its triumphant defence. I deeply deplore your affliction in losing such a son; but your sorrow is felt by the country, the army, and the sovereign. The queen had recognised his merits by placing him in the Guards, and conferring upon him army rank, trusting that he might pursue a career of which all were so proud, at that time not being aware of the dangerous state of his health. The blow is unexpected and most severe; but I trust you will bear up against it by the fact that your son's services have been most valuable to his country, in promoting the success of a just war; and I hope I shall not give you pain by alluding to another son—Captain H. T. Butler, of the 55th regiment—selected for employment on the quartermaster-general's staff when the army first embarked for Turkey, solely on account of the ability he had shown in his studies at the Royal Military College. I trust that the well-earned fame of one son, and the rising merit of the other, will, under Providence, be a source of consolation to you at this moment of extreme affliction. Pray accept, my dear general, the condolence of your faithful servant,

"HARDINGE."

"Lieutenant-general the Hon. H. E. Butler."

CHAPTER XXI.

BATTLES ON THE DANUBE AND IN WALLACHIA DURING THE SIEGE OF SILISTRIA.—RETREAT OF THE RUSSIANS ACROSS THE PRUTH.—CONVENTION BETWEEN TURKEY AND AUSTRIA.—OCCUPATION OF THE MOLDO-WALLACHIAN PROVINCES BY AN AUSTRIAN ARMY.

"Imitate the action of the tiger,
Stiffen the sinews, summon up the blood,
Disguise fair nature with hard-favoured rage."—SHAKESPEARE.

WHILE the siege of Silistria lasted, the left wing of the Turks—allowed by Omar Pasha to pursue an independent line of action—made a series of attacks upon the right wing of the Russian army, which was necessarily weakened by the vast concentration of troops around Silistria. This separate Turkish army, for such the left wing might now be called, so entirely independent were its operations, fought with bravery, rivalling that of the heroes of Silistria, and with a skill not to be expected under Turkish commanders. The general plan of operation was no doubt laid down by Omar, and his despatches from Shumla to the Upper

Danube were frequent; but still, so remote from the head-quarters of the Turkish chief was that theatre of exploit, that had not the pashas commanding the enterprises conducted by this left wing of Omar's army possessed great audacity, and much military talent, the counsels of their great commander would have been of little utility. As was mentioned *en passant* in the last chapter, Widdin was the pivot upon which this western Danubian army moved. We shall therefore give some account of this place before describing enterprises which were mainly directed thence. Before, however, we do so, it is necessary, as the chapter records

operations along the whole line of the Bulgarian and Wallachian banks, the advance of the Turkish armies, and the final retreat of the Russians, to present a general outline of the military communications. A Germano-American officer thus describes them:—

“THE RIVER COMMUNICATION.—The transport of troops across a river is much more rapid, and less exposed to casualties, than formerly; and is practicable at all seasons of the year wherever the banks of the river are accessible for marching troops. By employing steamboats in the bridging of the largest rivers, the former great difficulties in the accomplishment of this work are overcome. Steamboats carry with them all the necessary materials in good order; stem the current with facility; and, if only the banks are suitable, will, by a few hours' labour, make the crossing of a river practicable: we have seen steamboats tow the boats in line, and complete a bridge across the Lower Rhine in less than ten minutes. Whoever can afford to sacrifice steamboats, can destroy any boat bridge which is not defended by steamboats at a distance; can thereby separate the army of the enemy whilst crossing, and, by attacking any part with superior numbers, destroy it. In short, steam flotillas are the masters of large rivers. Although this is very clear, yet the belligerent parties in Europe in the late wars have not known how to avail themselves of this power to any extent. The Russians may be in possession of a large steam flotilla on the Danube, but it is a matter of doubt whether their officers will know how to make use of it. The Turks, on the contrary, may obtain officers from England well acquainted with this branch of warfare; but they have no steamboats on the Danube, and for the present, the mouths of the river are still in possession of the Russians.

“LAND COMMUNICATION OF BULGARIA.—Want of cultivation is the cause of bad roads. Besides the few bad cart-roads which suffice for the intercourse between the Danube and the Ægean Sea, the miserable bridle-paths, and foot-paths, and roads through the pasture-grounds, form the only means of communication. But even these become periodically useless, by the falling of the timber in the forests, by inundations in the valleys, by the softening of the clayey and loamy soil during heavy rains, and by other casualties. With the exception of the road from Widdin down to the Danube, which, although better than those on the Save, require considerable repairs, we have only to examine these cart-roads. The same importance which we attach to Sophia, in the northern part of the west end of the Balkan, as the point of conjunction of the different lines of communication for the operations from Servia upon Roumelia, we must attach to the towns of

Tirnova and of Shumla, for all the operations from the Lower Danube. In these places, the principal roads from the towns on the Danube unite; from them the few roads fit for military purposes lead over the Balkan. Among themselves and with Sophia these are connected by a road, leading, as it is said, from Shumla up the valley of the Kamshik and through the pass of Gogos into the valley of the Yantra, six marches. From Tirnova, this road continues over Lofeza to Sophia. As this is not a principal commercial route these roads are, of course, in a most miserable condition.

“From the Danube to Tirnova lead:—1. The continuation of the road on the Danube from Widdin to Rahova and Lofeza, twelve marches. 2. From Nicopolis by two roads: over Lofeza, in six marches, or over Sistova and Nikup, in five marches. 3. From Rustchuk over Tersenik and Nikup, in four marches. (These three roads lead through the most cultivated parts of Bulgaria, and are practicable for carriages and light batteries). 4. Turtukai and Silistria over Hazargrade (Rasgrade), in eight marches.

“From the Danube to Shumla lead:—1. From Rustchuk up, along the Lom, over good bridges, and through a well-cultivated country, and over bare hills, in five marches. 2. From Turtukai and Silistria over Rasgrade, in five marches. 3. From Rassova over Bazardjik (Kadji-Oglu-Bazardjik), Kustendje, and Jeni Bazar, in eight marches. 4. From Brailow over Hirsova, Karasu, Bazardjik, in thirteen marches; and parallel to this road—5. From Isacsza over Babatagh and Kustendje to Varna, frequently connecting with the road to Shumla (4th), and particularly passable between Varna and Bazardjik. From Varna four marches conduct us over Pravadi to Shumla. Pravadi completely blocks up this road in a valley only 300 paces wide. Innumerable small valleys or marshy spots, scarcity of wood and water fit for drinking, make the roads under 3, 4, and 5 very troublesome. Yet these very roads were used by the Russians in 1774, 1810, and 1828-9 to reach Shumla.

“From Tirnova over the Balkan leads:—1. A road over Gablova to Kasanlik (Gsanlik), in three marches; first over a Roman causeway, fit for field artillery, and through the populous district of the Yantra; then on roads which can be easily repaired, in three hours over the crest, and in three hours more down into the pleasant valley of Kasanlik. 2. Through wild regions, by a less frequented, inferior road, over the Little Balkan to Starka on the Kamshik, and hence over the Great Balkan to Islamdje (Selimno) and Jamboli, five marches.

“From Shumla over the Balkan:—1. A heavy road, only fit for the cart of the country, crossing the tributaries of the Kamshik, through the pass of Demir Kapi to Islamdje and Jamboli, in

the valley of the Tundja, five marches. 2. The most frequented of all the Balkan roads leads over Semidova, on the Alkali-Kamshik, through a lateral valley of the latter, crossing in a narrow defile one rivulet ten times, up the Little Balkan, and again through a long narrow defile on the Deli-Kamshik, then over Dobral, by a good road over the Balkan, and in a broad cultivated valley down to Karnabad, four marches. 3. Over Pravadi, through the deep and steep-walled valley of the Pravadi; then by two roads, either a short distance before or a short distance after the confluence of the Kamshiks crossing these rivers, over the Balkan to Nadir, and over the Little Balkan, which is here pretty steep, to Aidos, five marches. Although this road is only fit for buffalo-carts, like that over Dobral, it has always been used by the Turks for the transportation of heavy artillery from Constantinople to the different places on the Danube, and on this road the Russians, in 1829, crossed the Balkan. 4. Over Varna, and hence on a difficult bridle-path, along the steep and rocky coast, to Burgas.

“WALLACHIA, MOLDAVIA, AND Bessarabia.—The country consists of the southern and eastern declivities of the Transylvanian Alps, the summits of which rise from 5000 to 6000 feet. Thus mountainous in the north and the west, and abounding in metals of different kinds, it extends over a fertile, hilly territory, down to the low plains of the Danube, in which river it possesses a mighty water communication, and in Galacz, a kind of a seaport. A great many rivers and rivulets descend from the mountains to the Danube, all of them impetuous in their force, the greater part fordable, but overflowing at every heavy rain. The communications, which are maintained by means of bad bridges and fords only, are therefore very uncertain, and the clayey soil of the country renders the roads impassable in wet weather. The plain is covered with oak brushwood or pasturage. Moldavia and Bessarabia possess a somewhat different character from that of Wallachia: the streams issuing from the lower districts of Podolia and Bakowina flow more slowly towards the Danube, and form marshes at various parts of their course. Bessarabia is almost composed of gradual ravines, conveying but little water, and presenting to the eye the appearance of a perfect plain, covered entirely with pasturage without even a bush; and the inhabitants, after the manner of the Tartars, lead a wandering life, and carry their tents about with them. The Wallachians, too, are half wanderers, for their villages, which consist of spacious, and for the greater part subterraneous hovels, change position from time to time on account of the pasturage; and consequently we cannot trust to the situation of places indicated upon

a map, excepting where a church or a convent has assembled about it a sufficient number of wooden houses and huts to constitute a sort of town.

“It is but rarely that we find a country so richly endowed; it has wine, grain, cattle, and draught animals in abundance, and where pestilence, war, and despotism, have created a wilderness, nature, without cultivation, has planted whole forests of fruit trees. And yet these Wallachians, a nation of mixed tribes, know not how to avail themselves of these advantages.”

This plain sketch will enable our readers to follow with facility the movements of the opposing combatants, and to comprehend the motives for attack and defence in the various directions indicated in our narrative of the events to which this chapter relates.

Widdin and its neighbourhood, as to general appearance and position, are thus represented by William Beattie, Esq., M.D.:—“The scenery is diversified by undulating hills, while the symptoms of life and industry are distinguishable by their effects upon the surrounding landscape. The first view of the Turkish fortress and town, with the magnificence of the Balkan range soaring aloft in the background, makes a vivid impression upon the stranger’s mind. On landing, we found ourselves at once in the East; but on exploring the interior, we were struck, as in most of the other Turkish towns, with its air of neglect and decay. The population, nevertheless, is said to exceed 20,000, and its bazaars bear testimony to the revival of native industry and commerce, to which the steam navigation of the Danube is now giving an unexpected impulse. The fortress is of great strength, and mounts, we were told, little short of three hundred guns. The external features which give to Widdin so imposing an aspect in the distance, are its white minarets and mosques, which are numerous, and rise in proud eminence above the other buildings of the city. Though one of the strongholds of Islamism, it is the See of a Greek archbishop, and among the inhabitants a considerable portion belong to that Church.”

It was in this place, as related in a previous chapter, that the Turks crossed the river and established themselves in the village of Kalafat, which they fortified so strongly that the Russians were unable to dislodge them, although the conquest of this *tête du pont* of Widdin was of the greatest importance. Widdin and Kalafat were garrisoned by 30,000 Turks when the Russians first appeared before the latter. These troops, reinforced, and considerably emboldened by the attenuation of the opposing wing of the enemy, made various incursions to great distances from their head-

* The Danube Illustrated. Virtue and Co., City Road.

quarters, and attacked the foe with almost invariable success. Some of the fiercest conflicts of the Danubian campaigns took place in this direction, while the main army of Paskiewitch environed Silistria. The very day on which the Russian commander established himself upon the south bank of the Danube before Silistria, a severely-fought battle took place 100 miles up the river, at Nicopolis. This city is fortified, and has a strong citadel. It is built upon the site of an ancient Roman fortress, and has been the scene of events amongst the most interesting in European history. Dr. Beattie says—"The view of Nicopolis is striking, and the first object that fixes the attention is the outer wall, which climbs the steep almost perpendicularly, and throws its protecting arms round the city, with a boldness and hardihood which fully evince the importance attached to its possession by its founders and their successors. The town, extending along the Danube under the shadows of bold rocky headlands—surmounted by the citadel, towers, and masses of dilapidated walls—has a striking effect as it is approached by water. In front, several vessels of burden are generally seen at anchor, or lying alongside the quay; while in the distance the Danube, which is now two miles broad, presents the appearance of an inland sea, interspersed with several islands, which are covered with dense vegetation, and frequented by numerous flocks of waterfowl. Although it may be said that literally there is no scenery on these banks of the Danube, still the vast plain which expands right and left, green, fresh, and undulating, with chance patches of cultivation along the slopes, produces an exhilarating effect upon the spirits, and affords ample scope to the eye and imagination. Over this expanse herds of buffaloes, oxen, and troops of horses range at will; whilst through the air flights of birds are continually wheeling from isle to isle; and, nearer the eye, cranes are seen stalking leisurely among the reeds, or poising their wings for some new experimental flight." Situated between Widdin and Silistria, but nearer to the former, it was a position of much importance in the state of affairs then existing between the two armies. The intelligence received by way of Turkey concerning this battle is incomplete, and the Russians were naturally silent altogether concerning it. The Turks acted on the offensive, commanded by Sali Pasha, and defeated the Muscovites, with a loss to the latter of 2000 men. The attack of Sali Pasha was sudden and impetuous; it resembled the bursting forth of pent-up waters, which having rent the barrier that enclosed them, scattered all minor obstacles with irresistible force. The first charge of the Turks rent the Russian lines, and the resistance afterwards was desul-

tory and useless: the Russians incurred a signal defeat.

Soon after the battle of Nicopolis, another was fought at Radowan, when the Turks were also the assailants, and with a similar result. The Russians held that place in considerable force; but Solyman Bey, at the head of his brigade, stormed the place, beating out the Russians, killing and making prisoners 1500, among whom were many officers of engineers and artillery.

At the end of May, while Silistria was suffering beneath the utmost fury of the bombardment and assaults, the left wing of the Turkish army, pushing the troops on the Russian right rapidly eastward, met in several places with a determined resistance. At Turna, about sixty miles lower down than Radowan, the Russians had crossed the river; they were attacked by Solyman Bey and the conquerors of Radowan, and forced to recross to the northern bank. A combat at Semnitzer immediately followed, in which the Turks smote the Russians suddenly, and with slaughter.

So rapid was the advance of what may be termed a new Turkish army, that the position of the Russians became dangerous; their army was becoming outflanked by this eastward movement. On the 30th the Turks reached Karakal; and as the possession of that place opened the way in that direction to Silistria, the Russians made great exertions to put a stop to the victorious career of these heroes from the western Danube. A battle was accordingly fought, and, although it only lasted a few hours, the Russians left three thousand slain and six fieldpieces behind them. No wonder at the mad assaults directed against Silistria, when its capture was the only hope of redeeming a long catalogue of disaster and defeat. On the last day of May a portion of these forces pushed its way to Slatina, menacing the Russian communications with Bucharest. There were several bodies of Russians at Slatina, and between that place and the river Arghish; these were concentrated at Slatina, but were beaten, and again with very heavy loss in men and material. The movements of the Turkish left became more and more menacing throughout the early part of June; and when the siege of Silistria was raised, the positions occupied by Skender Bey and other Turkish leaders compelled the Russians to direct their retreat upon Fokshani and Birlat. The retreat of the main army of Paskiewitch from before Silistria compelled his extreme left to abandon rapidly all their conquests—Rassova, Hirsova, Matschin, Isaktcha, Tultcha, &c. Crossing the Danube at the most eligible of these positions, the left wing directed its retreat into Wallachia, Moldavia, and Bessarabia. Such as retreated upon Wal-

lachia for the most part ultimately crossed the Pruth into Bessarabia as rapidly as their ill fortunes constrained, which thickened day by day in number and extent.

The only serious engagement between the Turkish left and the Russian right, after the siege of Silistria was raised, was at Giurgevo, where a portion of the Turkish left wing, already repeatedly referred to as acting as an independent army, co-operated with the garrison of Rustchuk. It will be remembered by our readers that Rustchuk is on the south side of the river, and Giurgevo on the north. These two places are very important from their positions in relation to one another, and to the hydrographical peculiarities of the river in their vicinity. Rustchuk has a population of 30,000—Turks, Bulgarians, Jews, Wallachs, Armenians, and Greeks; each of these nationalities maintaining, in physiognomy, language, and costume, their distinctness in a marked manner. It is the most commercial and active place, perhaps, amongst all the frontier cities of Turkey; and celebrated for its desperate resistance to the Russian army of 1828-9, who were compelled to raise the siege, after protracted bombardments and assaults as fierce as those so lately directed against the sister fortress of Silistria. Its fortifications were dismantled in virtue of the treaty of Adrianople—a treaty disastrous to Turkish independence and British interests and honour. In the autumn of 1853, the Turks, under the direction of Omar Pasha, repaired the battlements, and erected new works.

Giurgevo was, in past times, one of the boldest strongholds of the Moslem. In the war of 1828-9 it was defended with a zeal and fortitude such as characterised the defence of most of the fortresses, whether on the right or left bank of the Danube. It is alleged that as many Russians fell there in 1828-9 as before Silistria in 1854: but Giurgevo was conquered in that struggle. The czar was so eager to secure his material guarantee, that the Turks had not time to put the place into a defensive condition in keeping with the fortress on the right bank of the river, before the Russians seized it. Between these two fortresses is an island, about two miles in length, a narrow strip of land, rising from the river at either side with nearly equal elevation. It is more than 900 yards from the Bulgarian side, and separated from the Wallachian by a narrow channel. The island is sedgy, and nearly covered with pools and marshes. On this island the Russians erected fortifications as soon as they took possession of Wallachia, in 1853. Hussein Pasha directed troops from the garrison of Rustchuk to assault it, as its capture was necessary as a preliminary to the conquest of Giurgevo. Hussein supposed

that the Russians, beaten at Silistria, would make a stand at Giurgevo, to gain time for reinforcements to come up, or at least to keep a portion of the Turkish army in observation while their troops retired from the extreme left. The pasha, in his fiery zeal, determined not to allow them to linger there, and perhaps collect in greater strength, for he was scarcely aware of the full desperation of their condition. On the morning of the 7th of July, when it was clear daylight, four boats, carrying nearly 400 men, were rowed to the island; and a steamer conveyed about half that number to another spot at a little distance from that where the larger detachment landed. The latter was commanded by Behran Pasha (the British Colonel Cannon); the smaller detachment was under the command of Colonel Ogleby. The landing of both parties was opposed by strong Russian pickets of riflemen; and while these were engaging them, several battalions of Russian infantry advanced, and Behran recrossed the river to inform Hussein that unless strongly reinforced the little bands which invaded the island must retire. Colonel Ogleby, by dint of courage and good address, succeeded in uniting the two detachments, notwithstanding the efforts of the Russians, with their overwhelming numbers, to cut them off in detail; but Colonel Ogleby and his men were pushed back, under a heavy fire of Russian musketry, to the water's edge. Hussein, with his usual dispatch, sent reinforcements, which made good their landing, in spite of the heavy fire of the enemy. The force of Colonel Ogleby rapidly augmented, until it reached the number of 3000; but the Russians, far more numerous than that at first, received reinforcements from Giurgevo with greater ease than Colonel Ogleby could be reinforced from his side of the river, and the Turks were consequently exposed to a decimating fight with far superior numbers. The combat raged the entire day; charges and repulses, heavy musketry discharges, and the continual popping of the Russian riflemen from the sedges and brushwood, brought down the Turks, and put their fighting qualities severely to the test. Night alone put an end to the conflict; and the Turks employed its hours of comparative security in throwing up breastworks and digging entrenchments. When day dawned there was no enemy; the Russians had retreated noiselessly under cover of the darkness. A tenth of the Turks who landed were slain, and twice as many were conveyed wounded to the hospital at Rustchuk. The Russian loss was at least as great: they flung their dead into the river as they retreated, to prevent them from being mutilated by the Turks, who sometimes beheaded their fallen enemies, and more frequently cut off their ears as trophies

of their victory. The floating bodies were borne by the stream to Silistria; and thus the tidings of Russian defeat were literally borne thither by their own dead.

The fight on the island was fatal to many British officers, among whom, as most distinguished for intelligence and valour, was Lieutenant Burke, who, like his countryman Butler, at Silistria, was the life and soul of the gallant few who sustained such overwhelming onsets. The daring valour and presence of mind of this officer was emulated by Captain Arnold and Lieutenant Meynel. All fell, and were forced into the river upon the bayonets of the Russians. Arnold and Meynel were never found, but Burke's body was thrown upon the shore, and was literally covered with wounds, there being thirty bayonet stabs and two rifle bullets in his body. His detachment had all fallen around him; and, fighting to the last, he sold his life at a terrible price to the enemy. Some account of this young officer is appropriate in closing our narrative of this battle. He was, as his name implies, a native of Ireland, and entered the army at an early age. He received a good military education, and was a profound mathematician and skilful engineer; and, like his friend Butler, he was also a volunteer in the service of Turkey. Omar Pasha conferred with him when directing the fortifying of Silistria, in 1853: he had entered that place among the bands by whom it was so bravely succoured. Mr. Burke fought chivalrously there on occasion of the last assault which the besiegers made. His remonstrances with Hussein Pasha against attacking the island, on the ground that as the Russians had been compelled to raise the siege of Silistria, they must, for strategic reasons too obvious to be overlooked, speedily evacuate Giurgevo, and leave it without any expenditure of life or labour to its rightful owners, had not weight with the hot-headed Hussein, and poor Burke fell the most distinguished victim to the pasha's error. A military mission to Schamyl was intended for him by the sultan, had not his career been closed in this untoward combat. We may say of him as Napier did of one equally gallant, who fell on a day of slaughter in the Peninsula War:—"He died, and no man died with more glory; yet many died, and there was much glory."

On the very same day that this sanguinary conflict reddened the stagnant waters of the island before Giurgevo, the Turks crossed in two other places, and met with almost as vigorous a resistance, but remained in possession of both the fields of combat. On these occasions the Russian General Bubatoff, who had distinguished himself so much in the Asiatic theatre of war in 1853, was severely wounded, as was also General Pogoff. By the end of the second week in July, Gortschakoff collected

about 50,000 men behind the Arghish, in addition to those which had already fallen back into that position after the battle of Slatina. The Russian general had to be carried in a litter, and thence to give his orders; but he persevered with indomitable obstinacy in retaining the command.

While the Russians were thus retiring before the everywhere victorious Turks, Austria was endeavouring to turn the current of affairs to her own advantage. The government of Vienna had watched the ebb and flow of the Russian invasion with constant vigilance. Her aim was *avowedly* to secure her own interests, yet she professed to be able to harmonise them with the policy of the allies and the integrity of Russia, whose humiliation she seemed more to dread than the conquest of the Ottoman Empire. In proportion as the cabinet of Vienna perceived signs of earnestness on the part of the Western powers, it assumed a certain language of firmness towards Russia; and while the allied armies were landing at Varna, the kaiser demanded of the czar the surrender of the provinces by a day which the latter was somewhat peremptorily required to name. Prussia affected to unite with Austria in this requirement. The latter, at the same time, added 100,000 men to her army, and moved large bodies of troops to her Transylvanian and Gallician frontiers, compelling Russia to employ an army of observation, which necessarily occupied a great portion of the troops that might otherwise have been precipitated upon the provinces. Austria really wished to get the Russian troops out of the Moldo-Wallachian territory, and her own into it, and hence her imposing frontier forces creating a diversion favourable to Turkey. It was then foreseen and foretold, but not by the Western governments, that as soon as the Austrians were firmly seated in the saddle from which Russia was compelled to dismount, she would disband her frontier armies, and enable the czar to distribute his troops elsewhere as he should have need. Secure of the oyster, she would, as the fable illustrates, leave to the mutual combatants each a shell. To accomplish this purpose, she made the demand for the evacuation of the territories which Russia had seized. The czar's answer was transmitted verbally to Vienna the same day that his minister advised the siege of Silistria to be raised. That answer was that, *out of consideration for Austria*, he would evacuate the provinces. This ostensible concdescension neither deceived Austria nor the allies: it was obvious to the whole world that the czar did not withdraw his troops except to save them from the pursuing Turks; but he was anxious to maintain by this language a show of dignity and power before his own nation, and those of other nations, who per-

sisted in believing in him. Mr. Horsman, the secretary for Ireland, well expressed, in his place in parliament, what all Europe felt:—"The czar has been completely unmasked, and shown to be the greatest marauder and revolutionist in Europe." The official answer of the czar reached Vienna on the 5th of July, when there was a fair prospect that, before the Austrians could join the Turks, or act upon the flank or rear of his armies, they could be safely conducted beyond the Pruth, whither, he knew well, neither Turks nor Austrians were likely to follow. The official reply was:—"The emperor will willingly resign the exclusive protectorate over the Greek Christians, if Turkey will accede to a common protectorate of the five powers. He will evacuate the principalities when the Western powers evacuate Turkey; but will hold a strong military position in Moldavia as a provisional security." This was virtually annulling his verbal message, having by its transmission gained time for his generals to place his troops in a more hopeful track for renewed offensive operations, or a safer retreat, than they were likely to make sure of ten days before, had Austria pushed her forces beyond either frontier. The Austrian cabinet was not very indignant at the trick which the czar had played, but told him that his communication was evasive, and his proposals inadmissible, a reply in which the Western governments concurred. By this time, however, Austria had her own measures concocted, and, but for the dissuasions, perhaps protests of Prussia, she would have at once marched her armies over the Turkish frontier. She had, by a very plausible piece of diplomacy, obtained from the Porte the consent of his imperial majesty the sultan to do so. A convention between Turkey and Austria was signed on the 14th of June. The Western powers did not initiate this procedure, nor did their ministers at Constantinople know of the negotiations until they had assumed a substantial form. A copy of this convention was presented to the British Houses of Parliament.

Convention between Austria and the Sublime Porte, signed at Boyadjikewy, on the 14th of June, 1854; and communications between Her Majesty's Government and the Turkish Ministry relating thereto.

No. I.

LORD STRATFORD DE REDCLIFFE TO THE EARL OF CLARENDON.

(Received June 21.)

(Extract.) Constantinople, June 10, 1854.

THE draft of a Convention between Austria and Turkey, providing for the eventual entry of an Austrian army into the Principalities, was communicated to Redschid Pasha two or three days ago by Baron de Bruck.

The draft of Convention has been communicated to the French Chargé d'Affaires as well as to myself.

In reply to an application from Redschid Pasha, I have advised a simple acceptance of the Austrian draft. To M. de Benedetti I have expressed a similar opinion.

No. II.

THE EARL OF CLARENDON TO LORD STRATFORD DE REDCLIFFE.

(Extract.) Foreign Office, June 22, 1854.

WITH reference to your Excellency's despatch of the 10th of June, I have to acquaint your Excellency that her Majesty's Government approve the course which you adopted, in advising the Turkish Ministers to accept the draft of Treaty.

No. III.

LORD STRATFORD DE REDCLIFFE TO THE EARL OF CLARENDON.

(Received June 28.)

(Extract.) Constantinople, June 15, 1854.

THE military Convention between Austria and the Porte was signed by Baron de Bruck and Redschid Pasha the night before last.

No. IV.

THE EARL OF WESTMORELAND TO THE EARL OF CLARENDON.

(Received August 24.)

(Extract.) Vienna, August 20, 1854.

I HAVE the honour to transmit herewith a copy of the Treaty concluded between His Imperial Majesty the Emperor of Austria and His Imperial Majesty the Sultan, on the 14th of June last, as published in the official portion of the *Vienna Gazette* of the 14th ultimo. This Treaty was ratified at Vienna on the 30th of June.

INCLOSURE IN NO. IV.

CONVENTION BETWEEN HIS IMPERIAL MAJESTY THE EMPEROR OF AUSTRIA AND THE OTTOMAN PORTE.

Signed at Boyadjikewy, June 14, 1854.

[Translation.]

HIS Majesty the Emperor of Austria, fully recognising that the existence of the Ottoman Empire within its present limits is necessary for the maintenance of the balance of power between the States of Europe, and that, specifically, the evacuation of the Danubian Principalities is one of the essential conditions of the integrity of that Empire; being, moreover, ready to join, with the means at his disposal, in the measures proper to ensure the object of the agreement established between his Cabinet and the High Courts represented at the Conference of Vienna:

His Imperial Majesty the Sultan, having on his side accepted this offer of concert, made in a friendly manner by His Majesty the Emperor of Austria;

It has seemed proper to conclude a Convention, in order to regulate the manner in which the concert in question shall be carried into effect.

With this object, His Imperial Majesty the Emperor of Austria, and His Imperial Majesty the Sultan, have named as their Plenipotentiaries, that is to say:

His Majesty the Emperor of Austria, M. le Baron Charles de Bruck, Privy Counsellor of His Imperial and Royal Apostolic Majesty, his Internuncio and Minister Plenipotentiary at the Sublime Ottoman Porte, Grand Cross of the Imperial Order of Leopold, Knight of the Imperial Order of the Iron Crown of the first class, &c.;

And His Imperial Majesty the Sultan, Mustapha Redschid Pasha, late Grand Vizier, and at present his Minister for Foreign Affairs, decorated with the Imperial Order of Medjidicé of the first class, &c.

Who, after having exchanged their full powers, found to be in good and due form, have agreed upon the following Articles:—

ARTICLE I.

HIS Majesty the Emperor of Austria engages to exhaust all the means of negotiation and all other means to obtain

H H

the evacuation of the Danubian Principalities by the foreign army which occupies them, and even to employ, in case they are required, the number of troops necessary to attain this end.

ARTICLE II.

It will appertain in this case exclusively to the Imperial Commander-in-chief to direct the operations of his army. He will, however, always take care to inform the Commander-in-chief of the Ottoman army of his operations in proper time.

ARTICLE III.

His Majesty the Emperor of Austria undertakes by common agreement with the Ottoman Government to re-establish in the Principalities, as far as possible, the legal state of things such as it results from the privileges secured by the Sublime Porte in regard to the administration of those countries. The local authorities thus reconstituted shall not, however, extend their action so far as to attempt to exercise control over the Imperial army.

ARTICLE IV.

The Imperial Court of Austria further engages not to enter into any plan of accommodation with the Imperial Court of Russia, which has not for its basis the sovereign rights of His Imperial Majesty the Sultan, as well as the integrity of his Empire.

ARTICLE V.

As soon as the object of the present Convention shall have been obtained by the conclusion of a Treaty of Peace between the Sublime Porte and the Court of Russia, His Majesty the Emperor of Austria will immediately make arrangements for withdrawing his forces with the least possible delay from the territory of the Principalities. The details respecting the retreat of the Austrian troops shall form the object of a special understanding with the Sublime Porte.

ARTICLE VI.

The Austrian Government expects that the authorities of the countries temporarily occupied by the Imperial troops will afford them every assistance and facility, as well for their march, their lodging, or encampment, as for their subsistence and that of their horses, and for their communications. The Austrian Government likewise expects that every demand relating to the requirements of the service shall be complied with, which shall be addressed by the Austrian commanders, either to the Ottoman Government through the Imperial Internunciate at Constantinople, or directly to the local authorities, unless more weighty reasons render the execution of them impossible.

It is understood that the commanders of the Imperial army will provide for the maintenance of the strictest discipline among their troops, and will respect, and cause to be respected, the properties as well as the laws, the religion, and the customs of the country.

ARTICLE VII.

The present Convention shall be ratified, and the ratifications shall be exchanged at Vienna in the space of four weeks, or earlier if possible, dating from the day of its signature.

In faith of which the respective Plenipotentiaries have signed it and set their seals to it.

Done in duplicate, for one and the same effect, at Boyadji-Keuy, the fourteenth of June, one thousand eight hundred and fifty-four.

V. BRUCK.
REDSCHID.

After the retreat of the Russians, Omar moved his head-quarters to Rustchuk, which, being on the banks of the river, was a better basis of operations against Wallachia than Shumla could possibly be. A party of English sailors, under the command of Prince Leiningen and Lieutenant Glyn, R.N., and a party of

sappers, under Captain Page, R.E., arrived there for the purpose of constructing a bridge over the Danube, and to assist in repairing the fortifications at Giurgevo. In these services they were so successful as to receive the marked acknowledgment of Omar Pasha. The Prince Leiningen especially distinguished himself by zeal and intelligence on the occasion. It was a novelty to see a German prince acting as an officer of the British navy, and the circumstance attracted much notice both in England and on the continent. These were the first Englishmen who crossed the Danube as the allies of the sultan in this war, unless, indeed, we except the gallant Burke and his confederates, who stormed the Russian works in Radowan, opposite Giurgevo; and who, although they did not touch the northern bank of the river, yet, landing on an island close by its shores, might perhaps be considered just claimants of the honour.

On the 15th of July a very amusing incident occurred. Iskander Bey, a Turkish brigadier of cavalry, was reconnoitring in the neighbourhood of Slobisea, attended by a corporal's guard of his own troopers. He perceived, in a lonely situation, what he took to be a sentry of the enemy with his back turned towards the brigadier and his party. Iskander instantly conceived the idea of seizing the sentry, and gaining such information as he might be able or induced, to give. After the gallant bey had made his dispositions to effect the object, he observed a number of other sentries; and suddenly, as a breeze sprang up, all of them performed a most singular rotatory motion with arms extended. Supposing this to be a signal to their pickets, the officer was doubtful of the success of his enterprise; but, resolved not to let the opportunity slip of gaining some information, he dashed, sword in hand, upon the sentinel, and to his amazement found that it was a stuffed greatcoat supported by a Cossack lance-pole, and surmounted by a helmet! Of course, the Russians had disappeared from the neighbourhood, and adopted this *ruse* to conceal their departure until beyond the probability of molestation. The *sentries* were divested of their greatcoats by the Turkish dragoons, except that captured by their commander in person, which was carried back and paraded through the lines with as much mirth as "a guy" is chaired through a district of London on the 5th of November.

The Russian army, which had been in such rapid and disorganized retreat, suddenly rallied, reinforced from Bessarabia, and even assumed the offensive. They engaged the Turks at Fraschete, but were terribly beaten. Notwithstanding this defeat, Dannenberg, mustering such scattered legions as he could collect, and receiving further reinforcements from Bes-

sarabia, was so bold as to attempt the Turkish camp near Giurgevo. In an address to his troops, he called upon them to drive the Ottomans across the Danube; but he could have had no hope of that kind, his aim could only have been to deter or retard pursuit, or, gaining a battle and then retiring, he would make proclamation that he did so for strategic purposes. Whatever his object, he was disappointed, for he lost in killed, wounded, and prisoners, more than 5000 soldiers. These battles totally demoralised the Russian army. The hopes inspired by the activity of Dannenberg, and the confidence of the fresh troops which crossed the Bessarabian frontier, were dissipated, and the Muscovites once more retreated along their whole line of operations. They retired by forced marches to Moldavia, and the head-quarters of Gortschakoff were fixed *pro tempore* in Jassy, the capital of that province, whither he was borne in a litter, suffering great pain and showing great fortitude. The czar made proclamation to his army, that it was withdrawn into Moldavia for strategic reasons, and to show his sincere esteem for his friend the Emperor of Austria! The retreat to Jassy was one of the most disastrous on record, where an army retired upon good roads, and through a rich and civilized country. The heat of the summer of 1854 was intense in the provinces; indeed, from the southern limits of Roumelia to the northern limits of Poland, the whole of these rich countries suffered from drought and high temperature. When the heat was fiercest, the Russian army was conducting its forced marches in its second retreat from Wallachia. Numbers fell dead upon the road; numbers were killed by the infuriated Wallach peasantry, whose houses had been violated and plundered. The Turks, in their ill-conducted pursuit, picked up thousands of stragglers disabled by apoplexy or sun-stroke.

It was on the 1st of August that General Gortschakoff expressed publicly his determination to abandon the Wallachian capital. He assembled the boyards, and having, in a conciliatory speech, thanked them for their courtesies and hospitality to the army of occupation, announced his intention to return at the head of a more powerful army; and warned them that, if they showed any favour to the Turks, they should be dealt with as traitors to *their lawful sovereign*, the czar. The Wallachian nobles listened in silence to these mingled threats and menaces; but when the rearguard of Gortschakoff's army left Bucharest, the city burst forth into loud raptures of joy for their deliverance; for, although the Russian party in the Wallachian capital was not despicable, the Turkish party was the stronger, and all were thankful at the prospect of deliverance

from Russian rapacity and oppression. Some writer has represented the family of Romanoff as descended from Sennacherib!—the poor Wallachs might therefore well sing in their triumph—

“The Assyrian came down like a wolf on the fold!”

For never did wolf prey upon the sheepfold more furiously than did the all-devouring Russ upon the rich lands and comfortable habitations of the Wallachian citizens and landowners; and the Assyrians, stricken under the walls of Jerusalem, were scarcely smitten by a more obvious Providence than the Russian hosts before Silistria; from the broken bastions of that heroic city to Jassy, the retrograde progress of the erst haughty invader was marked by awful disaster and defeat—“The stars in their courses fought against Sisera.” Everything that men call ill-luck fell upon the foe in his flight, until, with abject mien, the remains of the Russian army tottered, weary, diseased, and unwelcome, into Jassy. The whole of the discomfited forces were at length withdrawn behind the Sereth, and it depended upon the policy of the Austrian cabinet, and the strategic positions of the Austrian frontier armies, how the future course of General Gortschakoff should be directed.

When the czar heard of the last defeat at Giurgevo, and the way in which the power of Russia was hurled back through Wallachia, he is said to have smitten his forehead repeatedly with his hand, and to have exclaimed, “I can comprehend that my army was repulsed from Silistria, although I had expected another account from the Prince of Warsaw; but what I cannot understand is, that a wild band of half-naked Turks, after an engagement on the water, and after taking our fortified islands by storm, should have dislodged my troops, with such a heavy loss, from a position which they had been a whole year fortifying.”

As Omar Pasha gradually advanced through Wallachia upon the track of the fugitive enemy, he conciliated the people, offering pardon to all who had in any way aided the Russians under constraint. The Russian army did not long retain Jassy. The concentration of Austrian troops, and the knowledge at St. Petersburg of the convention between Austria and Turkey, in reference to an occupation of Moldavia as well as Wallachia by the former, constrained the czar to withdraw wholly from the dominions of the sultan. Accordingly, Prince Gortschakoff, the diplomatist (brother to the general), intimated at Vienna his master's intention—in deference to his esteemed ally, the kasir—to retire before the advance of the Austrian troops. Accordingly, on the 2nd of August, the Russians began to recross the Pruth at Septschain, Skulani, Senschain,

Serva, Valena, &c. General Gortschakoff, in his hurry, could but with difficulty remove his sick and wounded, and appealed to the humanity of the inhabitants on behalf of the helpless left in their hands. The long processions of waggons, laden with the diseased and mutilated, formed a pitiable spectacle; and must have humbled the pride, not only of the fugitives by which these melancholy trains were accompanied, but even of the czar, in his distant palaces, as the tidings reached him. Never did an army so boast—never was an army so beaten. The retreat of a vanquished host is not always a scene of humiliation: armies have won a just renown, when retiring before superior forces, which was denied them in the field of combat. Retreats have made the reputation of generals: the instances of Massena, when he retired from Sicily; of Sir John Moore, when he sought Corunna as a place of embarkation; and of Wellington, when he fell back upon the lines of Torres Vedras, may be added to the glorious occasions where great generals of antiquity acquired fame when they were not permitted to gather laurels. But the retreat of Gortschakoff was neither dignified nor skilful; his whining appeals to the inhabitants for mercy, and his haste to get his troops beyond the reach of their enemies, contrasted ludicrously with the brag-gart bulletins and proclamations which were so profusely scattered when there was no armed foe to dispute the seizure of “the material guarantee.”

It was well the Russians hastened their departure, for the Turks were in Bucharest on the 8th of August; into which city they marched with drums beating, trumpets sounding, and colours flying, and were welcomed by the Wallachs as deliverers. The advanced guard of the Ottomans was commanded by Halil Pasha, who issued a proclamation to the inhabitants of a generous and prudent character:—

“Inhabitants of Bucharest! the troops of your sovereign have entered this city to maintain good order, and the respect due to all established authority. Let no one presume to take the initiative in committing any violence tending to produce any change whatever. At the moment of their retreat, the Russian troops confided to our care the sick, whose weak state did not permit their removal. We will show that we are worthy of this confidence, and that, until such time as our hospitals shall be established in this city, they shall be treated in the houses where they now are, with all the anxious attention demanded by the love of our neighbour, and by humanity; for two empires, enemies at this moment, may be friends to-morrow, and ought to respect each other even amidst the horrors of war. Such are our wishes; the Wallachians, by conforming to

them, will prove the gratitude and respect they owe to their all-powerful sovereign.”

In about ten days after, Omar Pasha himself made a triumphant entry into the Wallachian capital, accompanied by Cantacuzæne, a name recalling ancient Byzantine associations. The victorious chief published another proclamation, still more calculated to reassure the dubious boyards, whose dalliance with Russia made them apprehensive of vindictive measures on the part of the sultan. Public addresses were presented to Omar by the consuls of the powers, and the magnates of the principalities, and the sultan's authority seemed more fully established than ever.

Matters were now ripe for the Austrian occupation; they had been ripening; but, like all fruit, time and various influences were required to bring them to perfection. As soon as the allies perceived that Austria had a desire to occupy the principalities, they, in giving their consent, sought by every method open to their diplomacy to secure Turkey against any pernicious consequences connected with such occupation. Count Buol, as the representative of the Austrian emperor, gave the most explicit assurances that his master concurred with the Emperor of the French, and the Queen of England, in requiring from the czar guarantees such as would secure Europe from a recurrence of the rapacity and aggression which had disturbed the peace of the world. Further, Count Buol pledged his imperial master not to treat separately with the imperial enemy until such guarantees were obtained.

All the powers, excepting Prussia,—who would consent to take no step which really impeded the czar's ambition,—agreed that the former relations between the cabinet of St. Petersburg and the Sublime Porte could never be renewed in compatibility with the interests and honour of Turkey, and of Europe; and they declared that no durable peace could be secured between these two powers, unless the protocol of the 9th of April, already referred to in this History, should be recognised by the czar. Communications concerning these proceedings were sent to St. Petersburg, Austria persisting in believing, or affecting to believe, that the autocrat would at last see the error of his ways and repent. The only result was renewed attempts on the part of the latter to cajole the court of Vienna, and to sow pro-Russian ideas broadcast in the Austrian capital among officers, politicians, and courtiers. Russian agents swarmed in that city, who were engaged in flattering the Austrian people, but more especially the army; while at St. Petersburg a feeling of undisguised rage against what was called the perfidy and selfishness of Austria pervaded every class, from the ambitious Russian who wielded the sceptre, to the scarcely less ambitious Russians

who flourished the knout. The diplomatic correspondence which brought out the views and wishes of all parties preliminary to the march of the Austrian troops upon the provinces, forms one of the most curious and interesting episodes of the course of events at this juncture. The first paper presented to the British House of Commons, in reference to these negotiations, was a despatch from the Earl of Clarendon to the British minister at Vienna. It is pervaded by an evident anxiety to pledge Austria more thoroughly to the aims of the Western powers, before the convention made the previous month by Austria with the Sublime Porte should take effect. The negotiations which ensued were so far successful that Austria gave the pledge, although she subsequently avoided carrying it out to its legitimate consequences when her armies were fairly established in the coveted territories.

No. 1.

THE EARL OF CLARENDON TO THE EARL OF WESTMORELAND.

MY LORD, Foreign Office, July 22, 1854.

I HAVE to acknowledge the receipt, this day, of your Lordship's telegraphic despatch, by which Her Majesty's Government learn that Prussia has declined to attend the conference which Count Buol proposed to summon for the purpose of communicating the answer to the demands addressed by Austria to the Cabinet of St. Petersburg, and that it will in consequence be transmitted by Count Buol to Count Colloredo for the information of Her Majesty's Government.

Her Majesty's Government, however, being already in possession of this answer, and having taken it into mature consideration, I shall no longer delay communicating to your Lordship the views which they entertain with respect to it.

It is unnecessary to dwell at length upon the arguments by which Count Nesselrode endeavours to throw upon the Western Powers the responsibility of the war which Russia alone has provoked. Count Nesselrode objects to the form of the summons addressed to Russia by England and France, and maintains that this summons, rendered imperative by the acts of Russia, was the true cause of war; but he takes no account of the long series of negotiations during the past year, nor of the repeated warnings which were given to Russia by France and England; and he chooses to forget that it was the invasion of the Principalities by Russian troops which first disturbed the peace of Europe, and which has rendered abortive every effort for its restoration. The despatch of Count Buol to Count Esterhazy, to which Count Nesselrode's despatch is an answer, points out clearly upon whom the responsibility falls of the present state of things; and in the Protocol of the 9th of April, the four Powers have solemnly recorded their opinion, that the summons addressed to Russia by England and France was founded in justice.

The opinion of Europe has been pronounced in favour of the course pursued by England and France, and it is needless, therefore, that they should defend themselves against the accusations of Russia. I proceed to examine the other points contained in the Russian answer. In the first place, if the demands of Austria, supported by Prussia, are considered in a purely German sense, it is impossible that the answer of the Russian Cabinet can be considered satisfactory by the two German Powers. The main points put forward in Count Buol's despatch to Count Esterhazy were:—

1. The necessity of a speedy evacuation of the Danubian Principalities.
2. The impossibilities of making this evacuation, required by the essential interests of Germany, dependent

upon conditions which it was out of the power of Austria to insure.

But Russia fixes no limit whatever to the occupation of the Principalities; and she looks upon an armistice as a previous condition *sine quâ non* of the withdrawal of her armies beyond the Pruth.

The injury, then, which in the opinion of Austria and Prussia, the Russian occupation inflicts upon the Germanic Confederation, continues unabated; nay, more, it is aggravated by the refusal of Russia to attend to the just demands of the two German Powers.

Count Nesselrode professes, it is true, to adhere to the principles laid down in the Protocol of the 9th April; but this declaration is worth little, as long as the Russian troops remain on Turkish soil.

In fact, the evacuation of the Principalities is essential to the integrity of the Ottoman Empire; and their occupation is in itself a flagrant breach of the public law of Europe.

The crisis which disturbs the peace of the world had its origin in the passage of the Pruth; and it is impossible to admit the pretensions of Russia to make the reparation which she owes for an act universally condemned, dependent upon the exigencies of a position which she has voluntarily created for herself.

Nor can England and France consent to an armistice upon the vague assurances given by Count Nesselrode, of the pacific disposition of the Russian Government. After making such great efforts and sacrifices, and engaged as they are in a cause so just, the allied Powers will not stop in their course without the certainty that they will not again be called upon, after a short interval, to recommence the war. The particular conditions of peace must depend upon too many contingencies for it to be possible to lay them down definitively at the present moment. Her Majesty's Government have, however, no hesitation in stating the guarantees which, in their opinion, and in that of the French Government, are essential to secure the tranquillity of Europe from future disturbances. These guarantees are naturally suggested by the dangers to guard against which they are required.

Thus, Russia has taken advantage of the exclusive right which she had acquired, by Treaty, to watch over the relations of Wallachia and Moldavia with the suzerain Power, to enter those provinces as if they were part of her own territory.

Again, the privileged frontier of Russia in the Black Sea has enabled her to establish in those waters a naval power which, in the absence of any counterbalancing force, is a standing menace to the Ottoman Empire.

The uncontrolled possession of Russia of the principal mouth of the Danube, has created obstacles to the navigation of that great river, which seriously affect the general commerce of Europe.

Finally, the stipulations of the Treaty of Kuchuck-Kainardgi, relative to the protection of the Christians, have become, by a wrongful interpretation, the principal cause of the present struggle.

Upon all these points the *status quo ante bellum* must undergo important modifications.

Her Majesty's Government cannot doubt that the Austrian Government will admit that these views are in accordance with the principles laid down in the Protocol of April 9; and that it would be difficult to restrict within more moderate bounds the inquiry which, by that Protocol, the four Powers engaged themselves to make in common, as to the means best calculated to maintain the Ottoman Empire, by attaching it to the general balance of Europe. But it is remarkable, that to this passage in the Protocol of the 9th of April—the only passage of capital importance, implying, as it does, the necessity of an European revision of the ancient relations of Russia with Turkey—Count Nesselrode carefully avoids making the slightest allusion.

In fact, the profession of the Russian Cabinet, that it adheres to the principles laid down by the Conference at Vienna, contains nothing which is of a satisfactory nature.

Her Majesty's Government are at a loss to understand the meaning of Count Nesselrode's declaration, that the integrity of the Ottoman Empire will not be menaced by Russia so long as that integrity is respected by the Powers who now occupy the territory and waters of the

Sultan. What comparison can be drawn between the invaders and the defenders of the Turkish territory? What analogy can exist between the presence of the allied troops at the invitation of the Porte, under the authority of a diplomatic Convention, and the forcible invasion of the Ottoman territory by the Russian armies?

It is unnecessary to say anything further as to the conditions which are attached by Russia to the evacuation of the Principalities; and I come now to that paragraph in Count Nesselrode's despatch which relates to the situation of the Christian subjects of the Sultan.

It amounts to nothing less than this, that the Russian Cabinet includes amongst the ancient privileges which are to be preserved to the Greek Church, the entire rights which flow from the Protectorate, civil as well as religious, claimed by Russia; but it cannot for a moment be supposed that the system established by such a Protectorate, even if it were based upon an European guarantee, could be compatible with the independence and sovereign rights of the Porte.

Her Majesty's Government is very far from saying that Europe can be indifferent to the amelioration of the condition of the Christians in Turkey; on the contrary, they think that Europe ought to take an active interest in the welfare of the Rayah population, and ought to come to an understanding as to the best mode of taking advantage of the generous intentions of the Sultan towards his Christian subjects; but at the same time they are firmly convinced that the reforms which are needed in the government of the various Christian communities in the Ottoman Empire can only be effectually and beneficially carried out by the Porte taking the initiative with regard to them, and that if such reforms are to be promoted by any foreign influence, it can only be by means of friendly counsel and advice, and not by an interference grounded upon Treaty engagements into which no State could enter without abdicating its independence.

In fine, it appears to Her Majesty's Government that the respective situations of the different Powers are in no way whatever changed; they are only more clearly marked out by the answer of the Russian Cabinet. England and France must therefore continue in the attitude of belligerents: on the other hand, as the Principalities have not been evacuated, Austria and Prussia will, no doubt, consider that the obligations of the Treaty of the 20th of April, strengthened, so far as Austria is concerned, by her separate engagement with the Porte, subsist in all their force, and that the time has now arrived for their fulfilment.

I have thus fully explained to you the views of Her Majesty's Government, which are entirely shared by the Government of the Emperor of the French, with whom Her Majesty's Government have been in communication upon this subject; and I have to instruct your Lordship to deliver a copy of this despatch to Count Buol.

I am, &c.,
(Signed) CLARENDON.

No. 2.

THE EARL OF WESTMORELAND TO THE EARL
OF CLARENDON.

(Received August 12.)

(Extract)

Vienna, August 8, 1854.

I HAVE the honour to report to your Lordship that I waited this evening upon Count Buol by appointment, and signed the note (No. 1), and received in exchange the note (No. 2) signed by Count Buol, copies of which I have the honour herewith to transmit to your Lordship.

INCLOSURE 1 IN No. 2.

THE EARL OF WESTMORELAND TO COUNT BUOL.

[Translation.]

Vienna, August 8, 1854.

THE Undersigned, &c., has the honour to announce to Count Buol, &c., that he has received from his Government orders to record in the present note that it results

from the confidential communications which have taken place between the Courts of Vienna, Paris, and London, in conformity with the passage of the Protocol of the 9th of April last, by which Austria, France, and Great Britain engaged, at the same time as Prussia, to seek means for connecting the existence of the Ottoman Empire with the general balance of power in Europe, that the three Powers are equally of opinion that the relations of the Sublime Porte with the Imperial Court of Russia cannot be re-established on solid and durable bases:—

1. If the Protectorate hitherto exercised by the Imperial Court of Russia over the Principalities of Wallachia, Moldavia, and Servia, be not discontinued for the future; and if the privileges accorded by the Sultans to those Provinces, dependent on their Empire, be not placed under the collective guarantee of the Powers, in virtue of an arrangement to be concluded with the Sublime Porte, and the stipulations of which should at the same time regulate all questions of detail.

2. If the navigation of the Danube at its mouths be not freed from all obstacle, and made subject to the application of the principles established by the Acts of the Congress of Vienna.

3. If the Treaty of the 13th July, 1841, be not revised in concert by all the High Contracting Parties in the interest of the balance of power in Europe.

4. If Russia do not cease to claim the right of exercising an official Protectorate over the subjects of the Sublime Porte, to whatever rite they may belong, and if France, Austria, Great Britain, Prussia, and Russia, do not mutually assist each other in obtaining from the original action of the Ottoman Government the confirmation and the observance of the religious privileges of the different Christian communities, and in turning to account, for the common interest of their co-religionists, the generous intentions manifested by His Majesty the Sultan, without any prejudice resulting therefrom to his dignity and the independence of his Crown.

The Undersigned is moreover authorised to declare that the Government of Her Majesty the Queen of Great Britain, while reserving to themselves the right of making known, at a suitable time, the particular conditions which they may attach to the conclusion of peace with Russia, and of modifying the general guarantees above specified in such manner as the continuance of hostilities may render necessary, are resolved not to discuss and not to take into consideration any proposition from the Cabinet of St. Petersburg which should not imply on its part a full and entire adhesion to the principles on which they are already agreed with the Governments of His Majesty the Emperor of Austria, and of His Majesty the Emperor of France.

The Undersigned, &c. (Signed) WESTMORELAND.

INCLOSURE 2 IN No. 2.

COUNT BUOL TO THE EARL OF WESTMORELAND.

[Translation.]

Vienna, August 8, 1854.

THE Undersigned, Minister of Foreign Affairs of His Imperial and Royal Apostolic Majesty, hastens to acknowledge the receipt of the note which his Lordship the Earl of Westmoreland, &c., did him the honour to address to him on the 8th of this month, and to record in his turn that it results from the confidential communications which have taken place between the Courts of Vienna, Paris, and London, in conformity with the passage of the Protocol of the 9th of April last, by which Austria, France, and Great Britain engaged, at the same time as Prussia, to seek means for connecting the existence of the Ottoman Empire with the general balance of power in Europe, that the three Powers are equally of opinion that the relations of the Sublime Porte with the Imperial Court of Russia cannot be re-established on solid and durable bases.

Here the Austrian minister recapitulates the conditions presented to him by Lord Westmoreland, and then adds:—

The Undersigned is moreover authorised to declare that his Government takes note of the determination of

England and of France not to enter into any arrangement with the Imperial Court of Russia which should not imply on the part of the said Court a full and entire adhesion to the four principles above enumerated, and that it accepts for itself the engagement not to treat except on those bases, reserving to itself, however, liberty of judging as to the conditions which it might attach to the re-establishment of peace, if it should itself be forced to take part in the war.

The Undersigned, &c.

(Signed)

Buol.

On the 20th of August, the result of all these diplomatic precautions was seen in the entry of the Austrian troops upon the protectorate. Three brigades of the corps stationed upon the Transylvanian frontier entered that day into Wallachia, and three brigades of the army of Count Coronini nearly at the same time crossed the Moldavian frontier. Before the end of August, the Austrian army was in great force in both provinces. Omar Pasha and his staff went out in great pomp from Bucharest to give *éclat* to the public entry of the Austrian general. Count Coronini was then conducted in form into the city, at the head of his army. Dervish Pasha, Ottoman commissioner in Wallachia, issued the following proclamation:—"The Sublime Porte, having entered into a convention with his Imperial Apostolic Majesty, as previously with the governments of France and England, it is my duty to make known to you that, in accordance with that convention, the Imperial Austrian troops will provisionally occupy both principalities. The presence of these troops in Wallachia need cause no uneasiness to you, for they enter the country as one of the friendly powers allied with the Sublime Porte. These troops will be in no way a burden to you, for they will pay for everything purchased with ready money. After the Russians have positively evacuated the principalities, the former government of the country will be restored."

The whole conduct of Austria in reference to the provinces was suspicious. The measures taken by Omar Pasha to pursue the Russians when they commenced their second retreat (our readers will remember that after retreating, and some portions of their army having actually crossed the Bessarabian frontier, they turned and assumed the offensive), were such that there was every prospect of the greater portion of the Russian forces being either slain or captured. Count Coronini threatened the Turkish general that if the latter molested the Russians in their retirement from the provinces, he would intercept the pursuit. To bring his troops into collision with the Austrians was too grave a responsibility for the astute Omar, and so the Russian generals were enabled to collect their emaciated and downcast soldiery, and bring them safe within the confines of their own territory. Lord Clarendon, in his place in the House of Peers, admitted all this,

but alleged that it was a mistake! Count Buol disavowed it! But "we know," says an able pamphleteer, "that it is the Austrian system to have a minister to talk liberally, and a general to act insubordinately. Just so Raditzky disobeyed his ministry, and was thanked for it in due time; just so Jellachich rebelled, was proclaimed a traitor, and was made dictator of Hungary to reward his treason."

The *Church of England Review*, remarking upon the above passage, makes these comments:—"At the first breaking out of hostilities, the Turkish ambassador in Paris put this plain question to the emperor's cabinet: 'Do you object to our using Hungarian and Polish officers, and raising a Polish legion?' and received the frank reply, 'The sultan, in so dangerous a war, must use such measures in his armies as his own safety may require; it will not become the emperor to object to them.' Did the Turkish ambassador in London receive the same answer, as there can be no doubt that he was instructed, simultaneously, to put the same question? We trow not! It is quite certain that the sultan was *advised* not to have recourse to such *dangerous auxiliaries*. Dangerous because offensive to Austria; and Austrian and German politics are in the ascendant at the English court; to them are sacrificed not only the interests of our ally, the Osmanli, but those of Great Britain herself."

Certain it is that Austria gave the allies no earnest support, and only manifested activity in frustrating their more decided counsels, and possessing herself of Wallachia and Moldavia. It is true that she guarded, by her occupation, those territories from being retaken by the Russians; but she also interposed at a critical moment between a Russian army in helpless flight, and a pursuing Turkish army, numerous, well organised, well commanded, and flushed with victory. The conduct of Austria, ever since her armies were quartered in these dominions of the sultan, has been, politically and morally, as bad as it well could be. Her military have distressed the people by turbulence, tyranny, insult, and exaction, until the Austrian occupation has become worse than was that of Russia. Bleeding from many a wound, these hapless realms waste away, and the honour of the Western allies is tarnished by what they deem it policy to overlook. The inhabitants of these countries ask whether their ruin is to be the price of the Austrian alliance, and if the iron sovereignty of the narrow-minded and insolent Coronini is the fulfilment of the hopes held out to them by the proclamation of Halil Pasha, and by the fair words of the conquering Omar?

CHAPTER XXII.

EFFECT IN RUSSIA OF THE RECONQUEST OF THE PROVINCES.—EFFORTS OF THE EMPEROR TO MAINTAIN THE WAR.—CONSEQUENCES IMMEDIATELY FOLLOWING THE AUSTRIAN OCCUPATION.—DESCRIPTION AND HISTORY OF THE PROVINCES.—COMPARATIVE VIEW OF THE MILITARY QUALITIES AND CHARACTER OF THE RUSSIAN AND TURKISH ARMIES.

"I have no fear of Russian arms, but I have a dread of British diplomacy."—LORD PONSONBY.

THE effect in Russia of the reconquest, by Turkey, of the provinces north of the Danube was to arouse the czar to renewed efforts, in which he was ardently supported by his people. He issued a ukase calling out fresh recruits for the "reserve lines," nine in the thousand souls in the eastern provinces, to be followed in a short interval by three in the thousand. The Jews were included in this ukase, but upon them ten in the thousand were levied at once. A quarter of a million of recruits was in this way added to the army. The cost of the levy to the landed proprietors, who were to this extent deprived of their serfs, was 22,000,000 of silver rubles annually, equal to about £3,000,000 sterling. An assessment of ten silver rubles and twenty copecs for the equipment of each recruit was made upon the owners of the serfs, amounting to nearly £400,000. An extraordinary contribution, amounting to one-fourth of the income was exacted from the central provinces, the proceeds to be entirely appropriated to the war. A notice was published in connection with the laying of this assessment, announcing that if the first portion of the tax was not paid in fifteen days, the property would be administered by the government. Yet was there far more discontent in the provincial towns of England, especially in the north, at the moderate increase of taxation then accorded by the British House of Commons,—and which was laid upon the public resources in a mode the least injurious to their elasticity,—than was felt in Russia under this wholesale confiscation. Let it not be said that the discontent there was felt but not expressed; the people were for war. The Russian emperor takes an oath at his coronation not only to *defend* but to *extend* his dominions, and this is the most popular part of the ceremonial. All Russia was for war, excepting only a few foresighted individuals who wished equally well to the aggression, but doubted the power of Russia to cope with the league formed against her. These doubts did not pervade the masses of the people. Their common expressions when tidings of defeat reached them were, "Russia is holy—and St. Nicholas will give us the victory over the Moslem and the infidel," or "We are Russians!" an expression uttered with a peculiar tone and manner, indicative of an imperious pride and self-reliance, which no

disasters short of a complete paralysis of power could humiliate.

The emperor, amidst all his exertions and resolution, felt keenly his altered position in the scale of European power. He was especially dejected when he heard of the desperate state of Prince Paskiewitch when wounded on occasion of the last assault upon Silistria. He addressed a soothing letter to the veteran Pole, and closeting himself with Count Nesselrode, despatches were rapidly transmitted to all his other generals, — Gortschakoff, Luders, and Dannenberg, alone escaped the most withering censure, but for none of them was there any praise.

The minister of war was sent to the headquarters of the defeated army, with orders to trace out the causes of such long-sustained and shameful disasters. Such a commission to the minister-at-war is never given, according to Russian imperial custom, unless when danger to the state is apprehended; the departure, therefore, of his excellency caused great dejection at St. Petersburg. The health of the autocrat began to give way, and his mind seemed frequently most painfully affected. Rumours of fierce contention between the Archdukes Alexander and Constantine circulated through all the Russian dominions, and were very injurious to the *morale* of the army. The Archduke Constantine claimed to be the heir of the imperial sceptre, and, it was alleged, placed his claim formally among the archives of the chancellerie. He based his pretensions upon being the first born of the emperor after his accession to the throne; Alexander rested his right upon the fact of his being his father's eldest son. The latter has been represented, especially by De Custine, as subtle and tortuous, and desirous to extend Russian aggrandizement by diplomacy, bribery, and stealth; Constantine was represented as a Russ *par excellence*—anxious at once to push the fortunes of the empire to the limits of its people's ambition, and to carry on a war in the name of the emperor as head of the Greek Church, and having a divine right of conquest. St. Petersburg was scandalized by these contentions; and it required all the authority of the emperor, and the influence of the affection of the empress, to restrain them.

Amidst all these convulsions of feeling and throbbing of apprehension within the imperial

circle, the landowners surrendered their property and their serfs uncomplainingly; the prevailing feeling being, that by-and-by the tide of fortune would turn, and the great empire would float triumphant upon its bosom. "The prevailing passion of the Russian nation," says Alison, "is the love of conquest. Domestic grievances, how great soever, are overlooked in the thirst for foreign aggrandizement. In the conquest of the world, the people hope to find a compensation for all the evils of their interior administration. Every Russian is inspired with the conviction that his country is one day to conquer the world; and the universal belief of this result is one of the chief causes of the rapid strides which Russia, of late years, has made towards its realisation. *The meanest peasant in Russia is impressed with the belief that his country is destined to subdue the world.*" The leading statesmen of Russia, and the court, constantly cultivate this feeling among the masses. This desire was never so prevalent as after the Austrians entered the provinces. The Russian party (as the most energetic advocates of aggression are designated) inflamed the passions of the people everywhere against Mohammedans, schismatics, and heretics. This party seemed to grow arrogant and haughty in its pretensions as misfortune attended the policy it had invoked. "Basing its system on religious fanaticism, it declares that the paramount duty of Russia is to establish, by the conquest of Turkey, the trinity of the golden domes of Constantinople, Moscow, and Kiew. These fanatics profess a sovereign contempt for, and hatred of, the nations of the West. They believed that neither England nor France would venture to offer any resistance. As events have proved the contrary, they are now resolved to throw themselves on the fanaticism of the Muscovite people, and to organise a general Slavonic insurrection, in order to vanquish 'the Anglo-Turks and French, *allies of Satan.*'"

At this juncture, the Russian agents abroad were reinforced extensively, and, notwithstanding the exhausting influence of the war upon the Russian exchequer, large sums of money were in this way lavished. Although the Muscovite armies were driven from the provinces, her spies and agents remained. Renegade Poles and Germans of intelligence, more particularly Prussians, were the most generally employed in this capacity; and never was a nation so well served by its foreign agents as Russia was at Bucharest and Jassy. It will appear scarcely to be believed that Omar Pasha himself was outwitted, and made subservient to Russian designs; indeed, every party in the provinces was made in turn the tool of Russia, so incompetent were they all to cope with her in political intrigue. The in-

famous Stirbey, the deposed Hospodar of Wallachia, was the chief agent of Russia, while he was the pet of Austria. When an exile he took up his abode at Vienna, and there suggested and instigated the Austrian convention which led to the occupation. He promised everything that Austria could desire, if the kasir would only carry him back to the hospodariat. This the Austrian government determined to do *per fas et nefas*. The Turkish government opposed Stirbey's return, but Count Coronini did not think it necessary to conciliate either the Porte or the pasha, and much ill-will immediately sprung up between him and Omar. The blame was not with Coronini altogether; the triumphant pasha bore himself proudly, and showed a sense of offended dignity at the airs of authority assumed by Coronini. Omar seemed to forget that the Austrians were there in virtue of an especial agreement made months before between the emperor and the sultan. The English commissioners in the army of the Turkish commander seemed equally forgetful on this subject, especially Sir Stephen Lakeman, who was made commandant of Bucharest. Zamoisky, the Polish officer (since appointed to the command of the sultan's Cossacks), was an agent of England, bitterly hated Austria, and perpetually stimulated both the pasha and Sir Stephen Lakeman against the commanders of the army of occupation. Brigadier Cannon and Colonel Simmonds caught the infection; and as Mr. Colquhoun, the British consul at Bucharest, had been the sagacious and faithful servant of his queen in all the changes that had passed over the provinces, he was an object of suspicion and dislike to the Austrian civil *employées*. Mr. Colquhoun was directed by his government to facilitate in every way in his power the Austrian occupation, but he was at the same time desired to be very observant of the tone and procedure of those who governed it. He possibly was more compliant with the hints he received in this direction, than with the orders he received to make the Austrian path always as smooth as he could. In fact, the whole of the British agents and officers showed a hearty ill-will to the Austrians, who were very eager to reciprocate it. Between the British and Turks the utmost cordiality existed; between both and the Austrians there was perpetual discord. Everybody seemed fated to cross the purposes of everybody else, and to serve unintentionally the designs of Russia. Russian agents, affecting to be informers, constantly brought information to the British consulate, and to Omar Pasha, of the sinister designs of Austria; they also suggested to Omar, through suitable media, that he ought to be installed as hospodar, and would be, were it not for Austrian intrigues at Constantinople. This bait took with the straight-

forward old general, who, although possessing great military foresight and sound sense, was not wholly proof against ambition; and, once beguiled into the sinuous courses of political intrigue, he became an easy prey to Russian wiles. Omar set about counteracting the Austrian designs alleged to be on foot at Constantinople for the purpose of preventing his just promotion. The Austrians had never conceived the idea of Omar being made the hospodar, and, detecting by their agents in the capital that he was furtively counteracting their policy, they were furious against him, and denounced him to the Porte as the make-mischief in Bucharest. The Russian agents, who first put the ambitious project into the good general's head, now as eagerly denounced him for entertaining it; and sent persons to Vienna, Berlin, and Paris, as well as to Constantinople, to represent him as an unscrupulous and designing man, bent upon his own aggrandisement, and indifferent in its pursuit whether he embroiled his government with a formidable and but qualified ally. The French consulate maintained a quiet attitude in all this dissension. The leanings of its officials were evidently against Austria, but the directions of the French Foreign-office were stringent, and were obeyed.

Meanwhile, everything went on unfavourably for the unfortunate inhabitants. The boyards promoted a movement for raising a separate army, which would be an important element in resisting Russia. Yet these boyards, uncertain whether Russia might not regain the ascendancy, kept out of sight, and committed the agitation of this measure to classes immediately beneath them. An offer was made to Omar, that they would forthwith raise and equip 30,000 men, who, being acquainted with the provinces, would be more efficient than either Turks or Austrians, should the invaders reapproach; and as the people were inflamed with an inexorable resentment against the Russians, they would be found ready to resist to the death any new incursion. Omar declined these proposals. Both Turk and Austrian wished to occupy for interests purely Turkish and Austrian, without the slightest concern for boyards, rayahs, or any one else. The inhabitants could do nothing in a direct, straightforward, and manly way; they were always endeavouring by some cunning resource to outwit Austrian, Turk, French, or British, at the expense of all the rest, and only succeeded in outwitting and ruining themselves. They did nothing to soothe, and much to exasperate, the contentions of which Bucharest was the centre, although they were desirous to secure the country against a second seizure by Russia. Omar was unfit for the duties in which he was engaged; the British agents were unfit to compete with Austrians or Russians, except

one man, who was so hampered by the government at home as to be powerless, except for contributing to the general confusion. English diplomacy failed as signally as Russian arms; everything was arranged for the worst as to the unhappy provinces; and the motto selected for this chapter became verified in the torment, oppression, pecuniary injury, and discontent of all Wallachia and Moldavia. The Austrian tyranny was exasperated by a bootless opposition from England one day, and strengthened by the guilty connivance of England another. An army of 80,000 men could have been raised, although only 30,000 was offered by the people themselves, and the Austrian troops might have been withdrawn; or, if Austria had for once been faithful to her alliance, their troops might have been ordered upon the Russian frontier, where they would have best been employed as protectors of the Turkish provinces. The Roving Englishman, in the *United Service Magazine*, gives a correct but satirical description of what transpired under the fatal influence of our diplomatic management:—

“Thus gradually we got every party into active opposition against us, and the Russian interest prospered and flourished in all directions. Bucharest became the seat of a furious social war, in which our hands were against everybody, and everybody's hands were against us. Our communication with the Austrians was cut off. We held no intercourse with Prince Stirbey. There was a sort of rivalry even between the French and English, and a French and English party. The Russian agents and spies, now more numerous than ever, made superhuman efforts to widen the breach in all directions, and to make all dissensions irreconcilable. A furious dispute broke out between Count Coronini, the Austrian commander-in-chief, and Omar Pasha; and the Wallachians, maddened at their sufferings, grew rich in curses, and anathematised them both with fearful acrimony. The smallest demand of an Austrian was met by execrations and refusal. This the Austrians openly attributed to British influence. There was no possibility of setting them right, because there was no authorised communication held with them; and at last both parties grew thoroughly exasperated. The most violent statements respecting the enormities committed by the army of occupation began to find their way into the English newspapers, making matters ten times worse than they were before. These statements, however, it is melancholy to add, were quite true; for the time soon came when the Austrians wrenched by the strong hand whatever was denied to them, whether reasonable or otherwise. The manner in which they had been treated was their excuse for every fresh misdeemeanour, and it must be acknowledged, even in the

THE PLAINS OF LOWER WALLACHIA.

height of our indignation, that their apology had some show of reason. And now the land which had rejoiced at the departure of the Russians, began to intrigue and scheme for their return. From one end to the other it was a scene of groaning and disaster. Immense tracts of the most fertile parts of the country remained waste and untilled, because the peasantry were harried and their cattle seized as post-horses for the Austrian officers going to Bucharest, or as beasts of burden to transport their stores and military baggage. The nobles were ruined in crowds, commerce was palsied, trade destroyed. I say trade destroyed, for the Austrians were so extremely angry that they actually carried on a crusade against the shopkeepers; and there were more political shopkeepers martyred at Bucharest than in London in the days of Wilkes. Austria played indeed her old tactics, the immemorial political melodrama she has enacted in Hungary and Italy. She established a reign of terror, and built her power on the ashes of the commonwealth. It is doubtful if she intended to do this. Her first hope was conciliation; it was not till good humour failed that she tried violence; and Colonel Dumont (a subtle diplomatist of the old school), who was charged with the conduct of her political affairs, began to be extremely busy in extending and strengthening the ranks of the anti-English party. It was the old story. Everybody who did not openly avow his friendship for the Austrians was assailed with calumnies and paltry accusations, more fit to have formed the gossip of washerwomen than the conversation of officers and gentlemen. There was a malignant clique of infamous hirelings busy in disseminating vile reports about harmless people in every ball-room and at every tea-table. The opposition on both sides grew systematic, vigorous, and constant. The imprudence of our conduct at this crisis positively surpasses belief."

It is appropriate here to give some description of the provinces thus torn and oppressed by those who ostensibly came to save and to defend.* Barclay, in his Dictionary,† thus describes Wallachia and Moldavia:—"Wallachia, a province of Hungary, but subject to Turkey, having Moldavia and Transylvania on the north, the river Danube on the east and south, and Transylvania on the west. It is 250 miles long and 160 broad. It was ceded to the Turks in 1739. Moldavia, a province of Turkey in Europe, bounded on the north by Poland, on the east by Bessarabia, on the south by Wallachia, and on the west by Transylvania,

being 180 miles in its greatest length, and somewhat less in breadth. The principal rivers are the Pruth, Moldau, Bardalach, and Sereth." What Barclay says of the latter is true of both:—"The soil is rich, and it abounds in good pasture, which feed a great number of horses, oxen, and sheep; it also produces corn, pulse, wax, fruits, with plenty of game, fish, and fowls. The inhabitants are Christians of the Greek Church. The Turks oblige the hospodars, or waiwads, to pay an annual tribute, and to raise a body of troops at their own expense in time of war."

There is not much difference in the character of the people of the two provinces; the Wallachs are exaggerated Moldavians. They are both very proud of their supposed descent from Roman colonies. So oppressed have the people been, as the tides of war between Russia and Turkey have ebbed and flowed over their border realms, that they have had no fair opportunity of following their industrious inclinations. There is a great disposition for the cultivation of both agriculture and commerce, if tranquillity allowed. The people are not warlike, and yet there are in them the materials for tolerable soldiers. They have generally leaned to Russia from religious sympathy, but they are naturally a loyal people, and, when well treated by the sultan, have given him no cause for dissatisfaction. The treaties between Turkey and Russia brought considerable concessions from the former to the provinces; these concessions were wrung from the sultan by Russia for her own purposes, but have nevertheless been of service to the provinces. Turks cannot take up their residence north of the Danube without permission of the provincial governments. Christianity, in the form of the Greek Church, is established; independence of the Porte is secured, except so far as the acknowledgment by a tribute of the "suzerainty" of the sultan. Obligation (alleged to exist by Barclay) to maintain an army in time of war, has been virtually abrogated. The hospodariat is very despotic, and Prince Stirbey, the hospodar of Wallachia, is the *beau idéal* of a provincial tyrant. The boyards and clergy have endless privileges, which are utterly subversive of the popular liberties and the general welfare of the states. The people are plundered by the nobles, under one pretence or other, perpetually. The Greek papas, or priests, are badly educated, mercenary, and servile; they betray the cause of the people, and for their own selfish interests uphold the domineering of the boyards. They are almost to a man in favour of Russia, but would aid the grand Turk, toward whom they cherish such a strong religious animosity, if he made it their interest to do so. The profitable occupation of Russian spies is very frequently added to that of their

* Those who wish for a more detailed account can consult, *The Neighbours of Russia*.

† A Complete and Universal English Dictionary. By the Rev. James Barclay. Illustrated by Engravings and Maps. Virtue and Co., Ivy Lane, and City Road, London.

sacerdotal functions. They are venal, immoral, and bigoted; in their manners vulgar, and in their persons filthy. They pass about the country and the streets of the capital with a disgusting affectation of sanctity, but when beyond the public gaze they throw off this sanctimoniousness, and are not often even tolerably well conducted.

We do not make these remarks from any prejudice to the Greek Church, and we are quite sure all sincere members of it would unite in this description. The spirit of the clergy is an element in the degradation of the provinces, which will take effect whether Russ or Osmanli politically rule. The hospodariat is generally purchased by the prominent member of some one of several noble families; and as a large price is given to the sultan for the honour, the purchaser regards his office in a commercial light, and reimburses himself by selling all the offices of the state. Even the judges sit upon the judgment-seat in virtue of a bill of sale. A ludicrous affectation of purity is associated with all these transactions. The judges and magistrates speak as if they were all justice, and the hospodar indulges in pompous proclamations of patriotism and loyalty, so that a stranger might deem him a new-born Kossuth in one aspect, and the eldest son of the sultan in the other: yet those judges are ever ready to take a bribe, and the hospodar is one of the best, if not quite the best, paid Russian agent in the world.

It is questionable whether any dens of iniquity are to be found like the Wallachian and Moldavian courts of justice. It cannot be said of the law there, as was said of the law in England, that it is "a lottery." The Wallachian and Moldavian court-houses are markets—the highest bidder obtains the judgment. It might be written over the porticoes of these abodes of venality, partiality, and cruelty, in the words of Milton—

"This place, exempt
From heaven's high jurisdiction."

If the appellant has not money to pay for the decree he claims, he may soon observe by the judge's manner that he does not conceive it his province to sit there for the administration of justice; the unfortunate suitor, if he be conversant with foreign literature, may call to memory the words of the great British dramatist:—

"I shall find your lordship judge and juror!
You are so merciful, I see your end
Is my undoing."

The landed interest in the provinces is avaricious and grinding to the last degree. The language used by the late Sir Robert Peel, when speaking of certain landlords, is terribly true of the land-despots of the Wallachs and Moldavians:—"These landlords, as a body, had

undoubtedly forgotten the duties which naturally, in their position, devolved upon them." Many of the Wallachs hold patches of ground in their own right, and these are as rich farmers as are anywhere to be found on the continent of Europe. Many hold tracts of land, and lead a sort of nomad life; but, wherever the boyards retain "their privileges," and wherever they can extend their influence over the land, they merit the denunciation of the statesman above-quoted, when, on another occasion, he startled the House of Commons with the indignant declaration concerning the class referred to before—"These landlords, as a body, had been so unmindful of their own interests, as to make rent alone the consideration in their relation to their tenantry."

The moral state of Moldavia is perhaps, on the whole, better than that of Wallachia. The boyards make a flaming profession of religion according to the Greek Church, and are eager persecutors of Jews, Turks, or Latins, as opportunity offers; but, in reality, they are to a great extent infidels. They in manners affect an oriental dignity, with an air of occidental arrogance; they assume French modes, which sit very awkwardly upon a general bearing of northern boorishness. To the Russians they appear like Turks; to the Turks like Russians; to the British they seem wondrously French; while the French protest that they are very bad copies of the English: they ape all, and are disowned by all. They in fact most resemble, in the way of a rough likeness, the people they seem most prompt to repudiate—the Greeks; and of all people, those with whom they seem most solicitous to be identified, they least resemble—the Romans, modern or ancient. The great vices of the boyards are gaming and extravagant ostentation; the great vices of the whole people are servility, and a confidence in disingenuous artifice. In the capital there is, however, to be found in society much elegance and intelligence; and amongst the poorer boyards in the country may be met men of manly intelligence and honest public purpose,—men who sorrow with a sincere patriotism over the wrongs of their country, and who would promptly resort to any brave remedy for its deliverance. The whole people are patriotic, except the clergy, and ardently long for the hour when freedom shall plant her tabernacles among them. It was cruel to mock their aspirations for liberty when the Russian eagles took their flight. They were willing to endure the less voracious vulture* of Turkey; but the Austrian bird of prey was more destructive than the once celebrated "bone-breaker" of the Osmanli, or the two-headed marauder from the hungry North. Passionately did the Wallachs

* The ancient cognizance of the Turks.

appeal for freedom and nationhood to Frank and Briton—and, alas! appealed in vain. An imperious policy prevailed, and the ruthless spoliator of Hungary and Italy planted his standards among them.

It was with wondrous tenacity the people clung to hope from England. An eminent boyard thus addressed the author of the *Battle Fields*:—"England is becoming every year less and less of an agricultural country, while our people are altogether labourers on the soil. There is no country better fitted in the world to be one of your principal granaries than ours, supposing the free navigation of the Danube and the Black Sea were once fairly assured. The united population of Wallachia and Moldavia is exactly four millions, and our corn lands could support at least twenty millions. The riches of our soil are almost incredible, yet we had miles and miles of it untilled, while even the hardest portion of your countrymen, the bone and sinews of your land, were emigrating in hundreds of thousands from sheer starvation; and you spent eight million pounds in one year, without relieving the frightful sufferings of the Irish. But we have not a manufactory in the land, and we do not want one. We have too much employment on the farm to be able to spare hands for the loom. Almost every manufactured article comes to us from abroad. We import our shoes, stockings, hats, gloves, and clothing generally; our saddles, horses and carriages, saddlery, guns, and cutlery; our plates, dishes, linen, and glass; our furniture and upholstery; our watches, clocks, and jewellery; our paper, ink, beer, wine. We import even, I am afraid, our conversation and ideas; we are made to be friends; we have what you want, and will want more and more; you have almost all that we require. Free trade and a sound commercial treaty between us would secure you on the one hand from famine, and us from financial ruin on the other. For we cannot always go on buying foreign manufactured goods without selling our own corn. The effects of this war have been fearful for us; some of the wealthiest of our nobles have been forced to sell their estates, our traders are on the verge of ruin. But for the consumption of the armies we could hardly have held out at all; this has helped us a little, but only a little. Money is at legal interest of only ten per cent., but really it is hardly to be obtained now under thirty, and that on good security. Who can improve his estate if he is obliged to borrow at this rate? We must soon grow parsimonious, content with the little moneys we can raise from our semi-waste lands, and stand still in a half-barbarous state, while all the world is going on. Yet we are not a poor country. If you give us our independence we shall not ask you for a

loan to support it, as Greece did. We have money, we have very extensive lands, and forests of public right, the annual value of which would be quadrupled under fair management. We ask you only to regulate our form of government at starting; not, by any means, to pay for it afterwards. You might help us, as I have explained, with advantage to yourselves, for you would thus open a new, or at least a more extensive market for the goods with which the warehouses of your manufacturers are gorged; and you might aid us without the smallest sacrifice of any kind. Turkey has no rights over the government of our country. She is, indeed, bound most stringently not to interfere with it, however often she may have done so. The relations between us stand thus. We have agreed, by repeated treaties, to acknowledge her nominal supremacy, and to pay her a trifling annual tribute in consideration of being protected against the encroachments of Austria and Russia. We have fulfilled our part of the contract, how she has performed hers let history tell you. Russia tried hard to degrade us as a people; it is sharp to own that she succeeded, but it is true. And so the honesty and intellect of our land cries aloud to you to save us. We love the French: most of our youth have been educated in Paris; their minds have been formed by the great French authors, and they have been taught to think by her statesmen and publicists; we love them for the brilliancy of their national character, for their light wit and graceful bearing, for their sparkling philosophy, for their chivalry and valour. But we do not look with more confidence than the rest of the world on the stability of their government; we cannot rely on them. France is fond of changing her political agents, and has often disavowed them when they promised us fairly; therefore all that is thoughtful and masculine in the land turns to great England, and our statesmen and public men hope in you only. Do with us as you will, we shall be contented. We shall have no jealousy of a prince you may choose for us. We submit ourselves blindly to your guidance, for we have long learned to respect and admire your good faith and your unvarying honesty. We have read of the simple and manly eloquence of your Commons, till it has stirred our hearts like the call of a trumpet with a silver sound, and its echo will never die away from among us. There are great men in England, whom we toast at our banquets, and honour in our homes; who utter no public word we do not register. May they take compassion upon us, for our burthen is sore. As yet the worst abuses of our worst governments are suffered to go on. There is a party, a small one now—it is the Russian party—who are interested in

supporting them, who still look to St. Petersburg to renew their license to pillage, and our shame; but the rest of us are listening with parched ears for only one word from you to bid us hope. If it is spoken, our national troubles will clear away like the mists of the morning."

It will be seen from this picture that the quarters of the Austrians were far from pleasant: the people muttered curses against the soldiery as they passed; the officers were nearly proscribed as to the society of the higher classes, they were unfashionable with the ladies, and were therefore generally "cut." The hatred must have been very profound which prevented the Wallach ladies from dancing with military men: a military uniform—Russian, Austrian, or Turkish—is all-attractive to these ladies; but in the instance of the Austrian occupation, nothing was thought of in connection with them but how to get them away. Several desperate duels were fought between Roumanian gentlemen and Austrian officers; but Corinini put an end to this by a threat of hanging any Rouman by whose hand an Austrian officer should fall. There has been no mitigation of the mutual acrimony, which has lasted up to the time we write, in 1855, with as much keenness as when the horses' hoofs of the Austrian cuirassiers first echoed upon the rough pavement of Bucharest.

The population of the two provinces, although nearly always estimated at 4,000,000, falls short of that estimate by nearly one-fourth. The nationality, however, comprises a population of 10,000,000, as Bessarabia is principally peopled by it; and through the contiguous parts of Hungary, Transylvania, and the Buckovina, 3,000,000 are dispersed.

In the second century of the Christian era, this territory was conquered by the Roman emperor, Trajan. Herodotus tells us that the race was the original population of Dacia and Panonia. Their Roman conquerors bore an honourable testimony to their obstinate valour; and, although the present race of Wallachs cease not to boast of a Roman origin, they have still the traditions of the storyteller as to how the Roman invasion was resisted; and how the last of their kings, the good and great Decebalus, reigned, and fought, and fell. Never were the exploits of the Roman arms more honourable to them than here: they conquered to civilise; they built great cities, reclaimed the pestilence-breeding morass, cultivated the wild steppe, interlaced the country with their characteristic roads, and settled colonies on the reclaimed wastes. The Romans did not treat the people with contempt, as Turks, Russians, and Austrians all have done; they conciliated and formed marriage connexions with them, whence sprang many

Wallachs of the present day. The Dacia of the Romans is always referred to in their history as fertile and beautiful—the richest and most commercial of all their colonies. With the glory of the Roman empire waned the security of Dacia. It was the high road for the incursions of those northern savages against whom Trajan erected his celebrated wall south of the Dacian territory, across the Danube, on the land of the Bulgars. Scyth, Hun, and Goth, swept over the fair fields of Dacia to acquire the rich prizes of the south. Crossing the Sea of Azoff and the Euxine, vast Asiatic hordes fell like clouds of locusts upon the cultivated fields of the Dacian husbandmen, and, like those ruthless insects, left only a waste behind. Then, as now, from the far north the whirlwind of war swept over these calm lands with devastating fury. Nor was it only from the north that war and rapine came with despoiling power. From the south, the rude Bulgar, the warrior Turk, came as the majestic and civilising Romans came, and few traces only of their civilisation were permitted to remain. In spite of many obstacles to progress and power, the Dacians recovered from the effects of the first gushes of the war torrents that burst through their country; and at the time when the Magyars brought fire and plunder in their track, they were a great people, possessing wealth and independence, where their race is now dispersed over territories broken into so many provinces. The Magyars wrested from them those portions of territory which form the parts of Hungary peopled by their tribes. When thus weakened, they further enfeebled themselves by division, separating into two peoples, divided by the river Moldau. The boundary gave a name to the people north of it, who are called Moldavians; and an eminent military leader named Walla gave the name of Wallachs to the whole people, but which was only retained by those on the southern side of the Moldau.

They maintained their independence until the lightning of the Osman scathed and withered, when the floods of the northern had deluged and subsided. This similitude has a literal truth, for it was Sultan Bajazet Ildevin, whose surname signifies *lightning*, that carried the Turkish arms with terrible celerity through the provinces. The old Dacian and Roman blood flowed then in richer streams through the veins of the Wallachs than in later ages; for they resisted the invasion with a defence so heroic as utterly to astonish the fiery chief, whose war-shafts sped with such blasting energy over their fair and fruitful realm. Often and often did the crescent pale before the charge of the Wallachians; often did the Turkish hosts reel, broken, back from the lines where the brave Wallachs stood to welcome death or

liberty. But it was beyond human valour or strength to resist such force for ever. The Poles and Hungarians refused them succour; the Pope promised them assistance if they would forsake the Eastern for the Western Church, but the Wallachs preferred to die. They bore up against the ceaseless flashes of war from so mighty an enemy alone, like the stricken tree, which, although blackened and broken, puts forth new branches, unaided but from the life within it, and the blessings of earth and skies. These brave Wallachs, alone, although begirt by great Christian nations—alone, with no help but Heaven's help, and the resources of their prolific soil, displayed political and martial vitality which their proud enemy could not but admire. Solymán the Great accepted a tribute, so long paid to his successors, as a token of suzerainty; in every other respect he recognised their independence. In the reign of the Sultan Achmet, of bloody memory, their land was suddenly overrun, when, in the confidence of treaty, they were unprepared for resistance, and thence began the practice on the part of the sultans to put up the government of the provinces to the highest bidder. Achmet made his unexpected incursion to avenge the assistance given by the Wallachs to Peter II. of Russia. Most writers represent this allegation by Achmet as a pretence; but there is too much reason to believe that the Wallachs allowed their ecclesiastical sympathies with Russia to betray them into overt acts, justifying the indignation of the Porte. Ever since, this cause has worked ill for them. Their priests have always coquetted with Russia, and Turkey has been always jealous. Had the people of the provinces betrayed no religious sympathies with Russia, on the one hand, and the Greeks and Servians, on the other, Turkey would have more regarded their rights, for to no province of the Ottoman empire was so much respect entertained in its proud capital. On no occasion in her quarrels with Russia had Turkey any cause of gratitude to the Wallachs; but often, perhaps always, just ground for dissatisfaction, or at least suspicion. The Emperor Nicholas, however, completely won the hearts of the Romo-Dacians. His sword cut the knot of treaties between the Porte and the principalities, and he obtained such a measure of freedom for them as amazed Europe, and brought the laudations of British senators in showers upon the name of the magnanimous Nicholas. He procured for both provinces an identical constitution. The constitution embraced the following great advantages:—A general assembly for each principality (this assembly to elect the prince in whose hands should be placed the supreme administration); the government responsible to this assembly; free-

dom of commerce; the right of religious worship; a local militia, or army, independent of the sultan; the establishment of civil and criminal tribunals with full power to administer penal justice.

The boyards and people exulted when the announcement of this generous and enlightened interposition on their behalf burst suddenly upon them; and from all parts of Europe strangers arrived ready to invest their capital under the shadow of a state so prosperously circumstanced, and so free. Besides, this constitution was guaranteed by the all-powerful Emperor Nicholas, and by the ostensible suzerain, the sultan. The real object of Nicholas was to have a body of men, such as the senators, whom he could corrupt by his agents. He inferred that a single chief—a hospodar—might be obstinate, but, with a limited number of senators, there was every likelihood that his all-skilful diplomatists would sway them as he pleased. The constitution was thus made a curse. Bucharest and Jassy became hives of Russian agents and spies; and there is hardly a form of corruption which ever cankered the hope of a country which was not used by the unprincipled Muscovite, to render all liberty impossible amongst the descendants of the Roman and Dacian race. The reader must remember the contiguity of the Russian empire, its puissance in relation to such small provinces, its extensively ramified and highly cultivated diplomacy, its vast military *prestige* and real resources, and the influence which its professed call to uphold the orthodox Greek faith would give it over the episcopate of the provinces, and no surprise will be felt that the senators of the provincial assemblies were, in a majority of cases (which was all that was required), the instruments of Russia. Some were so from stupidity, some from cupidity, some from bigotry, and some from sheer honesty,—believing that, on the whole, the provinces were safest under the great eagle's wings. All these elements of influence were nicely calculated in the chancellerie at St. Petersburg, and the Dacian constitutions became only a snare. In a former page the reader has found the feeling of the boyard of 1854; it will be here appropriate to show the feeling of the best portion of the same class in 1836. Lieutenant (afterwards Captain) Spencer, in his work entitled the *Western Caucasus*, records a conversation which he had with a patriotic boyard to this effect:—"Although our country, through the thralldom of our old tyrants, the Turks, was reduced to the verge of ruin, still, with a soil so fertile, and in possession of a constitution that guaranteed our liberties, we looked towards the future with confidence and hope. How illusive were our anticipations! From the moment we were cursed with Russian

protection—from the moment that power interfered in the administration of our affairs—every measure adopted by the senate or the government has been subsidiary to her views and interests. But this is not all: the country has been inundated with Russian agents, avowed and secret; no public assembly, no private dwelling, from the cot of the peasant to the palace of the prince, is exempt from their intriguing influence. The trading classes are told that the country will never be prosperous till it is united to the grand empire. The peasants are taught to look upon their seigniorial lords as tyrants. The vanity of the rich man is flattered by jewelled crosses; the poor and venal noble barter the welfare and independence of his country for a bribe; while our hospodars are nothing more than the most servile slaves to the will of the autocrat. Lastly, our much-vaunted constitution, from which so many advantages were to be derived, has become a dead letter, because every decree of the senate, although approved by the reigning prince, is null, unless sanctioned by the protecting powers, Russia and Turkey; and however mortifying the conviction, we feel assured that Russia will never cease her intrigues and machinations till our principalities are incorporated in her already overgrown empire; unless, indeed, the great Western powers interfere to prevent an act of such flagrant injustice; for any opposition on our part can never avail to prevent it."

The author of *Turkey, Russia, and the Black Sea*, thus describes the present and forecasts the future:—"However severe may be the sufferings of the inhabitants of Moldavia and Wallachia, in consequence of their country having become the principal theatre of the war between Russia and Turkey, yet this circumstance may be productive to them of much future good, because it will tend to place most forcibly before the political world of Europe the anomalous position in which they stand—owing allegiance to two foreign powers, and yet submitting to the rule of native princes, whose weakness prevents their being anything more than mere puppets to the mighty autocrat of the north. In addition to a succession of disputes, quarrels, and wars, in which their country has been embroiled during the last fifty years with Russia and Turkey, they have had the misfortune to see it devastated by the locust-like armies, first of one of these protecting powers, and then of the other. But this is not the only evil. We must also take into account the paralyzing effect this has had upon every species of industry, and the demoralisation that ever follows in the train of armies far more civilised than the semi-barbarian hordes that follow the standard of the czar and the sultan,—a demoralisation so disastrous that

even were this unhappy people to be immediately reinstated in the full enjoyment of all their rights and liberties, more than half a century must elapse before anything resembling confidence and security could be restored to a country so long cursed with the protection of two such powers as Russia and Turkey. Independent of the numerous evils to be rectified in every branch of the administration, the peasantry have become so brutalised as to be almost insensible to their degraded condition, and the better classes dead to all the higher feelings of our nature. We had an opportunity of witnessing the effects of a Russian military occupation of these countries, in all its horrors, first in 1835, and again in 1851. The fearful details of the first we fully described in a former work: the latter, although by no means so calamitous, had however the effect of producing a scarcity of provisions that almost amounted to a famine. This will be easily understood by those who are acquainted with the elements of which a Russian army is composed, and the violent means resorted to by a Russian commissariat when the imperial mandate is issued for provisioning a large body of troops. Every demand is then made at the point of the bayonet; and when all is devoured, the very grain which had been reserved for sowing is seized upon. Can we then wonder that these principalities, notwithstanding the advantages they possess of soil, climate, and situation—together with the noble Danube, navigable for all the purposes of commerce—should be at the present moment still lying for the most part in a state of nature, owing to the want of inhabitants to till the soil; or that the population should have been reduced within the last century by war, pestilence, and famine, to nearly one half of the original amount, and that a people who could once bring into the field against the Turks 200,000 men, should be now the slave of slaves."

It is not to be supposed that the provinces are inhabited only by the one race, although nearly all speak that mongrel Latin which is the common tongue. The Jews are numerous in the large towns, and the gipseys number 200,000. Greeks, Servians, Magyars, Poles, Bulgarians, Bosnians, and Tartars, are all to be found in the towns. In the country parts the race of Roman Dacians prevail almost exclusively.

The capitals of the provinces are pleasant places, but both are very unhealthy, from the total neglect of all sanitary regulations. Jassy, the metropolis of Moldavia, is beautifully situated. It is surrounded by orchards, flower-gardens, and choice shrubberies. It is mainly embosomed in a pleasant vale, but it extends up the acclivities of picturesque hills, from which the whole country presents a scene of

peaceful and cultivated loveliness. The domes and spires towering up from the hill side, present a lively characteristic of the place to the approaching traveller. The interior of the city is not so much to be commended; it has no pavement—boards laid over stagnant pools of mud and filth, and through the chinks of which the most pestiferous odours arise, form the causeways. Every nationality occupies its own district of the town, and speaks its own language, suggesting what might possibly have occurred at Babel before the dispersion. It is utterly impossible to conjecture the number of the population, so conflicting are accounts; perhaps 12,000 would be the nearest computation. Bucharest is larger than Jassy, less pleasantly situated, very much gayer, and by no means more favourable to the cultivation of morals. The paving is bad, and as every one that can possibly afford it keeps a carriage, the splashing, din, and confusion, have no parallel elsewhere. The population is about 30,000. These cities are the seats of government and the centres of Russian intrigue.

The present Hospodar of Wallachia, Stirbey, is utterly detested by the people, on account of his subserviency to Russia. They are also prejudiced against him on the ground of race. The national feeling requires one of their own race to reign, unless policy should necessitate an honourable compact with the European powers, which would place a prince of some royal family on the throne of an independent Dacia. The Ghika family, who trace their origin as far back as the ancient Dacian people, are popular in both provinces. Gregory Ghika was for a short time Hospodar of Moldavia, and during his administration he effected many and important reforms. He established a system of education of a most enlightened character, which the Russians, called in by the priests, the greatest of all enemies to Dacian liberty, destroyed. The provinces contain few cities, and unless where a group of wooden houses are collected round a church or a convent, one might suppose that there were no villages. This would, however, be a mistake, for a tourist thus corrects such an impression:

"The villages through which we passed, consisting for the most part of huts half buried in the earth, presented the same wretched appearance as those we had seen seventeen years ago; nor were the inhabitants less miserable. Poor people! this was the species of hut adopted by their ancestors, when, after the fall of the Roman Empire, their stately towns and villages were sacked and burnt by the Goths and Huns; but as these marauders were followed in regular succession by hordes of Magyars, Bulgars, Tartars, Turks, and now Russians, no doubt the plan of concealing their homes has never been changed. Nay,

in some districts, these subterranean villages have been so effectually concealed, with grass growing on the top, that were it not for the tell-tale smoke we see making its way upward from the earth, like a spent volcano, we might ride over them without suspecting that several human beings were living beneath. Near each of these human warrens may be seen a very remarkable building, rising to a height of about six feet from the ground, and extending to a length of from 300 to 500 feet; this is the village granary, made of open trellis-work, for the purpose of drying the maize. As to towns, they are few and far between; and when at length we do come upon one, the streets, like the roads, are unpaved, but laid down with boards, like those of Russia; the common sewers are beneath, and are never cleansed but by a thunder-shower; hence the fevers of the towns."

Such are the provinces concerning which we have heard so much during the progress of this war, and about which it commenced. It would be a very imperfect history, therefore, which did not give a tolerably extensive notice of what are the resources, races, position, and history of these coveted and contested dominions, whose real rulers have for some time been the Russian consuls at Bucharest and Jassy, or rather, the vile agents of Russian diplomatic intrigue—Poles and Germans, hirelings of falsehood and fraud, before whose apprehended denunciations even the consuls themselves trembled. The sincerity of Russia in pretending to guarantee to these provinces a certain independence, is tested by the seizure, in which, without the pretence of any wrong on their part, their rulers were deposed, their treasures ransacked, their people plundered, and their lands ravaged and desolated.

It is *apropos* to a chapter which brings Austria armed upon the stage, to present to our readers some considerations in connection with the Western policy to the German powers. Prussia looked upon the Austrian convention with the Porte more jealously, if possible, than even Russia. Frederick William did not conceal from his courtiers his chagrin, and, as usual, was both petulant and truckling, meriting the sneer of a certain military authority: "Prussia is gradually sinking from her lofty position; she is becoming a by-word among nations; and the state which a *soldateska* built up, may yet be destined to perish by the sword." The Western powers continued to court Austria and Prussia, as if there were no other states in the great German confederation. It would not have been difficult by skilful negotiations, and a liberal political use of the *quid pro quo* to have formed connections with the minor German states, which would greatly influence the proceedings of the two

great German powers. In Italy and Switzerland we have instances of how small states in contiguity with Austria may be made instrumental in checking her policy. The ascendancy gained over both the northern and southern great German powers by Russia was much promoted by her skilful management in Saxony, Bavaria, and lesser states. The great Napoleon, in his formation of a Rhenish confederation, sought such ends by similar means. What was done forty-seven years ago in this respect is not possible now; but his German policy is an instructive lesson for the allies to-day, even where it is neither practicable nor desirable to imitate him. It must be kept in view, that although the petty German princes are pro-Russian, the people are pro-English, and the armies of those states are very favourable to England. In consequence of the poverty of the national exchequers, the soldiers are perpetually on furlough, and fraternize with the people, imbibing their political bias. A threat to aggrandize these states at the expense of Austria and Prussia would be felt all over Germany, however indirect the menace might be. That the smaller German states possess such military resources as would be of great service to the allies if they could conciliate the alliance of those governments, or subsidize them, or even hire their armies, as in the last century the troops of Hesse were hired by England, cannot be doubted by any person who is acquainted with the military condition of Germany. The following may be taken as a correct estimate of their forces, if we renumerate the strength of all the troops of the various states which they could furnish at short notice for a foreign campaign, without weakening the necessary garrisons, depots, and reserves at home:—

State.	Infantry.	Cavalry.	Engineers, &c.	Guns.
Bavaria	40,000	7000	5300	200
Saxony	15,000	3000	2000	50
Hanover	13,000	3000	2000	36
Wirttemberg	12,000	2500	1500	42
Baden	10,000	2200	1400	40
Hesse-Cassel	10,000	1100	900	18
Hesse-Darmstadt	7,300	1100	900	18
Nassau	6,000	—	450	12
Mecklenburg-Schwerin	3,000	600	550	16
Mecklenburg-Strelitz	700	—	—	—
Oldenburg	2,500	400	450	16

The four Hanse Towns	3,000	400	—	—
TOTAL	136,200	21,850	15,850	460

without taking into calculation the requisite train.

Our readers cannot fail to perceive, from such statistics the importance of so conducting our German policy as to weaken the dependence upon Austria and Prussia of the other states, and to accustom them to look beyond the limits of the Bund, in their political and military relations.

Having presented the military resources of the German confederation, irrespective of Austria and Prussia, the condition and resources of whose armies are elsewhere discussed, we will close this chapter by as extensive a review as our space admits, of the armies who contested the possession of the Danubian provinces. Very erroneous impressions were almost universally entertained on the subject previous to the disgraceful flight of the invading army. It was the fashion in Germany to depict the military greatness of Russia as beyond parallel. Her troops were represented as millions, and her generals were reputed as the most skilful in the world, while her confines were described as begirt with fortresses such as no other territory in the world possessed. The Baron von Moltke and a few other German military men gave more sober accounts, but they made little impression upon the public mind of Germany. The courts kept up the idea of the invincibility of Russian soldiers, and the inexhaustibility of Russian military resources, purely from political motives. The object was to awe the modern *illuminati* by the overwhelming force which Russia could and would bring to the support of royal authority in Continental Europe. In France, ever since the destruction of Napoleon's great army in the Moscow expedition, the most exaggerated notions of the numbers of the Russian soldiery prevailed. The saying attributed to Napoleon, that the Russians were the most skilful, as well as the most obstinate enemies he had personally encountered, had great weight in the French estimate of Russia as a military power; and the celebrated saying which the great captive uttered at St. Helena—"In fifty years Europe will be republican or Cossack," still further aided the Russian military *prestige* with the French. In England we altogether despised the skill of the Muscovite, and cared nothing for his numbers; but the idea was universally prevalent that the men were of a stubborn valour. The campaigns on the Danube dispelled the illusion as to any peculiar tenacity of courage, and led to still lower opinions of their generalship. Some of the opinions thus formed have been corrected since; and we now know better the magnitude and character of the military machine which is moved by the fiat of the czar. Still, although professional men are now very well informed on all these topics, the general public require information. We shall endeavour to present some accurate detail of the quality and

character of the Russian troops, and of the habits, *status*, and spirit of their officers. This is the more important, as we approach a period in our history when British arms clash with theirs; we can better estimate what our braves have performed, and what may or may not be expected of them, when a clear conception of the military genius and strength of the enemy is formed. It is, in 1855, a general notion that the Danubian campaign caused us to underrate the capacity and courage of Russian soldiers; but we subscribe heartily to the belief that their conduct justified the lowest opinions we could form. A French officer of rank, in writing from Rustchuk, said—"Apropos of the Russians. What do they mean to do? What means this war of theirs, without connection and without plan;—these useless, I should rather say shameful, promenades from Kalafat to Silistria, and from Silistria to Rustchuk, only to escape in every place, and at every time losing, without the slightest possible advantage, the half of their soldiers? The Russians have arrived at such a point, that they are throughout Europe almost despised as a power and an army. Even the Turks hold them in the most supreme contempt; and I, as an old soldier, cannot say that they are mistaken."

In describing the Russian military system, we shall first describe the mode of recruiting: it is, in a word, by conscription. The population of Russia consists of several very distinct classes:—1. The *nobles*—these are very numerous; some are hereditary, some who have been ennobled for serving the state. They are all free from the conscription. 2. The *clergy*—these are greatly revered, and are of course free. 3. *Civil officials*—these, as necessary to the state, cannot be subjected to military service. 4. *Merchants*—they are not liable to the conscription. 5. *Burghers*—these are liable to military service, but can release themselves by paying a fine. The lowest class of burghers are, however, unable generally to pay that fine, so that they are always obnoxious to the conscription. 6. The *serfs*—who form the great bulk of the nation and of the army. They cease to be serfs when they become soldiers; this is the only inducement to a military life for them. The cavalry is well mounted, the horses of the heavy cavalry especially being large, and handsome, and well fed. Very many of the regiments, especially in the guards, are mounted on horses all of one colour, as our greys, bays, black-horse (7th Dragoon Guards), and household cavalry. The artillery and baggage trains are excellently horsed. A distinguished Prussian officer, well acquainted with the Russian armies, thus describes the conscription:—

"The proceeding was generally in this wise:

after discovering the exact number of men wanted, an imperial ukase was issued demanding so many men per cent., a large margin being left for desertions. The whole number required was then equally divided among the governments, the towns, and the various landed proprietors and villages. In the properties belonging to the nobles, the choice of those who were to serve lay with the landed proprietor; in the crown properties with the magistrate. Those were selected, first, of whom their masters wished to be rid, whether they were married or not, and next, those who had no one depending upon them. A sum of 2000 rubles was the price of a substitute, and well-to-do villages paid this sum down to free a certain number of their inhabitants from military service. On the other hand, the noble had the right to send a serf whom he wished to get rid of, and to get in return a receipt which secured him when the next conscription was made. It was scarcely possible for any one to escape by flight, and resistance was vain. The men were suddenly seized, and led off in chains to the nearest seat of government. The man thus forced to serve gave up his whole former existence. The time of service was formerly twenty years in the Polish provinces, twenty-two in the line in Russia, twenty-four in the guards. Should he ever return after his time of service had expired, he found his place as a serf filled by another, and all memory of himself gone. The garrison-town to which he was sent was hundreds of miles off; he lived with men whose language, manners, religion, and race might differ entirely from his own, and if he did not learn some trade by which he might exist, his only resource was to serve on. The Emperor Nicholas shortened the term of service; but this merely made the conscription fall oftener. This system of recruiting was so odious a measure that it was as seldom had recourse to as possible. The vacancies in the Russian armies were not filled up every year as in European states, but only when the want of men was seriously felt, or when war was imminent. Spite of the war which had threatened to break out, the army had not been recruited for four years, and as, generally speaking, one-tenth of its numbers quitted the army every year, when the war broke out, a deficiency of about 40 per cent. had to be made good. But, when the men were raised, the army was not much the better for them; it took a long time to discipline them, and they frequently had hundreds of miles to march before they reached their destination. To get rid of this arbitrary mode of getting soldiers, the Emperor Nicholas had recourse to one still worse—military colonization. The emperor became aware of the disadvantages of his new system, but could not remedy it. Altogether

the military education of the soldier, spite of the long period of service and the severe treatment of the men—possibly in consequence of these very complicated arrangements—was incomplete. Their movements were those of a machine, reduced to certain forms. On the other hand, the infantry went through all their evolutions with perfect order, and were perfectly steady under fire. The material of the artillery, which is the arm most prized by orientals, was excellent. The Russians were in this respect so far superior to the Turks, that the greatest results were expected wherever this arm could be used. They were not, however, very expert in their practice. The spirit of the troops was very good; the Russian soldier looked to war to better his condition, and a combat with the Mussulman was in his eyes a religious action. The officers were paid in silver, and the soldier was glad to exchange the tiresome duties of the parade, and the petty annoyances of garrison life, for the difficulties and the excitement of the field."

Nothing has fostered the military spirit in Russia so much as the mode in which rank is made to depend upon military service. Thus a *general takes precedence of a prince who has not a commission in the army*; for although property, and also titles, are hereditary in descent, yet *rank* is personal only, and depends almost entirely upon a military grade. Thus the ambition and the zeal of the nation are directed to the profession of arms. It is war which makes an emperor popular and a peasant free. The only profession which competes with that of arms is diplomacy. Spies and the bayonet are the great instruments of Russian advancement. The whirring wheel, the gliding shuttle, the noiseless plough, have no charms for the votaries of St. Nicholas. The flower of the youth of Muscovy are bred for war: 180,000 young men, and 10,000 officers, are constantly at the military seminaries. In these seminaries, the only kind of knowledge to which there is any regard paid is such as may bear upon the art of war. The best description of the military education of Russia which we can find is given by M. Haxthausen; he says:—"Peter the Great first encouraged the military spirit among his nobles; Munich organised the first military school, under the name of the School for Officers, composed of 180 young noblemen, natives of Great Russia, and fifty from Esthonia and Livonia; afterwards, in 1743, he founded the Naval Academy. Under the Emperor Alexander, the nobility set about establishing themselves similar institutions for the instruction of their sons. That of Toula, founded in 1801, was the first of this kind, and that of Tamboff, in 1802, the second. This spirit of emulation, encouraged as it was by the Emperor Nicholas, has continued to increase. Many private gen-

tlemen founded establishments of this kind, which were well endowed. Count Araktochéjeff bequeathed to the crown a large sum for the establishment of a corps of cadets to be named after him. In 1835, Colonel Bakhtine offered for this purpose the whole of his fortune, consisting of 1,600,000 rubles and 2700 serfs, reserving only a life-interest for himself; in 1836, Colonel Tschertikoff gave the same sum. According to the *Encyclopédie Militaire*, there exist in Russia at the present time, twenty-eight establishments devoted to the education of officers, of which one is for naval officers. The number of pupils is about 10,000, 1000 of whom enter the service every year. Of these, then, it appears that from 800 to 900 enter the army. The twenty-seven establishments devoted to the education of officers for the army are divided into several classes: they differ, first, with respect to the amount of the endowment; for, as the services of the parents almost always serve as passports of admission to the children, and the education is at the expense of the government, the establishments intended for the sons of generals are more luxurious than those which receive the sons of other officers. Further than this, these institutions may be classed according to the instruction given in them, and the destination of the pupils. We may divide them as follows:—1. The Corps of Alexander, an establishment situated near St. Petersburg, intended for 400 children under twelve years of age (especially orphans). 2. Seventeen establishments, situate in different governments, which take the children of officers or gentlemen, from twelve to eighteen years of age. Of these, however, some are reserved for younger orphans, or for the children of very poor parents. 3. The Regiment of the Nobility, at St. Petersburg, containing 1000 pupils, forms the highest class of these seventeen establishments, and prepares for the examinations to be passed by officers. 4. Five establishments at St. Petersburg, devoted to the most advanced studies. 5. Three establishments for special services (artillery and engineers). 6. The Military Academy, for the instruction of staff officers. The instruction in those schools which are not devoted to a special service is divided into three courses:—the preparatory course, the general, and the higher course; the last comprehends instruction in military science, while the other two supply the requirements of general instruction, and great attention is paid to the study of modern languages. All these courses are combined with practical exercises. In the case of the corps of cadets of Alexander, and in one only of the corps of government cadets, the instruction is confined to the first course, that of the other sixteen to the two first, and that of the regiment of the nobility to the third. The corps of cadets in the capital

embrace the three courses. All the military schools are subject to the same general regulations, under which some schools, organised in the military fashion, but intended for civil instruction, as the Academy of Bridges and Roads, the corps of Miners, that of Foresters, the Lyceum, Czarskojezelo, &c., are conducted. Although the establishments of cadets furnish annually a large number of officers, yet this number is far from supplying the requirements of the army. If we take the average of one officer to forty men, Russia would require about 25,000 officers, if she wished to call out all her regular troops, the number of which we have calculated in round numbers at 1,000,000 men. The baron no doubt would not, at present, put the Russian forces at so high a figure."

One of the greatest impediments to the efficiency of the Russian army is to be found in the diverse and jealous nationalities that constitute it. Since the British have been brought into collision with them, and made prisoners of many, we have found the utmost jealousy among them: the Russ hates the Finlander, the latter despising the Muscovite as heartily as he, in his turn, despises the German, while the Pole feels a supreme contempt for them all. The following view of the nationalities subjected to the Russian yoke, and from which her armies are recruited, will convince any intelligent thinker that such a heterogeneous force must contain elements of discord. The severe discipline prevents outbreaks occurring with such frequency as to destroy subordination; but, as in the prison at Lewes, where Fins and Russ are quarrelling while these lines are passing through the press, so, frequently, in the garrisons of Southern Russia and Finland, fierce animosities, arising from invidiousness of race, embroil the soldiery. There are more deserters from a Russian army than any other, although the desire again to see their families, and the *esprit de corps*, counteract the tendency.

The population consists of a number of distinct nations, tribes, and races, which have been classed and calculated by different writers. The last and most complete classification is as follows:—1. *Slavonians*—these consist of six races, and comprehend the inhabitants of Russia, Poland, and Courland. They are estimated at 44,000,000. 2. *Fins*—these consist of twenty-two races, and comprehend the residents of Finland, Livonia, Lapland, and some other places. They are estimated at 3,000,000. 3. *Lithuanians* or *Lettish*—there are three races of this people, their chief residences being the governments of Moghilev, Vitebsk, Wilna, Minsk, and Grodno. Their number is estimated at 2,000,000. 4. *Tartars* or *Tatars*—there are no less than twenty-seven races of Tartars scattered over the empire. The Tartars

proper are divided into fourteen branches, the Noggers into six; besides which there are the Kirghises, Aralians, Chewenses, Bukharians, Baschkirs, Teleutes, and Jakutes, whose aggregate numbers amount to 2,190,000. 5. *Caucasians*—there are eleven races of Caucasians, comprehending, amongst others, the Tscherkessens, the Anchases, Lesghies, Ossetts, and Kistenses, estimated at 1,400,000. These are seldom found in the ranks of the czar. 6. *Germans*—one race only, estimated at 450,000. 7. *Jews*—there are 550,000 of this indestructible people in the Russian Empire. 8. *Mongols*—under this head are comprehended the Mongols proper, the Kalmucks, Buritens, and Kuriles, supposed to amount to 330,000. 9. *Mandshurs*—these are divided into three races, viz.: Mandshurs proper, Tunguses, and Lamutes, whose numbers may be about 50,000. 10. *Samoïdes*—there are twelve races of this people, comprehending 70,000 souls in all. 11. *Kamschats*, who consist of six races and 50,000 souls. 12. *Esquimaux*—this Polar race consists of about 20,000. 13. *Indians*—there are three races of Indians, consisting of about 30,000 souls in all. There are besides in the Russian Empire, about 50,000 Greeks, 10,000 gipseys, 15,000 Persians, and 6,000 Arabians on the river Kama, and some Europeans, settled in the cities and towns, engaged in trade and manufacturing.

In the seventh chapter we gave a sketch of the Russian soldier, by the "Roving Englishman," we will make the same able pen available here for a description of the Russian officer; it is, we believe, faithful, and its perusal will lessen the surprise of our readers that the battalions of the czar were so invariably beaten on the Danube.

"He is a trim, slim, soldierly, distinguished-looking man; not handsome, or even good-looking, but nice. He is shaven to the extreme of neatness. His clipped moustachios are faultless. The general elegance of his exterior is indisputable. His uniform is astonishingly well made. His manners are charming. He has none of the cold, haughty reserve towards civilians which characterizes the Austrian officer. If you shake hands with him, he gives such a courtly yet cordial squeeze, that you might fancy his very well-bred soul was in his warm agreeable fingers. In society he is delightful. His conversation positively sparkles with good sayings, and is interesting, from its gay profusion of the most apt and well-told anecdotes. His courtesy is winning to a degree. He apologizes more readily and gracefully for the most trifling accident than any gentleman in Europe. You feel positively under an obligation to him for having inadvertently trodden on your toe, or inserted his elbow in your ribs in a crowd. He is so

accomplished a linguist, that you would inwardly confess he speaks your own language better than you do yourself. All languages, indeed, seem to come natural and easy to him. Then he is a traveller, and such a traveller! He speaks with equal familiarity about the North Pole and the Tropics. He tells you precisely what you wish to know. In a few pungent sentences he raises a picture in your mind of any place or person, a picture of such finished and perfect accuracy, that time will try in vain to efface it. He is certainly not a literary man, yet he is said to be the author of one of the most remarkable pamphlets of the day, and his information on literature is astounding. He knows the policy and public men of every state in Europe thoroughly. He has dined with them, and he knows more about them than you and I, who have lived familiarly with them all our lives. This is not pretence or fanfaronnade; his knowledge is perfectly submissive to good taste; it is never brought forward intrusively, but it comes at the first call when wanted, and it is perfectly sound. He would tell you something new of Lord Byron, or of your own brother, which would put his character before you in a different light to any in which you had hitherto considered it. From the intricacies and oddities of the British constitution to the last raw theories of the newest republicanism in Germany, and the private opinions of Rudolph, the fifty-second hereditary Margrave of Noodleland, everything is equally familiar to him. He has not the smallest prejudice on any subject whatever. You cannot argue with him, his ideas are so fluent, and appear so reasonable when uttered, that panting dissent toils after them in vain. He appears to have considered every scheme of government which has ever attracted the attention of mankind. He believes that of Russia to be the best. He does not quarrel with you for thinking differently, if you really do so. Every man may enjoy his own opinion, and he respects yours, though he cannot partake of it. Such is the dazzling surface of the character of many among the higher classes of the most extraordinary people in the world; but go deeper, and you shall marvel at the low depths of its infamy and disgrace, the completeness of its rottenness and corruption. He is an incarnate falsehood, a backbiter, with malicious intent, a most notable slanderer. He has no high and inspiring creed, no soul, no heart; but he has the jargon and seeming of them all. He utterly despises and sneers at the honour of women. He would connive at the shame of his wife, his sister, his mother, or his child, for his interest or convenience, without the smallest scruple. He would dishonour the hearth of his kinsman or best benefactor, by means which would send

him to the galleys. He would commit a burglary unblushingly, if it was not likely to be brought home to him. He would cheat at play. He would dextrously pick the pocket of his mistress in folding her to his breast. He would receive the wages of crime from her without a pang. He would poison her mind till it became as black as his own. He would give her aid and counsel in the slow murder of her husband, if any gain were to be got by it. His philosophy is pure materialism; he does not believe in anything but the present moment. His idea of the last crowning glory of human ambition is to have £50,000 a-year, and live at Paris. Whist, opera-dancers, dinners, suppers, music, dancing, and wit; his notions of perfect happiness do not go an inch beyond. Though an unrivalled diplomatist, and as clever as Brunow in acquiring popularity and influence under difficulties, he secretly votes the whole thing a bore, and would be much rather left alone to shine in his own way. He knows far too well the nothingness and uncertainty of place and power to covet it very much. He would rather be a philosophical looker-on, always having the last news from the best sources, however, and hand and glove with everybody, so that he could just pull the strings of political puppets now and then, and make them dance for his amusement. In other respects, he would take no interest in public affairs. He acts upon the same convictions at Sebastopol or Paris. He covertly laughs at the whole thing; he does not really care two pins about the issue of the struggle, except so far as it may affect his social position in Europe as a Russian officer. For the rest, he despises alike as fools those who are fighting with him or against him. He knows the commencement of the bother was a mere personal pique, or a political pretext for doing something that was exceedingly hazardous. He has not a grain of military enthusiasm; but if a poor or obscure man, he welcomes the war readily enough, as a possible means of personal aggrandisement. As for the danger, he neither thinks nor cares much about it. What is the use of living if you cannot have £50,000 a-year, and live in Paris?"

Little more than twenty years previous to the campaign, the close of which the previous chapter narrated, a Turkish army on the Danube was thus described:—"The camp-followers of a Turkish army were most numerous. Not alone those high in authority and their servants accompanied the vizier into the field, but also the whole retinue of the pasha,—the kadiasker, or judge—the post, which was served by Tartars—the imams, or clergy—the dervishes, or monks, and a whole array of servants, mechanics, dancers, jugglers, and other vagabonds, swelled the mass. As tents, provisions of corn,

oxen and sheep and even hundreds of dogs, accompanied the army, the number of beings was enormous. This mob of human beings and animals was under the command of the bonaldbaschi, who had under him hundreds of assistants." How very different was the organisation of the army of Omar Pasha! He had the same elements to control, the same prejudices to soothe, and innumerable impediments arising from factions at the seat of government, yet his troops assumed the power and dignity of an army under the guidance of his genius. The dress and equipment were regulated by government, and were introduced by the late Sultan Mahmoud, but Omar made several important improvements in both apparel and arms. The equipment has been thus described:—

"The clothing of the new infantry represented the transition from the oriental to the European dress: it consisted of a woollen waistcoat, over which was a broadcloth coat, reaching to the hips, and fastened in front with hooks and eyes. Instead of the turban, the shubarra was used, a sort of cloth cap without a rim, shaped like a melon, and of various colours. A red shawl, girt many times round the waist, protected the body. The Asiatic trousers were retained; they were of dark cloth, wide and loose as far as the knee, and then forming a sort of half-gaiter. The gaiters were made of impervious felt, the shoes very broad, and mostly of red leather. The felt cloak had a hood, which in bad weather served as a covering to the head, and in fine weather hung down the back. The musket, of French calibre, and provided with a bayonet, was mostly of Belgian manufacture; the sabre very crooked. The cartouch-box was a novelty. The arms and the clothing were altogether well suited to the nature of the troops, of the climate, and of the soil. Although it was difficult to teach this infantry regular movements in compact bodies, nevertheless we shall see later, on occasions when their courage carried them away, and they threw off the severe control placed upon them, that they could charge the foe with their old impetuosity. The cavalry were clad in a similar manner: they were armed with a broad, crooked falchion, a carbine, and pistols. They were drilled into a sort of discipline, but could not manœuvre, or charge in a compact body. The impetuosity of the old Turkish mode of attack was not yet quite broken. The horses, especially those of the Asiatic Spahis, were small, but fiery, well broken, capable of enduring great fatigue and privations. The Kurdish and Cappadocian horses were accustomed to be picketed, and to bear the mid-day heat and the midnight cold. They were only watered once a-day, and kept

in condition without barley, when fed on the coarsest fodder. The light and easy-fitting palanu, or saddle, made of felt, remained on their backs day and night; so that the horseman was ready at any moment to mount. The bit was very severe for so well-broken an animal, and was intended to stop the horse suddenly in mid career, or to wheel him round in a moment. The bar of the bit was often five or six inches long, and instead of the curb chain there was a ring. The round shoe was admirably suited to its purpose. The steel was forged cold, was thin and light, lasted five or six weeks, and protected the hoof admirably on stony ground. Although they use no cruppers, the Turkish horseman rides down the most precipitous places, covered with brushwood or trees, at full gallop. They ride only stallions, as the mares are kept at home for breeding, and are very dear. Although the Turks had made great improvement in their artillery, still they were very far behind." They had, however, adopted the Prussian system shortly before the war broke out, and as orientals rely much upon this arm of the service, especially Turks, a very happy moral effect was produced among the troops when they saw the excellent practice of their gunners. The destructive play of the Ottoman cannon in the first combats upon the Danube, and especially at Oltenitza, gave the soldiers of the whole army confidence, and greatly increased the chances of victory in subsequent encounters.

There is a great moral difference between the soldier of Asiatic, and the soldier of European Turkey. The latter, like the Egyptian, becomes a smart, slim fellow, and wears his costume *à la militaire*; the Asiatic never looks like a soldier, and seldom acts like one. He is dirty, slovenly, bloodthirsty, and insubordinate. He is lazy beyond all belief, and a bigot without conscience or religion. In war he is often a coward, yet upon occasions he starts into a fitful activity, and fights with ferocity. Place him behind a stone wall, or even a bank of earth, and he will contend for it against all odds; bring him into the open field, and he, and thousands of his fellows, will turn from one-tenth the number of the hated Muscovs. The European soldiers of the sultan, well officered, are, on the contrary, more than a match for the Russians, not only in the field, but when the latter are protected by works. For obstinate defence of a position, for active movement on the plain, for a brilliant storm, and for enthusiastic courage everywhere, the European soldiery of the sultan far surpasses the soldiery of the czar.

We must now turn from the records of beleaguered city and hurrying hosts, to the deeds of brave men on another element.

CHAPTER XXIII.

THE ALLIED FLEETS IN THE BLACK SEA DURING THE ENCAMPMENTS OF THE TROOPS AT VARNA, AND THE RECONQUEST OF THE PROVINCES BY OMAR PASHA.

"Hearts of oak are our ships,
Hearts of oak are our men;
Sailors, be steady!
Aye, always be ready,
To fight for old England again and again!"—*Old Sea Song.*

DURING the war between Russia and Turkey, in 1828-9, as the army of the former power advanced into the Dobrudscha and Bulgaria, its fleet co-operated, and thus the Turkish ports north of the Balkans were seized and made subservient to the general objects of the Russians, by enabling them to land provisions where they pleased, and thus supply their troops from their own resources in the Crimea and the Sea of Azoff. In this way Kustendje and Mongolia were made the bases for the march to Bazardjik, Kavarna and Baltschick supported the siege of Varna, and the last-named place, when conquered, afforded a harbour for the Russian transports and vessels of war, and a point of support for the army which was advancing to the Balkan. The Russians afterwards seized Sizopoli with a few ships of war and gun-boats, and thus secured the very best harbour and the strongest position on the western coast of the Black Sea, and a new point of support when their armies, forcing the passes of the Balkan, should descend its southern slopes into the fertile plains of Roumelia. The success attending these operations of the Russian squadrons will illustrate the importance to Turkey, and to her allies, of the sovereignty of the Euxine: indeed, in all ages *that* decided the sovereignty of the countries upon its shores. When the Turks overran the Dacian provinces, they would scarcely have succeeded, so brave was the resistance they encountered, had it not been for their command of the sea. In like manner, when the northern hordes were most successful in their incursions upon the Byzantine Empire, it was when those "Arctic fleets" (as Gibbon calls them), which figure so prominently in the history of these expeditions, were mainly relied upon by the adventurers for success.

In the summer of 1854, the Russian fleet, which had taken so many years, and so much labour and treasure to create, was locked up as it were in Sebastopol; except the adventurous *Vladimir*, which cruised about, eluding the vigilance of the allied admirals, and capturing her prizes at the very mouth of the Bosphorus. It is perhaps impossible to give an exact amount of the naval power of Russia in the Euxine at the time of which we write. There are various statements extant, and the

differences in them are considerable. We will select two, and our readers will then be able to judge for themselves the probable statistics. Haxthausen is now a very fashionable authority on all Russian questions of fact. He represents the Black Sea fleet as consisting of three divisions, each of which comprises ordinarily one three-decker, eight two-deckers (among the last, two ships mounting each 84 guns), six frigates, one corvette, and four smaller vessels; according to which statement the Black Sea fleet was composed, in 1843, of three three-deckers, nine vessels mounting each 84 guns, seven 74's—in all, nineteen ships of the line—besides six frigates, eleven corvettes, brigs and schooners, six steamers; otherwise—

3	120-gun ships	360 guns
9	84 "	756 "
7	74 "	518 "
Total 19		Total guns	1634

They actually carried, however, in all 1464 guns. The names of the three largest were the *Twelve Apostles*, the *Three Saints*, and the *Warsaw*. There is only one larger ship than these in the Russian fleet—the *Russia*, 130 guns, in the Baltic fleet.

Mr. Danby Seymour is more precise, and furnishes us with what purports to be a complete list of the Russian naval force in the Euxine in 1854. It is as follows:—

Name of Ship.	No. of Guns.	When launched.
Silistria	84	November 1835
Sultan Mahmoud	84	October .. 1836
Tri Svetiteli	120	August .. 1838
Tri Hezarhef	84	August .. 1838
Gabriel	84	November 1839
Selafael	84	July 1840
Uriel	84	October .. 1840
Twelve Apostles	120	June 1841
Varna	84	July 1842
Yagudil	84	September 1843
Rostislaf	84	November 1843
Sviatolaf	84	November 1845
Hvabri	84	July 1847
Tchesne	84	October .. 1849
Paris	120	October .. 1849
Grand Duke Constantine	120	September 1852
Empress Maria	84	On the stocks
Bosphorus	120	On the stocks
—	120	On the stocks
—	120	On the stocks

* These ships are probably at Nicolaieff, not at Sebastopol, and are unfinished. All the steamers, except the *Grozm*, *Severnain Zeezon*, *Molni*, *Meteor*, *Ordinaretz*, and *Skromni*, were built in England. The *Pruth*, which is in the Danube, was built by Mr. John Laird.

THE BLACK SEA, AND SURROUNDING COUNTRIES.

FRIGATES.

Name of Ship.	No. of Guns.	When launched.
Flora	44	September 1839
Messembia	60	October .. 1840
Sizopole	54	March 1841
Medea	60	September 1843
Kagul	44	September 1843
Kovarna	52	September 1845
Kulefeli	60	September 1847

CORVETTES.

Raylades	20	June 1840
Andromache	18	July 1841
Calypso	18	September 1845
Orestes	18	October .. 1846
Ariadne	20	August .. 1853

BRIGS.

Mercury	18	May 1820
Argonaut	12	September 1837
Themistocles	16	November 1837
Perseus	18	June 1840
Endymion	12	November 1840
Nearchus	12	November 1840
Euroas	16	July 1842
Ptolemy	18	September 1845
Theseus	18	September 1845
Achilles	16	September 1845
Orpheus	16	September 1845
Jason	12	October .. 1850

SCHOONERS.

Gonetz	16	March 1835
Latoslika	16	June 1838
Smelaya	16	May 1839
Drotig	16	June 1839
Zabiaka	16	August 1839
Ureilaya	8	September 1845
Skulchwaya	8	September 1845
Opil	16	September 1852
Soudjuk Kale	10	Formerly the Vixen, taken in 1837.

CUTTERS.

Struya	12	July 1835
Luteh	12	July 1835
Legki	12	September 1835
Nerok	10	July 1839
Skori	12	September 1845
Pospeshnoy	10	September 1845
Provornoy	10	September 1845

YACHTS.

Strela	10	April 1835
Orianda	10	May 1837

BOMBARD.

Peroun	July	1842
--------------	------------	------

STEAMERS.

Name.	Horse power.	Name.	Horse power.
Vladimir	400	Peter the Great	100
Bessarabia	260	Andi	100
Gromnosetz	260	Dargo	100
Crimea	260	Danube	100
Odessa	260	Pruth	100
Chersonesus	260	Berdeansk	90
Elbrus	250	Taganrog	90
Yenikale	180	Inkerman	90
Taman	180	Molni	80
Bayetz	136	Meteor	60
Mogutehi	136	Ordinaretz	60
Molodela	136	Skromni	40

Grozni	120	Vogin (Warrior)	250
Severnain Zvezon	120	Vitiaz (Hero)	250

GUN-BOATS.

Twenty-eight gun-boats, built between 1841 and 1852 for service in the Danube.

TRANSPORTS.

Thirty vessels, measuring 10,627 tons, built from 1837 to 1852.

Much blame was imputed at home to Admiral Dundas that he did not bombard Sebastopol; and many men, even of judgment and reputation, believed in the practicability of reducing the place to a heap of ruins by the action of the fleets alone. An officer writing from the fleet soon after the gallant cruise of the *Fury* (related in a previous chapter), and which exploit he witnessed, discusses this subject in the brief compass of a letter as fully as, for popular purposes, it is necessary to discuss it.

"These Russians tell us that there are 50,000 artillerymen at Sebastopol, and that they are practising at a target in the harbour day and night, in hourly expectation of seeing us there. Of course, it would be madness to lead the ships into such certain destruction. They say, also, that there are 60,000 soldiers at Odessa, and that they are placing heavy guns in the Mole battery, and otherwise working hard at strengthening the batteries there. Thus, if their ships (apparently but twelve or fourteen of the line) went come out of Sebastopol, it is not easy to see what there is for the fleets to do. The posts still held on the coasts of Circassia are sufficiently formidable to give trouble. I see by Chesney that Anapa resisted eight Russian line-of-battle ships, five frigates, and eleven smaller vessels, with a land force of 6000 men and a reinforcement from the army of the Caucasus, from the 18th of May to the 8th of June, 1828. Souchoum-Kale is also said to be formidable. Therefore, if we cripple six or seven of our large ships by exposing them to a contest with powerful land forts, we lose our numerical superiority, and in these days that is no trifle. Modern improvements in gunnery tend to equalise matters, and to render mere bravery less decisive. The people of England will be impatient if something is not done, but, without being in the counsels of the admirals, I don't see what they can do. If I had the management, I would show the whole force all along the Circassian coast, in the hopes of exciting the mountaineers to action; *en passant*, I would take anything tolerably easy, but I would not be decoyed into anything very serious, or likely to cripple large ships. I would then extend a strict blockade from Sebastopol towards Odessa, keeping a few flying steamers about the mouths of the Danube, and about Kaffa and Kerch, in the Crimea. Thus the Russians would be completely shut up, and unable to communicate with their armies or forts on either side by sea. They made so much use of the sea in 1828 and 1829, that it is pretty clear they cannot now safely cross the Balkan deprived of that advantage. They even seem to have great hesitation in advancing on the right bank of the Danube; for they do not appear to have advanced, for the last ten days, beyond their first landing-places in the Dobrudscha, Tultscha, Matschin,

and Isaktchi. Thus the presence of the fleets is invaluable, even if they never have the chance of firing a shot, and are reduced to tedious blockading. The Russian frigates at Sebastopol got under weigh with uncommon smartness (just while the *Fury* was laying out her hawser), and sailed beautifully; so that it went do to hold the enemy too cheap, and to be outnumbered by crippling your ships, and coming down to or under their number."

It is necessary, however, to a just conception of the question so well argued by the officer thus quoted, to remind our readers that, even if a bolder policy had been adopted by our admirals, and the loss of a number of ships had been incurred, with the infliction of proportionate injury to the ships or arsenal of the enemy, the advantage would have been ours, for we could have replaced from our reserves even a very heavy loss. This will be obvious to any impartial person, from the following statement taken from the *Portsmouth Guardian*, a very competent authority:—

"OUR NAVAL RESERVE.—A full account has been given of the powerful fleets which have been designated for service in the Black Sea and the Baltic. We do not suppose it likely that they will prove inadequate for the hot work they will have to encounter; but even if they do, and supposing both of those magnificent fleets should be destroyed, we have ample material in our home ports to supply their places. From our ships in reserve and building, we could form a naval force far surpassing that which any other nation in the world can boast of having afloat. We have in reserve, at the four ports of Portsmouth, Devonport, Chatham, and Sheerness, not less than 161 vessels of the 'effective ships of the royal navy,' and these estimated to carry not less than 6807 guns. Besides these, too, we have a goodly number of paddle-wheels and other small craft. Though some of the vessels may not, without considerable repairs, be in a state to send to sea, yet most of them are excellent sea-going vessels—far superior, indeed, to anything Russian—and could be fitted out for service on very short notice. Then we have of vessels building—five at Portsmouth, seven at Devonport, one at Sheerness, six at Chatham, eleven at Pembroke, four at Deptford, four at Woolwich, and one at Millwall. Total, thirty-nine."

Whatever may have been the wisest course—whether, by a more dashing use of the fleets, to risk more and perhaps lose considerably in the attempt to inflict greater injury upon the enemy, or to maintain merely a marine sentinels over the great naval arsenal of the czar,—the latter was the plan adopted by the navy, until, far advanced in the autumn, it was employed in conducting the expedition from Varna to the Crimea. That the Russians expected a

bolder line of action from the British navy, was evident from the alarm experienced all along their coasts. After the bombardment of the Moles, at Odessa, the state of apprehension there was continuous, and the terror was communicated along the Bessarabian shores to the Tauric Bosphorus. A Constantinople newspaper* thus describes the alarm of Odessa, and the contiguous coasts, while the events already related were occurring in the Dobrudscha, and spreading grief and fear through the provinces, whether occupied by Russ or Turk:—"From Odessa we learn that everything indicates care and anxiety. Trade is at a stand still, and credit has disappeared. Every one is a seller, but there are no purchasers of anything to be found. The garrison was kept regularly up to 30,000 men. The Russian fleet was lying *perdu*, but in full force, at Sebastopol." The dominancy of the Euxine by the navies of the Western powers was very humiliating to the pride of the czar and of his people. The St. Petersburg journals, at this juncture, perpetually taunted England with allowing "Malta to become a French garrison, and the Mediterranean a French lake." And it was argued again, in strange contradiction of these invidious articles, that England, by her possession of Corfu, was a standing menace to Austria; by her possession of Malta, menacing both France and Italy; and by holding an impregnable fortress at the mouth of the Mediterranean—that of Gibraltar—she had become dangerous to Europe, and had made that inland sea an *English lake*. In the United States, Brussels, and even France, these articles of the St. Petersburg press and government were reprinted, their arguments reproduced, and every ingenious and plausible theme taken up that would, in connection with this maritime ascendancy of the Western powers, sow dissensions between them, and also between Austria and the Italian States. The French government press condescended to repel these insinuations, and the *Constitutionnel* put forth the ablest article on the subject published in Europe. It was at once short, clear, comprehensive, impartial, and eloquent, and will set before our readers, at a glance, the importance to the western European states of maintaining the two great inland seas—the Mediterranean and the Euxine—free to the commerce of the world. "It has been said that the Mediterranean is a French lake. That definition, which betrays our national pride, is certainly not correct. The Mediterranean is a European lake, and it is on it that has long taken place the

* It will probably be new to most persons in England to hear that Constantinople is a city surpassed by few in Europe for the number of its periodicals. It is also a city of great political gossip, notwithstanding the gravity of the Turks.

conflict of industry and commerce, the wants of which evidently inspire, and are predominant in, the greatest number of international questions. The Mediterranean has again become the necessary path of the trade of the world, and all the nations aspire to have a suitable place on a theatre on which the greatest interests of modern states are developing themselves. If Russia seeks each day to increase her preponderance at Constantinople—if the ambitious policy of the czars is incessantly advancing towards the conquest of Turkey, it is only for the object of appearing in her turn with her fleets and influence in this great internal sea. If Austria desires to strengthen her authority in Italy—if not long since she supported Montenegro when in insurrection against the Porte, it was to assure to her ports in the Adriatic, or to direct towards herself by the ports of southern Italy, a great part of this gigantic transit which is constantly pouring in from the east towards the west. If England endeavours to maintain and increase, by important industrial undertakings, her influence in Egypt, it is in order to preserve the passage of Suez, which opens the road of the Mediterranean to its exports from India, as Gibraltar in the west insures a free passage to her vessels in the Atlantic. If, not long since, the Sardinian government hastened to concede the railway from Turin to Chambery by Mount Cenis, it was, as we then demonstrated, to direct towards Genoa a considerable current of commercial activity, and to give to that port a sort of maritime preponderance tending to absorb the transit which passes at present by Marseilles. Thus, all these nations exert themselves to draw to themselves the enormous commerce of which the Mediterranean is already the centre, and which is every day increasing. Let us be permitted to affirm that there lies the real question of the East; and if the affairs of Turkey pre-occupy to so great an extent the political world, it is only because an important state is menaced in contempt of treaties, and of the sacred principles of the right of nations; it is because every one comprehends that if the pretensions of Russia could succeed—if the Ottoman Empire should be struck out of the list of nations—if the Russian territory were to advance to the Archipelago, there would on the instant take place in the economical situation of modern societies, and in the conditions of maritime commerce, a profound revolution."

The "*sic volo sic jubeo*," in which the czar delighted so much, was no longer to be permitted upon the shores and waters of the Black Sea; accordingly, the Turkish fleet cruised in force along the eastern coast, in sight of the Caucasian population, who were thereby encouraged to stand to their arms, and hope for more extensive co-operation in their des-

perate and glorious efforts for liberty. The blockades of Sebastopol and Odessa were ordered by Admiral Dundas to be maintained, he himself says, with strictness. Mr. Layard, in the House of Commons and in the *Times* newspaper, affirmed that neither the orders nor the action of the venerable Admiral displayed any earnestness to cripple the Russian power. Be that as it may, the *Vladimir* broke the blockade, as already mentioned, and cruised about with a skill and courage worthy of even the British navy in its most adventurous days. In the subsequent defence of Sebastopol, the captain of the *Vladimir* was as gallant as when he roamed the sea. The *Caton* and *Furious* were detached from the British fleet to explore the coast of the Crimea south of Eupatoria. The *Caton* fell in with three Russian vessels laden with grain and salt, and captured them; the *Furious* made a prize of another with a similar cargo. Two of the vessels were sent to Constantinople, the other two were scuttled. The allies repeatedly resorted to stratagem to lure the Russian fleet out of the harbour, such as keeping a portion of their ships out of sight; but the Russians knew where they were safest, and stayed there.

On the 12th of May the *Tiger*, *Niger*, and *Vesuvius*, British war steamers, were cruising off the Bessarabian coast, near Odessa, when a heavy fog coming on, the *Tiger*, 16 guns, was stranded. Two companies of Russian infantry, a platoon of Lancers, and eight position field-pieces were immediately directed against the ship, which, being helpless upon the shore, could make no defence. The Russians opened a sure fire of cannon and musketry, without even an attempt at making prisoners of the *Tiger's* crew. It was a murderous and cowardly attack—a Sinope on a small scale, the Russians showing the same thirst for blood. Captain Giffard, who was in command of the *Tiger*, very uselessly and improperly, as we think, refused to surrender, and resolved to perish there under the fire of the Russian guns. His manly spirit could not endure the idea of striking his colours. He was disabled by a shot, which shattered his left leg; a splinter of a shell afterwards wounded his right leg. The command then devolved upon his first lieutenant, who perceiving that the shots directed from the uplifted broadside of the ship flew over the Russians, humanely and prudently resolved to save, if possible, the lives of his men and that of his wounded chief, and surrendered. His crew were then removed as prisoners of war, but the Russians were disappointed in making a prize of the ship, for the consorts of the *Tiger* were descried bearing in through the fog. The Russian soldiers were removing some of the ship's cannon, when the broadsides of the *Niger* and *Vesuvius* opened upon them. The

field-pieces then directed red-hot shot against the *Tiger*, set her on fire, and she was soon consumed. The British vessels drew off, and the prisoners and the few guns secured were brought in great triumph to Odessa. The Russian loss was exceedingly small. Captain Giffard, twenty-four officers and warrant officers, and 200 sailors, were made prisoners; several officers, and still more men of the crew, were killed and wounded. The rejoicing at Odessa and St. Petersburg for this exploit of capturing a few hundred defenceless men was ludicrous. The treatment of the prisoners was humane: General Osten-Sacken and his amiable and accomplished lady did everything to lighten the burden of their calamity, and soothe their regrets. Captain Giffard subsequently died of his wounds, while his faithful wife was on her way to minister to him. She wished to receive his body, and carry it home to the burial-place of his fathers, but political circumstances prevented. The Russians paid a generous tribute to his valour, burying him in Odessa, on the 2nd of June, with military honours. Nearly the whole garrison turned out to honour the sepulture of the amiable officer who had conciliated the respect and esteem even of his enemies. His brother officers and crew were permitted to follow his bier as mourners, and truly they were such, for he was as humane and gentle as he was gallant. A brief and authentic account of this disaster was given by the *Tiger's* surgeon, which has rendered it unnecessary for us in the previous narrative to go into more detail.

"Her majesty's steamer *Tiger* struck the ground at a quarter to six on the morning of the 12th, in a dense fog, ship going about four knots. On the weather clearing, we found ourselves within about 150 yards of the beach, under a high cliff. An anchor was immediately laid out with the hemp cable, and the guns moved aft; shot, coals, water, ballast, &c., got out; and every means taken to lighten during the three hours that we were left unmolested. At the end of that time a field-battery of about eight guns opened a most destructive fire upon us, and in about ten minutes the ship was on fire in two places, and the captain and four others struck down seriously wounded. Some of our guns had been thrown overboard; and the only one which we fired could not be used with effect, on account of the extreme elevation required. Under these circumstances, all further resistance being useless, the Russian flag was hoisted in token of surrender, and a boat sent on shore to apprise them of the fact, on which the firing instantly ceased. Orders were given for every one to leave the ship immediately, and to take what things they liked, but, in the hurry, very few availed themselves of the permission; for, as the fog cleared up, the *Vesuvius* was

observed, and we were informed that if we did not come on shore the firing would recommence. Before leaving the ship I amputated the left leg of Captain Giffard, it being carried away at the knee by a shell. The right leg was also severely wounded by a piece of shell, which cut it to the bone. Mr. John Giffard had lost both legs; Trainer, captain of the mizen-top, his left leg; Hood, a boy, was riddled with pieces of shell. These three are since dead. Tanner, ordinary seaman, was wounded by a shell dangerously in various places in the thighs and left hand: both he and Captain Giffard are doing well, the latter suffering more from the wound in the right leg than from the amputation. He suffered much from the long transit from the beach to the town, between five and six miles. We are now lodged in the lazaretto, in comfortable rooms, and nothing can exceed the kindness and attention we receive from every one. We are well-lodged, well-fed, and every want attended to; indeed, we fare much better in point of eating than you can in the squadron after a month's cruise. I am writing this in a great hurry, as I see the *Furious* and *Vesuvius* in the bay with a flag of truce, and I hope to be able to send it. Lawless and myself are both in attendance on the captain, and are allowed to see our own men every day, and there is very little sickness among them. They are all cheerful and well-conducted, and allowed all possible indulgence. Yesterday seven English vessels and crews were liberated by order from St. Petersburg. We want nothing; and the lady of General Osten-Sacken has insisted on supplying any little comforts or luxuries, as jellies, for the captain from her own house. Personal visits have been made every day by the governor and other officials, who are all kindness."

The captive officers were objects of great interest to the citizens of Odessa; they were the "lions" of every party, and were received into all the good society of the place. The Jack-tars did not conduct themselves any better than they would have done at Portsmouth—fighting among themselves, and knocking over a Russian, being very usual pastimes. These eccentricities, were treated with great forbearance, the Russians being of opinion that such proceedings were so natural to Englishmen that they could not avoid so acting. The poorer people treated the tars well, who, having money to spend, found no great difficulty in making themselves favourites with the Russian soldiers, who had none. They were not, however, permitted to remain long in the custody of their captors, as an exchange of prisoners was effected before the end of July, which restored 180 of them to her majesty's fleet. About twenty seamen and

SULINA, MOUTH OF THE DANUBE.

ten petty officers remained behind, there being no Russian prisoners to offer in exchange. The midshipmen had been previously removed to St. Petersburg; and being very young, the czar, with laudable generosity, placed them in the Imperial Naval College, where they were treated with great kindness and respect. Madam Osten-Sacken was as tender as a mother to these boys before they were removed from Odessa. In a word, the conduct of the authorities to the captives everywhere merits the eulogy of civilised Europe. It was everything that became generous conquerors.

The blockade of the Danube was thus notified by Admirals Hamelin and Dundas on the 1st of June:—"In consequence of the passage of the Danube by the Russian army, their occupation of the Dobrudscha, and their holding possession of the mouths and the two banks of the river, we, the undersigned vice-admirals, commanding in chief the combined naval forces of France and England in the Black Sea, declare by these presents, in the name of our respective governments, and make known to all those whom it may concern, that we have established an efficient blockade of the Danube, in order to cut off all supplies intended for the Russian army. All the mouths of the Danube communicating with the Black Sea are included in the blockade; and we hereby warn the vessels of all nations that they cannot enter that river until further orders."

On the 8th of June, the Russian batteries on the Sulina Mouth were destroyed by the frigates of the British fleet, with the exception of a small portion of them, which were taken possession of by the marines. There was at the time, farther up, a flotilla of armed Russian boats, which were concealed. The British repaired the fortifications, and removed the vessels which the Russians had sunk to obstruct the mouth of the river. The navigation was thrown open, except so far as it might be deemed necessary for the purpose of blockade to impede it. On the 7th of July, Captain Parker of the *Firebrand*, attended by Captain Powell of the *Vesuvius*, ascended the river, with three boats and a detachment of sailors and marines, to destroy some Russian works. The fortified village of Sulina was defended by formidable stockades, erected in a reedy jungle upon the river's bank. There a body of Russian troops lay effectually concealed from the occupants of the boats. Captain Parker, in approaching these stockades, supposed them to have been deserted by the enemy. He did not know the tenacity with which Russia holds by every foot of ground which can be defended by covert means. As soon as he came alongside of the stockade, a volley of musketry smote the boats, and a desultory but energetic

fire was maintained after the first general volley was directed upon the intruders. The boat in which the captain sat was literally riddled, and a few of the men were slightly wounded. The gallant but rash commander laughed at the unseen enemies for being such bad marksmen, and put back for the arrival of the other boats. He then led on his little squadron; and landing close to the stockade, he was about to lead his willing followers to the storm, when a bullet pierced his heart, and he fell dead into the arms of Captain Powell, who, assuming the command, led on the men with the same gallantry as his fallen chief. The two Russian officers behaved with a courage quite equal to that of Parker and Powell; they stood in the embrasures of the stockade, encouraging and directing their reluctant men, until the British marines shot them dead where they stood. The Russians must have suffered severely; but a considerable number of Greek and Bulgarian civilians were in the place, and carried inland the wounded Russians as they fell: a number of slain was found in the stockade, but no wounded. Among the dead were several Greeks, dressed as civilians, but who had evidently joined in the defence, for some of them had arms in their hands, clenched in the grasp of death.

The loss of Captain Parker spread gloom through the fleet, and deep grief in his own ship. Like Captain Giffard, he was as humane and sweet-tempered as brave. He was a son of Admiral Hyde Parker, and distinguished himself greatly in the Chinese war. On one occasion during that war, when attacked by three Chinamen, one of whom was well-armed, and a man of herculean size (young Parker being slight in person), he showed much energy and determination. He beat off two of the assailants, but the third and most formidable continued to attack him. His father was a witness of the combat, and was importuned to allow some of the officers about him to go to his son's assistance. The reply was, "Let him alone, he must learn self-reliance, and I must see what metal he is made of." In a short time the young hero returned to his father with the herculean Chinaman, disarmed, and a prisoner. He was only twenty-nine years of age when he fell. An anecdote illustrative of his humanity was thus touchingly related in the public papers of the day:—

"About four months previous to his death his vessel touched at Kustendje, from which place some Cossacks had just retreated, leaving behind them many tokens of their barbarity. One hut contained a pitiable spectacle. In it lay the bodies of a man and woman; and upon the latter lay a living infant, but a few months' old, its tiny hand extended on its mother's breast, and its little wrist lacerated by the

bullet which had deprived her of life. Close by was a little, terror-stricken boy, of about three years old, whose left arm was in a frightful state from the result of no less than five bullet-wounds. Struck with pity at the wretched condition of these Bulgarian children, Captain Parker had them sent on board the *Firebrand*, and properly attended to; at the same time expressing his intention of taking them under his own protection. The poor little things became great favourites with the sailors, who nursed them with more tenderness than could be deemed compatible with their habits and mode of life. On the eldest they bestowed the name of Johnny Firebrand; he was a fine, intelligent little fellow, and soon began to pick up English. The poor children were carried by the sailors to the funeral of their benefactor."

The funeral took place at Constantinople, whither his brave tars carried his body. He was buried on the 12th of July, in the *Champs de Morts*, at Pera. The officers and men of the fleet and army then there, and of the fleets and armies of our allies, followed him to his last resting-place; and the hard-featured tars that followed him fearlessly in battle, wept sorrowfully beside the picturesque spot where his remains were deposited.

During the month of June the fleets were more successful than earlier in the season, in their attempts to coax the Russian ships out of Sebastopol. On the 15th of that month six war-steamers sallied forth in presence of a few of our cruisers. This was very like a challenge from the enemy, and was accepted cheerfully. Several line-of-battle ships and frigates were observed following the steamers out of the harbour. A letter from the engineer who served on board the *Terrible* (British steamer) thus describes the event:—"After we had passed the stronghold the six steamers pursued us. They were crowded with troops. We steamed on full power to windward, as we wanted to draw them from their own street, as it were, so as to be able to give it them right and left, and to be out of the reach of the sailing-vessels at the same time. They chased us for nearly an hour, when the *Terrible* fired a shot from her stern-gun, which fell within a few yards of the admiral's ship. The fire was instantly returned by the enemy; but our captain, not being senior officer, was compelled by the captain of the *Furious* to cease firing until they came closer. In a few minutes more the action became general. I must inform you that at this period things looked anything but pleasant; the captain giving the chief engineer his private papers to burn, if anything should befall him, the chief giving his papers to his assistants, and I, in full uniform, all ready to go as prisoner-of-war

to Sebastopol. But a few of the *Terrible's* shells soon made the six heavy steamers pull up and steam their utmost towards the vessels then sailing out to their assistance. Imagine three steamers compelling six to run! We chased them as far as we could without engaging the whole of the fleet. Thus terminated the first naval engagement at sea between the British and Russian steamers. I must say they fired some excellent shots, well directed, but happily none of them struck us. I saw, very distinctly, one of our shots carry a great part of the admiral's ship's paddle-box away, and I think it was one of our shells that set the same ship on fire."

When relating the events connected with the encampment at Varna, it was our painful task to record the visitation of that formidable scourge, the cholera, which affected the fleets in the harbour and at Baltschick, as well as the armies in the town and encampments. It is here only necessary to say, that during the whole summer the fleets suffered from the pestilence, and from the peculiar typhus by which it is so generally followed. The French navy, like the French in the sister-service, suffered the more, especially in the ships *Montebello* and *Friedland*, on board of which the number of deaths was appalling. Cases occurred off Odessa and Sebastopol, as well as off Varna, and the movements of the fleets were unquestionably impeded by this disastrous visitation; for not only were many men lost by cholera and fever, but the crews generally were weakened, and were, on board some ships, scarcely fit for service. Nevertheless, such was the dauntless spirit of British seamen, that upon the smallest prospect of a brush with the enemy, they seemed to forget the dispiriting and wasting effects of illness, and to kindle up into strength and activity. This was exemplified at the close of the month of June. The fleet was then suffering much from illness, although the ravages of the cholera were not such as were afterwards experienced. A sailor, writing from the general rendezvous of the fleet at Baltschick, thus portrays the affair:—

"We have just returned from a cruise off Sebastopol. On the 21st we sailed from this bay with a fleet of eight English liners (one being a screw—*Agamemnon*, Sir E. Lyons), commanded by Admiral Dundas, and seven French liners (three screws), under Admiral Bruat, with a complement of screw and paddle-wheel steam frigates. At first calms prevailed, so that all the steam was employed in towing. It being found that the *Trafalgar* and *Diamond* dropped astern, they were sent back to Baltschick. A smart contrary gale then obliged us to give over towing, and to beat up; early on the 26th we arrived off Sebastopol. As we had never appeared in so small a line of battle—thirteen—many of the ardent indulged in

visions of glory, and thought that at length the Russian would come out of his den and fight it out; but our four screws were quite enough to shut him up there. The *Fury*, *Terrible*, and a French steamer, were purposely sent in somewhat a-head, so as to arrive at early dawn. The moment they showed themselves there was commotion and preparation in the harbour; steamers sent up tall columns of smoke, to help out the large ships, which unfurled sails, &c. But before they had sallied out to chase away these impertinent foes with an overwhelming force, to be recorded in a magnificent despatch as a grand victory, the signal-man on the hills above descried the fleet coming in; so the steamers moved up into the dockyard creek and put their fires out, the ships furled their sails, and we saw no more of them or their prison from sunrise to sunset of a clear and beautiful summer's day. The sailors were in ecstasy at the beauty of some of their ships, after English models, but larger and handsomer, and preserving quaint, old-fashioned rigging, in use with us thirty years ago. In the evening we stood out to sea, and in the night the *Fury* was sent back to rouse them up by firing a gun. Captain Latham describes the effect as very beautiful. In an instant all the large triple stone batteries were lighted up, and all hands under arms."

These naval skirmishes and frequent reconnoitings of Sebastopol by the allied ships, alarmed the chiefs of southern Russia, and all along the coasts, from the extreme south of Bessarabia to the Tauric Bosphorus, batteries were erected on all salient points, old fortifications were repaired, entrenched camps formed, troops distributed, and stores of provisions and munitions of war deposited. The greatest fears were entertained for Odessa. The Russian government could not conceive that that great

storehouse of Russian resources would be left unmolested after the chastisement so easily inflicted for the violation of the rights of the flag of truce. It is curious that while the allies were so delicate in connection with an attack upon a commercial city, lest they should injure the ships, stores, and dwellings of civilians, the Russian government itself contemplated the destruction of the city as the *dernier resort*, when its defence might cease to be possible. Rather than give the allies the triumph of a conquest, the Russians were willing themselves to fire the peaceful dwellings and the commercial treasure of the place. The issuing of the following order by the governor leaves no doubt of the fact:—

"The enemy is again seen in greater force than before at no great distance from our city. We are armed, and well prepared against any attempts which may be made by them to land; but the guns of his vessels have a very long range. Do not lose courage, but keep wet cloths and hides of oxen prepared to cast them over any shells which may be thrown into the city. Tubs full of water must be kept on the roofs of the houses, so that any fire may be at once extinguished. Should the enemy, however, carry on the war with obstinacy, under protection of his guns, we will retire to Tiraspol, after having reduced the city to ruins and ashes, so that no asylum may be found. Woe to those who may remain behind, or who may attempt to extinguish the fire.

"KRUSENSTERN, Governor."

Before the allied forces embarked from Varna, the blockade of all the Russian ports was effectual, not a craft of the enemy could be seen along either coast, and the union jack and the tricolour waved everywhere in undisputed triumph.

CHAPTER XXIV.

CONSTANTINOPLE DURING THE ALLIED ENCAMPMENTS IN BULGARIA, AND THE CAMPAIGN OF OMAR PASHA ON THE DANUBE.—SUPPRESSION OF THE GREEK INSURRECTION.

"A glorious form thy shining city wore,
Mid cypress thickets of perennial green,
With minaret and golden dome between,
While thy sea softly kiss'd its grassy shore."—ROSE.

VERY grave discussions had been maintained in Western Europe as to the possibility of a *coup de main* upon Constantinople by a Russian fleet and army. These discussions gave place, in the summer of 1854, to others almost equally momentous—as to the possibility of a fleet and army, borne from a Turkish port, dashing at once against the stronghold of Russian power upon the Euxine. Captain Spencer, in his

work entitled *Travels in Circassia*, speaking of the wild hordes attached to the armies of the czar in actual warfare, says "whose glory is war and rapine;" and he represents them as burning with the desire to enter upon any undertaking, however desperate, which promised to conduct them to the capital of the Grand Turk. In another work, *Travels in the Western Caucasus*, the same author attributes

a similar ambition to these men in reference to India:—"The name of India rings as cheerily in the ears of a Cossack or Russo-Tartar, as the merry peal announcing his marriage. How often have we seen these fellows, while bivouacking with the Russian troops on the banks of the Don and the Cuban, at the mere mention of a prospect of marching to the land of pearls and diamonds, caper like so many half-crazed dervishes. Their first step, of course, would be Constantinople and the Levant." In his work denominated *Turkey, Russia, and the Black Sea*, the same author, drawing from the stores of his extensive observation and experience, warns England and Europe that the resources of Sebastopol, and the fleets sheltered there, were such as to make it possible for a man of enterprise to take advantage of the currents and prevailing north winds of the Euxine to transport an army to the Bosphorus. These opinions were entertained by all travellers who had any pretensions to military, naval, or political skill. The Porte was not ignorant of this danger; although the unsoundness of its system of revenue, and the ignorance and venality of its pashas in squandering, or appropriating to themselves that revenue, left such places as Sinope, Varna, and Burgas, without suitable defence, yet the publications of Western Europe, warning Turkey of her danger, were often quoted in the periodical press of Constantinople, which (as we have before shown) is more extensive and influential than is supposed in Great Britain and France. What must then have been the joy of the Turkish government and people when the Russian flag had wholly disappeared from the Black Sea and from the provinces together, and Turkey, for the first time since the days of the imperial and imperious Catherine, might be said to be free from the menace of her enemies! The sultan was lavish in his acknowledgments of the services of the allied fleets, and thanksgivings filled the devotions of all good Mussulmen. Yet all this was tempered with some apprehension of the innovations of Western manners and ideas. The ladies began to wear their *yashmaks* very thin, and very small; the attire of Western Europe began to be affected by the gayer and more cultivated Turks. The continual disturbance of their quiet matter-of-course, by dashing English and French, appalled them. The pasha of Gallipoli was said to have died of fright, and the most patriotic Turks in Stamboul often gravely conferred together as to what would be the result of all these things upon their cherished faith and customs. The erection of the cross over the graves of deceased soldiers by the French, was regarded with wonder and denounced as audacious; and the freedom with which the Franks frequented

sacred places confounded the Osmanli. The sultan conceded to the French ambassador the right of erecting a Roman Catholic church, in terms which seemed to put the climax upon the homage of the government to the power of the Feringhes. After some preliminary compliments to the French, as "the sacred object of his imperial solicitude," the sultan declared—

"I have therefore issued an order, emanating from my imperial divan, granting the permission for building the said church. As soon as all of you—governor, naib, and mufti—shall be acquainted with this imperial order, take care that no one oppose the construction of the church in a convenient spot; and also take care that not a farthing be taken from the Catholics for that purpose. Know this, and obey the imperial sign. Done in the middle of the sacred month of Zelledgi, in the year 1270.
"ABDUL-MEDJID."

Soon after the allied troops sailed for Varna, a warm discussion arose in the Constantinople periodicals concerning the allegation of Mr. Russell, the *Times'* correspondent, that the lines of Gallipoli were chosen after a very brief inspection of the place by Sir John Burgoyne. As the remarks of the *Times'* correspondent cast an apparent imputation upon a general second to none in the British service for skill and valour, we take occasion here to give his own refutation. He thus writes:—"I can excuse his ignorance on the subject of military positions, but it is somewhat unfair to say that Sir John Burgoyne occupied only ten minutes in examining the ground, after I was engaged four days, for six or seven hours each day, in examining the ground. Besides which, I had the report of four officers of my own, and of two French officers, who had been engaged on the very spot. If there was any error on my part, at least, it was not owing to any want of time in the examination of the ground."

In a previous chapter we gave a description of the sultan's chief city when the allied hosts were there, in the spring: a passage from the *Journal* of a British infantry officer will convey an idea of its appearance when these hosts had departed, and their reserves only were stationed in its neighbourhood:—

"As we approached, the rays of the rising sun glanced on the domes and minarets of this splendid city, and from the Sea of Marmora, a magnificent *coup d'œil*, presented itself. The Bosphorus shone like silver in the bright sun, reflecting the high-coloured houses and tall cypresses. Here and there its surface was broken by the passage of merchantmen, and huge transports and steamers. We were soon anchored in the midst of this beautiful scene, and shortly afterwards I went ashore to ascertain

how far the internal condition of Constantinople corresponded with the grandeur of its outward appearance. Grievously disappointed I was: the long narrow streets were swarming with dogs, and the most dirty of the human race, Turks and Greeks, constantly jostled against me, breathing garlic into my very face. Never do I remember making myself so small as when I walked this abominable place. However, our stay here was very short, as we received orders to steam up to Beicos Bay. The next morning, therefore, we started, and were up at four to observe a magnificent sunrise. The surrounding country is very mountainous; and along the sides of the hills, which are covered with tall dark cedars, are terraced gardens, reaching down to the water's edge. We found other steamers at Beicos, full of troops, who had received similar orders to ourselves, and we were very soon anchored amongst them. The village from which it derives its name is situated on the Asiatic shore, and is a small, dirty place, the only good thing there being water, of which there is a delicious spring, close to the edge of the sea. The European shore, on which are the villages of Therapia and Buyakdere, is far more picturesque than the opposite coast. The English ambassador, Lord Stratford de Redcliffe, resides in summer at Therapia. Both are very beautiful places, but I should prefer Buyakdere. The principal houses look out on the water, having nothing to separate them from it but a broad road, and many of them having bathing-houses built far out into the crystal stream. We received orders at Beicos to remain there, as the cholera was raging at Varna, and many men, both of the fleet and armies, were falling victims to it. The *Agamemnon* and ships of war belonging to the allies were lying near Buyakdere. The Sultan's Valley is exceedingly picturesque, and studded with the finest palm-trees I ever beheld. Under these could be seen, at intervals, a small camp of Turkish soldiers, with their neatly-pitched tents of purest white, while here and there a light green one relieved the eye. *Arabas* also, or Turkish waggons, were seen, with their cream-coloured oxen, conveying women and children for their daily drive. They are painted red, or some other glaring colour, with gilt wreaths and leaves all over them, and have awnings and fringed curtains to protect the travellers from the sun."

"The band of the Rifles performed in the evenings: it was a great treat, for it was the finest military band I ever heard. During our stay at Beicos they delighted us very often, and the music sounded sweetly across the water. Every morning before breakfast was employed in bathing. K—— almost lived in the water, being an excellent swimmer; but it was not a

very pleasant place for a bad one, as there was no sand, and the stones were very sharp. The weather now became most oppressively hot, and we were compelled to protect our heads from the scorching sun by winding a long white turban round our straw hats and wide-awakes. Above all things, we found our white cotton umbrellas, which we bought at Malta, most useful. Two of our men died on board ship of cholera; the other regiments around us suffered a good deal more. As we were likely to remain here some time, application was made to the sultan to allow our men to be encamped on the Asiatic shore. This was very soon granted; and we were landed, and made our camp on a beautiful hill, overlooking the Black Sea and the bay in which our ship was lying. Happily the cholera did not visit us here, although the Rifle Brigade and the 63rd regiment (which were encamped some little distance from us) were very unfortunate, particularly the former, whose funeral parties were constantly seen marching down the hill to the place of interment. Our men enjoyed their move very much, and received their rations from the ship, but the officers went on board for their meals, boats being constantly employed in taking them to and from the steamer. The arrangements made by the purser and officers of the *Colombo* were admirable; and to them we are indebted for the comforts and attention we received during the two months we lived on board her. The soldiers were all sent down to the Bosphorus to bathe every morning, after parade, which was a very salutary arrangement. We remained in Beicos Bay until the 29th of August, when we received orders to embark the men and horses; and sailing down to Kulalee Barracks, took the *Shooting Star* in tow, having on board some artillery."

The above is a description by an officer on his way out to the camp at Varna, during the month of August; we now give one, equally graphic, from the pen of a returning invalid, on his way from Varna to Malta, and relating to the same period:—

"On the 5th of August we went on board *Le Caire*; the decks were crowded with officers, who had brought off their invalid friends, and we were waiting for despatches. Most of our passengers were sufferers from Varna, looking wan and weary, as they said, '*La retour de Varna*' would make but a sad song. Then we had poor Colonel Fergusson, of the 79th Highlanders, looking manly and well, with his Highland scarf over his shoulders; and though an invalid, who had suffered severely from fever, yet he seemed at ease, and dined with comfort. At dinner, of course, the conversation was principally of Varna, Shumla, Silistria—Silistria, Shumla, Varna, while ac-

counts of personal suffering illustrated the themes. The army was unoccupied; all about Silistria had been talked over long ago; and though now and then some one would relate how a poor captain, in charge of supplies, was hunting up Lord Cardigan, who himself was hunting up the Cossacks, and how at last mules stood still till his lordship came round on them, as the only chance of fulfilling their mission, with some little anecdotes, half sad, half humorous, anent which there was not much said of a memorable kind, for really, in our miserable plight, self became the subject of interest. The night passed, a hot, weary night; and we were off Gallipoli, when a cry arose; the *femme de chambre* rushed wildly on deck, and entreated some one to go to the English colonel, who had madly rushed from his berth. Poor gentleman! kind hands placed him on his bed, his faithful servant wept by his feet; but in almost as few minutes as my pen records the sad history, that fine and gallant officer, who, but a few hours since, had been among us with cheerful converse, hoping once more in health and strength to tread the heather of his native land, lay a corpse upon his pallet. The colonel's servant, a fine athletic Highland soldier, warmly attached to his master, sobbed over his fate like a little child. His brave heart seemed as if it would break with sorrow; and perhaps a sadder sight was never seen than the passage of that slow boat over the waters of the Sea of Marmora, in which the soldier, bowed down with grief, supported the lifeless body of his beloved and respected master, with his military cloak and his Highland plaid rolled round it."

Many of the wives of both French and British officers, especially of the higher ranks, remained at Therapia while their husbands were at Varna; and such as went on with them there, were glad to return from the desolation and pestilence of the place, which, notwithstanding the beauty of the vicinity, rendered it intolerable. Among the ladies at Therapia, there were two who attracted universal attention: both were wives of French officers of distinction, Madame St. Arnaud and Madame Youssef. Both these ladies were possessed of singular beauty, and were devotedly attached to their husbands. General Youssef stayed a short time at Therapia during the Varna encampment, as he had business to transact with the Porte concerning his "harum scarum" troops, the Bashi-bazouks, over which he exercised command. The general is a remarkable man, and attracted no small share of attention amongst the officers of both navies and armies then in the neighbourhood, and of the high officers of civil authority at Constantinople. He is a noble specimen of a soldier in person, bearing, and spirit. The general was born in

Italy, and when a child was captured by Algerine pirates. He remained there until a young man, when he escaped from his oppressors and joined the French army, then in the neighbourhood, as a common soldier. Displaying great courage and military genius, he rose through all the gradations to his present elevation. When the detachment of the army with which he was connected returned home, he was received in France (a country ever willing to reward the brave) with great *éclat*, and ultimately a lady of fortune and rare accomplishments conferred her hand upon the gallant adventurer. She had been the school companion of Madame de St. Arnaud, to whom she was much attached. Both these ladies formed a friendship for Lady Dundas, the wife of the British admiral.

Meanwhile the allied troops were congregating to reinforce the wasted divisions of Varna, and Turkish reinforcements were on their way to Roumelia and the Balkan passes for the general rendezvous at Shumla, to support the sultan's armies in the Dobrudscha. Some interest was evinced by the people when a fine, well-disciplined Egyptian battalion or squadron entered the Dardanelles, or a mob of fanatical and undisciplined Tunisians, or some strange gang of variously-armed cavalry arrived from the remotest boundaries of the empire. "If we stand on the Tophana bridge," said an observer, "in the early morning, Jews, Turks, Armenians, Greeks, and Arabs, French, Italians, and English, will pass us every moment. The Arab is going to sell his drugs; the Jew his diamonds; the Armenian is anxious about his bank; the Turk is calculating the chances for his opium; the Frank seems in a hurry about everything; and the Greek hopes to overreach them all."

Notwithstanding the air of stolid indifference generally exhibited by the Turks towards the allied troops, when the army was first quartered at Constantinople, and which they continued to maintain to a certain extent towards the reserves, and the regiments passing to Bulgaria and afterwards to the Crimea, this impassive mien would sometimes relax, and they would stand and stare with a deep and thoughtful gravity, or in a quiet way of their own adventure a question, or make a reply, betraying that they felt more interest than they chose to exhibit. A correspondent of the *Morning Chronicle* thus describes their impression of the Highlanders, some hundreds of whom were at Scutari during the autumn:—

"The Turkish and British soldiers stare at one another with unfeigned astonishment. One of the former said he thought our men very fine fellows, and so very neat; 'But what is the use of all this?' said he, 'they cannot speak.' They were eagerly looking about for

something in the shape of a public-house—a thing that does not exist at Scutari; but many had installed themselves in the coffee-houses, and were solemnly sucking the chibouk, and exchanging ideas with the Turks by signs over a glass of raki. An old Turkish dame whom I met was most anxious to know whether they were French or English, and seemed to be labouring under the impression that they were all musicians, on account of the white stripes on their breasts and arms. I told her they were ‘Inglis Askier,’ come to fight the Muskov; at which she broke out into a heartfelt ‘Inshallah!’”

An English gentleman, who accompanied a detachment of French troops from Marseilles at a later period, thus notices the interest which gradually began to be awakened in the Moslems towards the allied troops, although by no means always of an agreeable kind:—

“What irritates and staggers them (the Turks) more than aught else, is to see the Zouaves, half Algerines, half Frenchmen, assuming the green turban, the sacred colour of Mohammed himself, and the valued distinction bestowed exclusively upon the descendants of the Prophet, and the hadji, or pilgrim, to the Kaaba and the Pool of Yemzen. This is taunting them in the most tender point, and it is a bitter pill, which they will not swallow without many wry faces. Although the title of hadji, in Mohammedan countries, is next to that of hafiz, or one who can repeat the Koran by heart with scrupulous exactitude, yet it does not always follow that the pilgrim is an ornament to the society with which he associates; on the contrary, an old Arab proverb recommends excessive caution regarding hadjis. I imagine the taste of the Zouaves will not make the green colour a more remarkable distinction of sanctity.”

The hubbub which the passage of the allied troops kept up at the Porte was not its only disturbance; nor was the grand game of diplomacy which it was perpetually called upon to play, and the cares of its armies, the only additional causes of agitation; besides these chronic maladies of “the sick man,” there were perpetually springing up some new and acute troubles, and “flying Tartars” might be seen flitting between the embassies and the Foreign-office, and the Foreign-office and the seraglio, and away to the provinces—European, Asiatic, and African—each seeming as if his countenance was charged with an expression of interest in fated or imperilled kingdoms. The Albanians, who proved such useful auxiliaries, got up a little insurrection of their own, and harassed pashas and capitains. The Duke of Wellington’s celebrated aphorism, so true as a policy, “a great nation cannot have a little war,” was by no means true as a fact

to the Turkish Empire, for, notwithstanding its greatness, it was fretted by little wars throughout the summer and autumn of 1854. The Servians did not actually draw the sword against the sultan, but their hostile demeanour compelled him to keep considerable bodies of Bosnian troops upon the Servian frontier. In Kurdistan, many of whose wild horsemen volunteered to serve the sultan, and travelled at their own charges to Constantinople to do so, a furious insurrection broke forth, certain chieftains taking occasion of the sultan’s difficulties to defy his pashas, while ready to swear upon the Koran due allegiance to himself. In North Africa intrigues were set on foot by certain beys, subversive of the sultan’s rights, which they were disposed to invade by arms. If the grand seigneur was not a “sick man,” as the Emperor Nicholas had termed him, he was undoubtedly a troubled man, and a very extreme illustration of the apothegm—

“Uneasy lies the head that wears a crown.”

Amongst so many that were faithless, the harassed sultan experienced good faith from one—the Viceroy of Egypt. His ships, his troops, his treasures, were at his sovereign lord’s disposal: from the very beginning of the contest the brave Egyptians were in the van of battle. The only regular troops in the earthwork of the Arab Tabia, at Silistria, were Egyptians. Two Egyptian battalions of infantry, and some field-pieces connected with them, were the most efficient of the regular forces at that city during its wondrous defence.

Mr. Beaumont, in his *Journey from Warington to the East*, thus describes the remarkable man who now rules Egypt in the name of the sultan, but virtually as a sovereign:—“Said Pasha, the new viceroy, who, under the eastern law of inheritance, has succeeded to his nephew, as the eldest male representative of his renowned father, to the exclusion of the nephew’s sons, comes to the throne with the good opinion, good wishes, and acclamations of the country. Would that he may find a counsellor wise as Joseph, and be wise enough himself to follow his guidance! Then will Egypt again become the wonder of the world, and regain the glory which was hers so long. The dispatch of the troops finds the new pasha full employment at present. To-day he inspected the ball practice of the artillery, and I saw him in an open carriage returning from the field. Everybody saluted him, and he good-humouredly acknowledged their salutations in return. The pasha has a round face, with a good-humoured expression, and a jolly rotundity of person. He appeared to be forty years of age, but is not quite so much, his great size making him look older than he is. Mehemet Ali, his father, early foresaw his

natural tendency to corpulency, and determined, if he could, to check it. For that purpose he appointed him a governor, who was to see that he took a specified amount of laborious exercise every day, to send him a daily account of it, and to report any increase or diminution in his weight and size. Like the ancient Gauls, he probably gave his son a girdle, which he was not to exceed. Amongst them, as history tells us, all the youths were required to keep themselves within the compass of such a girdle, either by fasting, by riding, by swimming, or other laborious diversions, and if they still grew so fat as to exceed its bonds, they were not only fined but disgraced. How strange it is to find an Eastern ruler adopting this Western usage! Mehemet Ali's usual success seems to have deserted him here, for his son has far outgrown the dimensions of his girdle, which could never have been of iron—the metal which Herodian says was the material of the girdle used by the ancient Britons—his horse, I believe, thinks it was India-rubber. Some other of the father's instructions have succeeded better with the son, for when he sent him to Paris, he learned the French language, which he now speaks fluently, gained some acquaintance with Western usages, and is disposed to introduce improvements into Egypt. He regards England favourably—has procured an English nurse for his son, and has had him taught our language. Several of his ministers also are English; one of them now in his service has experienced the reverses incidental to office in this country. Two years ago he was one of the ministers of Abbas Pasha, but incurring his displeasure, he was dismissed, and fell into poverty; now he is a minister of state."

It is once more requisite to turn our attention to Greece, where the sultan found his bitterest enemies, not excepting Russia. Indeed, her Greek majesty was more Russ than the czar. While on a visit to Vienna she was accustomed to utter the most extravagant panegyrics on everything Muscovite, and to work herself into fits of passion when naming the Western powers. Her husband worshipped Nicholas as the incarnation of despotism. Whatever promoted the absolute powers of sovereigns, and the subject state of citizens, their Grecian majesties were ever ready to engraft upon their policy. What they practised at Athens, they wished, in the spirit of a true propagandism, to prosper everywhere. The model of a despotic government, "pure and simple," they found at St. Petersburg, and desired to copy it as far as the circumstances of Greece allowed: the *modus operandi* of encroachment upon the territory of other nations they would fain copy from St. Peters-

burg, too, as faithfully as they learned there the process of subjecting their own people to the condition of slaves. Austria saw all this with admiration. To the government of that empire, Greece appeared as a promising specimen of a young state; to the sultan, the Greek royal pair were very ill-conducted neighbours; and to the allies, Greece was like a thorn in the foot, sharp and sore, although so small. In a previous chapter we discussed the proceedings of the Porte in expelling Greek subjects from Constantinople, and showed how diplomatic relations had ceased between the two governments; the Turkish Minister for Foreign Affairs, in sending to the Greek minister his passports, thus vindicated the policy of the Porte:—"It appears, from positive proofs, that it is not through mere negligence, but through the toleration of the Greek government, that the frontier provinces of the empire have been just invaded. Orders have been given to the proper authorities to facilitate the departure of those Greek subjects who are poor or destitute, and to show as much indulgence as possible to those who are sick or infirm. It is my duty once more to repeat, that it is the Greek government alone which has created the necessity for this determination, and that the responsibility of it must rest entirely upon Greece." To this the Greek minister, M. Metaxa, replied, protesting against the decision without assigning any grounds for his protest, except the hardship of the case to those immediately concerned, but evading all recognition of the facts that the persons expelled by the sultan were pecuniary supporters of the conspiracy, and deeply implicated in it; and that the Greek government had been proved to be a party to the promotion of insurrection in the sultan's dominions. No person could read the brief debate in the British House of Commons, on the 28th of April, 1854, in which Mr. Layard and Lord John Russell took prominent part, without arriving at the conviction that the facts which had fallen under the review of the Turkish government, and the governments of its allies, left no doubt of the guilt of the Greek king, who pretended that he was destined by Heaven to deliver the rayahs from the yoke of ages, and to resuscitate the Greek Empire. In the face of indisputable proof that the Greek government had liberated its prisoners, and sent bands of robbers loose upon the Turkish territory—had sat in the councils of the insurrectionary committee at Athens—had supplied money to the agents preaching rebellion in Thrace and Macedon—had connived at the officers and soldiers of the Greek army entering the ranks of the insurgents, the minister of Greece had the effrontery and hypocrisy to write such language as the follow-

ing in reply to Redschid Pasha's despatch:—"There is a tribunal higher than either Greece or Turkey, whose judgments are unerring, and whose decrees are infallible. It is to this Supreme tribunal that Greece appeals; for to that alone it belongs to decide whether Greece and its government ought to be held responsible for the evil consequences of the existing state of things, because discontent has provoked the inhabitants of Epirus and Thessaly to revolt; and because, on this occasion, sympathies have been manifested in Greece favourable to a movement made by co-religionists, by countrymen, and by relations." This appeal to Heaven could not have been made either from the consciousness of innocence, or on the supposition that the governments of Europe were ignorant of the guilt of him who uttered it, and of the government whose mouth-piece he was; but still copying Russia in appeals to Heaven on behalf of "Holy Russia" and the "Orthodox Church," M. Metaxa hoped, by this sanctimonious assumption of a just cause, to please the Greek clergy throughout the sultan's dominions, and, through them, to impress upon his subjects, from the Danube to the Dardanelles, the deep interest Greece and its king took in their cause.

Of a piece with the hypocrisy of the foregoing, were the circulars issued by the Ministry of the Royal Household to the Greek agents in the different cities of Europe. They are pervaded by the pretence that the sympathy of the subjects of King Otho, for the insurgents of their race and religion in Turkey, was beyond the control of the Greek government, whereas the latter openly stimulated it. The Greek minister, also, hypocritically takes credit for not retaliating on the Porte, by expelling Turkish subjects, when he knew well the subjects of the sultan residing in Greece were seldom Mussulmen, but generally members of the Greek persuasion and race, and co-operators against their sovereign with M. Païkos and his king. The perusal of some portions of these documents is essential, however, to an impartial consideration of the quarrel. Their style is prolix, much being introduced into the principal one irrelevant to the facts and the argument professedly based upon them, which we therefore suppress.

Athens, 5th (17th) April, 1854.

"Ministry of the Royal Household and of Foreign Affairs.

"SIR,—The disastrous measures which the Porte has just adopted against Greek subjects and their interests, as I have informed you in my despatch of this day, gave us without doubt the incontestible right of reprisal by means of analogous measures, without, at the same time,

departing from the rules usually observed in similar cases. But it was repugnant to the king's government to act thus, or, in imitation of the Porte, to injure the subjects of the Ottoman Porte, whom it could not reasonably consider as responsible for all the rigours committed in Turkey against our countrymen and our commercial navy.

"After the Sublime Porte had broken off the political and commercial relations between Greece and Turkey, and abruptly expelled our consular agents from the Ottoman territory, the government of the king could no longer permit the consular authorities of the Porte to continue in the exercise of their functions in Greece. But while giving to the prefects the order to withdraw the *exequatur*, and to signify to all those who belonged to that body, and who were invested with an official character, to quit the country, it has at the same time declared that Turkish subjects may continue to reside in the kingdom, and that the vessels under the Ottoman flag shall be received in Greek ports, in order to carry on freely their commercial operations, as before; and both are placed under the protection of the Hellenic laws.

"I have the honour to transmit to you herewith copies of the circular I have issued on the subject, and in which you will remark, among other things, the solicitude with which the government of the king recommends to its agents to afford all the assistance and facility in their power to Turkish subjects in the conduct of their affairs, as also to the Turkish flag.

"It is now for the nations of the civilised world to judge of the difference which exists in the conduct of the respective governments of the two states. The king's government has limited itself to doing what was strictly and absolutely necessary. It could not, and it ought not, to imitate the Porte in having recourse to measures which are reprobated by the spirit of modern civilisation, and also by the noble sentiments of the nation of which it is the organ.

"Receive, sir, the assurance of my high consideration, &c.

"A. PAÏKOS."

The following is the circular referred to in the above:—

Athens, 5th (17th) April, 1854.

"SIR,—The Ottoman Porte has just adopted against us the most disastrous measures. You are already aware, sir, that the *chargé d'affaires* of the Ottoman Porte at Athens, not having found the answer sufficiently satisfactory which the king's government gave to an *ultimatum* addressed to them on the subject, has quitted Greece, after having announced that the poli-

tical relations between the two governments were broken off. In consequence of a proceeding so abrupt and so unexpected, the royal government could not keep any longer their minister at Constantinople. That functionary received, therefore, the order to demand, in turn, his passports, and to quit that capital with the members of the legation, leaving only the chancellery for the arrangement of the commercial affairs of more than 15,000 Greek subjects who reside there, and entrusting, as is usual in such cases, the protection of the Hellenic subjects to one of his colleagues. The government was all the more inclined to follow that course, as Nessel Bey himself, on quitting Athens, confided the protection of Ottoman subjects to the ministers of France and Great Britain, and he did not declare that the consuls of the Porte in Greece should also quit their posts. You may therefore judge of our astonishment on learning that the Porte, on sending to M. Metaxas, the king's minister at Constantinople, his passports, communicated to him at the same time, in its note of the 20th of March, that (to date from that day) all political and commercial relations between Greece and Turkey were broken off; that all the *employés* of the Greek chancellery at Constantinople, as well as all the consuls of Greece in the Ottoman Empire, must immediately quit; that all Greek subjects, without exception, must also leave Turkey within the term of fifteen days, at the expiration of which no ship bearing the Greek flag should any longer appear in the ports of Turkey. Independently of these measures, the Porte has intimated that it would recognise in no minister of the friendly powers accredited to it the right to protect Greek subjects, and to whom the king's ministers might confide that care. The Porte has also constituted, of itself, a commission to settle arbitrarily the affairs of our countrymen within the term of fifteen days, and to proceed to their expulsion.

"You may easily conceive, sir, the perturbation which measures of so serious a kind must have created in the commercial transactions of more than 15,000 persons established at Constantinople alone, without counting almost double the number of Greek subjects scattered throughout the Ottoman Empire, all engaged in trade and industry, as well as the immense and incalculable loss which must be the result to them. It was in vain that the king's minister observed that, in order to settle interests so extensive and so complicated as those of the Greek subjects residing in Turkey, a period of six months would scarce suffice. The Porte persisted in its resolution. In presence of such enormities, nothing was left for his majesty's minister but to quit Constantinople, protesting at the same time against

conduct so unheard of and so indescribable, and leaving the commercial chancellery for some days only, in order to try to arrange as well as it could the various interests of our subjects, to facilitate their speedy departure, and to issue passports and prepare the papers of our ships. But scarcely was he gone, when the police peremptorily ordered the consul, the director of the Hellenic chancellery, at once to close his office, and to stop all settlement of business. At the same time the commission instituted by the Porte ordered, in a proclamation posted up on the doors of the chancellery, all Greek subjects to present themselves before it for the settlement of their affairs, and forbidding them, under severe penalties, to have any intercourse with their chancellery. Thus, sir, in a few days, Greek subjects are violently expelled from the Turkish Empire. The Greek flag can no more appear in the waters of that empire. The ruin of the fortunes of so many is consummated; and a great number of our countrymen will soon be reduced to misery.

"Such is the conduct we witness for the first time in the recent history of civilised countries. No nation in a state of war with another has ever acted in so outrageous a manner with the subjects of its enemy. In order to show all the animosity against Greece, as manifested in these exceptional measures of the Porte, I might refer to what has always been practised in similar cases between great and civilised nations. I could support my views by the recent example of France, who, though at war with Russia, has nevertheless permitted Russian subjects to continue their residence in their country under the protection of French laws. But I content myself with comparing with those measures the conduct which the Porte itself has observed towards Russian subjects. The Porte has been for the last six months in a state of open war with Russia. Much blood, both on one side and the other, has been already shed on the field of battle; and yet not only has it not during that time expelled Russian subjects from its empire, but even when at the last moment it thought it to be its duty to order them to quit the country, it granted them for that purpose a delay of some months, which delay, at a later period having been prolonged through the intervention of the internuncio of his majesty the Emperor of Austria, did not expire till the middle of April. Still more, during all that period they were placed, and actually remained, under the protection of the said internuncio, when scarcely 150 Russians were found to be residing at Constantinople.

"The conduct of the Porte has been towards Greece, with which it is not at war, much more severe than it has been towards Russia, its declared enemy. The reason,

sir, is clear—it is because the Porte has, unfortunately, never forgotten what Greece was before she became free. That hostile disposition cannot be otherwise explained, which it has at all times manifested towards Greece, notwithstanding all the goodwill which the Hellenic government has invariably shown, in order to render the relations between the two countries more and more friendly. For twenty years that royalty has existed in Greece, and that the independence of the Hellenic kingdom has been recognised by the Porte, it has never ceased to raise up against her every species of embarrassment, and to create obstacles to her service and her commerce in Turkey. Many times have Greek subjects had to suffer from the arbitrary conduct of its authorities in the provinces. It has refused to issue the *exequaturs* of a great number of our consuls, in order that our countrymen should be deprived of the protection absolutely requisite in Turkey, and it impeded the service of those it had been obliged to recognise. I have not now space enough to expose in detail all the wrongs the royal government has endured from the Porte. It will be sufficient to remind you that in two other instances it has again found occasion for harsh measures against our vessels and our merchants, by prohibiting the former from trading in its ports, excluding the others from the corporations of trade, and withdrawing their *exequaturs* from our consuls. It will be then easily understood how at this moment the Porte has seized eagerly on the pretext furnished it by the insurrection of Epirus and Thessaly to resume its arbitrary measures against us, with a force and severity all the greater that it believes it can do so freely, and without any obstacle.

“I have said, sir, that the Porte sought a pretext for such conduct; for, after the answer given to the last note of its *chargé d'affaires*, its conduct cannot otherwise be explained. What, in fact, was demanded in the note of Nessel Bey? To order some officers who, for the most part natives of the insurgent districts, left the kingdom to combat with those of the same religion as themselves—with their brothers—to return to the kingdom within ten days, and to intimate to them that, if they did not obey, their pay should be stopped; to form a commission to try and punish them; to prohibit all armaments in the kingdom in favour of the insurgents; not to permit armed men to pass the frontier; to dismiss certain *employés* for having excited the public mind against Turkey; to disavow, in its official organs, those who openly and publicly (*au grand jour*) demanded pecuniary aid, who prepared armaments, and were members of divers committees in favour of the insurrection; to moderate the language of certain journals, and to establish

an inquiry, in order to discover the officer who facilitated the escape of the prisoners at Chalcis.

“The Hellenic government could reply to the complaints of the Porte by pointing to recent and well-known examples of other nations, who were in the same relation to each other as Greece is now with respect to the Porte. But with the view of maintaining its friendly relations with the Sublime Porte, it not only did not avail itself of these examples, but it, on the contrary, promised to do all it was permitted to do by the laws of the country, and all that was in its power to do, to satisfy those demands.

“It therefore replied, that the proposition relative to the recall of the officers was no longer necessary from the moment those officers had demanded and received their dismissal; that not belonging to the Greek army, they received no pay, and were consequently out of the jurisdiction of the Hellenic government; that the government would take care that the armaments against a neighbouring state should be prevented, and that armed persons should be prohibited from crossing the frontier so far as the nature and extent of our limits and our means permitted us to do; that an inquiry should be instituted against the accused *employés*; that it had no objection to express in its official organs all the inconvenience and injury that would accrue to the friendly relations of the two states from making collections of money for the purpose of preparing armaments for the insurgents; and that it would it do with pleasure all that was compatible with the laws of the country to moderate the language of the journals with reference to the insurrection of the neighbouring provinces. The Hellenic government gave, at the same time, assurances to Nessel Bey that his wishes respecting the escape of the prisoners of Chalcis had already been anticipated; and that the result of the inquiry which had been ordered proved not only the innocence of the officers of the garrison of Chalcis, but also the inutility of the attempts they had made to bring back the soldiers to their duty.

“It was after a reply so reasonable and so conciliatory, and in spite of those promises and those assurances of the royal government, that Nessel Bey suddenly quitted Greece, and broke off all relations with the two countries. In such a state of things it only remains for Greece, thus exposed to arbitrary conduct of the most unexampled kind, and to the most unjustifiable vexations, to make the Porte responsible for all the evils which will be the inevitable result of it; for the ruin of her commerce, of her navy, and of the fortunes of so many private persons. It is for the en-

lightened nations of the world to say whether, in the middle of the nineteenth century, and in time of peace, any government can be allowed to abuse in such a manner its position, and to inflict such serious injury on an independent state. You will, sir, communicate verbally this despatch and the documents annexed to it to the government to which you are accredited, and, if you are required to do so, a copy of them; and you will direct its particular attention to the conduct of the Porte with regard to us—conduct which a state of open war could scarcely justify. Receive, sir, &c.

“ΠΑΙΚΟΣ.”

Immediately after these diplomatic missives, the contest was renewed with still greater ferocity. The king, queen, and court, espoused the cause of the rebellion almost as openly as if a declaration of war had been proclaimed. Indeed, had such a declaration been made by Greece, her conduct would still have been disgraceful. When the great Napoleon, during his invasion of Russia, was urged to foment insurrection among the Poles and serfs, he replied, “No—I will make war against my brother Alexander with courteous arms.” Otho would neither declare war nor abstain from aggressions worthy only of a bandit. The *Moniteur* gave the following striking picture of the course of events:—“The accounts from Athens represent the state of the public mind in Greece under an aspect the most afflicting for all those who have been hitherto anxious for the prosperity of that country. A complete *régime* of terror exists there. Agents are ostensibly sent to all the points of the kingdom which have not, up to this time, manifested any sympathy towards the insurrection in the Epirus; those who allow themselves to be led away proceed to the frontier under the guidance of chiefs, who begin by levying contributions on all the Greek people in their way, and by setting fire to all the villages, the inhabitants of which refuse to take an active part in the revolt. When they arrive on the Turkish territory, it is, according to the expression commonly used at Athens, to force those wretched Christian rayahs to insurrection. At the same time such of the prisons of Greece, as were not at first thrown open, have supplied the means of recruitment. The wretches thus liberated take their place in the ranks of the regular soldiers, to march with them to sack the Christians of the Epirus and Thessaly. It is thus they pretend to regenerate these provinces and procure their civilisation! In the Attica and the Peloponnesus, justice is everywhere suspended; the coffers of the public money and the corn warehouses are everywhere pillaged; in a word, the most complete anarchy reigns in the administration and in the country.

A kind of Committee of Public Safety has just been founded at Athens, presided over by the old Fanariot Michel Soutzo. One of the first acts of this committee has been to draw up a list of proscription; and in order to carry its object into effect, it has enrolled a certain number of assassins, who have recently arrived from Constantinople and Smyrna, whose mission is to make away with whoever is suspected of not being favourable to the movement. On the 13th of May, an Athenian, who had dared to express doubts as to the success of the revolt, narrowly escaped becoming a victim; after having been ill-used in the most dreadful manner, he was thrown into prison. On the same day, the Catholics, while celebrating Holy Thursday, were on the point of having their church invaded by a band of assassins, and only owed their safety to the energetic representations addressed by the French minister to the Greek authorities. It is with pain that we enregister these symptoms of a kind of vertigo, which threatens to lead Greece into paths in which she can only meet with abysses.”

The allied governments, tired of remonstrating, made final and formal demands upon the Greek government, in terms not identical, but substantially the same. King Otho took time to deliberate; the French Emperor deemed it desirable to hasten his deliberations, and addressed to him with his own hand a sort of ultimatum, and dispatched it by M. de Brun and Baron d'Arvil. The letter intimated that the ports of Greece would be blockaded, and the capital occupied by French troops, if his majesty did not immediately protect the frontier of Turkey from his lawless subjects.* The

* The following admirable review of the relations of the kingdom of Greece to her protectors is from the pages of the Paris *Moniteur*. Of course it is from a French point of view, but it is as correct as to facts, as it is admirably conveyed as to expression:—“At the time when the Hellenic government is pursuing a course so contrary to the interests of the nation over which it has to preside, it may not be useless to recall to recollection the benefits which France has so prodigally bestowed upon Greece. No one is ignorant of the share which our navy and army have taken in securing the freedom of Greece. What is not so generally known is, that the expense of our squadrons in the Mediterranean, and the military expedition to the Morea, has increased our public debt to the extent of 100,000,000 francs. The payment of the interest of this sum, at the present time, gives a proof of the sympathy of the preceding generation with the cause of the Hellenes. The task of assuring the independence of Greece having been fulfilled, it remained to establish the new state upon a basis which would ensure its future prosperity. France obtained for it a great increase of territory. She insisted that it should be erected into a kingdom. She supported with her guarantee, collectively with England and Russia, a loan of 60,000,000 francs, very difficult of realisation at the period of its negotiation, in 1832. The resources of the Hellenic treasury, at first insufficient, and then ill-employed, prevented it from providing directly for the repayment of this loan. The treaty of 1832 contained a clause, in virtue of which the revenues of the Greek state were first to be chargeable with the payment and extinc-

Greek king threatened to abandon Athens, and throw himself for protection upon Russia and the German powers; when, however, he learned that the ships of the allies prepared to blockade his ports, and French troops were ordered to Greece, he and his subjects became panic-struck, and he professed his willingness to do all that was demanded of him. Showing no signs of being in earnest in this profession, the allies no longer regarded his word, or the word of his ministers, and, on the 15th of May, French troops landed at Athens; but while the capital was garrisoned by the soldiers, and the sea covered with the ships of the protecting powers, the little state they had protected and pampered defied their forces, insulted their subjects, and intrigued against their interests and policy in relation to other powers. By the military occupation of the capital, and the virtual blockade of the coasts, the sinews of war were paralysed so far as Greece was concerned, in reference to the insurgents. Money and arms, however, were still supplied to them from other sources, but less abundantly; and, in spite of the allies, small bands of sympathisers continued to find their way into the disturbed provinces. Soon after the French landed at Athens, a battalion of Turkish guards at-

tempted to take the position of Peta, where the Greeks had roughly entrenched themselves, but failed. Peta has strong natural defences. It is a plateau at the foot of the Mauro Vuro mountain chain, protected by extensive marshes in the front, and leaning behind on the mountains. Besides this, there was also a mountain skirmish between General Grivas and some Albanian irregulars. As the whole range of operations was still confined to the neighbourhood of Arta, skirmishes of this kind were naturally frequent, in which, as may easily be imagined, the Greeks were sometimes victorious. Ultimately, the insurgents in Epirus were confined to the mountains, without having secured a *point d'appui* in the country: it was impossible for them to maintain themselves for any time there, on account of the want of provisions. Even during the war of independence, the army in Acarnania and Epirus had always to import its provisions by sea, and the difficulty was, not to have men enough, but to be able to feed them. How could the Greeks manage that, when they had not the command of the sea? In the meantime, they were eating the provisions of the poor people in the neighbourhood, so that, in several cases, those whom they came to

tion of its external debt. Not only did France not demand the execution of this article of the convention of London, but besides, in an excess of kindness and generosity towards a country which she considered as one of her own creation, she ceased, in 1838, to follow the example of England and Russia, who issued additional bonds on the security of those previously entered into; and, with the object of providing a valuable reserve for Greece, France decided upon making the requisite payments when due, from her own resources. Those advances now exceed the sum of 13,000,000 francs. Since the adoption of this system, which soon involved us in a responsibility beyond our first engagement, we relinquished our claim upon a portion of the loan of 1832, which we had the right to consider as a security for the repayment of our private debt, to the amount of 2,000,000 francs, that amount having formed the capital for which the Greek government had credit in the National Bank of Athens, an establishment of credit organised by the assiduity of a superior clerk connected with the Ministry of Finance, M. Lemaître, and which had an essential share in developing in Greece industrial operations and agricultural works. In 1846, France founded at Athens a school directed by a high functionary of the university, where the professors, taken from our normal schools, gave every encouragement to the young men who wished to study our language and our literature. The library of the capital of Greece was, at the same time, placed upon the same footing as the French libraries—that is to say, allowed to share in the distribution of the works published by government. Our officers, in the midst of a thousand difficulties, and exposed to the dangers of the climate, to which three of them fell victims, prepared a map of different parts of the kingdom, which is considered a masterpiece of topographical skill. To these benefits of a general character, which were advantageous to the whole Greek nation, may be added the proofs of kindness and sympathy which King Otho and his government have unceasingly experienced from France. In 1843, when the Hellenic throne was menaced by the faction which now dominates at Athens, our diplomacy gave it a powerful support during the difficult transition from the *régime* of pure monarchy to a constitutional form of government. Subsequently, under equally critical circumstances, it was

the support of the French government, and its friendly intervention, which neutralised the effect of a formidable spirit of discontent. France most certainly did not deceive herself in regard to the real state of things in Greece. She deplored the faults of the administration, and the disorder which prevailed in the finances, but she endeavoured, to a certain extent, to conceal evils which she hoped to cure by care and prudence. We were desirous that the Hellenic government, from circumstances which we believed to be accidental, should not acquire a bad reputation, which would have been injurious to Greece herself; and it does not exceed the truth to say that, during twenty consecutive years, not a single disagreeable affair occurred, owing to the negligence or the fault of the government, when we did not take the opportunity of calming irritation, or bringing about an arrangement. To this kindness, which was of so sympathetic a character, which became tired of nothing and excused everything—to this kindness, which might be classed as weakness, had it not been exhibited towards a country the political existence of which was partly owing to us—it is now known what requital the Greek government has given. Abandoning itself to chimerical desires, yielding to suggestions from abroad, it has become the instrument of a power at war with France. It has allowed upon its territory the formation of armed bands, commanded by officers in its service, which have spread disorder and pillage in Epirus, Thessaly, and Macedonia. It has emptied its arsenals and exhausted its treasure to support an insurrection excited by itself, and which it still seeks to sustain, notwithstanding the checks it has received. Nowhere does scandal find greater impunity than at Athens. Salaried journals circulate every morning insults against France, against our army, and against the person of the emperor. Our people have been insulted in the streets, under the eyes of an inactive police; even the representative of his imperial majesty received a warning that his life was in danger. The majority of the Greek nation, let us hasten to say, thoroughly disapproves of these excesses and these follies. They are the first to suffer from them, and the responsibility of them entirely belongs to a government which is so ill-inspired as to risk, by ingratitude only equalled by its blindness, the loss of the only support which hitherto has never failed it."

liberate took refuge with their oppressors, the Turks. The people in the north of the Morea, who, perhaps from the copious mixture with Slavonic blood, are the most industrious of the Greek agricultural population, and who have therefore the most to lose, were not only not in favour of this movement, but, as far as it was possible for them to show their opinion, they were decidedly against it. As they prospered, better by industry than by plunder, all allurements failed to induce them to join in an undertaking from which they had so much to fear for their property.

The occupation of Athens by the allies was followed by a change of King Otho's cabinet,* the ministers of the allied governments refusing to transact business with men who seemed lost to all honour, and incapable of political moderation in the gravest exigencies. The king, now *ostensibly* submissive, substituted for his ex-cabinet a body of men worthy of their position—men of intelligence and patriotism, and who desired to advance their country by education, freedom, and commerce, and not by territorial aggression. They were also zealous for the real independence of the Greek Church, and therefore regarded any recognition of the pontifical pretensions of the czar as a betrayal of that independence. Furtively, the Greek king threw obstacles in the way of the formation of this ministry, and afterwards encouraged petty intrigues to bring them into discredit. His object was to give them a public, ostentatious support, and at the same time so to restrict their power and obstruct their policy, through his agents and the agents of his master, the czar, as to compel them to resign—thus saving himself from the odium of their dismissal, and producing the impression abroad that a liberal cabinet could not administer the affairs of the country. The presence of the French and English at the Piræus counteracted his schemes; he was vigilantly watched, and he knew it. He, meantime, complained to the courts of Germany, great and small, that his royal rights were invaded by the Western powers—that he was no longer King of Greece—but the puppet of the tri-partite league which was at war with Russia, and he besought the interference of his brother despots in his behalf. They did all they could for him. They expostulated, intrigued, lied, misrepresented, employed spies, and did everything but strike a blow on his behalf. Other portions of Greece were garrisoned by the

allies when it was perceived that a disposition to thwart their measures by underhand policy was cherished by the court and ex-ministers, and that the brigands and sympathisers were ready, whenever they dared, to set the allied troops at defiance.

Athens at this juncture became the focus of political mal-practice of all sorts. Russian and Austrian spies made it a nest of falsehood and calumny. Letters from Greece were sent by these persons to the German and Belgian press, misrepresenting the foreign ministers, especially Mr. Wyse, the English minister, towards whom their resentments were particularly rancorous. The conduct of Austria throughout these transactions was double-minded and treacherous. The advice given openly by the government of Vienna to King Otho was 'sound and temperate'; the instigations of the Austrian agents were restless and sinister. Poor Greece, enslaved by every party in turn, foreign and domestic, was torn by dissensions, and desecrated and dishonoured by rapine and assassination; yet, as it is the riven shell which scatters death around it, so Greece, rent by the throes of its bigoted passions and political convulsions, scattered destruction upon the neighbouring territory, and the sultan's subjects were the chief sufferers. The allies occupied themselves, at Athens, in soothing public exasperation, and in consolidating the reactionary work they had, as they hoped, effected. The English and French ministers did not sufficiently conciliate the religious prejudices of the people; and both ministers being of the Latin communion—or schism, as the Greeks would arrogantly call it—towards which at that juncture a fierce hatred raged, their moral influence was less than if they had been of any other communions. The Vienna press attacked Mr. Wyse incessantly and acrimoniously, while that of Berlin devoted its calumnies against the French minister, as if the two great German powers had resolved upon a division of labour in their faithless work.

The occupation of Athens by the allies, presents a suitable occasion for some notice of that city. As the metropolis of the Greek race and nation, it could not be properly passed over in the history of a war occasioned by the bigotry of the Greek religion, as well as the political aggrandisement of the proudest and most powerful man by whom it was professed. Athens, so renowned in story, is still very attractive—abounding in classic remains, and occupying a position of great beauty. It has been compared to the city of Edinburgh, which is often styled "the Modern Athens," but always, we believe, with the association of intellectual resemblance. The facts are, that the resemblance is much more physical

* The persons appointed to the new cabinet of King Otho were, for the most part, men whose names were well known in England and France as enlightened men:—Mavrocordato, President and Minister of Finance; Palandrios, Minister of the Interior; Pericles Argyropoulos, Foreign Affairs; Kallergi, War; Petolis, Justice. M. Bentlau still remained the private secretary of the king, and one of his most active agents of mischief.

han mental. There are few places on the face of the globe intellectually less like than the Athens of Greece and the Athens of Scotia. The mental characteristics of the metropolis of the Scottish people bear little resemblance to those of the Athens of antiquity, still less to those of the Athens of to-day. There is, however, a great resemblance in the site and general appearance of the two cities, notwithstanding their distinctive features are strongly marked. Edinburgh has of course nothing parallel to the glorious antiquities of Athens: she has her castle, but not an Acropolis; her old town, also, but "Auld Reekie" is not the least like an assemblage of classic ruins; she has her Arthur's Seat, and Athens has a mountain vicinage. Edinburgh is the finer—Athens has a purer light resting on its fallen glory, and modern beauty. The Temple of Theseus is generally the first antiquity to which the Greek *ciceroni* conduct the visitors to their metropolis. Near to the Temple of Theseus, is the Areopagus mentioned in the New Testament. The remains of the temples of the Acropolis are exquisitely beautiful; even as they moulder in decay they retain a grace and glory of architecture unrivalled in the world. It is a sad reflection upon modern times, that while antiquity lends to these relics a fascination of elegant taste, which will linger around them while one stone rests upon another, the buildings are defaced by shot and shell, which can be seen embedded in them—the work of the barbarous Turk. Yet there is a divine retribution discernible even in this. Athens became the citadel of religious persecution and idolatry after it had adopted the Christian name; and a power fanatically iconoclast, and having, with all its fanaticism, a certain tolerance, was permitted to waste the vicinity of these trophies of human genius, and to mar their beauty. In the midst of so many traces of a delicate refinement once reigning in Athens, King Otho has built the ugliest palace in the world: it is doubtful whether that of St. James's, in Westminster, or that of Dublin Castle, may successfully compete for supremacy in coarseness and bad taste. The visitor at Athens may congratulate himself on the sweetest butter and the most fragrant honey; and the grape, fig, and olive, may also refresh his palate in their season. The beauty of the Greek women is, like that of the Circassians, proverbial; yet travellers say that the fair fame of Athens in this respect, like that of "the Maid of Athens," sung by our great modern poet, is very much overdrawn. A gallant sojourner, however, during the present war, who described things and persons as he found them on his way to the Crimea and back, says:—"Their faces certainly are pretty, and their forms correspond

to Homer's term, *bathukolpos*, 'deep-bosomed,' but this arises chiefly from their discarding stays!" The men are like the Greeks everywhere else, and these we have described sufficiently in the foregoing pages. A popular history of Athens would be deeply interesting. Once the glory of the world, both as to power, beauty, and intellect, and the great maritime state of antiquity, it fell from neglect and over-confidence. When the general who commanded its army against Syracuse, represented that his soldiers were perishing from want of supplies, and the defence of the enemy growing stronger, Athens heard reluctantly, sneered scornfully, but did nothing to repair the disasters which might have been redeemed—and fell; a very old illustration of a very modern saying—"Experience keeps a dear school, but fools will learn in no other."

Queen Amelia was not deterred by the landing of the French from cherishing the hopes which animated her exertions. She declared in the presence of a large and courtly circle, that there never should be peace in the East until Otho and herself ascended the throne of the Byzantine Empire. The Western cabinets were highly incensed by letters in her and her husband's writing, sent to the British foreign minister by Lord Stratford, and which had been found upon persons of certain officers of King Otho's army, who were slain or made captives at the combat at Peta, where they led the insurgent forces against the Turkish troops under the command of Osman Pasha.

Soon after the landing of the French at Athens, King Otho dissolved the Legislative Chambers; for, packed although they were, some independent men had gained admission; and they were emboldened, by the presence of the allies, to bring the unfortunate condition of their country under discussion, and to blame the court for all that had occurred. The king, however, managed to get rid of their inconvenient discussions by a dissolution.

A number of British-Greek subjects deserted from the insurgents, and brought to the Ionian Isles the most tragic reports of the followers of Grivas, and others of the insurgent chiefs, and the frightful butcheries mutually perpetrated by them and the Turks. These accounts stopped the transmission of money from the Greek isles, which are under the protection of England. The details of these deserters were such as to remind one forcibly of Cobbett's writings, in 1834, when he declared that, on the ground of *humanity*, an independent Greece should never be constituted, as it would issue in the most ferocious conflicts between its subjects and Turkey, the most anarchical insurrections, and the perpetual intrigues of Russia to weaken the new kingdom and the old

empire, until she at last made her way through the Dardanelles, and showed her despotic flag over the waters of the Mediterranean. Cobbett was not heeded then; but his predictions were all fulfilled but the last, against the accomplishment of which we are now in arms. It was a painful confirmation of his political prophecy that the king of Greece tolerated piracy in the hope of injuring the allies through their commerce, and of capturing storeships, to furnish the insurgents with munitions. To such a degree of audacity did these pirates arrive, that they contemplated the seizure of the military arsenal of Paros, from an attempt upon which they were only deterred by the allied war-ships in the Greek waters. Tazami Karatassos, one of the insurgent leaders, showed great activity and daring about the time the allies were using these stringent measures at Athens. Through his instrumentality the insurrection was extended to Thessaly, and the towns of Paramithia and Margariti were successfully attacked.

At Calabaca the Greeks gained a signal victory, under Hadji Petros. The Turks and Albanians were under the command of Ismail Bey and Atem Bey; the advanced guard of the Turks, who sustained the brunt of the battle, was a brigade of Arabs, under Selim Bey. This conflict, or series of conflicts, began on the 12th of May, and did not end until the evening of the 16th. The Turks occupied an entrenched camp; but the Arabs, under Selim Bey, were some miles distant, effecting a reconnaissance, when, suddenly attacked, they retired, disputing every inch of ground, and were speedily reinforced by the Albanians. The Greeks pressed upon them with fierce bravery, and, after a retreat maintained with steadiness, order, and desperate courage, the Arabs and Albanians fell back upon the trenches. The combats on the successive days consisted of the advance of the Turks, and their being driven back again to their entrenchments. Their proceedings resembled a flight of rooks from the rookeries to the field, and back again to the rookeries, day by day. On the 15th, however, a body of volunteers from Thessaly joined the Greeks; and they were so strengthened by this accession to their numbers, that on the 16th, when the Osmanli again sallied forth, they were attacked with desperate rapidity and energy, and driven, routed and dispirited, to their entrenchments. On the 16th two detachments came to the reinforcement of the Turks—200 Arabs and Albanians, the former commanded by Halim Bey, the latter by Metzo Malijowa; but the communications being intercepted by the Thessalians, these reinforcements were literally chased by them, until they all fell into the hands of the pursuers, or were shot down in their flight.

From the 16th to the 21st the Turks remained in their entrenchments, in a pitiable condition, hemmed in by the insurgents, and starving. On the night of the 21st, they partly broke and partly stole through the Greek lines, but were pursued by the Macedonian contingent of the rebels, who slew many, and drove considerable number into the Peneus, where they were drowned, or shot while swimming to escape. The rebel army captured two stand of colours, five pieces of cannon, baggage, booty, and ammunition. Many wounded were left in the trenches when the Turks abandoned them. The Greek government immediately recalled Hadji Petros to Athens, but he, knowing that the king would approve of his insubordination, refused to comply with the mandate of the minister.

On the 22nd of May, the day after the flight of the Turks before their sanguinary and ruthless pursuers from Calabaca, the insurgents lost a pitched battle at Silkstria, in Epirus, where, after appearing a second time to subside, the insurrection broke forth as when a smouldering fire bursts up anew, when affected by any influence from without. It was, however, a third time suppressed by Albanian and Arab bands, supported by Egyptian regular troops.

The courage and address of one of the Turkish chiefs, Fuad Effendi, was the principal agency from the beginning in preventing the extension of the revolt, and in calming and assuaging the agitation of the people when the revolutionary forces were defeated. Indeed, the humane and wise conduct of Fuad contrasted alike with the conduct of the leaders on both sides when success gave them opportunity of visiting the vanquished with unmanly and ferocious cruelty. The proclamations of Fuad are masterpieces of sound judgment and adaptation to the state of affairs, in the midst of which he was called upon to sustain a dangerous and difficult civil and military administration. We give one of these proclamations as a specimen, the first, perhaps, and best of them, and in doing so direct the attention of the reader to the fact that, whenever the Turkish armies were commanded by men of ordinary competency, and whenever the provincial governments or pashaliks were under the control of honest governors, the troops and people of Turkey have appeared to advantage throughout this war. Well led in war, well governed in peace, there are elements in the Turkish character which make good soldiers, and peaceable and loyal citizens. The following proclamation of Fuad was issued at Arta, at the end of April, before the allies had interposed actively at Athens:—

“We announce that Peta, the stronghold of

these ill-intentioned persons, who, having lately entered into these lands, disturbed the tranquillity of the inhabitants, exists no more. It has been destroyed to-day, in one hour, by the bravery of the imperial troops, and those of the above-mentioned individuals who could save themselves have dispersed, having, for the most part, gone to the place where they came from.

"I call, therefore, upon those among you, the inhabitants of the villages, who having been deceived by these people, have risen in insurrection, and seemed hitherto connected with the same—some from fear of the authorities, others forced by the disturbers, and others influenced by their mischievous counsels—knowing now the fate of the village of Peta, to come to yourselves, think of the position in which you are, and return to the right way, straying from which you were running towards your ruin.

"You who fear to suffer from the severity of the authorities, banish all fear from your hearts; you who were forced, call upon the imperial forces for help; and you who hope still to succeed in realising your vain hopes, think seriously and look at the evils which your error is likely to entail upon you. In one word, all those of you who, in whatever way, have participated in the insurrectionary movements, hear the paternal voice which calls you to embrace peace, tranquillity, and prosperity, and hasten to demand the pardon which we are ready to accord to you for all that you have done, willing or unwilling.

"We give you the period of a week, within which you must send to us two persons from every village to tender your submission to the imperial government; be sure that I myself, and with me all the civil and military authorities in this place, will receive you with that benevolence and clemency which are in accordance with the high will of our most merciful sovereign, and you will enjoy, in full tranquillity and security, the fruits of obedience and submission to your legitimate government.

"But, if even in future some villages disobeying these our summons should remain in insurrection, in that case I shall find myself in the most regrettable necessity to adopt such strong measures as will certainly be followed by immense evils.

"Let the inhabitants of those villages, whom the disturbers do not leave free to do their own will, but whom they force to insurrections, let them take up arms against those enemies of their tranquillity, let them beat and drive them away. Such conduct will be considered by us as the greatest proof of their submission and fidelity towards their government.

"Knowing this, hasten to do that which is

counselled to you, for the love of your families and the welfare of your fatherland."

The career of the insurgents was much checked, when it became known that the King of Greece had signed such a coercive document as the allies presented to him. It was as follows:—

"1. The King of Greece and his government must make known to the Greek nation clearly, and with all proper publicity, that it is their intention to observe a strict neutrality on the Eastern question.

"2. They must disavow, in the most formal manner, and with the greatest publicity, all that has hitherto taken place.

"3. The most rigorous measures must be adopted to prevent recruiting for the free corps, and also to put down those which have been formed.

"4. To recall all Greek subjects who may have taken part in the insurrection in the Turkish provinces, and to punish them severely in case of disobedience.

"5. Not to give any leave of absence, or accept any resignation, where there is any reason to suppose that the party intends to take part in the insurrection.

"6. To publish the protocol of Vienna of the 7th of April, which secures the integrity of Turkey."

After the king signed these demands, the queen seemed to lose much of her energy, and became nervous and dispirited. She made various attempts to obtain influence over the English admiral and the French general, but found General Foray a very bluff and practical sort of person, quite beyond the reach of feminine diplomacy. She especially took to heart the seizure of the Greek ships at the Piræus, and their being obliged to haul down their flags. Her despondency was communicated to her spouse, who rose and fell with her, as the barometer rises and falls with the weather, and after all his boasting, he rode about Athens with dejected and downcast looks. Even this had its depressing effect upon the conspiracy; but when the people of Athens began to fraternise with the French troops and English sailors, and groups of them made what the Spaniards call *pronunciamentos* against Russia, in the public streets, the alarm of the queen and her satellite-consort knew no bounds; and they stooped to the most abject assurances that, if the English would take General Foray and his 8000 French to Varna, their majesties would never again give to Queen Victoria and her imperial allies any trouble whatever. The Russian ambassador became equally apprehensive as to the consequences of the fraternisation of "young Athens" with the French and English; and perceiving, by the end of June, that

the pacification of Greece was all but a *fait accompli*, he withdrew from the capital, on the pretence of leave of absence. Perhaps this was a necessary step to prevent his expulsion; for such was the conduct of the ambassador, and the indignation of General Foray, that a demand upon the Greek court for his expulsion could not have been much longer delayed. He had occupied himself in representing to the Greeks that the French intended to keep possession of the country; and the Greeks of London and Paris, always in the interest of the czar, busied themselves much in circulating the same calumnies. The chief of the Greek cabinet gave his Russian excellency a hint which could not be misunderstood, by a proclamation circulated throughout all Greece, representing the intentions of the allies as benevolent to the Greek people, and just to the Greek government, and calling upon all patriotic Greeks to co-operate with the cabinet and the Western powers in the pacification of the country and the restoration of public confidence.*

Shortly afterwards the Greek government proclaimed a general amnesty, and many returned to their homes in consequence, who had been compromised; and who, but for this assurance of pardon, would have continued to disturb the territory of the sultan, or roam about as banditti in their own land. Some of the returned leaders declared openly the complicity of the court and former cabinet, and accused King Otho of putting in his own pocket monies subscribed for the maintenance of the revolt.†

* The following is the brief and admirable proclamation of the War-Minister:—

"The enemies of public order, the instruments of interests opposed to those of the Hellenic nation, dare to assert that the allied army which has landed in the Piræus has views hostile to you. You are bound to contradict those malignant statements, and to explain clearly to the sub-officers, and through them to the private soldiers, that England and France, who have bestowed on Greece so many benefits, and who have not, for a single instant, ceased to protect her, have, by sending the allied army, no other object in view than to preserve our country from the fatal consequence of a policy which has been condemned by all Europe. Regarded thus in an European point of view, the presence of the allied army, far from threatening any attack on our independence, will on the contrary guarantee, in the midst of the war in the East, the Hellenic kingdom against any attack from without. Were it otherwise, a principle of honour would have prevented me from associating myself with the government. One of the most important objects of the policy of the ministry to which I have the honour to belong, is to win for Greece the sympathies and esteem of all the great powers of Europe. Such policy is the only means of improving the present, and of preparing for the future. Whoever does not act on the same principle is the enemy of his country."

"KALLERGI, *Minister-at-War*."

"Athens, June 14th, 1854."

† Grivas, Karatassos, and Tzamalas, the three principal insurgent chiefs, put forth a very remarkable document, in the form of a petition to the new cabinet. Other documents of various kinds convicted Otho and his former cabinet in a similar manner, *ex uno disce omnes*.

"Returned to independent Greece by order of her

It was said to have affected King Otho greatly that, while the Bavarian government government, we wish, before all, to express our thanks to it for having saved the nation from the wrath of the two protecting powers, and for having restored to us the rank which we formerly possessed.

"The only aim which we proposed to ourselves in crossing the frontier, and in treading on the sacred soil of our fathers, has been the deliverance of our brothers from the Ottoman yoke; besides this, we have been induced to do so by the following motives:—

"The former minister of war, Charles Soutzo, assured us positively, in the name and after the express orders of his majesty the king, that the government was firmly resolved to aid the revolution with all the means in its power; that the Western powers would look at it favourably; that principally the states of Germany, on account of the connexion of kindred (*relations de parentés*) which exists between their sovereigns and our own, would furnish us with all manner of material aid, and that they would protect us in case the Western powers should change their opinion about this new strife; and that finally, the intention to aggrandise Greece, and to liberate our brothers, was evidently proved by the fact that several millions of money were in the hands of the government.

"If the insurrection has, unfortunately, had a bad result, it is due to the perfidious tendency of the government to direct exclusively the movement after the plan which it had fixed upon from the beginning, by concentrating all power in its own hands, and by relying (*appuyant*) on one of the European powers alone.

"It is worthy of remark that, while the government lavished on some persons money and ammunition, and reinforced them with all means in its power, it behaved towards us, who fought without any regard to personal influence, having only in view the public interest, without money, as if it had proposed to itself to take on us a ignoble revenge. You must add to this, that the government, which ought before all to have consulted the protecting powers of Greece, without whose consent nothing could be hoped, has undertaken this movement against their wish, falsely pretending, as we said above, that we had their full consent and approval.

"It has divided the considerable sums which it has received from abroad among its creatures—among persons having no influence with the people who were to be revolutionised. It has sent ammunition in abundance, and even some cannons for the siege of fortified places; it has entrusted them to people utterly incapable and without any past (*antécédent*), who had declared themselves chiefs, against the opinion of the country; endeavouring in this way to annihilate all personal influences, it has succeeded, by its faults and false measures, to bring about the dissolution of the whole movement, and the ruin and death of many of our brothers in the neighbouring provinces.

"Many families from these provinces, in consequence of the ill-success of the insurrection, have taken refuge in Greece, deprived of all means of subsistence. The soldiers who went with us and their families are likewise in want. We request you, therefore, to give, as soon as possible, the necessary orders to make exact inquiry into the amount of money received from abroad, or from other sources—into the employment of this money, what sums have been expended, and what sums still remain in order that from these latter these unfortunate suffering persons may get some relief; for it is horrible to think that these brave people, who have done nothing but obey the voice of their country, having been deceived by the Greek government, should be now verging on despair.

"We request you to make known to us the result of the orders which you will have given in this respect, in order that, on our side, we may tranquillise those who suffer and moderate the impatience of their just demands.

"We remain, &c."

"By delegation of those who have followed us in our quality as chiefs of the insurrection in Epirus, Thessaly and Macedonia.

"THEODORE GRIVAS.

"D. TAZAMI KARATASSOS.

"PAPAKOSTA TZAMALAS.

"Athens, June 19th (July 1st)."

sympathised with him, the Bavarian people strongly disapproved of his conduct; and at Munich certain demonstrations of their disapprobation were connected with displays of anti-Russian feeling, scarcely expected in that Austrian-riden capital.

The promises of the court, and the signs of peace, did not prevail long without misgivings as to the one, and serious interruptions of the other. The court was suspected by the liberal ministry; and no person was allowed to hold an interview with his majesty without the presence of a member of the cabinet.

Piracy became very frequent throughout the month of July; and persons of respectability, in Athens and other places, were found to be connected with it—the intelligence and independence of these persons making the suspicion reasonable that their connection with piracy could only be for political purposes. One of the secretaries of the new ministry was suspected of being an agent of the court, and was removed from office. In the houses of the editor of the court newspaper, the court physician, and the royal librarian, the ministry instituted a search, and discovered letters and documents, which satisfied them that the court had no sincerity in its professed repentance. A pirate ship was captured by a British cruiser; and, from papers on board, and the confessions of its captain and crew, it was proved that they had murdered the crew of an English merchantman; that they were in the pay of certain officers of the royal household and palace previous to the inauguration of the new ministry; and that their murder of the English ship's crew was approved by their employers! The allies were disposed to deal summarily with the Greek king, but Austria raised difficulties, and Prussia protested—the minister of that court threatening to withdraw from Greece along with the Russian ambassador, on the ground that its lawful sovereign was coerced, and his sovereign rights invaded. The Western powers once more deferred to those of Germany, and once more, in doing so, were weak in policy, creating for themselves new embarrassments and dangers, to ripen in due time.

The largest body of insurgents on the Turkish territory was at this juncture surrounded and dispersed. Hadji Petros placed himself at the head of 6000 men, and advanced to attack a body of 4000 Turks posted at Tricala. Abdi Pasha took him in flank with a force equal to his own, and Zeimel Pasha fell upon his other flank with a force of 2000 men: the Greeks were dispersed with severe loss, the conquerors showing little mercy, as undoubtedly they would have received none had they been vanquished. The insurrection in Macedon was completely suppressed in July; upon the Epirus

it lingered through August, by the end of which month it had generally died out. The introduction to the insurgent provinces of the Bashi-bazouks, to aid the regular troops, much assisted its extinction. The literal meaning of the term Bashi-bazouks is "spoilt heads;" our English phrase "mad caps" answers very well to it. Such they were in hunting down the unfortunate Greeks, to whom they gave no quarter; and in this work they displayed more valour than in facing regular troops. They committed almost every excess while quartered upon the unfortunate and disaffected inhabitants, whose disaffection was increased by their presence. Gradually these adventurers were withdrawn, and before the autumn closed the rebellion was quelled, and the sympathisers of Greece were all reduced to the condition and character of common robbers by land or sea. The spirit of revolt, however, was not extinguished—the people of Greece, and of the Greek provinces of Turkey, were ready to risk life and fortune against the hated Moslem whenever an opportunity might offer; and had the Russians penetrated to Shumla, the whole of Bulgaria and Roumelia would have risen on their side. As it was, the diversion in favour of Russia was dangerous, as likely to sow dissensions between the German and Western powers, and as detaining considerable bodies of Turkish troops from the lines opposed to the armies of the czar. Whole divisions of the Egyptian contingent were detained in Thessaly and Macedon, and in garrisoning Constantinople, which might have otherwise taken part in the actions upon the Danube. The policy and ambition of the Bavarian ruler of Greece remained unchanged. As soon as the French seemed to relax their surveillance, he gave up all communication with his minister of the home department, and surrounded himself with spies and agents, native or Roumelian Greeks, Russians, Austrians, and Bavarians. The Greek king cannot learn; the court must be swept by the political besom, and a new government given to Greece, if any hope may be entertained for its future fortunes; but we fear that whatever government may preside at Athens, Greek affairs will not flourish for many years to come. The bigotry and brigandage of the people are the two great obstacles. Like the patron saint and pattern Emperor of all the Russias, the celestial Nicholas and the imperial Nicholas, the Greeks, as a people, seem to think piety and spoliation compatible; and that true patriotism consists in the exaggeration of national manners, the extension of the national bounds, and the coercive and even cruel propagation of the national creed. Greece has lost her beauty of mind, and retained its acumen and asperity—the rose has withered, and the thorn only re-

mains. Alas for Greece! the glory of antiquity, the land of gods and heroes! The philosopher and the statesman may inscribe upon her broken columns some classic tribute to the memory of her refinement, valour, and philosophy, but they can write no lesson of *truth* upon the minds and hearts of the faithless progeny of those by whom long, long ago, those monuments of genius and embellishments of taste were erected. Even her princely language has been exchanged for that soft mongrel tongue which better fits the lips of modern Greeks. Through vistas long and dark we may look back upon the fadeless glories of remote generations, but no ray brightens upon the eye of him who looks forward to a regenerated Greece. Even where traits of valour and of capacity are seen in the modern Athenian, they are distorted by his moral defects; if the characteristics of the elder Greece be there, they appear inverted and shadowy, as when we look from the landscape upon the surface of the lake, the landscape still appears, but every object, however recognisable, is presented to us in faint forms and dim hues. When the Greek ceases to brandish the cross as a weapon of aggression, and to carry it, not so much as a standard as a gibbet, upon which he would hang liberty; and when he shall learn only to regard it as the emblem of a deep human sympathy, a divine love, an eternal and sublime compassion, then the truth will make him free, and he shall be free indeed. May the day dawn for the Greek people, in the light of which crescent and star shall disappear, rather than be blotted out in the darker night of Greek barbarism and bigotry.

In reference to Greece and Turkey, we may aver, that if war should be the chosen instrumentality in the Divine agency of a great oriental revolution of thought and opinion, it will be the resurrection of the human race. We concur with a writer in the *Eclectic*, who says that "war is a necessary element in the moral government of the world." The agency is terrible, but the Hand that wields it is omnipotent; and He that can scatter its lightnings over so many lands, and cause its thunders to boom over the sea and the shore, through the valley and around the city walls, can also cause a peace as secure as the convulsions of nature so often herald, to bless with its light and calm the agitated realms. From the shores of the Euxine went forth the voice and footstep of man to reconquer the earth when the Deluge subsided; and who can tell but that forth from this great struggle, soaring over the turbulent waves of war, the dove may again go forth, to find and to confer the olive of peace? Principles may be evoked from this contest which will give to Greece, to Turkey, to Europe, and to the world, a pre-

viously unknown tranquillity. It is a war of ideas, disputing what the strong hitherto always claimed—the right of conquest—the power of force over freedom—of the mighty over the weak. A discussion is raised which strikes morally at the root of despotism, and will deal it repeated blows, until it fall, and cease to cover with baleful shade the fair earth, which awaits the sunshine of liberty. Men are being familiarized in this struggle with the words "human rights," "independence," "liberty." These expressions are echoed from the rocks of the Caucasus to the cliffs of the Dardanelles—from the City of the Sultan to the Cimmerian steppes. The central abodes of the world's population are startled from their drowsy moral and intellectual life by the peals of war, and they cannot but look upon the grandeur of the flashing elements, and, with newly stimulated powers, mark the results. This war must issue in the universal recognition of great international principles and human rights; or, overturning all freedom, bury the heart of man beneath its ruins. If the Greek race or creed will take the foremost place on the side of the incarnate enemy of human liberty,—*Gog*, who rules the land of Magog, and wields its resources for his own aggrandisement and glory,—then that race and creed deserve to perish, and the language and the taste they bequeathed to all nations, will be employed to commemorate the triumph of a superior civilization, because based upon superior principles.

Closely in connection with the progress of the insurrection in Greece, renewed attacks by the Montenegrins were systematically carried on upon their frontier. The Russian government had contrived the revival of aggressive movements by both Greece and Montenegro, as well as the insurrections in Thessaly and Epirus, as diversions while the Russian armies sought to force the Danube and the strongholds of the Dobrudscha. Some detailed notice of the attacks by the Montenegrins is necessary to complete our narrative of this series of events. When the late *vladika* (governor) died, his nephew, Prince Daniel Petrovitch became his successor. The *vladika* is not only prince, but pontiff of the Montenegrins. On the occasion of Prince Daniel's succession to these offices and authorities he did not receive the ecclesiastical investiture. The customs of Montenegro forbid the chief priest to marry, although the Greek clergy (the Montenegrins belong to the Greek Church, as shown in the second chapter of this history) are at liberty to act as they please in reference to celibacy. By Prince Daniel's rejection of the sacerdotal functions he was able to maintain the chief authority in his own family, transmitting the crown of chieftainship to his son. This was

arranged at St. Petersburg, and for reasons cleverly calculated to promote the czar's interests in Montenegro. At some future time, the all-grasping czar expects to make use of Montenegro in gaining a footing upon the shores of the Adriatic. A weak prince reigning over that free people would favour the imperial purpose; but if the prince were also a priest, he would have a sacredness in the eyes of the bigoted people which would lead them to defend him to the last man. The separation of the two offices was politic for the designs of the government of St. Petersburg. Besides, the czar is a pontiff; he is head of the Russo-Greek Church, spiritually and temporally; and it would be no great difficulty, protecting Montenegro as he does, to accustom the people by degrees to look to him as their chief spiritual authority; and, regarding their own princes no longer in that light, but as mere hereditary temporal sovereigns, it would be easy to work upon this feeling to sow dissension, and bring in Russia, by the invitation of some important portion of the people themselves, to settle their disputes.

As the Emperor of Russia claims the protectorate of Montenegro, and the people, from religious hatred to the Turks and religious sympathy with the Russians, acquiesce in that protectorate, the newly-elected vladika naturally sought the approval of the czar for his appointment. For that purpose he undertook a journey to St. Petersburg, where he was feted and feasted as a prince—the emperor's palaces, carriages, and guards being at his service. The vladika returned, dazzled with the glory of the imperial capital, and filled with fanatical hatred to the religion and people of Mohammed, and fanatical desire to spread, sword in hand, “the only true orthodox Church.” His installation took place on the 1st of July, 1852; and the policy he immediately pursued is another proof that, before the contest about the holy places between the French and Russian diplomatists, the czar was preparing to make an inroad upon the Turkish Empire. From the beginning of his reign, Prince Daniel permitted his subjects to plunder the Turkish inhabitants of the border. So independent a people can hardly be called subjects; they properly have no king; for, until the hereditary principle was recognised in the case of Daniel, at the instigation of Russia, through the Montenegrin priests, they had only an elected chief. This chief, however, had a certain military command, and could restrain incursions upon a neighbouring territory, to steal cattle and commit murder. Early in the spring of 1854, these predatory expeditions were more systematic; but as the season advanced, two Russian agents arrived, upon a mission from their government to the civil and ecclesiastical

chiefs of Montenegro, and arranged with the prince a plan of regular warfare against Turkey, murderous and piratical. The people were assembled at Cettinje, a sort of village capital, and 4000 men were sworn upon the Greek altar to make war upon the Turks unto death. A splendid flag was given them, brought thither by the Russian agents, resembling that of the Greeks, with a blue ground and white cross, and the inscription, “For Faith and Fatherland.” Forays were at once made upon the Herzegovina and Albania, and the prince encouraged and sustained these rapacious and treacherous raids, as did also the priests, by fanatical harangues from the altar. Prince Daniel issued the following proclamation, which, if not a declaration of war—which Austria insisted it was not—would to casuists less acute, and more conscientious than those of Vienna, appear to be so:—

“Daniel Petrovitch, Prince of Czernagora (Montenegro), and the Brda (the Nahias of Bielopavlich, Piperi, Moratska, and Kutska, are so called), salutes his captains.

“I trust that we Montenegrins shall, as heretofore, show ourselves brave and courageous, like unto the Greeks and other nations, and like unto our victorious grand and great grandfathers, who bequeathed to us the liberty of which we are so proud. I wish to know the soldiers who were before conscribed, in order that I may learn whether I can put trust in them; and therefore, captains, I command that each of you do assemble his tribe. Let each separate soldier declare openly whether he is willing to do battle with us against the Turks, those cursed enemies of our faith and laws. Captains, take down the name of each volunteer, and send in a written report to me at Cettinje. But this I say beforehand, he who is not prepared to meet death with me, let him, in the name of Almighty God, remain at home. He, on the contrary, who will accompany me, and forget wife, child, and everything he possesses in the world, let him go to the captain, that his name may be entered. I say unto you again, brave subjects and brethren, let him who is not prepared to look death in the face in my company remain unmolested at home; for I well know that one man who voluntarily and courageously takes the field is better than fifty timid ones. I invite every true man who has a courageous, and not a womanly heart, and is not reluctant to shed his blood for the Holy Cross, the orthodox faith, and his country, to share with me honour and glory. Are we not, my dear brethren, the children of these ancient Montenegrin conquerors who at one and the same time defeated three Turkish viziers, beat the French troops, and stormed the sultan's for-

tresses? If we do not slight our fatherland and the reputation of our ancient heroes, let us assemble and set to in the name of God. Health be to all."

The Turks regarded this as a declaration of war, and prepared for the defence of their frontier. They were not sufficiently prompt in so doing. Daniel, at the head of a fine body of men, entered the Herzegovina, and left no doubt as to his intentions: a proclamation was distributed throughout that province, which—excepting always the government of Vienna—was considered by all concerned as a renewed declaration of war. Our readers may form their own opinion from the document itself:—

"We, Daniel I., Prince of Montenegro, send our fraternal salutation to all Christians in the Herzegovina.

"You have heard that the Emperor of Russia, the father and protector of all Christians, is waging war with the Ottoman Porte. It is not for his own private advantage, but once for all to free the unfortunate Christians from the yoke under which they have sighed for the last 400 years. You have also heard how the Greeks, oppressed by the Ottomans, have taken up arms against their task-masters, and, fighting day and night, are making good progress in their enterprise. And you also, brother Servians, will shortly shake off what the diplomatists have imposed on you by their treaties. Let this, then, be the guiding-star which your fathers had in vain looked for after the day of Kosovo. The moment is come at which every Christian who is oppressed by the Porte must rise against his tyrant, and he who does not take advantage of it has nothing to expect but eternal remorse and shame. In the name of humanity, then, rise, and annihilate your oppressors; spare neither life nor property, lest you should be cursed by posterity and despised by the present generation. Remember, enchained warriors, the ill-treatment to which your ancestors were subjected, who died at the stake, were strangled, or starved. Remember that you are the despised slaves of a horde of barbarians, who tread under foot your nationality, customs, habits, and religion; who massacre your innocent children, and do violence to your women, and everything else which is sacred in your eyes.

"Where are your temples and sacred bells—where the holy halls which once echoed your hymns, and the praises of the one God? Where are your majestic convents—those sacred institutions, in erecting which the Servian princes spent their treasures? Look at your unfortunate brethren, who are daily forced either to renounce their faith, or to lose their heads,

which are exposed on the bulwarks of cities full of crime and stained with blood! Regard yourselves: you stand disarmed, like women, despised and in despair, without security for life or property, obedient to the blind will of an insatiate tyrant. Listen, then! I am prepared to assist your glorious exertions with all the means in my power. Ammunition, gold, and provisions will, with true brotherly feeling be shared with you, if, with confidence and without trembling, you will rise as one man against those worst of men—the Mussulmans. If we die in such a good cause, we shall have lived long enough."

Various combats took place between the troops of the sultan and the banditti of Daniel; but the influence of Austria was exercised to prevent a declaration of war on the part of the sultan, or any attempt on the part of the sultan's soldiers to follow the bands of Daniel into their own territory. Austria, at last, perceiving that the presence of Russian officers with these bands left it no longer possible for her to practise any double dealing, or further to screen her *protégé*, she undertook to suppress this "little war" on her own confines, and sent Prince Daniel a message to that effect. Prince Daniel answered with defiance, and held a review of 20,000 men, in the presence of a large number of distinguished Russian officers. Austria did not dare to embroil herself with Russia in that direction; but informing Daniel that the troops of the kaiser would co-operate with those of the sultan in drawing a military *cordon* round his territory, he gave up his enterprises, probably under the influence of Russia. Austria has been always peculiarly jealous of either Russia or Turkey possessing "the Black Mountain" (Montenegro), and on the occasion which we relate, she manifested this jealousy with much petulance towards Turkey and Russia, and empty menace to the Montenegrins, while her proceedings were as usual characterised by double dealing to all. Prince Daniel remained tolerably quiet during the summer; but as the vigilance of Turk and German was relaxed, the robbers of the Black Mountain were again over the borders, and continued to harry the homes of Turkish subjects, until the complete suppression of the Greek revolt, and the disgraceful retreat of the Russian armies from the provinces, extinguished the last hope of fanatical zeal or territorial aggrandisement on the part of Daniel. He became convinced that the czar was not likely to fulfil his promise of making him monarch of Herzegovina, Servia, and Montenegro; and that he must remain in his wooden palace, and beneath the shadow of his mountain, a prince in name, and a robber chief in fact.

It is almost impossible to peruse the events recorded in this chapter, and contemplate the complications and plots of the various powers—Russian, Austrian, Greek, Montenegrin, Egyptian, French, and English—for and against the Porte, without being reminded of the language of Montesquieu. In his celebrated *Persian Letters* (Letter XIX.), Usbek, the hero of the correspondence, writing to his friend Rustan from Smyrna, in the year 1711, is made to say:—"I have seen with astonishment the weakness of the empire of the Osmanlis. This sick body (*ce corps malade*) is not sustained by a mild and temperate treatment, but by violent remedies, which exhaust and undermine it without intermission.' After enumerating the causes of the decay indicated, he concludes in these words:—"Here, dear Rustan, is a correct idea of that empire, which, before the expiration of two centuries, shall be the scene of the triumphs of some conqueror.'" In another of Montesquieu's works, he qua-

lifies this opinion, and uses language still more pertinent to the state of things the foregoing pages describe. In his work, entitled *The Greatness and Decline of the Romans* (chap. xxiii.), he thus writes:—"The empire of the Turks is at present nearly in the same degree of weakness as was formerly that of the Greeks; but it will last a long time; for should any prince whatever place this empire in peril in the pursuit of his conquests, the three commercial powers of Europe know their affairs too well not to undertake the defence of it immediately.' In a note to this, Montesquieu adds:—"Thus, the designs against the Turk, like that which was formed under the pontificate of Leon, whereby the emperor was to proceed to Constantinople by Bosnia, the King of France by Albania and Greece, whilst other princes were to embark at their own ports;—these designs, I say, were not serious, or were conceived by people who did not understand the interest of Europe.'"

CHAPTER XXV.

THE WAR IN ASIA DURING THE SUMMER OF 1854.—DEMOLITION OF THE RUSSIAN FORTS ON THE CIRCASSIAN COASTS.—IMBECILITY OF THE TURKISH COMMANDERS AT TREBIZOND, ERZERUM, AND KARS.—EFFORTS OF GENERAL GUYON TO ORGANISE THE ARMY FRUSTRATED.—VARIOUS BATTLES, AND CHEQUERED RESULTS.—SUCCESSFUL SALLIES OF THE CIRCASSIANS.—DEPUTATION OF SCHAMYL TO THE ALLIES.—RUSSIAN COQUETRY WITH PERSIA, AND ATTEMPTS TO DOMINEER IN CENTRAL ASIA.—PROPOSAL OF ALLIANCE BETWEEN TURKEY AND PERSIA.

"There lake and vale smile fair and free,
With rocks—their guardian chivalry;
O! there men learn liberty,
'Midst crashing wind and dashing sea."—*Songs of the Nation*.

THE contest in Asia has not received a proportionate share of the public interest, except so far as the doings of the renowned Schamyl have attracted attention. A journal which leads public opinion in England, and which has rendered to the country much service during the progress of this war, lately expressed some doubts whether any victories obtained by Russia on the Asiatic theatre of the war could be of any importance in relation to its issue. This was a mistake. There are three ways to Constantinople from Russia—one through the Danubian provinces, another by the Black Sea, and a third through the Asiatic provinces of Turkey. A successful Russian army might march through Asia Minor to the Dardanelles, and command the entrance against Europe. Russia was not indifferent to the Asian branch of her aggressive operations, and during the whole summer of 1854 her efforts were incessant. It had long been the opinion of the Russian government that to extend its power in Asia Minor was an effectual mode of vanquishing Turkey, and of ultimately forcing its

way to the Mediterranean; while by extending the march of conquest to Central Asia and Persia, the Russian armies might ultimately reach India, the reputed source of so much wealth to England. While Russia did not relax her efforts of a "development" (as her apologists sometimes call her aggressions) in the direction of the Baltic or the Danube, her chief energies for many years have been given to extend her Asiatic influence. Even when at Adrianople she forced from the Sultan Mahmoud territorial concessions, and violated her pledged faith to England and to Europe in exacting them, she made her success in Roumelia the means of gaining territory in Asia. It is not the concessions made to her in the direction of the Danube which she has since most prized, but those made to her on the Asiatic shores of the Black Sea, as her long and sanguinary struggles in the Caucasus have proved. Russia would never have expended so many millions sterling, and sacrificed so many armies, if she estimated her Asiatic conquests as little as they have been accounted by many

in England. She had resolved to renew the contests of so many ages between Asia and Europe, and, as a great Asiatic power, to launch forth the innumerable wild hordes of the East upon Europe, until she became by this means the mistress of the world.

Sir Archibald Alison, in treating of the causes of the wars between Europe and Asia, takes this view, and his remarks disclose the philosophy of the contest which in this chapter we describe:—

“Surviving all the changes of time, of religion, of empire, and of dynasty, one great contest has in every age of the world divided mankind. It is the war of Asia and Europe—the strife of the descendants of Shem with the sons of Japhet. All other contests sink into insignificance in comparison. The nations of Europe and Asia have had many and bloody wars among each other, but they have been as nothing compared to those terrible strifes which in different ages have in a manner precipitated one hemisphere upon the other. This enduring warfare has alternately pierced each hemisphere to the heart: it brought the arms of Alexander to Babylon, and those of England to Cabool; it conducted the Saracens to Tours, and Attila to Chalons. In one age it induced the disasters of Julian, in another the Moscow retreat—it led to the fall of Rome and Constantinople—it precipitated Europe upon Asia during the crusades, and Asia upon Europe during the fervour of Mohammedan conquest. Cæsar was preparing an expedition against the Parthians when he was assassinated—Napoleon perished from attempting one against Russia. The Goths, who overturned the Roman Empire, appeared first as suppliants on the Lower Danube, and they were themselves impelled by a human wave which rose on the frontiers of China. It is the east, not the north, which in every age has threatened Europe—it is in the table-land of Tartary that the greatest conquerors of mankind have been bred. The chief heroes whose exploits form the theme of history or song, have in different ages signalised themselves in the immortal contest against these ruthless barbarians. Achilles, Themistocles, Leonidas, Alexander, Pompey, Marius, Belisarius, Constantine Paleologus, Charles Martel, Godfrey of Bouillon, Richard Cœur-de-Lion, John Hunniades, Scanderbeg, John Sobieski, Don John of Austria, Prince Eugene, Charles XII., Lord Clive, Lord Lake, and Napoleon, have in successive ages carried it on. It has been sung in one age by Homer, in another by Tasso; it has awakened at one period the powers of Herodotus, in another those of Gibbon. It began with the siege of Troy, but it will not end with that of Sebastopol.

“It is owing to the different characters of the race of men who have peopled the two

continents that this strife has been so long-continued and terrible. Though all profane history, not less than Holy Writ, teaches us that the human race originally sprang from one family in the centre of the eastern continent, yet the descendants of Adam who sojourned in Asia were essentially different from those who wandered in Europe. Nor was this surprising: we see differences as great in the same household every day around us. It was the difference of character which rendered their seats different: the Asiatics remained at home, because they were submissive; the Europeans wandered abroad, because they were turbulent. Authority was as necessary to the one as it was distasteful to the other. So essentially was this the distinctive character of the two races, and the original cause of their separation, that it characterised the opposite sides in the very first ages of their existence. Priam governed the tributary states of Troy with the authority of a sultan; but the Grecian host elected the king of men to rule them. It was composed of many different independent bodies; and the first epic in the world narrates the wrath of one of its chieftains, and the woes his insubordination brought upon the children of Hellas. The first great strife recorded in authentic history was between the forces of the great king and the coalesced troops of the European republics; and the same character has distinguished the opposite sides to this day. Athens and Lacedæmon were the prototypes of France and England, Thermopylæ of Inkerman, Cyrus of Nicholas: so early did nature affix one character upon the different races of men, and so indelible is the impress of her hand.

“From this original diversity in the character of the two great dominate races of men, has risen a difference not less remarkable in the sources of their strength and the means of their resistance. Unity renders Asia formidable; diversity has constituted the strength of Europe. Multitudes of slaves, impelled by one impulse, obeying one direction, follow the standards of the Eastern sultan; crowds of freemen, actuated by opposite passions, often torn by discordant interests, form the phalanxes of Western liberty. The strength of Asia consists mainly in the unity of power and administration which, in the hands of an able and energetic monarch, can be perseveringly directed to one object; that of Europe is found in the resources which the energy of freemen furnishes to the state, and the courage with which, when the danger arrives, it is repelled. The weakness of the despotic dynasties of Asia is to be found in their entire dependence on the vigour and capacity of the ruling sovereign, and the destruction of the national resources by the oppression or venality of subordinate

governors. The weakness of the free states of Europe arises mainly from the impossibility of giving habits of foresight to the ruling multitudes, and their invincible repugnance to present burthens in order to avert future disaster. If it were possible to give to the energy of Europe the foresight of Asia, or develop under the despotism of the East the energy of the West, the state enjoying even for a brief period the effects of such a combination would obtain the empire of the world. This, accordingly, is what happened in Rome in ancient, and British India in modern times. But universal dominion, except under peculiar circumstances, and for a very brief period, is not part of the system of nature; and to eschew it, the gifts of power are variously distributed to its various offspring.

"Two great sins—one of omission and one of commission—have been committed by the states of Europe in modern times, and it is from their combined effect that the extreme difficulty of the Eastern question, and the perils with which it is now environed, have arisen. The sin of omission was allowing the Byzantine Empire to be overrun by the Turks in the fifteenth century; the sin of commission, the partition of Poland in the nineteenth. It is under the effects of both that we are now labouring; for they broke down the barrier of Europe against Asia, and converted the outworks of freedom against despotism into the outworks of despotism against freedom."

The Russian proceedings in Asia may be thus classified: resistance to the attacks of the Circassians, and of the allies on the Circassian coast; offensive operations along the Turkish frontier; and diplomatic exertions to enlist Persia in her service, and to overawe the petty states of Central Asia. To pursue the course of her actions separately in their different spheres would be impossible, as they blend at various stages of their progress; still we shall endeavour to give as distinct a view of each as the circumstances allow.

In a previous chapter we related the operations of the allied fleets in the Euxine, during the period about which we are still writing, but reserved a portion of their achievements for this chapter, as more properly belonging to the Asiatic department of the war. A part of the fleet, under Sir Edmund Lyons, was ordered by Admiral Dundas to cruise off the Circassian coast. Probably this command was issued in consequence of the exertions made by the Circassians themselves. As soon as the Russians destroyed certain forts, and removed the garrisons, as already related, the Circassians took possession of the abandoned places, and began to reconstruct the demolished forts. Sir Edmund Lyons landed European officers to assist in this work. Fort Golovin,

which was much less damaged than the others which the Russians blew up, was speedily restored; and the Egyptian division of the Turkish fleet, then cruising off the coast, landed cannon and artillery-men, with Mohammedan and European officers in the Turkish service, to superintend the defences thus put into serviceable condition. Fort Villiamus and Fort Navalrski were also promptly armed, and redoubts of earth raised on the shore, to prevent the Russians from re-embarking, should they again effect a landing in the neighbourhood. The Circassians also fitted out a boat expedition, and, rowing across to the Crimea, performed the adventurous exploit of capturing two Russian gun-boats which were at anchor there; these they carried to the bay of Pschad; and setting out on the following day upon a new expedition, they captured a considerable number of Cossack grain-boats, and some freighted with ammunition; several armed vessels also fell into their hands. Had the allies assisted the independent tribes in forming a flotilla, immense mischief would have been inflicted upon the common enemy; and in the Sea of Azoff, where the allied fleets attempted nothing until the summer of 1855, those Caucasian boat expeditions would have been formidable to the Russians, and most useful to the allies. In this way large stores of grain might have been captured, and when not captured, destroyed, so as to deprive the enemy of much of those supplies which fed his garrison at Sebastopol in the ensuing winter. The presence of the allied squadrons along the coast kept up a perpetual effervescence among the independent tribes; and if the communications with the natives had been better maintained, and more effectual assistance rendered to them, many blows might have been struck at the Russian army of Asia, which would have told effectually upon the issue of the war, at all events in that theatre of the struggle. The position of the Russians upon the Abasian coast, in Georgia,*

* Georgia is a country in Asia, called by the Persians, Gurgistan, and by the Turks, Gurtshi; it is situated between the Black and Caspian Seas, and comprehends the ancient Iberia and part of Colehis. The hills are covered with forests of beech, oak, ash, chestnuts, walnuts, and elms; encircled with vines, growing spontaneously, and producing vast quantities of grapes. Cotton also grows spontaneously, as well as the finest fruit trees. Rice, wheat, mullet, hemp, and flax, are raised in the plains almost without culture. The valleys afford fine pasturage, the rivers are full of fish, the mountains abound with minerals, and the climate is delightful. The rivers, however, being fed with mountain torrents, are always too rapid or too shallow for navigable purposes. Georgia was formerly one kingdom, the inhabitants of which were Christians; after 1639, when it was conquered by the Persians, the country was divided between two native princes, by themselves called kings, but by the sophi styled governors. Each of these had a guard of Mohammedan horse in his pay. The Georgians were once famous for their skill in the use of the bow, and were thought to be the best soldiers in Asia. Their dress resembles that of the Cossacks, but lately, since Russian influence has

and Imeritia, might very early in the season have been rendered altogether untenable, had the allied fleets shown the requisite activity, or had the Turco-Egyptian fleet been more prompt. When Hassan Pasha took the command of the latter, there was more energy and enterprise displayed: he succeeded in conveying ammunition, stores, and field-artillery to Schamyl, who made good use of them, and could have employed with advantage ten times the amount. These supplies, however, aided him in the organisation of his troops; and the distribution of ammunition was hailed by the mountaineers with acclamations of joy. Many of them preferred, however, their own copper bullets to those of the cartridges with which they were supplied, and generally rejected the bayonet as a weapon unsuited to them; the sword and the dirk were still retained; while the muskets, and especially the few Minié rifles, sent to them were regarded as treasures of unspeakable value. It is to be regretted that the arms and ammunition supplied to these brave men were of an inferior quality—commercial cupidity stepping in even here to rob valour of its hope. Many a time, in the encounters between these mountaineers and the Russians, during 1854, had the former to throw away the muskets as useless, and to rely upon their own rude rifles; or, unable to use the bad ammunition supplied, to rely upon the strength of their right hand, and the faithful steel they had tempered so well for their Lesghian daggers or Circassian scimitars.

Schamyl was of course the most active and intelligent of all the mountain chiefs. He put forth the following proclamation to his people:

"The men of the West are coming to us as friends, and frankly. We must receive them well. They are anxious to assist us in exterminating the enemy, who for so many years, not-

predominated, the wealthier classes affect the attire of the Persians. They usually dye their hair, beards, and nails red. The women, who are celebrated for their beauty, stain the palms of their hands of the same colour, and paint their eyebrows black, in such a manner as to form one entire line, while the rest of the face is coated with white and red. Being generally educated in convents, they can read and write—qualifications uncommon with the men, even of the highest rank. The inhabitants are Christians, partly of the Greek and partly of the Armenian Church. There are many races residing in Georgia—Tartars, Armenians, Ossi, Greeks, Persians, Jews, Cossacks, and Russians. The Jews are very numerous, having many villages of their own, but they mostly mix with the Georgian, Armenian, and Tartarian inhabitants, but never with the Ossi. They pay an annual tribute to the Russian government. There are only four considerable towns—Tiflis, Gori, Suram, and Ali. On a former page of this History, it was shown that Russia obtained the protectorate of Georgia from the Persian government. This was demanded on the plea that the Georgians, being of the Greek faith, needed protection from the Mohammedan Persians. Ultimately Russia bought the good-will of the prince, and incorporated Georgia with her empire. The above is partly extracted from *Barclay's Dictionary*, published by Virtue and Co., City Road, London.

withstanding his repeated defeats, has been endeavouring to drive us from the mountains and forests in which our fathers lived—where our wives and children shelter their innocence—where we pray to Allah, the omnipotent and all merciful. Let us greet these warriors, who come, like as warriors of the greater and lesser Kabardagh, to wage war on the cruel Muscovites, those miscreants and contempters of Allah. Let us greet these foreigners, who respect Allah, who, to supply us with arms we have needed, have quitted their country and crossed boisterous seas. Receive with kindness these foreigners and friends of our mountains."

Schamyl was rewarded for this flattering declaration by a supply from Admiral Lyons of 18,000 ball-cartridges, which had been captured from the Russians; half were given in the name of the English, and half in the name of the French. From the *Charlemagne* an additional supply of 1000 cartridges was given.

Sir Edmund Lyons and the squadron appeared before Suchum Kaleh, a town of considerable importance and wealth, from the trade carried on there by Armenian merchants. The place was strong, capable of resisting a heavy bombardment. On the appearance of the squadron, however, the Russians evacuated it, although numbering 3500 men. They left the forts and town with such precipitation that they only spiked a few of the guns, and destroyed a small portion of the naval and military stores and provisions. The allies made booty of twenty pieces of cannon, several thousand shells, some thousand cannon balls, a large quantity of grape-shot, and stores of powder of a very coarse quality. About 800 tons of coals were also found there, as the place was a sort of *entrepôt* for the steamers which plied between the Crimea, Odessa, and the coasts of the Black Sea. A portion of the town was consumed by the Russians, when attempting to destroy their stores, in the hurry of their flight; to prevent pursuit they also burnt a beautiful bridge of boats. Redout Kaleh was abandoned with similar precipitation, and with similar results. These towns were the great provision depots from which the Russian troops in that direction of the Caucasus were fed. The abandonment of these places discouraged the army, exasperated the czar, and delighted the mountaineers, to whom the prospect of getting rid of the Russians from the whole line of coast was a stimulus to redoubled exertion. Anapa and Soujak bay alone remained to the Russians of all the fortified places which they had been at such trouble and expense to construct along these shores. Redout Kaleh was occupied by a detachment of Turkish troops; and the British naval officers immediately set about making defences, blockhouses, and earthworks on all salient points. The Turkish

force numbered 2000 soldiers, and would have been competent, in the state of defence in which the officers of Sir Edmund Lyons placed the fortifications, to have repulsed three or four times their numbers. Lieutenant Roberts, marine artillery officer of the *Highflyer*, was indefatigable in erecting defences, and succeeded in inducing the Turkish soldiery to exert themselves in that work, a task requiring some considerable moral influence. A correspondent who was present during his successful labours, thus describes the difficulty of keeping the Turkish soldiery at a task requiring continuous exertion:—"At times, in spite of their *yooos-bashis* (literally, captain of a hundred, or centurion) and *ba-bashis* (corporal or captain of ten), they gradually drop off to some secluded place with their chibouques, their numbers becoming 'beautifully less,' and at length their officers begin to follow their example. Then comes an appeal to their *meralai* (general), and then they again come trooping to work. They readily learned to make gabions, and greatly prefer that work to digging and cutting sods. The parapet has been raised to eight feet, and a similar one is making on the north side of the river. A correspondent says—"There is yet plenty to be got through to make the place perfect, according to the rules of fortification; but, even as it is, I would rather be with 2000 in the defence than 6000 in the attack. It is very troublesome to get the Turks mustered in a morning, and one must be always with them to make them stick to it. The other day, when a long line of parapet was completed by a great effort, the Turks rushed with their spades on the banquette, and putting them to their shoulders, after the manner of so many *tophek* (muskets), took imaginary pot-shots at *Moskoo*, and afterwards all sat smoking in the rear of the rampart, admiring greatly the result of their day's performance, and apparently wondering how the deuce they could have done it. It is very troublesome, too, when, as frequently happens, the progress of the works is interrupted by several of them taking it into their heads to leave off work, and sticking a sword, or piece of stick, into a portion of parapet just completed, commence their prayers and genuflections and head-bowings towards Mecca (the stick is supposed to represent the head of Mohammed); then they are tremendously in the way, and cannot be disturbed."

All the fortresses, great and small, along the whole coast were speedily subjugated, except Anapa, but little occurring at any of them to interest the general reader. One of the smaller forts, in an isolated situation, was captured by Schamyl, who, at the head of a numerous body of his followers, swept suddenly down, killing about 800 of the garrison,

and compelling the rest, 1500, to lay down their arms.

Some description of Anapa—as the principal fortified place held by Russia on the littoral of the Black Sea—is here appropriate, although it was not until the autumn that it was subjected to a bombardment which we shall notice elsewhere. As the first Russian stronghold on the Caucasian shore, approaching from the Tauric Bosphorus, it was of great importance to the czar to retain it as long as possible. By reference to Wild's excellent map, it will be seen that it is situated at the base of the mountain which terminates the lesser chain of the Caucasus; north and east of this chain the plains which are watered by the Cuban river stretch away. The Turks occupied this fortress from the year 1784, but only on sufferance—the Circassians allowing them to occupy it in the name of the sultan, as the head of the faith, and for the purpose of guarding their shores against the Giaours. The Russians were annoyed at the indication given, by the landing of Turkish troops there, of a disposition to strengthen themselves upon the coasts of the Black Sea, and General Bebekoff was ordered, in 1790, to reduce the fortress. He was signally repulsed by the Turkish garrison. The next season, another Russian general, Govdovitch, was successful, after a desperate assault. Peace between the czar and the sultan having been established, it was surrendered to a Turkish garrison; but in the war of 1807 was again subjugated by the Russians—Admiral Pastchekin, with a naval squadron, capturing both town and fortress. It was again surrendered to the Turks upon the conclusion of peace, but in the war of 1828-9 was besieged by Prince Menschikoff,* in command of the army, and Admiral Greig,† in command of the navy, who, after lying before the place by sea and land for three months, during which the fighting was incessant, compelled a surrender. The treaty of Adrianople placed the fortress permanently in the hands of the Russians. Soudjuk Kaleh is thirty miles south-east of Anapa. Ghelendik is sixteen miles from Soudjuk Kaleh. This was up to the time of the treaty of Adrianople a famous depot of English merchandise for goods in transit to Persia and Georgia. The Russians drove away this trade, and the English removed their establishments to Trebizond. A bitter jealousy towards the English mercantile influence there, has never ceased to be manifested by the Russians ever since.

These fortresses, which resisted fleets and armies in the wars which for three quarters of a century raged so frequently between czar and

* The same Prince Menschikoff who figured at Constantinople on the breaking out of the present war.

† Admiral Greig was a Scotchman, and there were many Scotch naval officers then in the Russian service. The Russian navy owes to them such efficiency as it possesses.

sultan on this coast, were in a few weeks captured by the squadron of Sir Edmund Lyons, and that of the Turco-Egyptian admiral, Hassan Pasha. Anapa remained intact for awhile, and then offered resistance; but it was of short duration, and hopeless from the first. The fruits of long and bloody wars, which Russia had previously waged, were thus torn from her in one brief naval expedition. Had the operations on land been also conducted with skill and vigour, the invaders might have been driven through the pass of Dariel, and upon the Caspian, before the autumn of 1854 had bronzed or scattered the summer foliage. Should success crown the sacrifices and efforts of the allies in this war, these shores must never again be given to the sceptre of Turk or Muscovite; but Asia Minor must be protected from northern incursion by the erection of independent states, monarchical, republican, or quasi-theocratical, like that of Schamyl, just as the people themselves prefer. By these means, and these only, can an effectual moral barrier be erected against Russian influence in Asia.

In previous pages of this History, the reader will find ample descriptions of the Circassian mountains, and of the northern slopes descending towards the rivers Cuban and Terek, and the Caspian Sea. The southern slopes of the range were also described, and the efforts of the Russians to consolidate their power coastwise from Anapa. A brief description of the climate and country along the coast is here appropriate. The climate is tropical, although the winter is severer than one might suppose with such a barrier as the Caucasian range sheltering the shore from the north winds. The mountains retire, as it were, for four or five miles to twice that distance from the coast, and the intervening space is well irrigated by mountain streams, and teems with fertility. The profusion of flowers is endless; it seems especially to be the region of roses, which grow luxuriantly, blushing in the summer light, and loading the air with sweetest perfumes. Inland the mountains tower in forms of grandeur which seem illimitable, while seaward the blue water stretches away in serene expanse, or lashes with agitated waves the bold headlands on which it breaks. Every little creek and bay nestles in richest foliage, and wild flowers lay

"Their fairy gems beneath the forest tree."

Every nook and recess from the lower land into the mountains is covered with scented shrubs, jessamine, and every variety of roses; while the overhanging rocks are covered with forest trees, as if the hills opened their bosom to embrace the smiling glade. We know of no better description of the appearance of the

country to one walking a few miles inland upon these shores than that given by an officer of her majesty's navy, who landed at Gagri when that fortress was abandoned by the Russians:—

"*Her Majesty's ship —, off the Circassian coast, May 15th.*"

"We are on the way to Suchum Kaleh, but Admiral Lyons has kindly permitted the officers to have a run on shore and explore the blown-up Russian fortress at Gagri. We found its remains standing at the entrance of a tremendous gorge, in the centre of which a mountain-stream runs, rendering Gagri the most healthy of the Russian Circassian posts. The hills, which spring in a steep slope from the sea, are on their lower parts covered with magnificent foliage, occasionally broken into large grassy spaces of a park-like appearance, and these are now decked in all the beauty of spring. Towards the middle of the mountains the trees are more bare, and a little beyond have no foliage at all. Then the species change from elm and oak to pine and larch, which at first runs with and lights up the other trees beautifully, and afterwards in a thick black fringe have all the top to themselves. Mountains such as these occupy either side of the gorge, their tops a mixture of black pine and snow. Towering beyond, in the centre of the whole view, are huge peaks of unbroken and perpetual snow; the whole is a glorious combination of summer and winter, beauty and grandeur. The fort of Gagri had evidently been evacuated in a hurry, as the Russians had left their ordnance stores there. I counted thirteen 9-pounders, quite new; and there are also several 10-inch mortars and howitzers, besides many piles of shot and shell in the best condition. Their principal missile seems to have been case-shot; the whole place was strewn over with old canisters and iron balls of this description; one store-house was entirely filled with the latter, to be fired from the 10-inch mortar. The fort is a square, with bastions at the angles, and there is a block-house at some distance from it up the valley to command the passage. We did not anchor, and our stay did not exceed half-an-hour. A number of Circassians were sitting on the remnants of *chevaux-de-frise*, and welcomed us gladly, but advised us not to go far up the valley, as their brethren on either side, not knowing what to make of us, would probably fire. They had collected in some numbers as we left, and as we shoved off all fired their rifles together, as a parting salute, which we acknowledged by tossing oars to them. As the Circassians do not understand any sort of warfare but their own, all the military stores should be taken and given to the Turks, to make strong their towns upon the Black Sea.

The evacuation had been so recent, that fragments of books and other small wares were strewed around. After leaving Gagri, we passed the town of Paposi, and skirted the coast of Imeritia; its occupants are Christians of the Greek Church, and favourable to Russia, their chief receiving 20,000 dollars a year. Some people theorise that local scenery influences the minds of those who dwell amid it; if so, these people should be the noblest nation on earth. The mountains have retired from the water's edge, and between them and the sea is a plain some miles across, upon which the trees and verdure are luxuriantly beautiful; smoke arises here and there, as if agriculturists were at work, and distant houses of wood are bathed in the brightest sunlight. This is summer: winter approaches half-way up the mountains, its boundary again marked by firs, and pines, and stray snow-patches in the ravines: again, there is a splendid black forest of firs, many miles in length, along the mountains; above this fir-tops are seen struggling through the snow; above is winter, indeed, in all its dreariness and fierceness. The immense quantity of snow is perfectly dazzling; it lies in one thick unbroken mass, extending high up into the heavens, except where abrupt precipices and rocks will not allow it to remain on their perpendicular surfaces; and peak upon peak, as fantastic as the most insane artist could desire, follow in rapid succession. In steaming along the coast we passed a Russian monastery embowered in trees; one monk alone had taken up his quarters there, as it had not been finished; it is now deserted; its circular green top, crowned by a gold cross, has a pretty effect.

"In passing Paposi five guns were fired thence as a salute, a gun to each ship (*Agamemnon*, *Charlemagne*, *Highflyer*, *Sampson*, and *Mogador*), which was duly returned by the *Agamemnon*, which ship bears the flag of Rear-admiral Sir E. Lyons. We have had some curious effects of mirage; the *Agamemnon* increased greatly in height, now becoming all white, then all black, and then surrounded by a thin white stripe, which continually changed its position; the *Charlemagne* appeared to sink lower and lower in the water, until nothing remained but her hammock nettings; after which proceeding she suddenly grew to twice her height, and then diminished once more. We are rapidly approaching Suchum Kaleh; there is a glorious view of snow and rock; the former, on the more distant mountains, appears to descend almost to their bases; but, notwithstanding snow and ice, we have below here tremendously hot weather. The masses of snow are partially lit up by the sun; in other places they are partly concealed by cloud; it is difficult sometimes to draw the boundaries

of heaven and earth, for, as the evening draws on, both are fast melting into one. One giant peak of porphyry, which shows the perpendicular rock, presides over the glaciers beneath right regally."

From the same authority we present a further account of the operations of the allied fleet upon the coast; his descriptions contrast pleasantly with the curt and dry despatches of the naval chiefs, which we suppress in favour of his more graphic pen. He represents Suchum Kaleh as abandoned when the squadron arrived off the bay, and thus paints the appearance of the place and vicinage:—

May 18.

"On nearing Suchum Kaleh, we perceived the walls were covered with men in the Circassian dress, eight of them bearing flags of all devices and colours, but nearly all having upon them the star and crescent. A beautiful bay, thickly wooded around, forms the entrance to Suchum; in the centre of this we found seventy fathoms of water. The wind blew from the shore, and brought with it a delicious perfume of flowers, and from the appearance of handsome detached houses scattered around, one sees that Russians and Georgians have lived together on friendly terms. About two miles from the town rises a small hill, covered with buildings; and farms, well constructed in every respect, nestle at its foot. I began exploring Suchum yesterday at ten o'clock. On the one flank is a battery of gabions and fascines, having eight guns towards the sea (six of them remaining there, though jammed up with shot). In the centre is a furnace of brick, built with the amiable intention of heating shot for our reception, for our prisoners tell us that the whole of the sea defences have been recently constructed. At the other flank is the old Genoese castle, surrounded by a thick wall of great strength and extent. Here are all the government stores; twelve or fourteen guns, ranging from 18 to 30-pounders (the latter are handsome and serviceable pieces of ordnance), repose upon the walls unspiked. Large stores of flour and wheat were still burning with a horrible smell; and shot and shell of all descriptions are strewed over the ground. Between these two ports is a long street, containing shops and houses of wood and stone; from the centre of this street a spacious road leads to the country. It is well planted with trees upon the walks on either side, behind which are cottages built in excellent taste, and covered with roses and jessamine. We visited the general's house; his coach-houses, stables, and kitchens, excited our admiration. A little beyond are botanical gardens. I never saw roses in such profusion as here; the hedges are formed entirely of

them, and they are in full flower; their scent fills the whole place. After nearly all the ships had foraged enormous bouquets, we climbed up to the houses on the hill I spoke of; these proved to be an enormous hospital, beds still remaining there. We sat underneath large trees in front of the building, and emptied our pocket-flasks with much gusto, for the heat was tropical. Here I sketched a Circassian, and gave him the performance, which caused roars of laughter and 'Mashallahs!' We soon got to know how it happened that the town had not been destroyed like the neighbouring places. It seems the Russians marched from the town overland to join the army in Asia; but, being too weak in themselves to make the journey, obtained a large escort of Georgians, the price of their service being the town of Suchum, the Georgians having stipulated that nothing should be destroyed except military stores. Their terms were accepted, and a Georgian detachment remained behind to take care of the place until their brethren should return; but our friend Schamyl had also kept his eyes open, and immediately upon the evacuation of the town by the Russians and Georgians, sent a lieutenant with a body of Circassians (some say 500, others 2000) to take possession. In consequence, disputes ran high between Georgians and Circassians (the former Christians) at Suchum Kaleh; the one party say they shall occupy the place and keep it, and the other that they have earned it; the returning Georgians, however, are but one day's march from the scene of dissension, and most likely Suchum Kaleh will be a prize well fought for. Schamyl's lieutenant had left for Batoum to communicate with the Turks. On leaving Suchum Kaleh, we made acquaintance with the highest peaks of the Caucasus, which run inland, and were left behind before approaching Redout Kaleh. We have been fortunate in the clear atmosphere, hot as it has been. This morning the view of the wildest part of the Caucasus was grand in the extreme. The highest peak (8000 feet) was in sight, its surrounding neighbours forming with it a magnificent snow landscape which I shall never forget."

By far the most interesting account extant of the reduction or abandonment of Redout Kaleh is the following. An abridgement would fail to convey the lively, eye-witness character of the narrative. There is an individuality about the description, which claims at our hands that we should present it entire.

May 22nd.

"And now to give you an account of our adventures at Redout Kaleh. We reached that place at about four o'clock, and, before doing

so, saw hosts of Georgians mounted, intermingled with Cossacks, and riding hard along the beach into the town; and, standing about the parapet of the fort, could distinguish eight or nine Russian officers by their uniform. The admiral immediately sent a flag of truce, requiring the immediate evacuation of the place. The officer in command replied that the prince was two miles distant, and it was necessary to communicate with him on the subject. Upon this the boat waited for a quarter-of-an-hour (five minutes longer than agreed upon), then shoved off, and, making signal to the admiral 'Have received no answer,' pulled out. They were ordered back, however, by signal, to remain another quarter-of-an-hour; but, on again reaching the shore, no one was to be seen—officers, Georgians, and Cossacks, all having disappeared, as if by magic. On this being made known, the *Agamemnon* immediately opened fire, the Turks were got into the boats, and assembled near the *Sampson*, with a few gun-boats to cover them, and waited until ordered to approach; but, as the first shot was fired, a thick mass of smoke began to rise from the town, and soon afterwards I counted ten such ascending straight into the clouds—in short, the Russians had fired the town, and right well had they commenced their work. The old Caucasus, who shone against the sky with all his snow-peaks, without a cloud, echoed loudly the cannonade of the *Agamemnon* and *Charlemagne*, and the gun-boats and Turks advanced and disembarked, having had but one gun fired at them from the fort. The Turks formed upon the beach, the Bashi-bazouks penetrated the wood on their right, and examining the houses and forts in front, as skirmishers. The Turks proceeded by the banks of the fine broad river towards the burning town, and found that pursuit of the Russians was cut off by the destruction of bridges of boats. Two rivers, one from the south and one from the east, have their confluence here. A Turk swam across one with a line in his mouth, to form a communication, but the measures of the enemy had been taken too well, and but a few shots were fired at the last of them. Meanwhile, the ships' boats were recalled, and the Turks left in quiet possession of this side of the rivers; the rest was a tremendous conflagration; houses and trees burnt together furiously during the whole of the night, and fierce flames and illuminated smoke rendered our decks almost light. As I was looking through a glass, down came the steeple of a church, most beautifully covered with flame. Fortunately, the wind did not permit of its spreading more to the west, or the Turks would have been burnt out. All the men in the ships were ready at their guns during the firing, and the artillery and marines were

ready to land if necessary. Redout Kaleh was the most important point of the Russians, connecting Tiflis and the interior of Georgia with the Black Sea; and it was from that place communications were made between the other posts and the army in Asia. Flame and smoke were also seen in the direction of Poti, which most probably has shared a similar fate; so that now the Russians are completely shut out in Georgia from the Black Sea. They had evidently retained Redout as long as possible, owing to its importance, but were prepared to destroy it upon an emergency, and I have no doubt but everything was made ready to fire it on our first appearance off the place when we hoisted the Turkish ensign. Redout is now the most important position in the hands of the Turks, and they require more men and guns there as soon as possible, as now they have but 7000 men to hold five positions. We are now off to Sinope, and afterwards to join Admiral Dundas, leaving the *Sampson* to help to take care of Redout Kaleh."

While the British naval officers were thus occupied, some British engineer officers and Captain Brook crossed the mountains from Burdan, near Galovinsky. They were attended by a number of sappers, to expedite the journey, as it was necessary to cross the Russian road by a difficult route. A further precaution was taken by accepting an escort of Circassian riflemen, commanded by Ismail Bey. The object of this expedition was to communicate with Schamyl personally, and arrange with him for such a line of action as would more effectually divert the Russian arms in Georgia, and secure the coast line which they had abandoned. Ismail Bey, the conductor of this escort, had arrived from Constantinople in the *Terrible*; a French cruiser had taken him thither on a mission to the Porte. He was landed by the boats of the *Agamemnon*, and warmly greeted by his brave followers, who thronged the beach to meet him. The Circassians led the party of British officers by routes the most intricate, but affording prospects in which the beautiful and sublime rapidly alternated, and sometimes blended. On one beautiful sward buttercups and daisies dotted the green carpet profusely, reminding the officers of their own loved isles, and of the friends they left at home; and who were then doubtless thinking of them, or praying for their safety, or entertaining bright dreams of their usefulness and renown. Up the steep mountain paths, and through terrific ravines, the party made their way, and along precipices that were frightful even to remember. They entered various villages, the situations chosen for which, proved the Circassians to be judges of the picturesque. The amazement of the

inhabitants was great to see the European officers. In a wood, straying a little from their escort, they came suddenly upon a fine old gentleman, attended by two Circassian beauties, his daughters. He drew his sword, determined to make a gallant defence, whatever the nature of the strange-looking intruders might be; but on learning that they were Ingealeez, he put up his sword, and his fierce brave looks gave place to cordiality and smiles. After numerous adventures, the party accomplished their object, and returned to the fleet, attended by large numbers of the native warriors, who discharged their rifles at parting, and showed by every gesture their exultation at having the English for their allies against the cruel Muscovite.

Sir Edmund Lyons sent home a report presented by one of the officers commissioned by him to hold communication with the natives. Having described them generally, he observes of Enim Bey, who conducted the escort—"His will seems law along the whole coast, from Soudjuk to the Anakria river. Within those limits along the coast all are Mohammedans, and during the nine or ten years of his residence among the Western Caucasians—being a native of Schamyl's, or the eastern country, Daghestan—he has built mosques, created schools, and, in short, excited a revival of religion *à la Wesley*. 'Before he came, we were beasts,' said a chief to me lately; 'and now, if he were to order us to march into the sea, we should go without question.' Their hostility to Russia is inveterate and intelligible; but they know well how unfit they are to cope with the Russians out of their own mountains, and the Russians equally well know them. Nevertheless, I hope that they will not be altogether useless. The naib is dignified and stately; he moves with an escort of wild mountaineer horsemen, preceded by a red and buff banner: his white Circassian tunic, yellow vest, black cartridge-cases, and tall grey sheepskin cap, admirably set off his dark strongly-marked face. In conversation, you at once find him a very superior man, clear in his views, thoroughly knowing his own position, and that of his countrymen. All the natives of the coast, from Soudjuk to Anakria, are bitter against the Russians, with the exception of one or two chieftains, who have received money and honours from them; but these are isolated cases, and they have had no influence on the people."

But while British power was making itself felt on the Circassian and Abasian coasts, and the hand of Schamyl was heavy upon his enemies, the Russians—the hero penetrating into Georgia and terrifying Tiflis—and while the loss of the Russians, in slain, wounded, prisoners, and stores, from these causes was

great, everything was in confusion and disorder where the Turkish pashas governed. Turning the attention of the reader southward and inland, one of the most important positions occupied by the Turks was Kars, a place which afterwards (during the autumn of 1855) acquired so great a notoriety by its heroic defence, under the command of General Williams. Erzerum also became of interest as a great central position for the Turkish armies. It was the general rendezvous for troops from Asia Minor; and those forces which were landed at Trebizond from the Bosphorus and Varna, were mostly directed upon Erzerum. Kars and Erzerum are about 170 miles apart, the former to the north-east, upon the Arpa chain. At the time of which we write it was badly fortified, being only partly walled. Many of the houses, and even some of the Armenian churches, were of wood; and the whole place presented a dilapidated and ill-conditioned appearance.

Trebizond is the Trapezus of antiquity, the capital of Anatolia, and is situated on the south-east coast of the *Pontus Euxinos*. The place has a considerable trade, being an emporium for British manufactures; there were some copper mines worked in the neighbourhood; and it is the grand mart for Circassian slaves. During 1854 it was greatly strengthened, especially on the land defence. Its population is about 50,000. Erzerum is situated in an elevated plain, or table-land, of great extent, nearly 8000 feet above the level of the sea. It is surrounded on all sides by the peaks of lofty mountains, many of them perpetually covered with snow. The city is very picturesque, being built on several high knolls at the foot of a mountain with a double peak. There are nearly 40,000 inhabitants, seventeen baths, twenty-five mosques, some of them magnificent, and four churches of the Greeks and Armenians. The place remained throughout 1854 very indifferently defended. In the summer of 1855 it was extensively fortified, under the superintendence of General Williams, already referred to as the hero of Kars. The plan of defence was a series of redoubts, mounting heavy cannon, placed on all salient situations, and so connected as to strengthen each other and the general defence. We may be excused for thus anticipating events future to those recorded in our chapter, so far as to show the state of the place during the contests of the summer of 1854.

Between Trebizond and Erzerum the communications are excellent in the spring, summer, and autumn, but in winter they are often difficult. In Duncan's *Campaigns with the Turks in Asia*, winter-travelling between the two places is thus described:—"We now

began to experience intense cold, against which, however, we were well protected; and the scenery began to assume a very different character to that of the day before. Having crossed a deep ravine, we ascended a rugged mountain, without the trace of tillage, whilst on the opposite side every inch was cultivated. At the top of a rock some enterprising individual had built himself a hut, but how he managed to ascend or descend were matters of mystery. Probably the land he tilled cost him nothing; and no Turkish tax-gatherer would venture up to collect taxes or dues from so dangerous a quarter. In a few hours we entered into real Alpine scenery, only more wild and grand. Mountain torrents fell from dizzy heights, forming glaciers, and losing themselves beneath the snow and ice which choked up the ravine. At times a wild torrent issued from some crevice, and rushed with fearful noise through rocks of Titanic size, which lay in wonderful confusion, and had been hurled to their strange positions by some convulsion of the earth. Above our heads and on every side were snow-capped mountains, rising one above the other, and of various formations. Some were round, others peaked, whilst the greater number presented the most rugged and abrupt shapes. We had to pass this and the succeeding day along precipices miles long, and of frightful depth; but we were fortunate in meeting with no accident, and in not losing a single baggage-horse. One of the latter fell, but was luckily caught by a shrub; and he rose, shook himself, and took his rank after the others with utter indifference of his fall. Accidents are very common with the baggage-horses; and as they push by each other in the narrow passes, the one nearest the abyss falls, and is generally dashed to pieces. We passed several carcases on this day's journey which were still fresh, and on which dogs and crows were feeding. A wolf came running down the side of the mountain, but on seeing us he sneaked off, before a revolver could be brought to bear on him. No country can offer greater attractions to a sportsman than the pashalik of Trebizond, in which we were still wandering. Partridge, snipe, and small game are to be found in abundance; whilst wild boars and bears offer a more exciting and dangerous sport. The former roam untouched in the forests, as the Turk despises swine flesh, and are only to be killed in one manner, which requires some patience. The hunter must be concealed near the spot where they regularly come down to drink. The first shot must be mortal, otherwise adieu to your intended victim, for he is fleet of foot, and out of range in a minute. Bears are likewise numerous; and when pressed by hunger will give chase to a caravan. Popular

report says that on these occasions only can the horses be induced to break out of their walk, and gallop on. The animals are instantly aware of the presence of a bear; they exhibit the greatest fear, give vent to a plaintive neigh, and rush madly forward. The wolves here are cowardly in the extreme; the report of a pistol suffices to disperse them." These remarks as to the winter climate hardly convey so unfavourable a view as that given by Mr. Curzon, who says—"The breath out of doors congeals on the moustaches and beard, and speedily produces icicles, which prevent the possibility of opening the mouth!" Erzerum, lying *en route* from Trebizond to Persia, is commercially very important,—British and Swiss manufactures, furs, hides, goatskins, wool, tallow, nutgalls, wax, tobacco, gum, and minerals, forming the principal articles of commerce.

At the opening of the summer these important positions were all miserably defended. Pecuclion and pestilence were more formidable enemies than the "Muscovs." The pashas were prodigally wasteful of the resources in their charge, and venal beyond belief. Had they been in the pay of Russia, they could not have more effectually served her interests. The Polish and Hungarian officers holding rank in the Turkish army were so desponding, that their misgivings threw a damp upon the courage of the Turkish soldiery, who are always brave when well led. It is upon the higher classes of Turks that the debasing effects of Islamism are chiefly seen. Those European officers could not understand how a soldiery so treated, and so commanded, could even be brought to face the enemy; and the disheartening demeanour of these gentlemen tended to make the Turkish common soldiers think that their enemies must be more formidable than they had supposed. The army at Kars were placed under canvas, near the city, as soon as the severity of the northern Asiatic spring abated, and their long line of green and white tents presented a most picturesque aspect. Cholera and fever had ravaged the troops, in quarters in the city, from the fall of the leaf in 1853 until the encampment of 1854 was formed, when these visitations rapidly abated. The same plagues prevailed in all the surrounding villages, where the army found winter quarters; and the removal of the troops thence to the camp was attended with sanitary results similar to those which followed the removal of the soldiers who had been in the capital. It was surprising how the men rallied, and how eager they were to be led against the enemy. Money and provisions came rapidly to camp, the men were paid their arrears, discipline began to be enforced, and the prospects of the Moslems

brightened. Had Guyon, or Williams, or any European general of merit received authority from the Porte to lead that army against the foe, it was in a spirit and condition to fight its way to the foot of the Caucasus. "Why do we not march?—Why do we not march?" was the cry of the soldiery to Guyon, as he rode among the gaily-coloured tents. The muschir and the *native* pashas did not like fighting, while there was anything to plunder in an official way from those under their authority, civil and military; and consequently 35,000 as brave men as ever encountered the legions of the czar (except those of France and England), with eighty pieces of cannon,—the artillery-men well disciplined upon the Prussian system,—remained in the tents at Kars, while the Circassians, unaided, impeded the movements of the enemy. The Russian army had time to concentrate, recruit its health and vigour, and receive reinforcements, while pashas luxuriated in the fumes of tobacco smoke, the dreams of opium eating, and the languid pastime of the harem.

At that time the Russian forces in Georgia were weak, scattered, and unhealthy, or they would have probably surprised the Turkish army in their tents. That would have been by no means difficult for an enemy within a few marches of them, for there were no organised modes of obtaining intelligence in the Moslem army—random spies brought any news they could pick up or invent. The persons employed in this capacity were generally peasants, and so illiterate as to be unable to comprehend their instructions, or comprehend them, quite unable to form any judgment as to their importance. Sometimes they ran away; sometimes were assassinated by the Georgian Greeks; often they fell into the hands of the enemy, and were as often spared by the latter from contempt. If any did come back to the Turkish camp, their tidings were so contradictory that nothing could be made out by collecting the reports. When any more intelligent than the rest were employed, they were generally "bought up" by the Russians, and sent back to the pashas with false intelligence,—while they returned again to their new employers, who paid them so much better, with a true account of the Moslem camp. Russians were quartered at Gumri, about thirty-six miles from the camp, and had they not suffered so much from typhus, cholera, and the inclemency of the previous winter and bitter spring, it is inconceivable how they should omit to steal a march, and fall upon the unwatchful Osmanli. What the forces of the Muscovs at Gumri were, the muschir at Kars never could find out. "Let them come," was his sapient remark, "and we will fight them." When they did come, defeat and

shame to the boaster were the results. Meanwhile, nothing went on in the camp that the Russian general at Gumri did not hear; it was filled with his agents, who moved about under one disguise or another with perfect impunity. The bearded Jew, with his sparkling eye and glittering jewelry, sought not so much to sell his trinkets as to buy intelligence; and the shaven Armenian, who so slyly sought an investment, was prepared to negotiate other matters than loans. So well aware were even the soldiery of the czar at Gumri of the *perdu* state of everything in the camp, that although nearly the whole of that garrison were Poles, scarcely a dozen made their way to the Turkish camp as deserters. One officer, a Mohammedan, his breast covered with orders, deserted under circumstances of fearful risk. Day after day there was a "medglis," or council of pashas, who discussed the propriety of marching everywhere but where it was practicable to go, or where they were likely to meet the foe. Scarcely had the medglis broken up, when all the camp knew of their vain-glorious purposes, and the enemy in a few hours laughed in his cups over the folly of the Osmanli. At one time it was projected to march upon Gumri on a certain day,—not many hours had elapsed after the resolution was taken, before the whole plan was in possession of "the Russian excellency," who prepared accordingly; and sneeringly told the Turkish spies, when caught and carried before him, to "go back and tell the muschir that, being of his counsels, he was quite ready for the day and hour to meet his projects *à la Russe*."

At one of these meetings of generals, Churshid Pasha (General Guyon) perpetrated the bull—which, being an Irishman, came natural to him—of recommending his brother pashas to "March upon Erivan, and not tell any one they were going until they got there; not that there was anything to be done at Erivan, but doing it would encourage the men for other enterprises!" The Hibernian pasha probably meant to say, that a march where no important result immediately depended upon it would be useful in keeping up a spirit of enterprise in the soldiery. The pashas all concurred with him, but in two hours it was the talk of the common soldiers, and Guyon necessarily abandoned the idea. Immediately afterwards the garrison of Erivan was strengthened. At Alkalakaki, a place of some strategical importance, only a few hundred Russians were quartered,—Guyon offered, with characteristic bravery, to take a small body of men and surprise the place. The superior pashas would sleep and smoke upon it;—they did so, and next morning it was well known in Kars, and Guyon was complimented for his courage in proposing such an exploit; at the same time, the garrison

to be surprised, was indeed surprised at the folly of its intended assailants in allowing their designs to be so easily discovered. The place was put in a due posture of defence, and fresh troops assigned to maintain it. On another occasion, an important reconnaissance which Guyon hoped to effect became known to the enemy, who marched 8000 men to intercept the general, and at the same time made a serious diversion upon the extreme left of the Turkish army.

While the army lay encamped near Kars, and the pashas were heedless of the importunities of the foreign officers to move, the latter made good use of the time in disciplining the troops. The artillery was made very efficient, several battalions of infantry were armed, equipped, and drilled, after the manner of the Chasseurs de Vincennes; several French officers having arrived at Trebizond, some of them went on to Kars, and perfected the drill of these chasseurs. A bridge of boats* was prepared, under the direction of an Hungarian officer who had served with Guyon in the Kossuth war. The muschir talked of marching even to Tiflis, and thought he would require this expedient for crossing the rivers in his course, which generally resemble the muschir himself in shallowness, but, unlike him, are generally rapid.

* A correspondent of an evening journal gives the following humorous sketch of the sensation created among the citizens of Kars by this work:—"A pontoon bridge, which had been for some time in the course of construction, was completed yesterday, and, to test its solidity, was thrown across the Kars-tschai. The trial was very satisfactory, and a squadron of cavalry, with a field-battery, passed in safety. The bridge is short, but the rivers which flow between this and Tiflis are insignificant and narrow. A great crowd assembled to witness the trial, and the novelty of the proceedings greatly delighted the solemn townspeople. With all his natural or acquired impassibility, there are few more curious or inquisitive than the Turk, who is easily amused and astounded, and is a thorough *gobemouche*. In connection with the bridge were two small boats, constructed to carry the anchors. These excited to an intense degree the marvel and admiration of the natives, who had never in their lives seen anything of the kind. How these hollow contrivances managed to keep from sinking was the subject of animated discussion, and a not easily-solved problem. Great travellers, who had actually been as far as Trebizond, and had seen real ships with sails, now rose doubly in the estimation of their fellow-townpeople. One individual, who was certainly before his generation, having asserted that he had seen ships move without sails or oars, and only with smoke, was very properly looked upon as a liar and impostor; and the crowd requested to be informed if he was laughing at their beards, or thought them to be sons of asses, to believe such abominable lies. Persisting in his assertion, this ill-conditioned traveller was denounced as a son of Sheitan, and imprecations were heaped collectively and individually on his father who had made him, on his ancestors who had preceded him, and on his successors to any number of generations. To return to the boats. I doubt if the magnificent Baltic fleet, steaming up the Sound, headed by the huge *Duke of Wellington*, with 'Sir Charlie' himself on the quarter-deck, aroused more admiration in the minds of the northern spectators than did these two tiny punts in the unsophisticated imaginations of the good people of Kars. The officer (an Hungarian) who had superintended the construction of the bridge and boats was looked upon as a magician, and as rather a dangerous character."

While the army of Kars was thus inactive, Schamyl was issuing forth from his fastnesses like an eagle swooping upon its quarry. The Russian troops which evacuated the fortresses along the coast were attacked in detail and severely handled; the division which abandoned Suchum Kaleh was permitted to march a considerable way unmolested, when suddenly, in an unwatchful moment, Schamyl fell upon the rearguard, entirely cutting it off, and, throwing the main body into disorder, maintained a harassing pursuit until a junction was formed with another Russian corps, when Schamyl's force was too small to do more than annoy the enemy, causing fatigue and alarm, picking off the men of the rearguard with their rifles, and making prisoners of all stragglers. Soon afterwards the Circassians made themselves masters of the pass of Mosouk, interrupting the communications of the Russian army in Georgia. The lieutenants of Schamyl were also active; if he were the eagle, they were the hawks, and in every direction they found a prey. Through the instrumentality of his agents, the warrior chief succeeded in raising the Mingrelians, whose fear of Russia had been excessive. Several of the tribes joined the troops of Schamyl, bringing with them stores of ammunition and arms, and even money.

Along the Turkish frontier a number of combats now occurred in rapid succession, between small bodies of troops, in which the Russians had a uniform success. The necessity of reinforcements to the Asiatic army was at last felt by the Porte; it is said that this was the result of Omar Pasha's representations, who, much as he had upon his hands elsewhere, found time to address his government upon the importance of striking a vital blow upon the Russians in Asia. Early in July, 6000 regular Turkish troops embarked at Varna for Trebizond: the promise of 20,000 more was made to the chiefs of the Asiatic armies, but was never fulfilled. Had even a small body of French troops been landed on the north-east coast of the Black Sea, the moral effect upon the Christian populations of Mingrelia, Georgia, and Armenia, would have been immense. The French were not in sufficient force in the East, nor in sufficient health to undertake this; besides, the uncertain counsels of the allied generals and the allied governments paralysed all such enterprise as would comprise the coasts of Abasia and Mingrelia. The strength of the Turkish army in Asia by the beginning of July was 20,000 men, at Batoum, Redout Kaleh, and Suchum Kaleh, under the orders of Selim Pasha, and at Ardakan a division of 6000 men. The army of Anatolia was composed of 30,000 men of a better quality than those under Selim, whose head-quarters were at Batoum; at

Bayazid there were about 16,000 men, 8000 of whom were regular troops, the remainder the very wildest irregulars that the most out-of-the-way places in Asia Minor could supply. A few of the troops sent from Varna were Cossacks* in the sultan's service. When these irregulars encountered the Russian irregulars of the same name, both parties manifested considerable curiosity in the way in which they observed each other, but instead of exercising any of the amenities of kindred race, they seemed to entertain a most jealous rivalry.

The Russian army in Georgia turned its attention to the daring enterprises of Schamyl: in consequence of the losses already sustained from his arms, the Georgian militia and irregulars were mustered in considerable force. The latter, who generally ran away from regular troops, were found very available either

* The following extract from a letter, giving a comparative sketch of the two classes of Cossacks, will interest the reader:—"The dress of the Turkish Cossacks consists of an Astrakhan fur cap, a shabby imitation of the 'Busby,' a brown tunic, with the sleeves open in front and hanging loose from the shoulder, showing the jacket underneath, the colour of which depends on the variety of cloth which may be in store at time of the issue. Their arms and accoutrements are of an inferior description, and consist of a lance, a pair of flint pistols, and a sword too short to be serviceable as a weapon for cavalry. Their equipment is completed by a pouch and buff belt, which receives a coat of pipeclay at periods varying according to the ideas of military smartness entertained by its wearer, such matters being perfectly discretionary, and not influenced by any impertinent interference of superior authority. In size, appearance, and condition, their horses do not seem to be suited for cavalry purposes; their want of power and weight must prevent their being of much service in a charge, where both these requisites are indispensable, and they do not possess sufficient strength and activity to enable them to contend in skirmishing and light cavalry duties with their well-known antagonists. The Russian Cossack is a very different style of man, and has the advantage over his namesake in the Turkish army in being as it were born to his profession, which entails on both himself and horse, even in time of peace, constant exposure to privation and fatigue, instead of being called upon for his services on an emergency. The Russian Cossacks are recruited from Turkistan, Bessarabia, the Crimea, and Ukraine, in a manner very similar to the old feudal system—that is to say, that every householder in these districts is exempt from taxes on condition of furnishing a man and horse every alternate seven years for the service of the emperor; and have the privilege of being officered by their own nobles, excepting in the cases of the colonel and drill-instructor, who are both sent from the regular cavalry. They receive in time of peace only rations for themselves and forage for their horses, and in time of war they are placed on the same footing as the regular cavalry. There is no great enthusiasm for the army among that class of Russians corresponding to the 'few smart young men' who are always being appealed to by the recruiting sergeant in England, and to obtain men at all in some parts of Russia but little respect is shown for the liberty of the subject. The other day, at Odessa, the authorities having been called upon to furnish a certain quantity of *food for powder*, were obliged to have recourse to a stratagem which would scarcely have been tolerated in the times of the old pressgang. They directed the police to surround one of the principal *cafés* in the place, at a time when it was most full, and after selecting all those fit for service, sent them off in irons to join the army, where they are now probably being initiated into the mysteries of the manual and platoon, their apprehension and faculties being quickened under the fostering care of the knout."

in combating the Bashi-bazouks or the Daghestans. The Georgian troops acted principally on the defensive; but they were exceedingly useful in keeping open and re-opening the Russian communications. In this particular service they were more efficient than the regular Russian army. A few irregular Armenian companies were also thus useful; the militia of Russian Armenia were, however, far inferior to those of Georgia. All those auxiliary forces had a prevailing fear of the "Delli-khans," a Circassian phrase, which answers to our English phrase of "cracked heads," and to the Turkish designation of Bashi-bazouks. This name of Delli-khans was conferred upon certain volunteers of Schamyl's army, who well merited it. These "cracked heads" are certain wild and lawless men of the mountains, whom Schamyl even cannot tame; they received a roving commission, and were in all their habits cousins-german to the Bashi-bazouks, — whose family name, so to speak, they bear, only enunciated in another tongue. Sometimes the Georgian militia would take to shameless flight before a mere handful of these Delli-khans, who harassed the rear of the Russian army in Georgia, and infested the skirts of the territory southward beyond that over which Schamyl, during these conflicts, held military sway.

In July, the French war-steamer, *Vauban*, carried to Batoum the last detachment of the reinforcements sent from Varna by Omar Pasha, and thence visited the coast of Mingrelia, Georgia, and Circassia. Having approached Anapa (still maintained as a Russian garrison), they pointed the guns at her; but she did not fire, having orders not to do so. Her captain succeeded, under cover of the night, in taking soundings, which act of foresight was of great use when, subsequently, the bombardment of Anapa was decided upon. The little place called Soudja also remained in the hands of the Russians, and there the *Vauban* threw in a few shells, which produced a disproportionate amount of mischief, and obviously terrified the garrison. The most useful part of the cruise was in affording several of the Circassian chiefs an opportunity of visiting Constantinople, and bearing from Schamyl proffers of alliance to the sultan and the allied generals. These men strongly represented to Marshal St. Arnaud the desirableness of a demonstration by even a small body of allied troops upon their shores, whom they offered to join with an army of 80,000 men. The French general gave deep attention to their representations, but their request could not, or at all events was not, complied with.

In July, Selim Pasha (the chief in command at Batoum) set out upon an expedition with a considerable force, for what object it would be

difficult to conceive, unless for the purpose of giving the Russians a chance of waylaying and attacking him at an advantage. He *was* attacked, and, after a severe struggle, in which he rode wildly about, displaying some personal prowess, he was obliged to retreat precipitately upon Choorooksoo. During the retreat, he left many prisoners and eleven guns in the hands of the foe.

On the 29th of July the Turks experienced a severe defeat. At Karaboulah, about eighteen miles from Bayazid, they were encamped to the amount of 10,000 men: 3000 of these were redifs, or militia; the remainder, Bashi-bazouks. The Russians attacked them with a force of about equal numbers, an obstinate and irregular conflict ensued, in which the Russians were on the point of being repulsed, but they brought up their reserve of 5000 men, which left the fortunes of the day no longer doubtful. At that moment, Selim Pasha, at the head of four regular battalions, quite a match for the Russian reserve, arrived; but, instead of charging the enemy, or covering the retreat of the redifs and Bashi-bazouks, he turned and fled, leaving those who had fought so obstinately, and who, being irregular troops, would be sure to disband and take flight if defeated, to do as they best could. The rout was total; they dispersed and fled in every direction over the country, the Russian cavalry dyeing their swords with slaughter. Not a man of the fugitive host turned his back upon the enemy until they saw their general, and the fine body of regular troops he commanded, turn away, while within view of the field, leaving them to their fate. It was generally supposed that Selim had handled Russian gold. So the Porte thought; for upon the arrival at Constantinople of Skender Bey (Lieutenant-colonel Frieh) with despatches, and to request reinforcements, Selim was deposed from his command at Batoum, and from his honorary command of the sultan's imperial guards. This was the Selim who fought so well at the close of 1853 at Chevketil (Fort St. Nicholas), a full account of which may be seen by the reader in the chapter of this history which treated of that event. Selim set out in life as a common soldier, and was a lieutenant when Sultan Mahmoud destroyed the Janissaries. From that time he was in constant employment, and fought the Russians in Bulgaria, in 1828-9, held a command against Mehemet Ali, and was considered an efficient officer in putting down the various provincial insurrections to which the dominions of the sultan are so liable. After this defeat, the Russians followed up their success, and entered Bayazid in triumph. They did not linger there, but advanced the next day to Erzerum, whence the panic-stricken inhabitants fled towards Trebizond.

These disasters were but the preludes to others. On the 7th of August, the Turkish army at Kars left its fortified positions, and advanced to attack the Russians at Kuyukdere. This probably resulted from the instigation of Russian spies, as the Muscovite general was anxious to "draw them out of their lair," and receive battle from them in his own fortified camp. The headstrong and stupid pashas seemed willing to be ensnared. They had opportunities to assume the offensive long before, when the Russian positions were not particularly strong; but they chose to wait until the enemy's engineers had thoroughly secured his camp, and then sallied forth to attack it. The Turks assailed the right wing of the Russians, a fault which no generalship could perhaps afterwards have repaired; for not only was the right the stronger of the Russian wings, but their cavalry reserves, which were numerous and well commanded, could act there with great efficiency. So impetuous, however, was the attack, that the Russians gave way, and the victorious Osmanli thought that the rout of the whole line must ensue, when the Russian general threw his whole cavalry upon them at a moment favourable to the charge. The Turkish infantry were unable to form to receive them, so sudden was the swoop of the Russian horsemen upon them. They were dreadfully cut up; one general was killed, and two were desperately wounded. Hassan Pasha was made prisoner, mortally wounded, and Mustapha Pasha, whose appointment to supersede Selim had not yet reached him, was slightly wounded in the sword-arm, and in the bridle-arm severely. Two thousand five hundred Turks were made prisoners; what number fell upon the field it is impossible to say, as no account the least to be relied upon was ever transmitted to Constantinople, or at all events found its way westward. It was one of the most sanguinary battles which had as yet taken place between the two armies in Asia. Mustapha Pasha, who was wounded, was the same who at Oltenitz, and in the Dobrudscha, fought with so much gallantry and success. He had arrived out with the first reinforcements sent by Omar Pasha, and he fought at Kuyukdere with a determination not to yield, which ensanguined the contest.

While in these battles the Russians were driving the Turks before them as a ball struck by a bat, Schamyl was carrying his standard through all those parts of Georgia which from Daghestan are most open to such inroads. He appeared at the head of 20,000 men, and struck terror into the hearts of the pro-Russian Georgian population. If it had not been for the diversion thus effected by Schamyl, there is no saying what results might not have followed the career of Russian victory in Asia.

But the proceedings of Schamyl, and the arrival at Kars and Erzerum of reinforcements, which were landed at Batoum and Trebizond, compelled the Russian armies to fall back in every direction; and, but for the skilful concentration of the troops by the arrangements of Bebutoff, the recent victories would have proved disasters, by the severe loss of men they entailed, and the necessity of retiring rapidly, in order to cover Georgia, and maintain his communications. Before this retrogressive movement commenced, the commander at Kars had the folly to send to Bebutoff a challenge to bring out his army into the open field, and he would meet him there. The same day Vely Pasha and Mustapha appeared with eight regiments of cavalry reconnoitring the Russian camp, where they perceived columns of smoke ascending—the Russians were at their old tactics of burning everything inflammable before retiring. So precipitate was the Russian retreat, that, as is usual with them, not igniting the materials intended to be destroyed until the last moment, the tents remained sound and furnished, while the fodder of the horses, sacks of barley, and the timber collected for fuel, were burning amongst them. Baggage-waggons and ammunition were in piles, so placed that the fire in a few hours would have reached them. Ten cannons (spiked, however) fell into the hands of the reconnoiters. The muschir pressed on with his troopers in pursuit, until he reached within half cannon-shot of the rearguard of the Russian army, part of which entered Alexandropol, part encamped in its neighbourhood, and the rest continued their march upon Tiflis. This timely and well-executed retreat of Bebutoff saved Georgia from pillage and fire at the hands of the Lesghians and Daghestans, if not from regular occupation by Schamyl in person. When the retrograding Russians arrived at the Georgian capital, Schamyl, at the head of 15,000 Lesghian horse, was within eight hours' march (thirty miles). The mounted Lesghians had invaded Khahbestan, and taken possession of eighty villages. General Count Read, civil and military governor of Tiflis, sent orders to Alexandropol for aid just as Bebutoff entered that city, who had fallen back in the exercise of his own judgment from the tidings of Schamyl's movements, which had reached him at Kuyukdere. That was the time for the muschir and his pashas to have struck home; but instead of following the enemy, they held a meeting to denounce General Guyon, and petition the Porte for his removal. But for Guyon and the European officers with him, they and their armies would have been annihilated together long before. The capacity of the Turkish army to meet a disciplined enemy had depended upon his ceaseless

exertions. In battle, his sabre was often gleaming amidst the thickest ranks of the foe, and but for his generalship, defeat must have invariably attended the manœuvres of the pashas. The skill of the British hero was perpetually in requisition to repair upon the field the confusion, planless attacks, and wild movements of the muschir and his officers. The Russians, apprised of the divisions among the pashas, calculated upon the inaction which they knew by experience would follow, and accordingly seized the pass of Bulac, the only route accessible for horses in the way from Bayazid to the Turko-Persian frontier. This movement was attended with success; a Persian caravan was captured, and great booty obtained. Two thousand men and two pieces of artillery were posted in the defile, so advantageously that it would have required an army to move them. The communications between Turkey and Persia in that direction were thus completely cut off. The continued activity of Schamyl, however, rendered it necessary to abandon this position, as the troops were wanted elsewhere, and within a month the pass was again free. The state of all the Turkish provinces of Asia grew rapidly worse. The army fell into arrears of pay, their clothing was in rags, bands roved about Anatolia, committing excesses of all kinds, and several French officers, on their way between Batoum and Kars, were murdered by their allies. Schamyl continued to send faithful agents with intelligence of his plans, of which the pashas made no other use than to talk about them, and the intelligence actually reached the Russian governor at Tiflis from Batoum and Kars. At last the mountain prince, wearied by the disappointments of his incomprehensible allies, collected what booty he could, and retired to his fastnesses. The Russians then rapidly recruited their armies with Mingrelians, Georgians, and Armenians, and received reinforcements of Cossacks from the Cuban, with regular troops from the Caspian Sea. The pashas quarrelled, demoralized their troops, and treated the European officers almost as if they were personal enemies.

During the whole summer Russian agents intrigued at the Persian court, as they had in the autumn of the previous year, in order to effect a diversion upon the Turko-Persian frontier. British and French influence prevented such a result, and the Shah of Persia actually opened negotiations at Constantinople for an alliance, and the services of a Persian army. Had the Western powers engaged to pay a Persian contingent, there is little doubt but that the shah would have committed himself to the enterprise. Of what use such auxiliaries might be it is difficult to determine; they might prove embarrassing friends,

but would undoubtedly prove formidable enemies. The *Moniteur de l'Armée*, in noticing these negotiations for Persian aid to Turkey, observes:—"The Persian army, if we may credit the accounts which have reached us direct from that country, would not be a despicable force, in the event of a general struggle of the Mussulman states against the Russians; they reckon, it is said, twenty regiments of regular infantry, and the light cavalry would be very formidable. This result is due to the military school founded at Teheran, with the co-operation of European officers—to some Italian officers, who principally contributed to the defence of Venice, and who, since 1849, have entered into the Persian service—and lastly, and more particularly, to a young man of great promise, named Hussem-Khouli, who is now first aide-de-camp to the Shah of Persia, and whom France may claim as one of her pupils. This young officer was sent to France in 1847, to receive his education; he was brought up at the Military School of St. Cyr, where he went through his studies and exercises for eighteen months. Since his return to Persia, he has devoted all his energy to the reorganization of the Persian army, and France regards him as one of her most grateful and most devoted friends."

It is with better reason England may claim the credit of any organization that the Persian forces possess; in confirmation of this, the following detailed account (extracted from the *Friend of India*) of the present strength and composition of the Persian army, will be considered of some interest in the present posture of affairs:—

"The first introduction into Persia of European discipline, and a knowledge of the fabrication and use of artillery and fire-arms, were due to the gallant and adventurous Shirleys, who entered the service of Shah Abbas more than two centuries and a half ago, and gave him valuable aid in his wars with the Porte. But although a few European officers and artificers were after that to be generally found in the Persian armies or courts, little advantage resulted until, in 1806, Napoleon, whose views were turned towards India, entered into an alliance with the Shah of Persia, and sent several officers to discipline the Persian troops, and organise the material for an army. After a time, the Russians obtained an ascendancy, and several of their officers were employed; but in 1828, a number of officers from England and India were sent to reorganise the force, which still retains the system then introduced. This fact has given the whole organization a peculiarly British character; while the great services and high qualifications of Sir H. Lindsay

Bethune, Colonels Ferrant, Sheil, and Passmore; Major Todd, Captain Lynch, Mr. Armstrong, and several others, have established a high opinion in the minds of the Persian soldiery regarding the skill, courage, and justice of British officers. The Persian army, as at present organised, is composed of regular and irregular infantry, irregular cavalry, and regular artillery, of which the latter alone is permanently maintained on the full establishment. The regular infantry (*serbaz*), which consists of eighty-two regiments, is divided into two classes—the one forming the active permanent force; the other a reserve, somewhat similar to the Landwehr troops of Germany. The active portion of the infantry consists of three regiments of Guards and thirty-two regiments of the line. Each regiment (*fouj*) is composed of ten companies (*dusteh*)—viz., one of grenadiers (*dusteh bahadaran*), one of light infantry (*dusteh mekh booran*), and eight line or battalion companies (*dusteh serbaz*). Each company is of the following strength:—One captain (*soltan*), one lieutenant (*naib-i-awal*), one sub-lieutenant (*naib-i-duwum*), five sergeants (*serloga*), ten corporals (*deh-bashi*), 100 privates (*serbaz*). The line companies have each one fifer (*neitchee*), and the flank companies one bugler (*sheipourchee*). The staff of the regiment consists of one colonel (*serjung*), one lieutenant-colonel (*yaver-awal*), one major (*yaver-duwum*), two adjutants (one to each wing), one surgeon (*jerrah*), one accountant and paymaster (*mirza*), one baggage-master (*tablidar*). The full strength of a regiment is, consequently, 1190 of all grades. The right wing is under the charge of the lieutenant-colonel, and the left wing of the majors. The uniform consists of a red or blue cloth jacket, loose linen breeches, high brown or yellow leather boots, and the national lambskin cap; the two latter are supplied by the soldier, for which, however, he receives an annual allowance of about seven rupees. The accoutrements are made of leather, on the European plan; the arms are flint-muskets and bayonets, of either English or Persian manufacture; which latter are of exceedingly good quality. The formation is in two ranks, and the men are good shots, manœuvre smartly, and are tolerably steady under arms. Two regiments form a brigade (*teep*), which is under the command of a general of brigade (*ser-teep*), and two or more brigades constitute a division, commanded by a general (*serdar*). A general-in-chief is called *amir-i-tooman*; a marshal, *amir-i-nizam*. The war-minister has the title of *wuzir-i-nizam*, and he is assisted by a staff-officer, uniting the functions of our adjutant and quarter-master general's departments, who is designated 'adjutant-bashi.' Of the three regiments of Guards,

the 1st., or Bahaderan Khassa, is a grenadier corps, and composed exclusively of Christians, either subjects of the empire or refugees: it is at present commanded by a Russian, named Samson Khan. The 2nd regiment is called the Old Guard; and the 3rd the Guard of Karamania. The remaining forty-seven regiments form the reserve force, and of these the greater portion are little more than skeletons, the men being allowed unlimited leave. They are, however, annually mustered and exercised for a few days, and are always liable to be called on for service when required. A considerable portion of these corps have recently been embodied, and are now forming a reserve camp under the orders of Khan Baboo Khan, the king's uncle. The recruiting-ground of these corps is chiefly distributed over the provinces of Irak-Ajemi, Fars, Kermans, and Yezed. Their pay, when embodied, is the same as that of the active force; but while on leave, they receive nothing. The irregular infantry consists partly of a militia, and partly of contingents, furnished by the frontier districts; this force amounts to about 80,000 men, called *Toofunchees*, armed with muskets or matchlocks. They are only called out on particular occasions, and even then they receive no pay and find their own arms and equipments; but they receive rations and ammunition, and a sort of general license to plunder. The whole of the Persian cavalry (*Kooshoonee Sowaree*) is irregular. Several attempts at organising regular cavalry under European officers have been made, but without success, and all have been finally reduced. With the exception of 10,000 men forming the Royal Guard, the cavalry force is drawn from the several tribes when required. The total force they are bound to furnish amounts to 190,000 men, which, with the guard, gives a grand total of 200,000 cavalry.

"The fixed contingent of the tribes, to which extent they can be called upon if requisite, is as follows:—

Khorassan	45,000	horsemen
Fars, Kerman, and Arabistan ..	50,000	"
The Bakhtiariis	15,000	"
Kurdistan	20,600	"
Irak-Ajemi	20,000	"
Azerbijam	40,000	"

So large a force of cavalry may appear excessive, with reference to the population, but it must be remembered that the infantry arm is proportionally weak, and also that in some parts of Persia, and especially on the frontiers, almost every man is a horseman. These troops receive no pay, and they furnish their own horses, arms, and equipment; but when called out they draw rations for themselves and their horses, and look to plunder for all else. They are commanded by their own khans and

subordinate officers; but these are all nominated by the shah. A portion of this force, varying in strength, is permanently kept on foot, a certain number of villages being assigned for their support. But the only respectable body of permanent cavalry is that composing the two corps of the Royal Guard, which amount together to 10,000 mounted men, designated severally the Golam-i-pesh Khidmut and the Golam-i-Shah. Of these two corps, the first holds the higher rank, as the body-guard of the shah. Formerly, this corps, like the original Mamelukes of Egypt, was recruited by the children of Christian parents in Georgia, Armenia, &c., but now it is exclusively composed of Mussulmans of good family. On appointment, the Sowar receives forty tomans for the purchase of horse and equipments; the pay is thirty tomans per annum, with rations and forage, and cloth for a new uniform at the festival of Naoroze. The whole, generally speaking, are very well mounted; the arms are a carbine, the curved sabre, a long dagger, and a pair of holster pistols. The perquisites, when employed on civil or political duties, are very considerable, and they are thus enabled to keep up a very strong and efficient appearance. The other, and subordinate corps of the Golam-i-Shah are similarly, but less sumptuously equipped and mounted, the outfit being only twenty-five, and the annual pay twenty tomans.

"The artillery is confined to horse artillery and camel artillery. The former, which takes the place of foot artillery, is organised in batteries on the English system, and the latter consists of zumbooruks—light swivel guns attached to the saddle of the camel, deriving their name from '*zumboor*,' a gnat. The horse artillery forms three regiments, each of eight troops or batteries, with 162 officers, 3258 non-commissioned, and gunners, and 4368 horses. There is also a reserve corps, with three batteries, 600 men, and about as many horses; giving a total, in round numbers, of 4000 men, 5000 horses, and 162 field guns. The batteries consist of five guns and one howitzer. The heavy batteries are composed of 12-pounder guns and 24-pounder howitzers; the light batteries of 9, 6, or 3-pounder guns, and 12-pounder howitzers. Each battery has nine ammunition waggons—seven for the guns, and two for the howitzer—with the addition of a rocket-carriage and one spare gun-carriage. The guns are worked by mounted detachments; eight horses are allowed for the draught of each 12-pounder gun and 24-pounder howitzer; and six horses for the lighter pieces and the waggons. An ordinary battery has 182 horses. The ordnance and carriages are all constructed on English models, and, especially the latter,

are of very serviceable description; but small-arm ammunition is carried on light two-wheeled tumbrils, of Russian pattern. English weights and measures are exclusively used by the artillery, and in the magazines; and a translation of the *Pocket Gunner*, made by the late Major D'Arey Todd, who was for several years in the Persian service, is the present guide and basis of their system. The corps of Zumboorchees consists of four companies, each of fifty men, with a captain and two lieutenants. Each man is mounted on a camel, and carries his zumbooruk affixed by means of trunnions to a swivel on the front of the wooden saddle. The piece, in form, resembles a short musqueteon, having a stock and flint lock, and a wrought-iron barrel, carrying a ball of about thirteen ounces, the whole weighing about 75 lbs. The total load, including the Zumboorchee and a supply of ammunition, amounts to 450 lbs. One spare ammunition camel is allowed with every two zumbooruks when on service. Great pains have been taken to render this little corps as perfect and efficient as possible, it being a favourite arm with the shah, to whose guard it is attached, and on all public occasions of ceremony it forms a leading and remarkable feature. The artillery generally is the most efficient branch of the service, and is kept tolerably complete. The uniform resembles that of the infantry, the jacket of dark blue cloth with red facings, the breeches of blue cotton, the boots, sword, and pouch-belts of black leather, with a regular horseman's cloak for bad weather. The arms are the sabre and a pair of pistols. The pay of each grade is one-third higher than that of the infantry, and the officers hold rank a grade higher than in the line, a colonel of artillery being equal to a general in the other branches. The whole department is under the charge of a sort of Grand Master of Artillery, called Amir-i-Topkhanch. This appointment, which is considered one of the most important in the empire, is only conferred on officers of the highest rank, and is occasionally held by the Grand Wuzeer. There are several well-stored arsenals, the most important of which is that of Teheran, which includes a foundry, a gun-carriage and small-arm manufactory, with an extensive laboratory and workshops. The large guns are for the most part of brass, and 800 camels are kept up for the parks and other ordnance purposes. In addition to the regular artillery, each large town has a body of trained gunners for local defence. Such are the strength and organisation of the Persian army at present. The material is in many respects excellent—the men are tall, powerful, active, and intelligent, sober and temperate in their habits, capable of great endurance, and brave."

The above account of the military power of Persia will enable the reader to form some opinion upon the relations of that once mighty empire to the great empires by which it is now bounded, and how far its alliances in this war may influence the contest.

The domineering conduct of the Russian agents in Central Asia engaged public attention. The tidings from Khiva and Bokhara, like those from Teheran, were contradictory and improbable, and afforded ample topics for discussion in the press both at home and in India. The *Delhi Gazette* gave the first information of the efforts of the czar in Central Asia; and although the representations of that journal were laughed at by some, and gravely contradicted by others, they were finally shown to be correct. Russian troops came towards Khiva by a road which they had been making many years; they entered the boundary of the Khan of Khiva's dominions, and built forts there. The khan, in order to preserve his throne, entered into an alliance with the czar. In these encroachments Russia was abetted by Persia, the troops of which power assumed a menacing position upon the Khivan frontier. The Khan of Khiva was a very reluctant ally of Russia, and as soon as he heard of her reverses, he caused bands, ostensibly unauthorised, to attack the forts that had been erected, and to harass the Russians in every way they could. Not so the King of Bokhara, he entered willingly into the Russian schemes. Believing that his murders of British officers, especially the unfortunate and excellent Connolly and Stoddart, would for ever expose him to the enmity of England, he was ready to place himself beneath the ægis of Russia. He knew that if Persia formed any intimate connexion with Britain, she would, to please her ally, inflict upon him some disaster, perhaps altogether deprive him of his throne. Thus calculating, he threw himself into the arms of the czar. By these instrumentalities Russia opened up a correspondence with Dost Mahomed, Khan of Cabool, who, having a salutary fear of the Indian government, preferred an alliance in that direction, and disclosed to the British agents the negotiations opened up with him through the Persian and Bokharian courts. The reverses experienced by the Russians upon the Danube and in Caucasia, together with the menaces of the British and French envoys, turned the attention of the Persian shah to the West; and as the diplomatic influence of Russia fell at Teheran, the Khan of Khiva grew bolder, and finally the intrigues of 1853-4 in Central Asia were abandoned. The hope, by way of Khiva and Bokhara, of penetrating to Afghanistan, and thence to India, is one of the long-cherished projects of Russian ambition. The route

pointed out by the great Napoleon to his *quasi* friend, the Czar Alexander, was often travelled in thought by the Czar Nicholas, and would by successive czars, if the progress of Russia had been permitted to continue in that direction. The double-headed eagle looked with ferocious eyes at the same time towards Constantinople and Teheran. The difficulties of reaching British India, although great, would not prove insurmountable to a power which, if she fails to accomplish a project in one age, will postpone it to another, but never relinquishes the purpose of her ambition, nor deviates from an attitude of aggression until that ambition is satiated, if indeed Russian ambition ever can be satiated.

Mr. Duncan, a gentleman well known as the correspondent of a London paper from the head-quarters of the Turkish army in Asia during 1854, dwells much on the practicability of Russian designs in India. He is of opinion that all the sacrifices of men and treasure made by the czars to subdue the Caucasian tribes have been made with an ultimate design on India. We can believe that if no such designs existed, Russia would, for the purpose of approaching the Dardanelles, and wresting the rich Turkish and Persian provinces of Asia Minor from the sceptres of the sultan and the shah, have made these and still greater sacrifices; but we concur with Mr. Duncan that this design animated the disposition to sacrifice so much. Mr. Duncan thinks that the idea of any future czar conquering India must be dismissed. It is by no means plain to us that the idea is inadmissible; no one acquainted with the progress of Russia in the East will doubt the possibility of her conquering all Asia Minor and Persia; and if such conquests be accomplished, the possession of India is not beyond Russian achievement, and for the very reason which Mr. Duncan assigns as justifying English policy in resisting the progress of the czar in that direction, namely, that every step she takes towards Central Asia increases her moral power over all the East, and proportionably lessens that of every other nation having authority or influence there.

A portion of the Mohammedan Sepoys, sent by way of Egypt, would have been found very effective troops in co-operation with the Turks, and the name and moral influence of England would have been spread in connection with their success all over the Asiatic world. An Asiatic Turkish contingent might have easily been formed, and would have been very effective. The language of Lord Ellenborough, in his place in the House of Lords, in May, 1854, ought not to have been disregarded:—

“Any blow struck against Turkey in Asia paralyses the Turkish Empire. More than that—the whole commerce between Turkey and

Persia is carried on by Trebizond and Erzerum, and the occupation of those places by Russia puts an end to that trade, insulates Persia, and most materially affects her policy. But, notwithstanding these circumstances, we did not carry on war in Asia as we did in Europe, with army against army. We had in Asia nations at our disposal. We had nations conquered, but yet disposed to throw off the yoke. We had still more—a gallant nation which has been for years in arms, successfully defending its independence. We should make war with their army as well as by the troops we could detach for any operation of this kind; but this mode of action has been altogether neglected.”

The influence of Persia upon the question of Russian progress in Asia, and the ultimate designs of the czar upon British India, have been lately placed in a very instructive light by a leading monthly periodical. The writer has thoroughly grasped the whole subject, and presented it in a light which will enable our readers to form a full judgment upon it:—“The Persians hate the Muscovs; the loss of Georgia, and their defeats on the banks of the Araxes, still rankle in their hearts. Their antipathy to the Turks is equally strong, kept up by the recollection of their former wars and antagonism, and partly by sectarian differences of creed. From the latter cause arises a bitter hatred. ‘Turkey,’ said the old Mollah, then prime-minister of the shah, ‘were it twice as large, would be but a small mouthful for Persia.’ Carried away by his furious zeal, the old fanatic did not perceive that he talked nonsense. Not that such ridiculous rhodomontade is uncommon in that country, whose inhabitants are the very Gascons of the East, with the difference that Gascons, though they may talk big, usually fight well; whereas the Persians, dispirited and demoralised, and having small inducement to fight in defence of a fallen nationality, and a government alternately barbarous and pusillanimous, are not likely to display much greater prowess and military skill, when next taken into the field, than they did in their contest with the Russians. Individually they may be brave; M. Flandin somewhere affirms that they are; although such is hardly the opinion that will be formed from many other passages of his book; but it will be hard to make an efficient Persian army, under the present system by which the country is governed, with officers who are either boys, or enervated by the excesses and shameful vices to which the Persians are prone, and who look upon the service merely as a means of gratifying their more than womanish vanity, by wearing fancy uniforms, monster epaulets, and diamond decorations, and have less knowledge of their duty than a European corporal.

The private soldiers, upon the other hand, have nothing to fight for. Taken for the most part by force, and for perpetual service, unless the shah thinks proper to release them, receiving a little grain for sole rations, they are most irregularly paid, and are often near to starvation. The shah takes from his coffers the money requisite for the payment of the soldier, and gives it to his prime-minister, from whose hand it passes through so many others that the twelve tomans (about six pounds) which each man is entitled to annually, dwindle to five or six before, after long delay, they reach his hands. M. Flandin saw a regiment that had had no pay for two years. Sometimes their misery drives the poor wretches to mutiny, by which they perhaps obtain a small payment on account; but often it is found more convenient to disband them, and raise a new regiment. Promotion, in Persia, is obtained neither by merit nor by military knowledge, but solely by birth, caprice, or intrigue. Princes and khans, whatever their age, having never served, totally ignorant of military matters, obtain the most important posts, and are entrusted with commands which they are greatly puzzled how to exercise. The degree of confidence they inspire in their men may be imagined; and the fate of an army thus officered, when opposed to European troops, or even to the more warlike of the Asiatic nations, can hardly be doubtful. M. Flandin gives some diverting but rather highly-coloured sketches of the siege of Herat, and of Hadji Mirza Agassi’s (the same fanatical prime-minister who was for making a meal of Turkey) celebrated cannon, which he founded in the camp itself, and for which he had but a very limited number of balls:—‘The artillerymen’s practice was so bad that they all flew over the town; and soldiers, enthusiastic admirers of the vizier’s balistic skill, volunteered to make the circuit of the fortress to seek and bring home the precious projectiles. It may be imagined how this formidable besieging artillery diverted General Simonitch, the Russian ambassador, an old officer of Napoleon. He derived great amusement, it appears, from the Mollah gunner and his innovations: these puerilities, conceived with all the gravity of an oriental, helped him to pass the time during that tedious siege, to which the Persians had brought, not only an army of soldiers, but another of artisans and traders of all kinds. It seemed as if they were about to found a colony in front of the besieged place. The royal camp had itself the appearance of a town; it comprised a bazaar and workshops of all kinds. The Persians, lacking confidence, it would seem, either in their strength or in their strategic knowledge, thought the siege might be a long one, and carried foresight so far as to plough and sow the ground around their camp. Their labour

was not lost; in due time they gathered in the harvest.' Although French and English officers have in turn instructed the shah's troops, and for a time with some show of success, the favourable results they temporarily achieved melted away after their departure. M. Flandin gives a dismal account of the state of the Persian army at the time of his residence in the country, citing as a specimen—and probably rather a favourable one—of the whole, the six thousand men he saw encamped, under the shah's immediate command, outside Ispahan. The lines of white tents were most symmetrical; the guns were drawn up in good order, and vigilantly guarded by sentries with bare sabres; the horses were picketed in the rear, at mangers cleverly and cheaply constructed of clay. But on parade, and in the field, the aspect of affairs was far less martial and imposing. Ragged uniforms, dirty belts, wretched muskets—many of them without flints, some without locks—soldiers in a state of misery, and officers who knew but just enough to make their men carry and present arms—such were the elements of the regiments ranged beneath the brilliant banner of the Lion and the Sun. If Russia, as some believe, has designs, resolute although not yet ripe, on British India, and is bent on discovering a south-east passage to our vast Asiatic possessions, certainly Persia's regular troops would be no serious obstacle to her march. She would have infinitely more to fear from natural difficulties, from the immense tracts of desert her armies must traverse—solitudes where no vegetation or water are found, from disease and climate, and from the harassing attacks of Persia's irregular cavalry, Kurds, Arabs, Turcomans, variously armed and equipped, fighting after the manner of their different tribes, Parthian-like, firing and flying, but individually brave, skilful with their weapons, and generally well mounted. Led in a body against a disciplined Russian force, they would probably be scattered to the winds; distributed along its line of march, pressing on its rear, cutting off its stragglers, wearying it by night alarms, intercepting its supplies, they would form a heavy addition to the perils and difficulties it must inevitably brave, by whatever route it might attempt to reach our Indian frontier. We have always considered the apprehensions expressed by some few persons, with respect to Russian views on India, to be, if not chimerical, at least much exaggerated, and entirely premature. England could hardly have a better barrier between her Eastern possessions and Russia's ambition, than countries constituted and inhabited as are Independent Turkey and Afghanistan, or than Persia, with its barren salt wastes and frequent malaria. Until those countries are swallowed up, or subjugated

by the encroaching northern colossus, there is little chance, we think, of Cossacks on our Indian frontier. If Russia had Constantinople, the case would be different. With the Black Sea all her own, with the great naval power her vastly augmented trade would speedily give her, and with the increased weight she would acquire in Asia, she might one day attempt a move eastwards. But these are remote speculations, to be realised, if ever, only in a very distant future. If Russia were allowed to get the Dardanelles, which it is pretty evident she will not be, she would soon find herself in a position to push westwards as well as eastwards, and would be more likely to trench upon Austrian and Prussian provinces, which lie at her door, than to traverse half Asia in quest of a distant foe and a doubtful victory."

We cannot close this chapter on the war in Asia, in 1854, more appropriately than by a passage from *Blackwood's Magazine* of February, 1855, as to the prospects of the Russians and Caucasians respectively, in their combats for the mastery of those mountain realms, where they have maintained such protracted and unremitting war. "There is but one way of subduing a country that is both mountainous and wooded: this is, to pierce the country with military roads and to destroy the bush. But the country must be subdued to *some* extent before these measures are taken. That even mountains, comparatively bare, present great military obstacles, has been abundantly proved, as they present great natural fortresses of the strongest kind; the deficiencies of which, where any exist, the very rudest kind of art is capable of supplying. Nowhere do we get a better notion of this than in the picturesque narrative of Xenophon, where he describes the march of the ten thousand through the mountains of Kurdistan before they debouched on the wintry table-land of Armenia. Wherever there is a defile there are heights above it. The army must march through the defile, and the heights are in the possession of the enemy; so it is necessary to storm the heights, in the face of all opposition, before the defile can be used; and even in case of the best success, when the heights are stormed and the main army has safely passed, unless the storming party are prepared to occupy the heights for ever, they must expect annoyance on retreating, as the enemy will probably immediately occupy the vantage-ground they have left. But difficult as it may be for a military power to act in a bare mountain country, the difficulty is incalculably increased by the existence of woods. In naked mountains, the enemy, though often difficult of access, may be found when looked for, and attacked; for where one man can climb another can. Nor are caverns

a sufficient protection, as a poor North African tribe once found to their cost, when, as has probably frequently happened elsewhere, they were smoked out. But it is otherwise in the case of woods. The enemy will never 'break cover,' for this good reason, that his means of offence and defence depend upon his keeping close to it. Thus, as we might expect, history abounds with instances of regular forces being bewildered and cut off in woods by irregulars, who of course are the best suited to this kind of work. Besides many modern instances, one of which was the misfortune of the French general, Vandamme, in a *cul de sac* of wooded hills at Culm, in Bohemia, we have an abundance of such cases before the invention of fire-arms; such as the loss of the Athenian force under Demosthenes, the general, in the woods of Ætolia; the defeat of the Roman army at the Caudine forks, and the destruction of the legions of Varus in the Westphalian forest, which was part of that Hercynian wood which then covered the face of half Germany. Supposing the wood to be on even ground, and of limited extent, it is possible to clear it of the enemy by a line of skirmishers advancing across it. Not so when it climbs the side of a snow-covered ridge, and extends far away over the horizon. This is, perhaps, the greatest condition of difficulty to an attacking army; and it is with this that the Russians have had to contend in the Caucasus. With a country of such a nature it requires no great amount of courage on the part of the defenders to give much trouble. But suppose courage and resolution in the defenders superadded to the difficulties of the ground, the unequal

nature of the contest is increased, and we do not wonder that in this way mere handfuls of men have put to flight large battalions. The most striking case of this that occurs to us was the battle of Morgarten, in Switzerland, in which a large body of Austrian men-at-arms, amounting to some thousands, was attacked and discomfited by a few hundred herdsmen of Schweiz, Uri, and Unterwalden. To arrive at Schweiz from the plain country of Switzerland, it was necessary for the invading army to pass along the shore of the Lake of Egeri, at the end of which they found the passage closed by a wooded mountain, dipping down to the water's edge. As they were defiling round this cover, difficult enough of itself, on a sudden they were astonished by an avalanche of rocks and tree-trunks rolled down by invisible hands; and while in confusion, made more inextricable by the encumbrance of armour, they were attacked hand to hand, and slaughtered by the light-limbered mountaineers, who drowned those they could not cut to pieces, and stopping both ways of retreat, left few to tell the tale of the day. This was the first and chief condition which enabled the Caucasians to hold their own so long against Russian aggression, and to keep their highlands standing dry in the deluge of their dominions, like a hog's-back reef in the sea."

From the warfare in these mountain lands we now turn the attention of the reader once more to the sea, but not to "the hospitable sea," as the ancients called it, which washes the shores of Asia Minor and of the Caucasus, but to the inclement waters of the Baltic.

CHAPTER XXVI.

PROCEEDINGS OF THE ALLIED FLEETS IN THE BALTIC.—UNSUCCESSFUL ATTEMPTS TO DRAW THE SCANDINAVIAN STATES INTO THE ALLIANCE.—THE RUSSIAN FLEETS SEEK SHELTER BEHIND THE FORTIFICATIONS OF CRONSTADT, SWEABORG, ETC.—CAPTURE OF BOMARSUND.

"Those haughty shopkeepers, who roll
Their goods and edicts forth from pole to pole."—BYRON.

IN the tenth chapter the review of the Baltic fleet, its departure, arrival out, and the preparation of a powerful French fleet to co-operate, were related. The excitement produced in Denmark, Norway, and Sweden, by the advent to their coasts of this vast armada was very great. Probably the excitement on the Russian coasts was as great. The people along the shores of the Gulfs of Bothnia and Finland were curious regarding this vast armament, as well as alarmed. They desired to see it; and yet the achievements it was expected to attempt were so vast, and so serious in their consequences, that apprehension filled every mind.

At St. Petersburg the sense of peril was very great, yet a vague confidence in the destinies of Russia predominated. Of all Russians, the inhabitants of the new metropolis are the most ambitious, and the most confident that their ambition will be realised. "Elsewhere (says De Custine) great cities abound in monuments raised in memory of the past: St. Petersburg, in all its magnificence and immensity, is a trophy raised by the Russians to the greatness of the future. The hope which produces such efforts appears to me sublime. Never since the construction of the Jewish Temple, has the faith of a people in its own destinies raised up

from the earth a greater wonder than St. Petersburg. And what renders more truly admirable this legacy, left by one man to his ambitious country, is, that it has been ratified by history. This mighty metropolis, ruling over its icy marshes, in order from thence to rule the world, is superb—more superb to the mind than to the eye. Yet it may not be forgotten that 100,000 men, victims of obedience, were lost in converting the pestilential swamps into a capital!"

With the spirit of ambition and confidence animating the citizens of the modern capital of Russia, which this quotation displays, it can be no matter of surprise if, in the suspense which filled the hearts of the multitudes of the city of the czar, a haughty defiance largely mingled. Yet while St. Petersburg is more ambitious than Moscow, it would not sacrifice so much for the empire. As De Custine says, "it is Moscow that explains St. Petersburg." Moscow has a history—it is devotedly Russ, it treasures up with hoarded memories the barbarian deeds of the Russia of bygone ages. Deeds of which a nation might well be ashamed, are sources of pride to the genuine Muscovite if they extended the dominion of his forefathers, or gratified their love of conquest: he literally exults in

"The gathered guilt of olden times."

The St. Petersburgers, descended from Germans, Fins, Scandinavians, and Slaves, care nothing for the past, their whole thought is directed to the future, and with an ambition as arrogant as the government of their nation, and, like its empire, vast.

Every movement of the Anglo-French Baltic fleet was watched at St. Petersburg with profound interest. The citizens took journeys to Cronstadt and Sweaborg to observe the ships when they appeared off those places; and the public of the capital were, partly by the government, and partly by private means, apprised of all the proceedings of the allied squadrons. In London the interest felt in this expedition was also profound, and England was never more confident in any naval force which had at any time left her shores. The British people felt that, whatever might be the fortunes of their troops in Turkey, in the Baltic England had a force upon her own element, and must prove resistless. The sea, so formidable to most other nations, was, with all its dangers and its mysteries, a sort of home to England: she could only think of it with triumph. However other nations might philosophise about it, and say—

"It beareth man a bubble on its bosom,"

her people made it their song—

"Britannia rules the waves;"

and "a campaign upon the billows" seemed only a prelude to victory and glory. High hopes filled every English breast when "the pet admiral," the redoubtable "Sir Charley," was at the head of this magnificent fleet in the waters of the czar. The public feeling was as if the nation had made an alliance with the sea, and had reason to be proud of its power and its mystery—

"In all time,
Calm or convulsed, upheaving to the pole,
Dark, fathomless, sublime."

Many of the humblest classes in the British metropolis, and in the south of England, volunteered on board that fleet from motives of the purest patriotism. It is no exaggeration of the manliness and generosity of the public sentiment of the poorer classes in England at that time to say, that they felt, as Gibbon wrote, "the man who does not expose his life in the defence of his children and property, has lost in society the first and most active energies of nature." It was the spirit of freedom—of resistance to aggression—of sympathy with a weaker nation, which so rapidly manned that fleet with recruits from those only accustomed to pursuits on land.

To what extent the hopes of the British nation were fulfilled our narrative will show; but whatever disappointment was felt, the brave and skilful admiral who commanded that fleet incurred none of the responsibility. He did all which courage, governed by experience, ought to attempt. The government under whose directions he acted did everything that bad governments can accomplish to mar an expedition, when there is no responsibility, nor any public feeling to hold them in check. As the fleets entered upon the duties assigned to them, the new scenes by sea and shore amused and pleased the crews. The correspondence of officers and men to friends at home show that a lively and contented, as well as enterprising tone of mind, characterised the whole force. The bold shores and intricate shallows excited the admiration, or occupied the thought and labour of the men; but no subject pervades the correspondence from the fleet so much as the delight felt by all in the brilliant skies of the North, when night brought forth in their glory those objects of beauty and wonder denied to gaudy day, reminding one of the beautiful words of Southey—

"How beautiful is night!

A dewy freshness fills the silent air;
No mist obscures, nor cloud, nor speck, nor stain,
Breaks the serene of heaven;
In full-orb'd glory yonder moon divine
Rolls through the dark blue depths;
Beneath her steady ray
The desert circle spreads,
Like the round ocean, girdled by the sky!
How beautiful is night!"

The object of the fleets was not, however, a summer-pleasure cruise, little as was effected in proportion to what was expected. Labour and danger were encountered in sounding the almost innumerable shallows, surveying the coasts, reconnoitring the enemy, tempting him from his shelter, and storming one of his strongholds. An officer on board one of the ships in Sir Charles Napier's fleet, writing to a friend in London, says:—

Great Belt, March 27, 1854.

"Although I wrote a note, which I intended sending by the *Vulture* to England, yet the weather was so bad on her departure that we could not communicate. That letter will probably reach you at the same time this does. The weather was beautiful yesterday, and is so to-day. The atmosphere clear, raw, and bracing, imparting a cheerfulness to most of us. The *Miranda*, which had been sent as a vessel of observation to the Baltic, previous to our departure from England, joined us yesterday morning. Her bow seemed rough and scratched about the copper from stemming the ice, through which she forced her way for some distance with some difficulty. She brought intelligence that the Russian fleet is anchored at Revel, from which they cannot be freed by the breaking up of the ice until the end of April. The *Miranda* left England with sealed orders, and instructed not to show her colours. Part of the squadron was detached ahead yesterday, under Admiral Chads. The *Leopard* steamed back about mid-day with a Danish admiral on board, who visited the flag-ship, and was saluted with fifteen guns. The squadron anchored off Wyborg (about eight miles) in the evening. We got under weigh very early this morning. Our destination has been changed, probably resulting from the interview with the Danish admiral. We are now proceeding to Kiel in lieu of Kiøge, which may be owing to the intelligence that the Russian squadron is sealed up in Revel, and must remain there until May. Sir Charles has left the squadron this afternoon in charge of Admiral Corry, and has steamed ahead, in the *Duke of Wellington*, in the direction of Kiel. It is now evident that the squadron cannot reach that place this evening.

"9 p.m.—We have just dropped anchor within three or four miles of Kiel harbour."

Sir Charles remained at this anchorage for three days, during which time great numbers of persons from Hamburgh, Altona, and other places, visited the fleet, and especially gratified their curiosity by going on board the *Duke of Wellington*. The trains to Altona and Hamburgh were daily filled by persons of the highest respectability, who expressed their best wishes for the speedy triumph of the British

flag. The desire to see Sir Charles himself and his famous flag-ship seemed to be, however, the uppermost feeling with the Germans. The Danes were less cordial than the Swedes, Norwegians, and Germans (the German governments were cool, or showed an ill-dissembled hostility). Berlin, Leipsic, and many large places in interior Germany, sent forth their thousands to witness the gorgeous sight. The guns were exercised in the presence of these visitors; many of the most intelligent of whom expressed their astonishment at the precision with which marks were struck at long range. The fleet weighed and sailed for Kiøge Bay. The following letter is dated—

Off Kiøge Bay, Copenhagen, April 10.

"I have just been in Copenhagen, the morning being extremely fine after the stormy night. I made my way into the city, and went to the British minister's residence, where I found Sir Charles Napier busily employed in asking questions of some officers belonging to the ships employed in the transport of water and provisions for the fleet. I afterwards returned on board the *Obotrit* steamer again, and fell in with sundry officers of the frigates lying at Copenhagen on my way; they all seemed anxious for work. I proceeded to Kiøge Bay, and went on board the *Duke of Wellington*, and was employed for a couple of hours in looking over this splendid ship. On my appearing on board with a bundle of London papers under my arm, I thought the sailors and marines would have eaten me up for distributing among them a portion of my store. A German party, who had come many miles from the interior of Germany to visit the fleet, returned on board the steamer to Copenhagen, well satisfied with their trip. I returned myself on board a Danish steamer, having two hundred persons on board, ladies and gentlemen, and a band of music. On leaving the vessel the band struck up 'God save the Queen,' which was accompanied by loud cheers from the passengers, and re-echoed by the officers and men on board the *Wellington*. If I am asked which of the two people was most enthusiastic in their expression of feeling on the occasion, I may say, without either favour or affection, the Germans. On the part of the higher classes of Danes there was an evident symptom of curiosity evinced to view the ship; but on the part of the Germans, there was a deep interest in the cause for which the fleet was engaged, in favour of civilization. On our way back we met the admiral returning from Copenhagen. From what I heard, he intends moving towards Bornholm within a day or two. The principal pilot belonging to the fleet, a Dane, was desired by the admiral this morning to proceed

to Elsinore to bring the French line-of-battle-ship, *Austerlitz*, round to Kiøge Bay, where she will probably be to-morrow. The officers of our fleet are awfully fleeced in Copenhagen in the exchange of money, and, again, in what they purchase with it."

About the time the foregoing letter was written, the whole of the bullion in the Finland bank at Helsingfors was transported to St. Petersburg, from the apprehension of a bombardment. The inhabitants of Helsingfors, although protected by the Sweaborg fortresses, retired inland in considerable numbers, and many withdrew to St. Petersburg. The library of the university and the archives of the senate were packed up, and placed in the casemates of the fortress. The people at Helsingfors, and all through Finland, began to suffer from the high price of provisions, so that the government interfered, and fixed a maximum. At the same time a ukase, dated from St. Petersburg, directed that before the 29th of May, a naval force for the defence of the coast should be organised, and all seamen report themselves at their several ports. A number of Russian prizes fell into the hands of the fleet in every part of its progress hitherto, and the press of Berlin made piteous lamentations over the loss to commerce and the injury to innocent traders in this way inflicted. In order to blockade the Gulf of Finland the more closely, vessels were stationed both in the Gulf of Finland and the Gulf of Bothnia. The czar's efforts to get sailors were impeded by the number captured in the prizes, and by the flight of all who could escape from the coasts to the shelter of neutrals, or even of the English. The following extract from a Stockholm paper shows how tenderly the paternal government of the Emperor Nicholas treated his Finnish subjects:—"The whole town swarms with fugitives, who are pouring out of Finland. Many, too, come from Aland, in order to escape the Russian pressgangs. The Russian fleet is in great want of seamen, and, as it is preparing to take the sea as soon as the ice gives way, the authorities lay violent hands on young and old. In the night fathers of families are hurried off without a moment's grace, and the result is, that whole households fly to Sweden with bag and baggage, in order to escape such tyranny."

Scarcely had Sir Charles Napier and his fleet appeared in the German Ocean, when the states of Germany manifested the greatest anxiety to make Russia aware of their neutrality. There were none of the minor states of Germany too petty to pretend to some importance as to their peaceful attitude. The agents of Prussia were everywhere through Northern Germany co-operating with Russia;

and while inducing formal and ostentatious declarations of neutrality, about which the Western powers cared nothing, these agents were active in making arrangements to supply Russia overland with all articles contraband of war. The Hanseatic League was the first to make a pompous avowal of its intentions to avoid all participation in the warlike demonstrations of either side, by issuing the following notice:—

IN consequence of the war which has broken out between several of the great European powers, the Council Rath feels called upon, as a preliminary, to make the following orders with respect to the intercourse to the harbours and places of the belligerent powers:—

The exportation of all articles, deemed contraband of war, or as are understood to be so by the law of nations and the existing Hamburg State treaties, as also the exportation of ammunition, moreover of powder, saltpetre, brimstone, balls (*kugeln*), fuseses (*zundhütchen*), and also all descriptions of arms, and generally all such articles as can be immediately used in war, is forbidden, from the day of the date of the proclamation, equally under Hamburg or foreign flag, or by land, to the states of those powers now engaged in war.

Whomsoever acts in contravention of this order, be it as owner or master of the vessel, or as exporter of the goods, will incur not only the confiscation of the before-named articles, but will also be further punished by a heavy fine and by imprisonment, according to circumstances. In order that a necessary control may be exercised over all exportations to the states at war, the articles must be accurately specified; and the superscription "merchandise," or any similar general description, will not be admitted.

No captain or master of a ship sailing under the Hamburg flag must violate a blockade, or, after such (blockade) has been duly notified to him, sail through clandestinely, nor must he either carry two sets of ships' papers, or bear a foreign flag, so long as he is in possession of Hamburg ships' papers (*schiffs' passe*).

Whosoever may require to know more respecting the orders and notices with reference to navigation and trade of neutrals, as issued by the belligerent powers, must address themselves to the Department of Commerce (*Commerz Comptoir*).

Given in our assembly of Council, Hamburg, the 10th of April, 1854.

An Order respecting the Exportation of Articles Contraband of War, published on the 11th day of April, 1854.

IN consequence of the existing state of war between Turkey, France, and Great Britain, on the one hand, and Russia, on the other hand, the senate has determined, for the protection of the interests of the trade and navigation of this city, to make and publish the following enactments:—

1. The exportation of articles contraband of war to the powers now at war, or to their subjects, is prohibited.

2. Articles contraband of war consist of arms, ordnance, firearms, and ammunition of every description, but, furthermore, particularly powder, balls (*kugeln*), rockets, fuseses (*zundhütchen*), and other material used immediately in war, as also saltpetre, brimstone, and lead.

3. The transgression of the present order will be followed by a confiscation of the articles contraband of war, and those who are guilty of such transgression, or are accessory to it, will be, moreover, punished with severity.

Decreed at Lubeck, at a meeting of the senate, on the 10th day of April, 1854.

C. TH. OVERBECK, Dr., *Secretary*.

In the Scandinavian States, the brave old admiral, his officers, and crews, were welcomed with joyous acclamations. When Sir Charles

landed at their capitals, the courts and peoples seemed to enter into a generous rivalry as to his reception—salutes were fired, processions were formed, festal arrangements were made. The wealthier citizens kept open houses for the officers of the British fleet, while the humbler people were equally hospitable to the jolly tars, who performed various freaks, infinitely amusing to the sober northern burgesses. The bold, generous, rollicking character of the mariners of England met with a cordial appreciation from the inhabitants of Copenhagen and Stockholm. The press of these cities emulated that of Britain in eulogies upon the Western alliance, and denunciations against Russia.

The following spirited article is translated from the Swedish evening paper (the *Afton-bladet*), dated Stockholm, April 4:—

"The die is cast. The Western powers have at length declared war against the czar; civilisation, social order, political progress, has eventually, after twelve months' test of a patience that appeared inexhaustible, drawn the sword against barbarism, oppression, and lawless usurpation, and the curtain has risen for a new act in the drama of universal history, the unfolding of which will exercise a most important influence on the whole social state of Europe. The epoch of peace has passed. These forty years have developed among the greater portion of Europe an almost unanticipated state of civilisation, happiness, and prosperity. Other days are now dawning, in blood, sacrifice, and suffering; their closing no human mind can foresee. To all appearance the struggle must be terrific and general; and no nation, no government, can calculate how long they will be permitted to remain quiet spectators of a scene of war carried on beyond their frontiers. The struggle is for the most sacred—the dearest ties of society—its religious and commercial freedom—the political rights of the people, and their advancement in civilisation, welfare, and happiness. The petty quarrel respecting access to the church and vault has extended to a magnitude vast and immeasurable, and the sword must not return to its scabbard until the fate of Europe has been decided—until victory shall have finally declared for the West or the East—for freedom or for Cossack power.

"It is a great idea, uttered by a despotic monarch, but by a man who built his despotism on the mass of the people's choice—that the era of conquests has for ever passed. It is no longer the narrow-minded selfishness of dynasties that can determine for the world the boundaries of war or peace. If Europe be doomed for a lengthened period to forego the blessings of peace, and look the horrors of war in the face, it will always be a satisfaction to reflect that this war is not maintained for the

acquisition of territory—it is the people, the most civilised people of Europe, urged by their conscience and their duty, that take arms to secure for futurity peace and order, and, once for all, to drive despotism, fraud, and oppression within its proper sphere.

"It is a great and glorious sight to see how the very spirit of the people has rendered the impossible possible—how the march of civilisation has formed a bond of unity between two nations that have ever since the era of the Crusades been at war, or continually suspected and hated each other: England and France, those implacable foes, those rivals full of bitterness, have shaken hands across the Channel, and united in a treaty for higher objects than national vanity. Out of the difference of disposition, opinions, traditions, and manners that exist between these two nations has sprung a unity of mind and action that must generate feelings of courage and security in the minds of the weakest and most sceptical of mortals. Their cause is the cause of humanity; and wherever the light of civilisation shines, the nations of Europe look towards the united Western powers as the banner-bearers of truth and the champions for a better and brighter futurity.

"In this strife—its morning dawn already risen in blood over the countries of our nearest neighbours—the Scandinavian people are not yet called to share. It may be a longer or a shorter period before the signal is given for them to join in the struggle; the hour has not yet arrived. They can still sit in peace on their rocky strand as observers until the period when they shall be called upon to act. But, although their arms yet rest, they must not be lukewarm spectators of the phases in the struggle; the warm sympathies of their hearts, their prayers, their good wishes, can only have one bent—only one feeling of happiness or joy can fill their breasts to hear that victory has crowned the united flags of the Western powers, and only one feeling of sorrow depress them if—which may God forbid!—another fate than that of success should attend their efforts. So powerfully and universally is the public opinion expressed in Sweden, in Norway, and by our faithful allies across the Sound, that not one single voice will dare to raise itself with other wishes. With joy, hope, and the sympathy of friends, we salute from our strands the flags of England and France, and welcome them to our waters. Their success embodies the promise of our future happiness; the Swedish heart knows no neutrality between freedom and slavery, between the light of Western civilisation and the darkness of Eastern oppression. With the former must our hearts' warmest sympathies go, our minds' bright hope: and there is no human power

that can smother the silent but warm good wishes that rise in every Swedish breast for the success of the just cause, and for an honourable victory to those arms that fight for it."

Having conducted our readers to this point in the progress of the Baltic naval expedition, we pause in the narrative to give some account of the admiral himself by whom it was commanded.

Charles Napier was born on the 6th of March, 1786, and is consequently now in the 69th year of his age. The place of his birth is Stirlingshire. The Napiers are a Scotch border family. Sir Charles is a son of Captain Napier, R.N., and grandson to Francis, the fifth Lord Napier. Charles was thirteen years of age when he was entered as a midshipman in the navy, perhaps a little too old, for we are of opinion that the sooner a boy meant for the naval profession is placed on "blue water" the better. He was put on board the *Martin* sloop, and sent to the North Sea. He there acquired those hardy habits which have clung to him ever since. His next cruise was in the Mediterranean, where he got his lieutenancy in the nineteenth year of his age. It does not appear that he obtained his promotion because of his merits, although a bold lad, fond of his profession, and full of enterprise: his naval and aristocratic connexions gained him the step. His appointment was to the *Courageux*, 74, in the squadron of Sir J. B. Warren; and he was soon called upon to prove his fitness for promotion, in the capture of the French 80-gun ship *Marengo*, and the 40-gun frigate *Belle-Poule*. Next year he was promoted to the *Pulrush* brig as commander—a step of which the young hero was very proud, and to which he has looked back ever since with peculiar pleasure, as the turning point in his career. His conduct in this command was useful, and in two years (1808) he obtained the command of the *Recruit*, an 18-gun brig. He soon distinguished himself when left more to his own resources, and the *Recruit* and its young commander began to be much spoken of in the navy. The *Diligente*, a French corvette of 22 guns, had a desperate encounter with the *Recruit*, and in all probability would have soon surrendered, but she was fortunate enough to carry away the mainmast of the *Recruit*, and while the latter was so far disabled, the *Diligente* sheered off. In the action, Napier's thigh was broken, and he received other wounds. In February, 1809, he commanded the *Recruit* at the taking of Martinique. In a recent electioneering speech, he referred to that siege, as illustrating the neglect of the Admiralty in not providing him with mortar-boats to bombard Sweaborg when in command of the Baltic fleet. In April, 1809, he conducted a splendid naval chase, which issued in the capture of the *D'Hautpoule*, a

French 74, and was immediately after "posted" as captain. Very few of our naval men have arrived at the rank of post-captain at the age of twenty-three. The subsequent promotion of our hero was much slower. In 1811, he was appointed to the command of the frigate *Thames*, and served in the Mediterranean, under Admiral Pellew. In the two following years he was in active employment, and confirmed, by his assiduity and skill, the high opinion of him entertained by the profession. The command of the *Euryalus* was given to him in the American war which so soon followed, and, under the command of Admiral Gordon, his exploits attracted the notice of the navy and the country. The Americans too, against whom he fought, were generous admirers of his enterprise. The Admiralty issued secret orders against the British frigates engaging the large frigates of the Americans; Captain Napier indignantly tore and cast away these orders, and was incited rather by them to attempts beyond his ordinary daring: so long ago he began his conflict with Boards of Admiralty, and has rendered the country almost as much service in that description of warfare as when engaged with her foes. Captain Napier carried an expedition up the Potomac river, where he displayed wisdom and skill under the most arduous and difficult circumstances; his presence of mind was as conspicuous as his daring and romantic valour. He was again wounded, a rifle-ball from the shore grazing his neck. In 1815, the *Euryalus* was paid off, and our hero was made a Companion of the Bath. He remained unemployed till 1829, when he was put in command of the *Galatea*, which he retained for three years. In 1833, he first acted as an admiral, but not in the service of his own country: he accepted the command of the fleet of Don Pedro, in the war which placed the house of Braganza on the throne of Portugal. Donna Maria owed her throne more to the skill and valour of Admiral Napier than to any other cause. The annihilation of the fleet of Don Miguel by the force under his command, was one of the most complete naval victories ever achieved, and achieved against overwhelming odds. The conduct of Admiral Napier on that occasion is one of the brightest pages in the history of British courage. When the war of the Portuguese succession was over, Don Pedro conferred upon "Charley" a title, about which the hero cared nothing. In other respects, the royal family of Portugal showed its wonted faithlessness and ingratitude, in its treatment of the man whose exploits so largely contributed to its ascendancy.

In 1833, soon after he left the *Galatea*, and before he went out to Portugal, he stood for Portsmouth on ultra-liberal principles. In 1837, he was candidate for Greenwich, and

polled 1153 votes, but the government influence was against him, and he was beaten by forty votes. The year 1840 is memorable for the war with Mehemet Ali, when Sir Charles Napier (knighted for his exploits on behalf of Donna Maria of Portugal) was Commodore of the fleet under Sir Robert Stopford. The admiral was a grave, orderly, steady officer, who proceeded slowly and regularly to work, whatever was to be done; "Charley," on the contrary, set about his task with energy and heroism, and therefore perpetually crossed the path of the staid admiral. It was well for the country he did, as almost everything of spirit accomplished, was done by the commodore, Captain Collier, and a few other junior officers. At the bombardment of Acre the conduct of Napier was especially conspicuous; it was by his instrumentality the magazines were fired, and the enemy compelled to surrender. The landing at Djoni, and the captures of Beyrout and Sidon also illustrated his energy and bravery. Armed with a huge stick, like an Irishman at a fair, he led the sailors, marines, and military detachments, his trowsers tucked up half-way between knee and ankle, and a most eccentric-looking wide-awake on his head. The men idolised him, and would have followed him anywhere, on sea or shore. The mode of conducting operations being to his mind very slow and cool, he astonished the fleet, which was blockading Alexandria, by going in under a flag of truce without orders, where, asking for an interview with Mehemet Ali, in five minutes he negotiated a convention which ended the war. Admiral Stopford was indignant at such irregular proceedings; Lord Ponsonby (who affected to despise the slow and feeble processes of British diplomacy), when he heard of it at Constantinople, repudiated the whole affair; but when the convention was sent home, Lord Palmerston, seeing the solid sense which pervaded the arrangements of the British negotiator (for such Charley took it into his head to make himself), recommended it to the adoption of the government; and to the horror of Admiral Stopford, Lord Ponsonby, and all the diplomatic corps, the negotiation done off-hand by the bluff sailor gave peace to the East, and possibly prevented a war with France,—as Louis Philippe and M. Thiers were jealous of England, and plotting to make the Eastern question a medium of some combination against her. The cunning, but feeble and treacherous, "citizen king" was baulked by the extempore statesmanship of the British tar. On his return home, he was elected to parliament for Marylebone. In 1846 he was made Rear-admiral of the Blue; in 1853, Vice-admiral of the White. For two years he commanded the Channel fleet, and every year served his country, more or less, by attacking

the mismanagement of the Admiralty. We may be permitted to anticipate his career since the termination of his command of the Baltic fleet, by stating, that after his exposure of the conduct of Sir James Graham as First Lord of the Admiralty, popular feeling has been strongly in his favour; and in December, 1854, he is member for Southwark, having been returned without opposition.

As we can hardly hope to have done justice to the gallant admiral in our sketch, we present an extract from a speech of his own, delivered on the hustings at Portsmouth, in 1833, when he was candidate for that borough. The speech is so characteristic of the man, and his descriptions of such events as he chooses to describe so graphic and lifelike, that the reader will perceive what Sir Charles is from his own speech, with a clearness he could hardly otherwise realise:—

"In the course of my canvass I have been asked who I am. I'll tell you. I am Captain Charles Napier, who twenty-five years ago commanded the *Recruit* brig in the West Indies, and who had the honour of being twenty-four hours under three French line-of-battle ships flying from a British squadron, the nearest of which, with the exception of the *Hawk* brig, was from five to six miles astern the greater part of the time. I kept firing double-shotted broadsides into them. One of the ships was captured by the *Pompey* and *Castor*, the other two escaped by superior sailing. Sir Alexander Cochrane, my commander-in-chief, promoted me on the spot into her. At the siege of Martinique, the *Eolus*, the *Cleopatra*, and the *Recruit*, were ordered to beat up in the night between Pigeon Island and the main, and anchor close to Fort Edward; the enemy, fearing an attack, burnt their shipping. At daylight, in the morning, it appeared to me that Fort Edward was abandoned; this, however, was doubted. I offered to ascertain the fact, and with five men I landed in open day, scaled the walls, and planted the union-jack on the ramparts. Fortunately I was undiscovered from Fort Bourbon, which stood about a hundred yards off, and commanded it. On this being reported to Sir Alexander Cochrane, a regiment was landed in the night. Fort Edward was taken possession of, and the mortars turned against the enemy. I am in possession of a letter from Sir Alexander, saying, that 'my conduct was the means of saving many lives and shortening the siege of Martinique.' I had once the misfortune of receiving a precious licking from a French corvette; the first shot she fired broke my thigh, and a plumper carried away the mainmast. The enemy escaped, but the British flag was not tarnished. On my return to England in command of the *Jason*, I was turned out of her by a Tory Admiralty,

SIR CHARLES NAPIER, Bt. Kt.

because I had no interest; but as I could not lead an idle life I served a campaign with the army in Portugal as a volunteer, when I was again wounded. At the battle of Busaco I had the honour of carrying off the field my gallant friend and relative, Colonel Napier, now near me, who was shot through the face. On my return to England, I was appointed to the *Thames*, in the Mediterranean; and if I could bring the inhabitants of the Neapolitan coast into this room, they would tell you that, from Naples to the Faro point, there was not a spot where I did not leave my mark, and brought off with me upwards of one hundred sail of gun-boats and merchant vessels. I had the honour of running the *Thames* and *Furieuse* into the small mole off Ponza, which was strongly defended, and before they could recover from their surprise I captured the island without the loss of a man. I was then removed to the *Euryalus*, and had the good fortune to fall in with two French frigates and a schooner; I chased them in the night close into Calvi, in the Island of Corsica, passing close under the stern of one, plumpering her as I passed; and though we were going eight knots, I tried to run aboard of her consort, who was a little outside, standing athwart my house; the night was dark, the land close, and she succeeded in crossing me, but I drove her ashore on the rocks, where she was totally wrecked, and her consort was obliged to anchor close to her; the *Euryalus* wore round and got off, almost brushing the shore as she passed: these ships were afterwards ascertained to be *Armées en flûte*, mounting twenty-two guns each, and the schooner fourteen. From the Mediterranean I was ordered to America; and if my gallant friend, Sir James Gordon, was here he would have told you how I did my duty in that long, arduous service up the Potomac: he would have told you that in a tremendous squall the *Euryalus* lost her bowsprit and all her topmasts, and that in twelve hours she was again ready for work; we brought away a fleet from Alexandria, were attacked going down the river by batteries built close to what was the residence of the great Washington, and I was again wounded in that action in the neck."

It is only necessary to add concerning our hero, that he is also an author; he has contributed to the London press, has published some nautical works, and a good history of the war in Syria. Lord Palmerston, on a public occasion, thus spoke of him:—"My gallant friend is a match for everything, and whatever he turns his hand to he generally succeeds in it. However, gentlemen, he now, like Cincinnatus, leaves his plough, puts on his armour, and is prepared to do that good service to his country which he will always perform whenever an opportunity is afforded to him. I

cannot refrain from repeating an observation which was made to me by a very discriminating, calm-minded friend of mine, who passed some time in the East, and saw a great deal of my gallant friend, and who, when he came to town, visited me to give me an account of what he had observed. When I mentioned to him my gallant friend, and praised his enterprise and boldness, his daring and his intrepidity, this gentleman said, 'Yes, all that is very true; but there is another quality that Sir Charles Napier possesses, which is as valuable as any of these, and as important an ingredient in his success. *I never saw any man in my life who calculated so many moves beforehand.*'"

The officer who acted second in command of the Baltic fleet, at Bomarsund, was Admiral Plumridge. He entered the navy in 1799. Seven years afterwards, he received his commission as lieutenant. He subsequently served in Egypt, and at the ever-memorable battle of Trafalgar. Up to May, 1809, his services were very various, and in very different spheres of action: the Baltic, Cape of Good Hope, India, the West Indies, and the Mediterranean, were stations at which his skill and assiduity were made available. On the 1st of May, 1809, he commanded the boats of the *Melpomene*, and destroyed a Danish cutter of war, of six guns, and several merchantmen lying under the protection of heavy batteries in the harbour of Huelbo, on the coast of Jutland. Soon after, in the same ship, he was engaged with twenty gun-boats. In December, 1810, he assisted in the reduction of the Isle of France, and, in 1813, in the capture of a convoy in Port D'Anno, and the reduction of its batteries. In 1814, he acted as Sir Edward Pellew's aide-de-camp at the conquest of Genoa. He was promoted to the rank of commander in 1814, and in 1817 he acted as captain of the *Amphitrite*, but was never posted until 1822. After having been variously employed after that time, he was appointed superintendent of the Falmouth Packet Station in 1837. As second in command he served on the East India station soon afterwards. From 1841 to 1847, he sat in Parliament as member for Falmouth. In 1842 he was appointed storekeeper of the Ordnance. The good-service pension was conferred upon him in 1842. The 1st of October, 1852, he received his flag as Rear-admiral. The command of the paddle-wheel squadron of the Baltic fleet, under Sir Charles Napier, was assigned to him in 1854, his services in which will shortly be presented to the reader.

It will be recollected that, in the account given in the dispatch of the Baltic fleet in March, Rear-admiral Corry was represented as commanding the reserves. Some notice of

him, as holding such a distinguished position in connection with the enterprise, will be appropriate. Rear-admiral Lowry Corry entered the navy as a first-class volunteer in the year 1805. After serving at the Cape of Good Hope and in Buenos Ayres, he returned to England as a midshipman on board the *Sampson* in May, 1807. During the bombardment of Copenhagen, he was present on board the *Lela*. He suffered shipwreck off Milford Haven upon his return. Upon the home station, and in the Mediterranean, he continued in uninterrupted service until commissioned as lieutenant in 1812. On the 28th of May, 1814, he escorted the Emperor of Russia (Alexander I.) to England, on board the *Impregnable*, the flagship of his Royal Highness the Duke of Clarence, afterwards William IV. The King of Prussia was also on board the *Impregnable* at the same time. Lieutenant Corry was promoted to the rank of commander in 1815. July, 1820, he was appointed flag-captain to the Hon. Sir Henry Blackwood, on the East India station. In April, 1835, Captain Corry took the command of the *Barham*, 50 guns, and in that ship conveyed the Earl of Durham to Constantinople. Subsequently, he commanded a squadron on the coast of Spain, and received the thanks of the queen of that country and her cabinet for his exertions in landing with the various ships' companies under his orders, and preserving the cities of Barcelona and Valentia from the forces of Don Carlos, which were then advancing upon Madrid. Immediately after, he retired on half-pay. In September, 1844, he was put in command of the *Firebrand* steam-frigate, to conduct an experimental squadron of brigs. Before the close of that year he accepted the command of the *Leopard*, 80 guns, in which he served several years on the home, the Lisbon, and the Mediterranean stations. Captain Corry was made a Rear-admiral in 1852, and was soon after placed in command of the Channel squadron. He was appointed second in command of the Baltic fleet in 1854, but being with the reserve squadrons, Admiral Plumridge had frequently the honour of acting in that capacity, as noticed in the memoir given of him above. An officer on board Admiral Corry's ship, the *Neptune*, 120 guns, when proceeding to reinforce the fleet of Sir Charles Napier, gives the following sketch of their entrance upon the scene of their labours in the Baltic. He writes off Kronborg Castle, Elsinore:—

"This important fortress is situated on the north-east point of the Island of Zealand, in Denmark. It was erected in 1580, in the reign of Fried II.; the style is Gothic, and the material white stone. The castle is surrounded by fortifications of a comparatively modern construction, the powerful guns of

which sweep the Sound of the Baltic in all directions. On the opposite coast is the Swedish town of Helsingborg, distant about three miles, and the two places form most formidable objects of annoyance to an enemy entering or leaving by this highway of the Baltic. In 1801, the British fleet, under Sir Hyde Parker, with Nelson second in command, forced the passage of the Sound previous to the bombardment of Copenhagen. Under the castle are spacious casemates, capable of accommodating upwards of 1000 men; and the lighthouse at the north-west corner commands a beautiful and extensive view of Elsinore and the neighbourhood of the distant town of Helsingborg, and a long line of Swedish coast with the Baltic bounding the horizon on the south.

"There are many interesting associations connected with Kronborg. It has been immortalised by Shakspeare making its ramparts the meeting-place of Hamlet with his father's ghost. According to the traditions, its vaults are sacred as the dwelling-place of the Danish Roland, the hero of a thousand legends, who never appears on the surface of the earth but when the state is in danger; and the dungeons of Kronborg have a melancholy interest attached to them from the unfortunate Caroline Matilda, Queen of Christian VII., and sister of George III., of England, having been imprisoned there. Our voyage now increased in interest; the coast of Jutland, and Hamlet's castle, like a square mass on the waters, in sight; and vessels far and near, sounding the expanse around, and indicating the line of boundary betwixt sea and sky, which the misty glow of an almost cloudless sun had nearly formed into one.

"At Elsinore (the key which unlocks the narrow sluice-gate of the Baltic), an hour's delay occurred to take in a pilot to conduct us through the narrow slip which alone is navigable for the narrow sound. Our presence in that locality recalled many naval reminiscences; and the new pilot at the helm occasioning a temporary leisure, we came in for some interesting particulars of our captain's life. Deriving his birth from the same county as Nelson, he had come under the particular charge of the great man; had served in his ship from the almost infantile period of his entering the navy; had assisted at the bombardment of the very Castle of Kronborg, which had attempted an opposition to their advance on Copenhagen; and had seen a brother—a post-captain at the age of nineteen—killed at his side a few days after his promotion."

We can be at no loss as to the plan to be pursued in recording what was done in this expedition to the Baltic of 1854, for the gallant admiral of the British fleet has himself laid it down for us in a hustings speech, in 1855, as the successful candidate for the representation

in parliament of Southwark. He requested the indulgence of the great assembly which he addressed if he occupied a little of their time in vindicating himself, and the brave men of the fleet with which he served, from the aspersions which had been cast upon them. He reminded his audience that the ministry of the day had entered upon the war reluctantly, forced by the irresistible impulse of public opinion. Even when war was determined upon, that ministry was not in earnest; no preparations on the requisite scale were made. When he received his appointment as commander of the Baltic fleet, he lost not a moment in acting upon it. He got his final instructions on Wednesday, went down to Portsmouth on Thursday, and sailed on the Saturday. So little foresight had been shown by the government, and so incomplete were the preparations of the Admiralty, that he had neither pots nor pans to cook his dinner, nor plates to eat it off. He could not even procure a servant from the suddenness of the orders he received. Notwithstanding all this unpreparedness, he sailed on the day named. The weather in England was severe, such as for a great many years had not been experienced, and it was of course still more severe in a more northern climate; but the Great Belt was passed in safety, and a great deal of work effected. They placed buoys in all the channels, and took soundings in all the most intricate and narrow passages. Having arrived at Copenhagen, he deemed it his duty to pay his respects to the King of Denmark, and to endeavour to induce that sovereign to join the Western powers. The people of Copenhagen were well disposed to them, but the government declined any avowal of an alliance. He then proceeded to Stockholm, where he met with a most enthusiastic reception, both from king and people; but Sweden was a small nation, and in dangerous proximity to Russia, and although he used every possible argument to persuade the king to join the alliance, his majesty declined. The difficulties of the Baltic navigation had never been overrated—his fleet felt these difficulties; but officers and men were actuated by one spirit, and he was therefore enabled to conduct the fleet through its various perils without the loss of a single vessel. Having overcome the impediments of the navigation, he at once sailed to a Russian port, in the hope that the enemy would be brave enough to come out; but the Russian ships of war sneaked away behind fortifications, where it would have been madness to follow them. With a view to tempt them to come out, he had taken one-half of the fleet into a difficult harbour, full of rocks; but all his efforts were in vain—they preferred staying behind their batteries

to meeting the British flag. He then proceeded to Cronstadt, but owing to their draught of water being too large, it was impossible for the allied fleet to get at that fortress, and he was reluctantly obliged to give up any idea entertained of there striking a blow. It was not without the strictest examination he had arrived at the conclusion, that to attack Cronstadt would be to risk the whole of the magnificent British fleet; but having arrived at that conclusion, they returned to the mouth of the Gulf of Finland, with the intention of attacking another Russian fortress, Bomarsund. The next object was to reconnoitre Sweaborg, under the protection of which fortress a large Russian fleet was lying; and although the season was drawing to a close, and the weather was becoming very bad, they succeeded in closely examining the strength of the place and its capabilities of resistance. The result of that examination was, that it was deemed to be unsafe to attempt that undertaking at that season of the year, and at the close of a naval campaign.

From the outline of Sir Charles Napier's proceedings, which we have substantially given from his own account of it, it would appear that the operations which he conducted comprised four distinct departments: the blockade of the enemy's ports, taking soundings, an examination of the shoals, harbours, and channels; the reconnoitring of Cronstadt; the bombardment and capture of Bomarsund; and the examination of Sweaborg. We shall endeavour to follow the gallant chief throughout the track which he has himself described.

As the first efforts of Sir Charles Napier were directed to secure the alliance of the great Scandinavian states, it is suitable to notice the importance of securing such a result. Although Sir Charles was not successful, the government could hardly have employed any one so fit for the task. At Alexandria his diplomacy was as successful as his gunnery at St. Jean d'Acre, when the exigencies of the Syrian war demanded both at his hands. The court of Denmark was timid and time-serving, and its leaning was Russian. The court of Sweden was much more favourable, and the people also; but Norway sympathises more with England than perhaps any other nation in the world. Of the two brave nations of the Scandinavian peninsula, Norway is the more free, patriotic, and public-spirited. This should not be lost sight of by our diplomatic agents; for Norway is not a mere province of Sweden, as it is customary to regard it in England; it is an independent nation, and must unite with Sweden as an integral part of the kingdom in order to form any alliance. In time of peace, there exists little further political community between them than between any other two friendly indepen-

dent nations. Against foreign enemies they are bound reciprocally to give assistance. Previous to a war being proclaimed, the council of ministers of both countries must be agreed. Norway, from her independent resources, maintains a fleet of 150 gun-boats, 50,000 seamen, and an army of 24,000 soldiers; and, without the consent of her *storthing*, not a boat or man can be employed by the government of Sweden. The "sinews of war" must be provided by a public vote of the same body. When Sir Charles Napier mentioned upon the hustings, at Southwark, that Sweden had 200 gun-boats, and an army of 60,000 men, he omitted any reference to the forces of Norway above-named. The united war power of the two nations would be 350 gun-boats, and an army of 84,000 men. Denmark could not bring so large a body of troops to the assistance of the allies; about 30,000 men would be the most she could muster for a campaign; neither could she bring so large a fleet of gun-boats as even Norway; but she possesses a respectable squadron of large ships, including several line-of-battle sailing-ships, and an equal force of stout frigates and brigs. Within the last few years she has made considerable progress in organising a steam navy, in which she is superior to Sweden and Norway. Were the three nations of Scandinavia to enter heartily into the war, it would be decisive as to its issue. The Scandinavians are a braver, and a finer race of men than the Russians. As sailors they are as much superior as any one body of men could be to another. Their soldiers equal those of Russia in dogged pertinacity, and possess a dashing gallantry and active valour of which the Russians are wholly destitute. With such an additional force as these nations united could bring upon her western frontiers, all the great fortresses on the shores of the Gulf of Finland must fall, nor could St. Petersburg be saved. The gun-boats of the allies would form a flotilla of such power as would crush every obstacle Russia has raised against the naval progress of invaders. An army of 100,000 men, Danes, Norwegians, and Swedes, as many French, and a reserve of such troops as might be raised in England for that purpose, would paralyse the power of Russia in a single campaign.

The motives which influenced the free Northern kingdoms to resist the blandishments of Sir Charles Napier's diplomacy, were such as ought to have weight with us in passing judgment upon their policy. An eminent Stockholm periodical places the matter in this light:—"We say that the war has no definite object as far as we are concerned. But would not the weakening of Russia be of great effect on the future of Sweden? Doubtlessly—if this weakening is brought about: but the great powers are not yet agreed on this point. What

resolutions have been formed? As long as the question remains as it is, we are on a sea of uncertainty. As long as the great powers have not agreed on a definitive settlement of the European balance, our union with them in the Russian war would only be a support given to a policy full of chances impossible to foresee, and of no advantage to us. We cannot afford to run so great a risk. No; before the three great powers at least have decided resolutely to deprive Russia of important territories, we do not believe that Sweden ought to give up that state of peace and security which she enjoys at present—a *status* recognised by the whole of Europe, even by Russia, and blessed by the people of the united kingdoms. It is not yet known, and probably we shall not be informed, for some time, how far the allies have resolved to dismember Russia. Even if Austria were to give the allies that armed co-operation for which they have waited so long, it would not then be certain that this dismemberment would be declared a necessary condition of peace. Might not other means be found which would equally satisfy the honour of all parties?—and where should we be in such a case?"

It is obvious, from the spirit of the above quotation, which conveyed the prevailing opinion of the three nations, that until the Western powers formed a more definite and clear line of policy as to the objects of the war, it was the interest, and in fact the duty, of Denmark, Norway, and Sweden, to maintain a rigid neutrality.

While Sir Charles was endeavouring to conquer the caution of the Northern courts, and his officers were taking soundings and blockading the gulfs, prizes were frequently captured. The crews of the merchant-ships so taken were treated very generously, being landed at Copenhagen or elsewhere, with supplies of clothes and money. Such letters as the following, from Copenhagen, were frequently arriving home:—

"I went again yesterday afternoon to see the Finnish prisoners, and had a longish chat with them. When I read to them a passage from the Danish papers, according to which they would, if they had returned to Russia, have been compelled to serve on board the fleet, they seemed to be exceedingly pleased. Those that I have seen are smart fellows enough. The *Tribune* and the *Alban* have orders to go to Kiøge Bay, in order to take the captured vessels through the Sound or the Kattegat to England, or some other harbour in the North Sea.

"One o'clock, on board the steamer *Malmo*.—Business that takes me to Lubeck has brought me here. At this moment the *Tribune* (we are some thirty miles from Copenhagen) is sailing past, and bound for the Sound or Kattegat. She has three of the captured merchantmen in tow.

The *Alban*, too, is coming past with another Finnish ship in tow. It follows the wake of the *Tribune*. The ships, with their cargoes, have been valued at £48,000."

It was not only for merchantmen that our sailors were on the look out, although their longing hope to encounter a Russian ship of war, or a Russian fleet, was doomed to disappointment. The following extract from the letter of a naval surgeon, will show how bitterly that disappointment was felt:—"One morning, about ten days since, we saw a large vessel some eight or ten miles ahead, which we fully believed to be a Russian man-of-war, as she made all sail to get away, and showed no colours. As we rapidly came up with her, she took in sail, until she was under reefed topsails (fighting trim), so we beat to quarters, and the pipe sounded loudly 'hands bring ship into action.' For about three minutes, everything was bustle apparently, casting the guns loose, clearing the decks, &c. Five minutes after the pipe every gun was double-shotted and primed, and the men standing with their match-lines in their hands waiting for the word to fire, and just as we got within good distance, the black-guard ran up American colours, and coolly told us he would have hoisted them sooner, but he wanted to see how smart we could clear for action. If our tars did not bless him to the wrong side of heaven, don't believe me!"

While tidings of active warfare against the Russian strongholds were too impatiently looked for at home, intelligence by way of Berlin arrived in London that Cronstadt had suffered extensively from an explosion. Like most of the news which reached us from the two great German capitals—when the tidings were not altogether untrue—this was greatly exaggerated. A laboratory in the island of Cronstadt, employed in the manufacture of cartridges, was blown up; sixty persons, many of them civilians, lost their lives, and more than twice that number were injured, many of them mortally. The building was not, however, within the *rayon* of the fortress, which sustained no injury; but in the town private property to a considerable extent was damaged or destroyed.

Very early in the operations of the expedition, sinister reports of a private treaty between Russia and America were put into circulation, which, if true, would have tended to weaken the Baltic blockade, or bring the allies into conflict with the United States. These rumours were to a great extent untrue; but there was much political coquetry between the great despotism and the great republic at this period. The *New York Herald* seems to have originated the alarm. In one of its issues, there occurred the following, which being quoted by the European press generally, was made the subject of extensive comment and conjecture, and by

the press in the pro-Russian interest was paraded as something very ominous and important: "We learn that either the *Hermann*, from Southampton, or the *America*, from Liverpool—the next steamers due—will bring the draught of a convention concluded between Mr. Buchanan and Lord Aberdeen, on behalf of their respective governments, by which England admits, in the approaching European war, the doctrine that the flag covers both ship and cargo, and that free ships make free goods; also renouncing the right of search for the impressment of seamen, so far as American vessels are concerned, and conceding the restriction as to the law of blockade. In return, the United States is pledged to strict neutrality and non-interference in the coming contest between the Western powers and Russia. This is a most important convention, and has been negotiated by Mr. Buchanan without instruction from Washington. It is important as it affects our rights and our commerce, and places us in a position that we should have occupied years and years ago. It secures our neutrality without any treaty stipulations, as it removes the cause of war, and at once enables us to become the great carriers on the seas of the world. In 1812, the doctrine of the right of search led to the war with Great Britain; the treaty of Ghent left the matter unsettled. In 1818, Lord Castlereagh unsuccessfully endeavoured to obtain our consent to the doctrine by special treaty stipulations: but it continued unsettled. When Messrs. Webster and Ashburton were arranging the treaty at Washington, in 1842, all reference to the doctrine was studiously avoided for fear of a rupture in the negotiations at that time. But now, in the face of the impending war in Europe, and in the necessity of our neutrality in this tremendous struggle, the great principles for which we have for half a century contended are obtained. The recent debates in the British parliament show the reluctance with which the concessions were made. To that part relative to the rights of our sailors, we desire to call the special attention of the New York Chamber of Commerce. The convention, and the correspondence connected with it, will probably be submitted to the senate as soon as received, for the immediate action of that body."

The Baltic and its *Russian* naval ports were very little known previous to the war—at all events, very little was popularly known of them. Ordinary maps often omitted the names of places which were, nevertheless, of importance to Russia. Thus Dr. Cottman, the American citizen who made himself so notorious as an advocate of Russia, tauntingly asked the question, when the British fleet attacked Libau, Brahestad, Gamla Karleby, and other places of minor importance, destroying in them ships

and stores, "Who ever heard of these places?—what map contains their names?"

The following description, which will probably be valuable to many of our readers, as increasing their knowledge of the Baltic, is from the pen of a gentleman skilled in fortifications and naval affairs:—

"Kiel Bay is on the eastern coast of Holstein, a little to the south of Schleswig. It is a capacious and most beautiful bay, and possesses the paramount advantage of communication by railway with Hamburg, besides any amount of victualling supplies, which are both good and cheap. Coals are also plentiful, and may be had at a reasonable contract price.

"A glance at the map will exhibit the importance of the islands of Åland and Gotland, held by Sweden. It is thought that Russia may attempt to gain possession of the latter station—one of the most strategical points in the Baltic, and overawing Stockholm; but the Swedish government have put it into an efficient state of defence, and dispatched five regiments of infantry and one of cavalry to man its fortifications. The principal Swedish naval station is Carlscrona; but it is in the Gulf of Finland that the public interest chiefly centres. Of the characteristics and defences of this coast our information is meagre. Few parts of Europe are so little known. Russia studiously discourages the dissemination of such knowledge of her dominions as may be turned against her in time of war, especially in relation to seas and coasts from which there is no egress to the ocean but through the Sound.

"The Baltic is a close sea, occupying the centre of Northern Europe, separating Sweden and the Danish islands from Germany, Prussia, and Russia, and extending from 54° to 66° N. lat., and from 10° to 30° E. long. Its great length and comparatively small breadth give it the form of an extensive gulf. It washes the coasts of Denmark, Germany, Prussia, of Courland, Livonia, and other Russian and Swedish states. Its extent from Torneo to the island of Wollin is 240 leagues. Its average breadth may be taken at 120 miles, and its surface at 125,000 square miles. The southern coast of the Baltic is low and sandy; and the shores of the Gulf of Livonia are low and commonly sandy, though in a few places interrupted by a rocky beach. The rocky coast becomes general at Cape Spinhambre, at the entrance of the Gulf of Finland; and the sea-coast of Finland presents throughout its entire extent the same succession of fiords and rocky headlands which encircles the whole seaward frontier of Sweden and Norway. But the dimensions of the fiords of Finland are far more limited than those to the west of the Gulf of Bothnia, seldom exceeding a few miles in extent, although their

mouths contain an equal number of islands; some of which, as the isles of Sweaborg, have been converted into fortresses of great strength. The coasts of the Bothnian and Finland gulfs are thickly strewn with rocks of granite and limestone, presenting in places a labyrinthine archipelago of little islands, rendering the navigation extremely dangerous. All the Russian ports, except Revel, are inconvenient and unsafe for loading and landing goods.

"About fifty rivers and streams of consequence discharge themselves into the Baltic Sea, which possesses a basin only exceeded in size by that of the Black Sea. Perhaps in no inhabited country in the world does such a quantity of snow fall as in the countries round the Baltic. Hence the freshness of its waters; 31 lbs. of water from the North Sea contains 747 grains of salt; but the same quantity from the Baltic does not yield more than 389 grains. Its comparatively small depth may perhaps in some degree be attributed to the numerous rivers which flow into it. Its depth is greatest where no great rivers enter, as near the island of Bornholm, and between it and the coast of Sweden, where it is 110 to 115 fathoms deep, while in general it only attains from 40 to 60 fathoms. The waves of the Baltic do not swell so high as in the ocean, but they are more dangerous and harassing to shipping, as they succeed each other with greater rapidity and impetuosity; while its small depth, the shallowness of the Russian shore, the rugged nature of the Swedish coasts, and the sudden and frequent changes of the wind, render this sea formidable to navigators. The shores of the Baltic nearly every year are covered with ice, which, from the end of December to the beginning of April, shuts up the harbours, straits and bays, and interrupts navigation. In the Gulfs of Finland and Bothnia the freezing begins sooner and ends later. In 1658, Charles X. of Sweden marched an army over both Belts to the conquest of Zealand; and in 1809 a Russian corps passed from Finland to Sweden over the ice, at the narrowest part of the Gulf of Bothnia, called the Quarken. The Baltic has a very perceptible current, and when the wind blows strong from the north, the water becomes so fresh as to be even fit for drinking or for preparing meat. Even in the hottest summers the Baltic is cooler than any other sea."

The reference to Kiel in the above account is not sufficiently full to satisfy the curiosity of our readers, as such frequent reference has been made to it in the despatches during the war, and in this History it has already been repeatedly named. The waters of the gulf of Kiel are so deep as to admit the largest vessels to the walls of the city. The entrance to the gulf is defended by the forts named *Delicors*

and Friederichsort. The site of the city is extremely pleasant, but it is not itself picturesque, although wearing an antique look. The castle is celebrated as the residence of Catherine II. of Russia in her younger days. Its ramparts command a magnificent sea panorama. The environs are charming, and the people hospitable and frank. Seven hundred years ago Kiel rivalled most of the cities of the Baltic, and never wholly lost importance. It is at present a notable place, of considerable commerce, and afforded the ships of our fleet frequent shelter during the naval campaign of 1854.

As the Russian strong places on the coast of Finland are the main objects of attack for the allies, it will prevent the necessity of interrupting our narrative or appending voluminous notes, if we here give some account of Finland, its chief city, Helsingfors, and its principal fortified places.

"In the year 1831, Finland was subdivided administratively into eight circles, or *Lans*, and in one of these lies Viborg, a town which enjoys a rather active export trade. The town is about twelve versts from the harbour, lies at the end of a large bay, and consists of the main town and two suburbs, united by a bridge to the island on which the castle stands, and is about seventy-four miles north-west of St. Petersburg. It contains a Greek cathedral, a church for the Swedes and Germans, another for the Finns, a Roman Catholic chapel, some schools, and about 3500 inhabitants. The port of Viborg is of great extent, and is inclosed by two large islands, which form, as it were, two natural breakwaters. As a fortress it ranks high, both for position and strength:—the sea washes nearly the whole length of the outer walls, while battery upon battery commands every approach. The view of this frontier fortress, with its churches and domes flashing in the sun, and its long line of batteries and bastions rising in massive strength from the water's edge, is very striking. Attacked often by the Russians, it defended itself with great bravery, and in 1710 it was besieged by Peter the Great, and taken, after a hard struggle of several weeks' duration. The peace of 1721, known as the treaty of Nystad, put the czar in definite possession of it and the neighbouring country; and in 1745 the treaty of Abo enlarged still further this conquest. The Swedes, since the days of Peter the Great, have always played a losing game when at war with the Russians, particularly as the latter have almost always succeeded in gaining the assistance of the Germanic kings of Denmark. For nearly a century the conquered portions of Finland, distinguished as Gamla Finland, or ancient Finland, were subject to the same regulations in civil matters as the rest of

the Russian Empire. In the circle, or *Lans*, already named, contiguous to Viborg, is Helsingfors, the capital of the Russian government of Finland. It has now about 16,000 inhabitants, and the strong fortress of Sweaborg protecting the entrance of the harbour. The fortifications mount 300 cannon, and contain barracks and casemates for a garrison of 12,000 men. Helsingfors lies in latitude 60° 9' 42" N., longitude 24° 57' 30" E., at the mouth of the Vanna, about 180 miles W.N.W. of St. Petersburg. The town is, historically speaking, comparatively of modern creation, having been founded by Gustavus Vasa in the sixteenth century. The Russians have greatly augmented and improved Helsingfors since it came into their possession, more particularly since the year 1819, when it became the capital of Finland; the removal to it of the University of Abo, and the senate, after the conflagration of that town in 1827, also materially increased its importance. The streets are long, large, and laid out at right angles, as in most other Russian towns. The remains of the library saved from the fire of Abo are preserved there. It consists of about 80,000 volumes, chiefly editions of the classics taken by Charles XII. from the monasteries during the Seven Years' War. The harbour is capacious, and ranks as one of the best in the Baltic, and an important trade is carried on in timber, corn, and fish. Helsingfors is the residence of the governor-general, and the seat of important courts and public offices:—it contains the senate-house, several churches, and has manufactures of linen, sail-cloth, and tobacco."

Very early in the campaign a painful loss occurred to the fleet in the person of Captain Foote, of the corvette *Conflict*. The unhappy event transpired on the 18th of April, at Memel. The captain went on shore on business connected with the prizes which he and those in command of other ships had captured. In the evening he prepared to return to his ship, but was warned by his brother officers, and by sea-faring gentlemen of the place, of the danger of attempting to return in the face of so rough a sea. A heavy nor'-wester had sprung up, and blew right against the stream of the Haf, where it debouches. Between the moles of the harbour the surf was very rough. The principal pilot of Memel urged the captain to take a large boat, but he refused, preferring to return in his narrow gig, with his surgeon and five sailors. In less than ten minutes the boat suddenly disappeared. The life-boat, manned with pilots, was launched to rescue, if possible, the captain and his crew. He and four of his sailors were lost, the surgeon and one sailor clung to the boat, and were with great difficulty taken off, half frozen. Captain Foote was a young man of great promise, a

daring and skilful officer, and fell a victim to his audacious courage, like Captain Giffard off Odessa, and Captain Parker in the Danube. *De mortuis nil nisi bonum!*—we dare not infringe this maxim, especially where the brave and generous are concerned; but the rashness of this young captain, and of other junior officers of the fleets, exposed themselves and others to needless jeopardy, and it is to be hoped that this loss will inculcate prudence among the inexperienced, but nobly gallant, officers of our fleet, who are so recklessly ready to expose their lives to every danger. The *Conflict*, which Captain Foote commanded, had captured the *John, Jost, Catherina Charlotta, Kalling, Carl Magnus, Rasmussen*, and other merchant ships, some of considerable value.

A letter from the surgeon who was saved gives an account of the misfortune, which places the conduct of Captain Foote in a light less rash than other concurrent accounts present it. In justice to his memory, as well as to make our relation of the accident more complete, we append it:—

Her Majesty's ship Conflict, Memel, April 19.

"MY DEAR SIR,—Although I feel myself scarcely equal to the sad task of writing to you, I cannot allow the post to leave without doing so, as I know well how gladly you will receive any details of the sad accident of which I was unhappily a witness. Lieutenant Hore, who is now in temporary command of the ship, has already related to you the account of the death of Captain Foote, though no words can express the sorrow and grief felt by every officer and man for a captain so much and so deservedly beloved. Although so short a time of the commission has elapsed, his constant, unvarying kindness, his thoughtful care for the comforts and even the convenience of every one, and his mild amiability of temper in command, had so endeared him to every one, that his loss is felt as that of a near relative, an old and valued friend. Mr. Hore has explained to you the reasons of the ship being at this port, and of the captain's motives for landing. As I was anxious to see the town, he very kindly asked me to accompany him, and had ordered dinner on board at five o'clock, to which he had invited his officers. This being a bar harbour, with a very rapid river, the wind blowing on shore makes a tremendous surf on the bar. Though, when we left the ship yesterday morning, there was a light breeze, there was no danger to be apprehended, and we crossed the bar without getting a drop of spray. After calling on the commandant of the town, the captain arranged all the business necessary for sending home the prizes, and left the shore at half-past four o'clock. The captain, knowing that the surf is

often dangerous on this bar, made many inquiries as to whether the sea had risen, but could not learn of it being more than in the morning, when crossing was perfectly safe. Indeed, neither he nor I was at all aware of the increase of surf on the bar until we were nearly in the midst of it, and then too late to return. The first sea which struck us filled the boat; the second turned her over. I saw the captain swim away manfully for the shore, then about half-a-mile off; but, encumbered with his great-coat and boots, and having in addition to struggle against the rapid current, which sent him back on the breakers, he was not long able to bear up against it, and was seen to go down by one of the crew—the only man saved but myself. The boat's crew were five, four of whom were drowned with the captain; three of them managed to get on the boat's keel, but only one was able to keep his hold, and he was washed off three times. By the gracious interposition of Providence, I was enabled to get hold of a couple of oars, and support myself until the surf-boat came, which was about twenty minutes. They picked me up just as I had let go the oar, in a state of insensibility. The pilots entertain no very strong hopes of recovering the bodies, from there being a strong under-current setting into the Baltic; but every search is being made along the coast, and, if the body of the captain is found, arrangements will be made by the British consul for the proper sepulture of the remains. Mr. Hore is now on shore, and will himself see that all the necessary arrangements are made. The inhabitants of the town are almost wholly Protestant, and there are many churches.

"In conclusion, I can only express to you, my dear sir, the wish that I may be of some further service. Any wishes of your own with reference to the captain's property on board will be attended to as a sacred duty by Mr. Hore. Perhaps when Mrs. Foote is able to listen to these details, they may tend in some way to soothe her; though I fear, indeed, it will be long, very long, ere such can happen.

"I remain, dear Sir, very truly yours,
"W. H. SLOGGETT."

"W. Hodgson, Esq., Plymouth."

Thus perished one of the most enterprising officers of Admiral Napier's fleet.

The first exploit against an armed enemy was performed by the *Arrogant* and the *Hecla*. The latter, it will be remembered by the reader, performed great services by a cruise before the dispatch of the fleet, for the purposes of surveying and taking soundings. These two ships were commanded by Captains Hall and Yelverton. They observed a fishing boat off the coast, of which and its crew they took possession, and compelled the captured sailors to act as

pilots. They guided the ships up a narrow river, but the day was advanced, and it was necessary to anchor for the night; before doing so the *Hecla*, which was in advance, was fired upon from a battery in a wood, which was protected by a high sand-bank in front. She was struck by a round shot in her hull. The *Arrogant*, quickly arriving, joined her in dislodging the enemy; this was speedily done, as the guns mounted upon the high bank were immediately silenced; shells were thrown over the bank into the wood, which soon checked the fire of the enemy. One of the vessels, passing the bank, threw in an effective broadside of grape and canister, which completed the rout; the wood was cleared of the assailants. Early the next morning, the skill of the coerced pilots was again put into requisition—the *Hecla* leading, as her draught of water was lighter than that of the *Arrogant*. For several hours the Finnish sailors piloted the little squadron up the narrow and intricate windings of the river, when suddenly the *Hecla* came in front of a battery. The ship had only six guns, and they were of smaller calibre than those of the fort. She, however, was ready to open fire at once, as the men were at quarters; the fort returned the fire, and it was soon obvious that the gallant little steamer was no match for it; nevertheless, such was the precision of her fire, that the artillerymen were seen to drop fast who were serving the guns of the fort. The promontory which afforded a salient position for the Russian battery and field-pieces was crowded with troops, and just as the *Arrogant* arrived, a heavy fire of musketry was opened by them. This fine vessel of 46 guns, however, directed a broadside with grape upon the mass of the soldiery, creating terrible havoc. The horse-artillery galloped off the promontory, and the infantry sought the shelter of a wood within rifle range, and opened a rapid fire upon the ships. Captain Hall, of the *Hecla*, was hit with a spent Minié ball in the right leg; Lieutenant Crew Read, of the *Arrogant*, was wounded in the cheek by another of these messengers from the wood, and his eye seriously injured. At this juncture the little squadron incurred great peril by the *Arrogant*, which was too large for so contracted a sphere of action, getting aground near the fort. A single broadside, however, dismounted all the enemy's guns, and she was got safely off. At last they reached Eckness, where three merchant vessels of which they were in search were under the shelter of the batteries. Two of these ships were stranded, and could not be brought away; the *Hecla* ran alongside of the third, took her in tow, and steamed off with her prize. The *Arrogant*, which from her deeper draught of water was still behind, came up at this critical juncture, and pouring a tremendous broadside upon the

batteries, saved the *Hecla* from a volley which would have probably afforded her other work than bearing away a prize. The larger ship then shelled the troops, sparing the town. The loss of life, on the part of the Russians, was very severe, as great numbers fell under the vertical fire of the English. The only damage sustained by her in return was from the musketry, by which two men were killed and four wounded. The *Hecla* had one killed and several wounded. As they bore down the river with their prize, they met the *Dauntless*, which had come in search of them. The admiral, who was then entering Hango roads, heard the deep booming of the cannon, and sent the *Dauntless* to investigate the cause. When the three vessels rejoined the fleet, the crews of all the ships gave them three hearty cheers, and the admiral-in-chief signalled, "Well done, *Arrogant* and *Hecla*." The spirited conduct of Captains Yelverton and Hall gave great satisfaction to the government at home. The Duke of Newcastle addressed to the lords of the Admiralty the following letter:

"MY LORDS,—I have laid before the queen the papers transmitted to me by your lordships, relative to the destruction of certain batteries at Eckness; and I have received her majesty's commands to desire that you will signify to the admiral commanding her majesty's fleet in the Baltic, her majesty's great satisfaction at the gallantry and skill displayed by the officers and men of the *Arrogant* and *Hecla* on this occasion.

I am &c., &c.,

"NEWCASTLE."

Among the desultory exploits, tidings of which reached England at this time, that of the *Amphion* and *Conflict* was the most pleasing. In the little port of Libau eight new merchant vessels obtained shelter, there were besides others which were aground, and such was the terror inspired by the vicinage of the British fleet, that some of the ships were scuttled to prevent the cruisers from capturing them. The *Amphion* and *Conflict* justified such apprehensions, for they made their way into the port, and, without losing a man or firing a shot, took possession of the town and shipping. The private property on board the captured ships was restored to the owners upon application; the public property of the town was destroyed. The question is open to discussion how far in such expeditions the commanders are justified in sparing private property, when its destruction is feasible on an extensive scale, and the war is heartily espoused by the people whose property is so situated. It is said, in support of the policy of sparing private property, that the Duke of Wellington adopted it in France and in the Peninsula; but these countries were our allies at that time. Spain and Portugal were

in arms on our side; and although France was Napoleonist, the legitimate king was our ally, and we were bound to respect the property of his subjects. By sparing commercial places and private treasures we leave so much wealth to the hostile nation, which finds its way into the public treasury against us. This is especially applicable as an argument when at war with a despotic country, all the property of the people being obnoxious to seizure and confiscation for the public weal at any moment. The czar never scruples to press the wealth of his people into his service, and if our ships spare the property of the enemy, private or public, they are simply leaving it for the czar to employ against the nation whose flag they carry.

One of the most daring naval feats performed during the war was accomplished by the *Dragon* while reconnoitring the port of Revel. The captain perceiving two of the enemy's ships at anchor under the batteries, determined to cut them out, or lose his ship in the attempt. He took up his position with such skill that not a ball hit his ship, while he was able occasionally to throw shot and shell into the works, and mature his arrangements for cutting out the ships, which he eventually succeeded in doing, and towing them into Hango Bay, without losing a man, or having line or spar injured. When the great strength of Revel (referred to elsewhere) is taken into account, the enterprise of the *Dragon* rivals that of the best and bravest times of the British navy.

It was on the 28th of May that the admiral proclaimed the effectual blockade of Russian ports, viz.:—"The ports of Libau and Windau, on the coast of Courland, and other ports, roads, havens, or creeks, to as far north as Cape Dager Ort, were in a state of blockade by a competent force. It added, that all ports, roads, havens, or creeks, eastward from Cape Dager Ort, including Hapsal, Wormso Island, Port Baltic, Revel, and all other intermediate ports on the coast of Esthonia, as far as Eckholm Light, and thence in a northward direction as far as Helsingfors and Sweaborg, on the coast of Finland; continuing westward, Baro Sound, Hango Head, Oro, and Abo, including the Aland Archipelago and intermediate ports; thence north, including Nystad, Biorneborg, Christinestadt, Vasa, Walgrund Islands, Little Karleby, Icobstad, Great Karleby, Lahts, Kalawki, Brahestad, Uleaborgh, Karle Island, Tio, Gestila, Tornea, and all intermediate Russian ports, roads, havens, and creeks in the Gulf of Bothnia." This blockade was kept up in a very different fashion to that of the Euxine, although the latter was easily effected in comparison. While the *Vladimir*, and other Russian ships from Sebastopol, Anapa, and the Sea of Azoff, repeatedly set the great fleet of

Admiral Dundas at defiance, eluding their vigilance, carrying stores from one Russian port to another, and taking Turkish prizes from the entrance to the Bosphorus, not a fishing-boat could move in the Baltic during the presence there of the active and spirited admirals by whom the blockade was enforced. Discussions were frequently raised at home, during the ebullitions of party spirit in 1854, as to the bearing upon the results of the war of a blockade of the Russian ports, especially in the Baltic. Some maintained that, in crippling the commerce of the enemy, we were injuring our own. A large portion of the trade of Russia, especially of Western Russia, is carried on by British capital, in the form of advances for produce. The British merchant advances the money, and the shipments are in due time made to his account. In this way, tallow, hemp, flax, timber, matting, and even corn, find their way to England. To check the commerce of Russia, it was therefore maintained; was to impose burthens upon ourselves, by raising the cost of production at home, making the material of our manufactures scarce, and consequently dear, and exposing those merchants to certain and extensive loss who had made the advances upon Russian produce. On the other hand it was argued that, while loss would undoubtedly ensue to our own commerce, still heavier loss would be entailed upon the enemy—just as certain expense is incurred in the equipment of armies and fleets, which is injurious to trade and exhausting to the resources of the country; but if these fleets and armies destroy the armaments of the enemy, he suffers greater loss, is sooner exhausted, and the advantages of a successful war compensates the burthens imposed. In reply to such arguments it was frequently said that no advantages were actually proposed by a successful issue of the war, and that, therefore, for us the only prospect was additional debt and attendant discontent, even in case of victory, but perhaps shame and defeat might render our burthens still more grievous. These last arguments against the blockade, and against the war, were urged by the *peace parties*. There are three very distinct parties to whom the appellation will apply:—the *religious peace party*, comprising the Quakers, Moravians, and religious persons of other and minor denominations, who conscientiously oppose all war, and profess to rely upon the providence of God alone for defence; the *philosophical peace party*, who, on grounds of political economy, resist war, and push their opinions to such an extreme as to prefer national dishonour to national expense, and the universal suppression of freedom to the partial destruction of trade; the *political peace party* consists of persons who, from sym-

pathy with absolute government, entertain no alarm at the progress of Russia, and regard her as the very sanctuary of order, and the czar as its chosen and sacred champion. The triumph of Russia is, in their eyes, the triumph of government over anarchy—of Divine right over revolution—of the monarchical and aristocratic principles over democracy, and of personal property over socialism. They regard the czar as England's ally against revolutionary rulers like Napoleon, and revolutionary demagogues like Kossuth and Mazzini. All these *peace parties*, from their different points of view, decried the blockade in the Baltic, and predicted for England a ruined commerce and financial disorganization. To us it seems wonderful how any person or party could be so blinded by prejudice as not to perceive that the mode of conducting the war which soonest dried up the resources of the foe, would, in the long run, come lightest upon commerce, prove the cheapest mode of conquest, and tend to secure order by rendering the disturbance of the balance of power difficult, and taking away all temptation from any aggressive government to make use of the agitated nationalities to foment revolution or insurrection, so as to distract other governments from attention to its designs, or efforts to frustrate them. It equally astonishes us how any person can refuse to see that if the objects proposed by this war be attained, British commerce must be immensely benefited. In the Baltic our operations were only directed to the humiliation of the power opposed to us; in the East the ends in view were the integrity of the Ottoman Empire so far as foreign aggression might tend to disintegrate it, the freedom of the Danube, and of the Black Sea. Should such objects be consummated, an immense impetus would be given to commerce; the fine countries north and south of the Danube would be free to develop their resources, and we might obtain from Bulgaria, Wallachia, Moldavia, and the shores of Asia Minor, much that we now import from Russia, and find good customers for our manufactures in the cultivators of those rich and teeming soils. Whatever measure, even by entailing heavier present sacrifices to commerce and to property, hastens the conquest of the enemy and the realisation of objects for which we have gone to war, will ultimately enlarge the sphere of commerce, enrich our country, and promote the comfort and independence of many nations.

It is of importance, in discussing this question, to remember that where the blockade could not exclude the shipment of produce, it effectually excluded the Russian mercantile navy from its own carrying trade. It is estimated that produce to the amount of a million sterling comes down the Vistula annually to

the Prussian ports of the Baltic; from these ports it might be shipped, notwithstanding the blockade, but not in Russian vessels. In the summer of 1854, the quantity of merchandise brought down the Vistula far exceeded the above estimate. The advances of British merchants upon the produce of Russia, if wholly lost, would not affect England in any degree so severely as the discontinuance of those advances would affect Russia. The nobility of that country, and other great landowners, are generally in debt, their estates are heavily mortgaged, for no aristocracy in the world lives so extravagantly. They cannot raise their crops without loans or advances annually made, or where they are less burthened, and can do so, pecuniary advances are necessary to enable them to send them to market—to St. Petersburg, Riga, and Memel, on the Baltic, and Odessa on the Black Sea. Mr. Wilson, editor of the *Economist*, estimates the assistance thus afforded by European capitalists to be about seven millions sterling, while Mr. Cobden estimates the value of our annual imports from Russia at twelve millions sterling. These two statements are irreconcilable, for although English capital is not exclusively employed in these transactions, it is chiefly so; and England is not the only importer, although the chief, of Russian produce. The above estimate by Mr. Cobden was given, not upon his own judgment, but upon that of certain city merchants largely engaged in the Russian trade. His own opinion had been that six millions represented the value of such imports, and we think a sober review of all the available evidence will justify the conclusion to which he came, without the *ex parte* and sinister assistance of the Russian merchants whose authority he quoted. The official returns for 1852 and 1853 present the following table of quantities, and the estimated cost brings the worth of the Russian imports to the sum at which Mr. Cobden—exclusive of his city assistants—calculated them, an annual average of six millions sterling:—

We believe that the blockade of the Russian ports will ultimately be a great advantage to England, by enlarging the sources of our supply; and as Russia has hitherto taken very

few English manufactured goods, the extension of foreign produce markets will result in a corresponding increase of our own exports. We could obtain flax and hemp from our colonies in any quantities, if circumstances should induce the colonists to supply us. Ireland is an excellent flax-growing country. Prussia and Belgium are also flax producers, and could enlarge their exports. The increase of population in the United States keeps pace with the corn production of that country in a ratio which precludes any hope of very great increase in the supplies of "breadstuffs" from that side of the Atlantic. The shores of the Mediterranean and of the Black Sea could supply us with any amount. Asiatic Turkey, Bulgaria, and the provinces having the Danube as an orograph, could yield us all that we could consume. The certainty of peace would encourage them to cultivate their luxuriant soils, and they would exchange their products for ours. Turkey is the true commercial rival of Russia. Whatever we buy from the latter with gold, we may buy from the former with goods, if the territories of Northern Turkey are preserved from Russian and Austrian spoliation and tyranny, and if any incursion upon Asiatic Turkey by Russian troops from Georgia be treated by Western Europe as a *casus belli*. Turkey can be induced, in her present temper, to yield to the diplomacy of Western Europe such social and governmental reforms as will give security to agriculture, as her laws already give security to commerce; and all attempts to repress her material improvement by her two great enemies, Russia and Austria, being sternly met by concentrated Europe, the fine provinces of Turkey will spring rapidly into importance, agriculture flourish, commerce fill her harbours, and the merchant marine of England plough her seas, freighted with those treasures which reciprocally bless the nations which exchange them.

To us it appears that Russia is chiefly vulnerable by blockading her ports: this was Mr. Cobden's opinion when the Russian loan was discussed, previous to the breaking out of the war. The sacrifice of our commerce with Russia will, in its ulterior effects, be the extension of our commerce with the world; and the infliction upon Russian resources, by raising up in the meantime powerful commercial competitors, be such as she can never recover under her present political and commercial system. Seasons of manufacturing distress in England have always produced an increase of her commerce, because the enterprise of her manufacturers and merchants have, by the aid of cheapness caused by the depression, pushed their trade into new markets, which continued to afford purchasers when the causes of decreased demand for British manufactures else-

where have passed away. So now, new *purchase* markets will be assiduously sought, and supplies will continue to be drawn from them when the war which necessitated their production shall be silent, and Russia again seeks her customers in England. If the blockade continues a few more seasons, Russia, when the war is over, will be glad to concede free trade, and take our goods for articles in exchange, for which she now refuses to take anything but our gold. It will assist our argument to present a comparative view of the annual value of British and Irish manufactures and produce sent to Russia and Turkey during five years, ending in 1850.

	Turkey.	Russia.
1846 . . .	£2,141,897	£1,725,148

	Total excess to Turkey	£2,280,903

It is curious that in cotton goods alone Turkey is especially a good customer. From Burns' *Commercial Glance* we learn that up to the breaking out of the war there was an increasing trade with Turkey in this particular department.

It is to be allowed that, indirectly, Russia is obliged to take our manufactures to some extent, the nature of her trade with Germany constraining her to do so; but it needs no argument to prove how disadvantageous to us is this indirect reception of goods for produce. But even if we were the greater sufferers by this necessary measure of war, a marine blockade, we should cheerfully and bravely submit to it until the principle of justice for which we contend is vindicated. In reply to all the querulous objections to the war, founded upon what we may ourselves experience of disadvantage by blockading the Russian ports, we may well reply in the indignant eloquence of a living statesman, "Of what avail is your possession of the noblest fleet which ever rode the seas in ancient or in modern days—of what avail is the possession of the best-disciplined and bravest soldiers which ever marched to battle—of what avail is your vast mercantile marine, your vast accumulations of capital, your

almost limitless command over all the improved appliances which modern science and ingenuity have constructed for the purposes of war, if you cannot resent a national insult, or oppose the aggressions of an enemy, without commercial ruin, suspended industry, and popular disaffection and outrage being spread over the face of your whole empire?"

The blockade having been resolved upon and proclaimed by Admiral Napier, he was not the man to make it ineffectual, but throughout the campaign he maintained it with unslumbering vigilance and unresting activity.

Immediately after the official notification of this blockade, an affair of some importance occurred at Brahestad, in the north of the Gulf of Bothnia, where we believe the flag of a British man-of-war had never before been seen. Admiral Plumridge, with a small squadron consisting of three steam frigates (the *Leopard*, *Odin*, and *Vulture*), spread terror along the shores of the gulf, and finally attacked and destroyed the ships, stores, and dockyards. The damage done to the place was valued at nearly a quarter of a million of rubles. Great stores of timber, sawn and in plank, 12,000 tons of tar, with five large vessels "of 1000 lasts each," which were ready for sea, were all burned. The stores collected at Brahestad were intended for the purposes of ship-building, it being the policy of Russia of late to encourage the commerce of the Gulf of Bothnia, and the building of ships for the carrying trade of the Baltic.

The next day several prizes were made by the little squadron off Uleaborgh, and after reconnoitring the place, the admiral "lay to" until the following morning, when Uleaborgh itself was attacked, and the ships, dockyards, and stores entirely consumed. There were eight ships on the stocks nearly built; half as many old ships "laid up;" 18,000 tons of pitch and tar, deals, rafts, row-boats, spars, rope, hemp, canvas, "ribs," stocks, cordage, and extensive and well-built sheds for workmen. It was a magnificent sight at both these places to see the flames bursting upwards from such vast stores of combustible materials, until the heavens became lurid as they reflected the voluminous fires, which seemed as if they gushed upward from some mighty volcanic eruption.

The combustion both at Brahestad and Uleaborgh was sudden, as the boats landed the crews from the steamers, and the stores were systematically fired, so as to ensure their complete destruction. Uleaborgh was enriched with those large aggregations of ship-building material, for the especial purpose of building gun-boats to resist the allied fleets upon their expected advent. Their early appearance in

these regions not only deprived the czar of much property, but rendered a well planned project impossible. Early in June, Gamla Karleby was attacked by the same squadron, or, at least, two of its ships, with the intention of destroying such stores as it was reported were collected there for purposes similar to those which led to the large collections at Uleaborgh and Brahestad. Gamla Karleby is a very small place, of no importance commercially, and having a population of scarcely 2000 persons. The officer in command was, however, a man of resolution and skill, and he profited by the disasters at Brahestad, which is situated only a few miles north. Gamla Karleby is built on a bay in the Gulf of Bothnia, and is well situated for defence. A flag of truce was sent to demand the surrender of the place, and all its stores, which was refused. At eleven o'clock at night, it being then broad daylight, as is of course the case at that season of the year in the Gulf of Bothnia, the boats put off from the ships, heavily armed and well manned. The delay which occurred after sending in the flag of truce (attended very improperly by an imposing force of armed boats), gave the garrison and the inhabitants a great advantage. Some few houses on the bay were occupied by about 100 of the natives, all good marksmen, accustomed to use the rifle in pursuit of birds and game. Two companies of 200 men each, Finland rifle corps, with guns in position, field-pieces, and a troop of horse artillery, took ground in good strategical positions; and several boats, each armed with a gun and well manned with Finnish riflemen, were placed in a position to intercept any of the British boats which might become disabled. The British began the attack with eleven boats, each armed with one gun,—a force scarcely competent to deal with the guns used in defence of the place, while the numerical force of the marines and sailors that could be spared from the ships was insufficient. The combat lasted until midnight, when the attack was abandoned. Very little loss was inflicted upon the enemy, very heavy loss was experienced by the British; one of the boats of the *Odin* was cut off; when captured, six men lay dead in her, and as many more were wounded; a magnificent bronze gun, of great length, and a flag, were taken out of her as trophies, and finally brought to St. Petersburg, and displayed there; twenty-two men were taken prisoners, fifty-four killed, and a proportionate number wounded. The Finland rifles fought with the greatest bravery, and the inhabitants rivalled them in valour. There is no love to Russia on the part of the Finlanders, but the danger to their homesteads from a bombardment by the boats made the combat to them as necessary as if they were defending their

shores against an enemy adverse to their liberties, reminding one of the spirit breathed in one of the old songs of Finland :—

"In danger's hour, in battle's scathe,
What courage showed this little band;
What patriot love, what matchless faith,
Didst thou inspire, poor native land!
What generous, steadfast love was born
In those thou fed'st with bark and corn!"

We trust the day may come when the Finland rifles will stand side by side with the British as allies and liberators, directing their skilful aim against the Muscovite oppressors, and maintaining their old renown, as celebrated in the ballads of their country :—

"I saw a people who could hold
The loss of all, save honour, light;
A troop 'mid hunger, pangs, and cold,
Still, still victorious in the fight."

The joy in Russia was great over the repulse of the British. No people can give so plausible an account of a defeat sustained than the Russians; but they have no skill, because no moderation, in detailing the intelligence of a victory. Had the combined fleets of England and France been beaten on the open sea, the vauntings of the St. Petersburg journals could not have been more exultant; although to the oppressed Finlanders in her service, and not to her Muscovite serfs, was Russia indebted for her victory. There was, however, very little to boast of in St. Petersburg, for Admiral Plumridge ravaged the coast of Bothnia, destroying immense quantities of naval stores and shipping, but everywhere fastidiously respecting private property. He made a report of his cruise, on the 10th of June, to the admiral-in-chief, who thus expressed himself upon it in a despatch to the Admiralty :—

"SIR,—I beg leave to enclose Admiral Plumridge's report of his proceedings in the Gulf of Bothnia, from the 5th of May to the 10th of June, by which their Lordships will observe that he has destroyed forty-six vessels, afloat and on the stocks, amounting to 11,000 tons; from 40,000 to 50,000 barrels of pitch and tar; 60,000 square yards of rough pitch; a great number of stacks of timber, spars, planks, and deals, sails, rope, and various kinds of naval stores, to the amount of from £300,000 to £400,000, without the loss of a man. Admiral Plumridge has had to contend with innumerable rocks and shoals, incorrectly laid down in the charts, and met the ice up to the 30th of May; nevertheless, though several of his squadron have touched the ground, I am happy to say that they have received no damage that he is not able to repair with his own means."

This despatch is certainly not correct in averring that, up to the 10th of June, Admiral Plumridge so much signalised himself without the loss of a man, as the attack on Gamla

Karleby was made upon the 7th of June. Exclusive of that affair, however, the account given in Admiral Napier's letter of the doings of Admiral Plumridge is of course correct, and presents the operations of the Baltic fleet in the naval campaign of 1854 in a light which enables us to regard it as one of utility and triumph. This extensive destruction of property, as well as the effectual suppression of Russian commerce in the Baltic, was heavily felt at St. Petersburg, and disheartened the court.

The French Baltic fleet passed through the British Channel on the 23rd of April, but did not join Admiral Napier until full two months after. The united fleets presented a sublime spectacle. Never before was such an armament seen upon any sea. The fleets advanced up the Gulf of Finland to Cronstadt, during the month of June. An officer on board one of her majesty's ships thus writes concerning the dangers attending upon its navigation :—

"The Gulf of Finland, which is the high road to St. Petersburg, is protected, in the first instance, by a group of islands which bear the name of the largest—Aland. 'This granite archipelago encloses a perfect labyrinth of straits and bays studded with minor islands, and so fringed with reefs and banks as to make the navigation often impossible—always hazardous.' Still, a visit of inspection may suffice; and we may at once pass on to the really serious impediments presented by the character of the gulf itself. At the very entrance, the navigation is difficult; and we shall have to trust for our guidance to the activity of our own surveyors, as it is incredible that the Russian government will maintain the existing lights and beacons for the use of a hostile fleet. Almost exactly opposite, and only a few hours steam from the entrance of the gulf are the fortresses of Sweaborg on the north, and Revel on the south. The entrance to Helsingfors Bay lies between Langern and Vester Svart. Helsingfors is defended by the fortresses of Sweaborg, which are built on seven islands, and have generally been deemed impregnable. Cronstadt is extremely difficult of approach for the purposes of a bombardment, and once there we are within twenty miles of the capital, to defend which the mouth of the Neva is strongly fortified. Cronstadt is the Gibraltar of Russia: we can never take it with the means at our disposal. A numerous flotilla of gun-boats, and an army would be requisite: we have neither."

A portion of the fleet bombarded Bomarsund, while the rest was advancing to Cronstadt. We shall not tarry at present to describe its position or fortifications, as it was afterwards bombarded with more effect. It will suffice for our purpose here to say, as the Earl of Ellesmere remarked in a speech since delivered at

Worsley, "Bomarsund was rapidly advancing to a state that would have made it another Sebastopol in the Baltic." On the 21st of June, Bomarsund was attacked by the British steamers, *Hecla*, *Odin*, and *Valorous*, which anchored within a mile and a-third, and thence conducted the bombardment. Very heavy metal of different kinds was used against the place—balls of 96 lbs. weight, and shells of 100 lbs. Congreve rockets also did serious damage. This missile proved very destructive in the Peninsular War, and in Germany, when the English rocket brigade was attached to the armies of the Confederation. The bombardment continued without the slightest intermission for seven hours. The batteries nearest the fortress were silenced early in the action. Stores of grain, and other provisions, were destroyed. At last, the British slackened fire, leaving the place in flames in several directions. The Russian authorities represented their loss as trifling. Only four British seamen were hit: this, however, might be accounted for in the way alleged by the *St. Petersburg Journal*, that it was of no use for the garrison to fire upon the fleet, which carried on the bombardment beyond the range of the batteries. The precision of the British fire was excellent, although so large a proportion of the men were not mariners—perhaps two-thirds; the same proportion prevailed generally on board the hard-fought ships of Nelson. The valour of the crews was not much tested, as they were not exposed to any considerable fire. One officer, Mr. Lucas, of the *Hecla*, displayed cool intrepidity: a shell having fallen on board his ship, he deliberately raised it in his arms, and before the fusee had burned to the point of explosion, he threw it into the sea, where it hissed harmlessly as it plashed beneath the water.

Four days after Bomarsund was bombarded a second time, and still more extensive damage was inflicted. The bombardment was continued throughout the next day, until the fortress was considerably injured, and many of its defenders slain; the British loss was insignificant.

Meanwhile Sir Charles Napier reconnoitred Cronstadt, when he found, as already shown, that the fortress was impregnable, because the draught of water would not allow him to bring his broadsides within range. This is the suitable place in which to give some account of the great Russian stronghold. The reader may form a clear idea of its position from the engraving. De Custine says, "As we approached Cronstadt—a submarine fortress of which the Russians are justly proud—the Gulf of Finland suddenly assumed an animated appearance. The imperial fleet was in motion, and surrounded us on all sides. It remains in port,

ice-locked, for more than six months of the year, but during the three months of summer the marine cadets are exercised in nautical manoeuvres between St. Petersburg and the Baltic. After passing the fleet, we again sailed on an almost desert sea, now and then only enlivened by the distant apparition of some merchant vessel, or the yet more infrequent smoke of a *pyroscaph*, as steamboats are learnedly called in the nautical language of some parts of Europe."

In a military reference the most condensed description, and at the same time the most complete, with which we can present the reader, is the following:—"Cronstadt is a town, fortress, and port, in the government of St. Petersburg, from which city it is thirty-one miles distant; it is built at the south-east extremity of Cotlin-Ostrof, an island in that part of the Gulf of Finland called the Bay of Cronstadt, about sixteen miles from the mouth of the Neva. This island, a bed of chalk, formerly called Rétouzari by the Finlanders, is seven miles in length, and about one mile in breadth. At the entrance of the harbour, on an island opposite the citadel, lies the castle or fortress of Cronschlott, built by Peter the Great. This fortress and the mole bristle with guns, and the harbour itself is approachable only by one channel, which is fortified with a double line of guns, these works constituting Cronstadt, 'the Malta of the Baltic.' The passage between this place and Cronstadt is 2000 paces in width, and has ample depth for the largest vessels. Besides its importance as the great naval station of the Russian fleet, Cronstadt is the harbour of St. Petersburg. All vessels proceeding to that port are searched here, and their cargoes sealed, and such as are too large for the shallow waters of the Upper Neva, unload their cargoes at Cronstadt, and transport them in smaller craft. The channel is marked by stakes the whole distance, and vessels built at St. Petersburg are placed on a 'camel,' or kind of raft, by which their draught of water is lessened one half, and then floated down the Neva, and over its bar, on which there is often only seven feet of water. Cronstadt, which is built in the form of an irregular triangle, is strongly fortified on all sides. It has three harbours lying to the south of the town. The outer, or military harbour, which is entirely surrounded by a massive and strongly-fortified mole, is a rectangle stretching out into the sea, and is capable of containing, besides smaller vessels, above thirty-five ships of the line. It is now so shallow at low water that many of the ships are obliged to anchor in the middle harbour, which is properly intended for the fitting out and repairing of vessels. It contains the slips, a powder-magazine, a manufactory of pitch, tar, &c. The third, west, or

innermost harbour, which has space for 600 merchant vessels, and runs parallel with the middle harbour, admits only merchantmen, for which there is besides an excellent roadstead, immediately outside the port, which is defended also by the citadel, constructed on a rock in the middle of the sea of Cronstadt. All these harbours are well secured, but in consequence of the freshness of the sea-water, no vessel can be preserved in them above twenty years. They are, besides, detained a great part of the year by the ice in the Bay of Cronstadt, which usually prevents vessels from entering after the end of November, or leaving before the end of April, or sometimes even later than that. The town is very regularly built, and contains many fine, straight, and well-paved streets, and several public squares. The houses, however, with the exception of those belonging to the government, are chiefly of one story, and built of wood. The city has three gates, and is divided into two parts, the commandant and admiralty quarters, which are subdivided into four districts. The permanent population of Cronstadt, exclusive of the garrison, the pupils of the naval school, workmen, and sailors, is not considerable; during the summer it amounts to upwards of 40,000 individuals of various nations; of these, next to the Russians, the English are most numerous. The inhabitants derive their chief support from the fleet, trade, and shipping. The town presents an appearance of great activity and bustle during the summer, but in winter all is dead and stagnant. The town and port were laid out, and the buildings far advanced, by Peter the Great, who founded Cronstadt in 1710; but it did not receive its present name (the town of the crown) until 1721. At the northern extremity of the island are Fort Alexander and the battery of St. John; the latter is built on piles in the Neva."

In case of attack by a land and sea force combined, Cronstadt has means of offence not described in the preceding account. "Cronstadt itself, from its situation, can scarcely be protected by field intrenchments. Great labour, however, has been expended on the means of ensuring for it a safe and unbroken communication with the mainland—such as that through Perekop, or across the Putrid Sea into the Crimea. No fortress, well defended, ought to succumb which has an open highway behind it to admit perpetual reinforcements of men, of arms, of stores, and of provisions. Moreover, between the mouths of the Neva and the capital huge camps have been prepared, to act as checks upon the besiegers, should they ever gain possession of Cronstadt, and advance upon St. Petersburg. If we add to this that sunken ships and secret mines obstruct every channel of ingress to the Baltic dominions of Russia,

that four hundred floating batteries are said to be building in the dockyards of the Neva, and that innumerable gun-boats already swarm in all the shallow waters bordering the sea, hidden in creeks, behind rocks, or lines of natural fortifications, it will be evident that our admirals and our gallant sailors have a stern task to accomplish, and that Sebastopol is not the only point at which Russia can offer a long, bloody, and desperate defence."

From the foregoing representations, it is plain that security is afforded to this great arsenal and fortress mainly by the narrowness of the channel, which, just at the entrance behind Fort Menschikoff, is commanded by two enormous floating batteries, formed of old ships of the line. At the back of the island, opposite the Finland coast, there is another channel, but this has been made impassable by piles and huge blocks of stone. The only passage which is accessible, is commanded for a distance of four English miles by the fort; and so intricate is this, that, however well piloted, vessels must move very slowly, and if for hostile purposes, all the while under the fire of batteries mounted with guns of the heaviest calibre: the sinking of a single line-of-battle-ship would effectually close it. Professor Jacob's invention for destroying ships is placed there, and was much relied upon for its efficacy. This invention consists of chests filled with combustible matter sunk to the bottom of the channel, connected by wires with a galvanic battery. The fortifications of Cronstadt consist of five strong forts; four of them are formed of immense granite cubes, and the fifth is of logs. If Cronstadt be pregnable (which we believe it is to a powerful flotilla of gun and mortar-boats and rafts), its pregnability rests in the fact that the forts may be taken one after another, as each of them might be brought under the concentrated fire of the attacking squadrons or flotilla. During 1854 it was deemed impossible to subdue it, not only by the admiral commanding in chief, but by his experienced coadjutors: even Admiral Chads, the great captain of naval gunnery, gave his opinion against risking the fleet in an attack. Had Sir Charles made the attempt, and a considerable number of his ships been destroyed, his naval superiority would have been lost, the ships of the enemy would in that case have sallied forth, and, assailing his shattered squadron, would have accomplished the ruin of the British fleet. The self-denial and prudence of the admiral in not risking the loss of such a fleet, where at least but an empty renown for himself could have been won, entitles him to the gratitude of his country.

A very curious circumstance was reported to have taken place during the reconnaissance of

Cronstadt. A beautiful English yacht, belonging to Lords Leichfield and Euston, cruised before the island far in advance of the fleet. Suddenly a fast-sailing steamer from the Russian fleet gave chase. A British war-steamer bore down upon the pursuer, which had some difficulty in making its escape back to the harbour. According to the tale related at the time, the Russian steamer, which barely escaped, had on board the Emperor Nicholas, the Archduke Constantine, the Archduchess, and the Russian Admiral of the Cronstadt fleet! If the British captain had known the prize so nearly within his grasp, he would probably have risked ship and life to secure it: his success would have been one of the most important episodes which ever occurred in a great war. The taking of both Cronstadt and Sebastopol would probably have hardly done so much to secure for the allies a lasting and honourable peace. Upon such incidents, of apparently little moment, often hang the fate of armies and empires, and the peace of the world.

That the imperial family were at Cronstadt during the reconnaissance by the British admiral, is testified by Dr. Cottman, an American citizen then in Russia, a violent partisan of everything Russian, and as violent a hater of everything English. He thus bitterly notices the arrival and departure of the fleet:—"Old Admiral Napier came up last Sunday week, and took a look at Cronstadt, where I have been waiting a month to see a great combat, and have been disappointed, for the fleet all disappeared on Monday. I have found out there is to be no show. I paid my money at the gate, got admission, find the principal actor sick—"Can't come to the scratch," and the play 'is given up.' The finest fleet that ever floated passes by Riga, Revel, Sweaborg, and Cronstadt, and contents itself with a look. The days of chivalry are gone; and I must be satisfied with cheerful, happy faces and hospitable hearths, in lieu of great battles in Russia. British valour has eked out in gasconade, detraction, and defamation of private character, and destruction of private property. The idea of terminating a war by discord in the imperial household, and jealousy between the elder brothers of the imperial family! There never existed a more united or harmonious family. The Grand Duke Alexander is, according to the journals of the day, dying of hectic fever and night sweats, when in reality he would pass freely for a beer-drinking, athletic Englishman, and, I might almost say, with an exuberance of health; and, instead of jealousy and distrust, the most cordial sympathy and devotion to each other prevail. Brothers more devoted to each other cannot be found anywhere in the private walks of life. Michael, the chief of artillery, and Nicholas, of infantry,

are both very intelligent, and the devotion to their father, and the desire to execute his will, equal anything that the most exalted imagination could picture. The emperor's health and spirits have been very good for the last two months, but they both appeared to advantage the two days that the allied fleet lay off Cronstadt. The fleet lay between the imperial pavilion on the premises of the Grand Duchess Helen, at Oranienbaum, and the fortifications at Cronstadt. Thousands of persons collected on the heights of Knansa Gorkoe, and about Oranienbaum, as they said, to see Old Charley cut capers when the ball opened; but the spectators were disappointed; this magnificently attired company declined to face the music, and left the saloon, consequently the ball closed before the dancing commenced, as it is rather awkward to dance without a *vis-à-vis*."

Leaving Cronstadt, the British fleet again appeared before Bomarsund, and a third bombardment, aided this time by a land force, reduced it. Previous to this, a fruitless attack on Hango, as unfortunate as that on Gamla Karleby, depressed the minds of men in the fleet and at home. Some exploit was necessary to reanimate the spirits of the men. Before relating the occurrences which led to the capture of Bomarsund, it is desirable to afford some description of the place. The fortification called by that name was erected on one of the Aland Isles, a group which stands midway between the coasts of Sweden and Finland, at the entrance of the Gulf of Bothnia. The immediate cluster of islands is composed of seven, occupying an area of ninety square miles, and sustaining a population of 10,000 persons, who cultivate the soil, which is generous and productive for so high a latitude, and who, by piloting and fishing, acquire a subsistence. The Russian fleet visits the Aland islands nearly every summer, when performing its annual evolutions, as there is good anchorage, and Russia likes to display her power in that neighbourhood. The island on which the fortress stood is intersected by calcareous hills, and is well watered, streams gushing in every direction to the sea. Indeed the name Aland—the Scandinavian designation—means "country of rivers." The scenery is picturesque of its kind; fine sea-views are afforded in all directions; while the verdant character of the surface, and the forests of birch and pine, form beautiful contrasts to the sea scenery. The climate is comparatively mild. The currents of the waters of the Gulfs of Bothnia and Finland here meet, and the rapidity of these currents prevent the formation of ice so early and so frequently as higher up in either gulf. The creeks and bays are full of fish, and the group of islands supported 14,000 head of cattle. Notwithstanding the mildness of the seasons,

as compared with places within the gulfs, the Sound of Wattaskifket, which separates the islands from Finland, is sometimes frozen over. This was the case in the year 1809, so memorable to the inhabitants of Sweden, Finland, and Aland, when the army of Buxhorden not only crossed the sound, but lit their bivouac fires on the ice. These islands were ceded by Sweden, in 1809, to Russia, by the treaty of Frederichstein, which made over to the all-grasping czar Eastern Bothnia, and what remained of Finland to Sweden after the treaty of Abo. Russia has used Aland, not as a colony, or a source of profit in any way, nor has she much interfered with the religion, laws, or customs of the inhabitants; her object in making the acquisition being to constitute it a military outpost, and a starting-place for future aggression upon Sweden. The position was admirably adapted to her purpose: "It was a good fulcrum for the lever which was to lift and shake the Northern kingdoms." Here Russia might establish the point of support from which her fleets should ultimately go forth to control the Baltic. Aland was a pet place, accordingly, in the esteem of the Emperor Nicholas; he himself planned the works, which were only partially erected, and which the allied powers destroyed. It was well adapted for the designs of Russia. The harbour is secure, having outer anchorages at Led Sund and Lumpar Bay, which are extensive.

The only passage from the southward is very narrow, it is also deep, but devious; the mariner must thread his way amongst islets and rocks innumerable, which have been compared to a mosaic of rocks and isles. The entrance from the north is straitened by Präesto Island, from which it may with ease be defended. Possessing one side of the Gulf of Bothnia, Russia, in her designs upon the other, could scarcely seize upon a base of operations more convenient than the Aland Isles. At the time the allies conquered them, workmen were busy in laying the foundations for far more extensive fortifications than then existed. Of the character of the Bomarsund works very different accounts have been presented. Dr. Cottman, whose letters ridiculing England and decrying the expedition of the allies have drawn so much attention in the United States, had the effrontery to represent the defence as consisting of twelve guns during the first and second bombardments, related in another page, and to sneer at the English as wasting time in throwing shells into General Bodisco's cabbage-garden. The number of guns captured, and the men made prisoners, not only refute this sneer, but plainly prove that unless a paid agent of the czar, Dr. Cottman would never have attempted to give currency to a falsehood so devoid of all plausibility. The fortification of

Bomarsund consisted of a mainwork flanked by towers. The masonry was of granite, and apparently nine feet thick, but it was proved by the bombardment that there was little more than two feet of solid masonry, the rest was filled up with brick and rubbish. The approach seaward we have already described. By land it was also very difficult. The defence of the place might be sustained on the land side within very narrow limits. A chain of rocks ran from north to south, connected with an arm of the sea within a few miles, so as nearly to isolate the promontory on which the fortress stood, leaving a narrow way here and there as the only medium of communication. A second barrier was formed by a similar enclosure still nearer. A third natural barrier, closer still to the fortress, consisted of rocky ridges, which extended from the northern shore, forming nearly a line of circumvallation. This was fixed upon by the Russian engineers as the true line of defence. At either extremity of the ridge was built a round tower, and below, on the sea-shore, stood the fort, or, as the Russians persist in calling it, the barrack. It was a large and strong pile of buildings, answering the twofold purpose of barrack and fortress. This building with the round towers formed an irregular triangle, the barrack or fort being the apex. On the shores of Präesto Island, opposite the northern tower, or Fort Nortike, was another fort or tower. The guns of Nortike swept the rear of the mainwork, and the range of its guns extended beyond the ridge. The mainwork defended the harbour, and was itself flanked by the tower called the Tsee fort. There was weakness in the defence of this point, for the tower only partially commanded the road from Castelholme, and the ground was uneven and woody, so as to cover the approach of an enemy. The new plans of the engineers provided against this weakness of the defence effectually; and had the destruction of the place been delayed another year, the strength of the fortifications would have rivalled those of Sweaborg and Cronstadt. Against a sea-attack the place was well fortified; against a land-attack the defences were incomplete, being liable to fall before attacks in detail. The buildings were novelties in fortification. The towers were of red granite, and beautifully built. Their diameter was about sixty yards, their height sixty feet. In the centre was a large court open to the sky, like the court or square of an oriental house. They had two tiers of guns, and the batteries were casemated. The roofs were sloping, and of iron, with protruded windows. Above the upper tier of guns was a bomb-proof roof. Each tower mounted twenty-four guns—eighteen, twenty-four, and thirty-two pounders. The casemated batteries were found very disadvantageous in action, as the

smoke collecting within them had no means of escape, and nearly suffocating the gunners, prevented them from maintaining their fire with sufficient rapidity. Besides, when a shot entered through the embrasures its effect was very destructive within such a confined space. Engineers say that the towers were constructed on imperfect principles, as only a fourth of their fire could be brought to bear upon an enemy who concentrated his attack. The main fortification, or barrack, followed the lay of the shore, the more effectually to defend the harbour in any direction. It was a half-moon battery, or series of batteries; the rear was closed by "a curtain," a horse-shoe battery abutting upon it. This range of fortification had ninety-two guns, and was constructed to hold 3000 men. The great advantage of the allies consisted in their capacity to invest the place, and so cut off all reinforcements and supplies. There was, however, a two years' store of provisions husbanded within the space occupied by the troops, and the magazines were replenished with a profusion of all the implements of destruction common to defensive war in fortified places.

Such was Bomarsund when, in August, 1854, the allied fleets and troops prepared to assail it. It was the general feeling throughout the fleets that the sailors and marines were sufficient, without troops from home, to take the place. A few companies of engineers, sappers and miners, and artillery, with a regiment or two of the line, and a good brigadier, would have been an auxiliary force of value to the general operations of the fleet; but when the tars and the marines heard that a French army was required to reduce Bomarsund, they felt by no means flattered. So it was ordained, however, by the magnates at home. A force of 11,000 French, and about 1000 British, were sent out in ships of the latter nation from Calais, with several officers of reputation in command. General Baraguay D'Hilliers, the hot-tempered diplomatist whose mode of transacting political business with the Porte made his recall from Constantinople necessary, was appointed military chief of the expedition; and Colonel Jones, of the East India Company's College of Engineers at Chatham, was nominated as Brigadier to the British contingent. The embarkation of French troops, from a French port, in British ships of war, as allies in a foreign expedition, produced a powerful impression in Western Europe of the earnestness and sincerity of the French and English alliance. The tars received the French soldiers on board with a rude but generous hospitality, and observed their guests with mingled expressions of cordiality and surprise. The French soldiers manifested an intense interest in the ships and crews of their allies; and mutual protestations of an alliance

to last for ever were very common on board, until the expedition arrived out at the rendezvous, Led Sund, the southernmost position in relation to the intricate passage which leads to Bomarsund, and affording good anchorage. One who mingled in these scenes thus wrote:—"The Aland summer was at its height. The sun shone brightly on the calm broad basin of Led Sund, and the rocky islets which studded it, throwing a sparkle on the waters, and striking out strange lights from the dark foliage of the pines. The scene was peaceful and pretty. A cosy villa, or farmhouse, with its large out-buildings, peeped out from green pleasant nooks along the shore; and far down, in quiet coves, market and fishing-boats were lying on the beach; ponies were grazing on the islets; the windmills were working; and smoke came from the chimneys;—all giving token of continued occupation. The inhabitants anticipated no danger, or thought it vain to fly from it."

The first movement against the enemy was an order from Admiral Chads to take up a position in front of Bomarsund, but out of range of its guns. Light steamers cruised about the islands, and between them and the Finnish shores, to prevent all communication. The want of the *matériel* promised from France delayed the enterprise, as delay attended every step throughout the war, so far as it depended upon the home authorities. The interval was well employed by Admirals Napier and Chads, in reconnoitring the fortress, and the three great round towers which aided in its defence, the whole bristling with 180 cannon. Every spot was leisurely surveyed, a knowledge of which could at all affect the prospects of the assailants. At last, all was prepared for action—greetings and feasting ended; and the allies and their bands exchanged "God save the Queen," and "*Partant pour la Syrie*," for sterner music. On the 7th of August, the troops were sent forward to the scene of service. They landed in two divisions, to the north and south of the place, seized the important points of communication, and then formed a complete line of investment, with either flank resting on the sea. In front of the main fort in the harbour, the French line-of-battle ship, bearing the flag of Admiral Parseval Deschenes, and the four block-ships from England—*Edinburgh*, *Blenheim*, *Hogue*, and *Ajax*—took up positions, and a flying squadron of steamers made the investment by land and sea as complete as it could be. The plan agreed upon by the allied chiefs was to bombard by land batteries the round towers, and then, by a grand *coup*, ships and troops were to assault the great fortress. This plan was acted upon up to the juncture of the surrender. The French division landed in Tranvick Bay, about four miles south

of the harbour, and within the first circle of natural defence already described. The second division, commanded by the English chief, landed in a pretty, sheltered cove near Hutta, and at once, on a misty morning, as the inhabitants were awaking to their daily toil, proceeded through a populous village to occupy the positions contemplated in the plan of investment. The people showed to the British the utmost confidence; even the women evinced neither fear nor surprise. The first man that fell was a Greek priest, who, approaching the French lines, was supposed to be a spy, and was shot by the sentries. A lady, who was with him in a gig, was wounded at the same time; her husband had been killed during one of the previous bombardments. The enemy did not contest the ground; and both divisions, without incurring the risk of a single shot, approached rapidly the point in the circle where their pickets would meet. An officer who accompanied Brigadier Jones thus describes the encampment of that general's division:—"A green *plateau*, girded with pine trees, sheltered by a low rocky ridge which ran laterally to its left, was the spot chosen for our camp. A quiet little sequestered spot, it soon became a scene of bustle and merriment, alive with groups and figures of men climbing trees, lopping boughs, making fires, &c. It seemed a sort of enchantment, so soon was the scene changed—the grassy field covered with bower-like huts, irregular, fantastic, and picturesque, and made motive with striking *tableaux*. The distant sound of the French bands mingled pleasantly also with the clang of axes, the hum of voices, and snatches of song. As the light faded, the picture melted into twilight hues; the fierce, fitful blaze of the pines showed only the few dusky figures which were still sitting or standing by the watchfires, or the shadowy forms of the sentries looming in gigantic outline on the ridge. The sounds too had died away, save the crackling of the fires as fresh branches were thrown on them, or the occasional note of a French bugle; and he only who has lain down under such circumstances, knows how solemn is the hush and silence caused by the sleep of men ready to 'do or die!'"

The French division took the initiative, throwing out a regiment in skirmishing order by dawn of day. The corps selected for this service performed it with caution and courage, blended in a manner which, to a military eye, was beautiful. They took advantage of every crag and tree and clump of brushwood; but the tops of their shakos shone so brightly in the light of the rising sun, that the position of every file could be seen from the round tower Tsee, which opened fire upon them, but without any effect in checking their progress or

causing them loss. The position taken by the British general was skilful. He was so sheltered by the unequal character of the ground, that the enemy were obliged to elevate their guns—the shot thrown by them generally went far beyond the lines. For two days the divisions occupied their positions, as the guns could not be sooner brought up. Their metal was heavy, and they were drawn by the sailors of the fleet. Some of the guns required 150 men to bring them up. When the guns did arrive, the French established their battery south-west of the Tsee tower; that of General Jones was established between that tower and Nortike, so that the battery could be turned against either, as circumstances might require. During these preparations the fortresses seemed to look grimly down upon the beleaguering troops, and gave forth their flashes of defiance from many an embrasure. An incident occurred during the ensuing night illustrative of French character, and which brought on the first *heavy* firing to which the men of either division were exposed. A solitary musket-shot from the Tsee tower struck a French officer of chasseurs; in an instant the whole corps rose, and rushing forward with a yell, fired a volley against the tower: promptly was its reply bellowed forth, and the other forts, joining in chorus, the loud thunder of artillery rolled through the night air, reverberating over hill and rock, while the sky was illuminated with the flashes which accompanied their thunder. The trees all around were torn and crushed with round shot; large pieces of rock were hurled from their elevation by the stroke of the heavy ball; and grape tore through the branches and foliage of the trees like the heavy pattering of a sudden and stormy shower. For two hours the Russians kept up their gunnery practice against the allied positions, but more especially against the French, as if they could never sufficiently avenge the volley of small arms directed so unexpectedly against them. During this incessant firing the French works were rapidly progressing, and the guns were placed in position as soon as day dawned. To cover this operation a brisk discharge of rifles was opened from behind the breastwork; the distance was seven hundred yards, and so sure was the aim of the French riflemen that the guns of the enemy were silenced. The attack upon a fortress by rifles, as here practised, has been represented as a novelty even by military writers; this is a mistake, the employment of rifles to aim at the embrasures of fortresses is as old almost as the use of fire-arms; but it has generally been the practice for the riflemen to seek cover while the guns of the fortress were discharging. Sir John Burgoyne, in the Crimea, subsequently showed that the value of the rifle was chiefly in taking aim while the

guns were actually being discharged, and that, instead of their discontinuing rifle firing at that juncture, it ought to be the more fiercely kept up. At Bomarsund the practice was in consonance with Sir J. Burgoyne's opinion, and the effect was deadly to the Russians; scarcely a face or hand could appear at an embrasure when it was struck by a bullet from the French. The rifle used on this occasion was not the Minié, but the *carabine à tige*, such as the Turkish chasseurs were armed with at the battles of Oltenitza and Citate. By daybreak on the 13th of August, the French batteries being all in position, the first cannon shot was fired: this was soon followed by others, at first very slowly—too slowly for the impatience of the army, which was full of enthusiasm—but the guns being of brass could not be fired so quickly. The round shot from our batteries made little impression upon the enemy's works; the rifle was more formidable than the light guns of small calibre which we employed. The guns were 16-pounders, and were only four, exclusive of the mortars, which were also four in number. The mortars extensively damaged the roof of the fortress. The French general, seeing that no breach was likely to be made, requested Brigadier Jones to turn the flank of the battery he was erecting against Fort Tsee, in order to co-operate with his attack. Just then the white flag floated from the roof; the chiefs went to the front, and after a short time returned, reporting that the terms of capitulation could not be agreed upon. The firing from the French battery was renewed with still less effect than before, yet the fort replied feebly, and in a desultory way, which led the assailants to suppose that the defenders were unwilling to obey their officers in protracting the defence.

On the morning of the 14th, Lieutenants Gigot and Gibon, followed by a body of volunteers, stormed the tower, entering by the lower embrasures. These embrasures were not armed, but were boarded strongly: it was one of the weak conditions of the defence that the lowest tier should be but six or seven feet from the ground, leaving an escalade practicable. In the suddenness of the attack the commandant was killed by a bayonet thrust; the garrison generally escaped to the large fort, leaving, however, thirty-two prisoners in the hands of the French. There had been no loss of life to the garrison from the cannon; the rifle ball, however, had been very fatal. Some British soldiers entered the place soon after its capture, and broke open the apartments, scattering the furniture, and even the contents of the surgery, in broken fragments around. The French seemed much amused at these exploits, but took little part in them. While this was going on in one direction, there was fierce firing in

another. Nearly the whole of the previous night, the principal fort cannonaded a mud battery erected on the shore, and armed with a 10-inch mortar: so badly directed was the firing, that this heavy cannonade was not sufficient to dismount the mortar. The ships answered, but from a very great distance, the fire of the fort. Amidst the roar of cannon from ship, shore, and fortress, several volleys of musketry were heard in somewhat close proximity to the French camp. This was caused by a company of French chasseurs, who had been sent to patrol the fort, to prevent ingress or egress, coming in the darkness upon another patrol; each mistaking the other for the enemy, several volleys were exchanged, and a considerable number of men killed and wounded before the mistake was discovered. On the afternoon of the 14th, the enemy sprang a mine under Fort Tsee, into which, since its capture, they continued to fire from the main fortress. The Russians supposed that the French were there in force, but Sir Charles Napier, either having information of the intention of the Russians, or possibly conjecturing that such an attempt would be made, telegraphed for the French to leave the fort. They had not long obeyed this friendly admonition before the tower was lifted up, and shattered by the upheaving earth, to which the exploded mine had given its impulse. Several natives who had wandered into the fort, hid themselves when the French were abandoning it, and perished. One who escaped, informed the French general of the fact. Several French soldiers also perished, the explosion having overtaken their tardy retreat.

On the evening of the 14th, and during the night, the sailors of the British ships, with incredible labour, got up the guns which were intended for a breaching battery; there were three 32-pounders, and four howitzers, and they were in position within 750 yards of the round tower called Nortike. At early dawn the booming of these guns was heard over fort, and camp, and the surrounding sea; crash after crash was heard from the grim tower, which seemed to bid them a stately defiance. Every shot told: the first two shots brought large fragments of the masonry crumbling to the base; the third entered an embrasure, tearing before it casement, cannon, and everything in its course. The tower replied with vividness and energy, and one shot, striking the trunnion of a gun in the battery, glanced off, and mortally wounded the Hon. Mr. Wrottesley, a lieutenant of engineers, a fine, spirited, intelligent, and active officer. He was the second victim the war had made in the same family. He was immediately borne through the camp to the beach, where they laid him down, and he expired. The shot from the tower generally flew over the

breaching battery, and plunged into the camp, doing mischief in every form which such missiles are wont to accomplish, except inflicting death; the escapes of the men were marvellous, but very few were hit. A breach was soon made by the well-directed fire of Commander Preedy, R.N. The sailors at the guns were much exhausted, for they had worked long and energetically; they were at last relieved by detachments of the marine artillery, who continued to assail the fort with heavy round shot and shell, until the breach was reported practicable by the engineers, and the assault was every moment expected. While suspense and expectation hung upon the hearts of the soldiery, the white flag was once more hoisted by the enemy. The surrender of the tower was formally made, but it was night before the troops took possession, when they marched out the prisoners, seized upon the munitions they chose to carry away, and abandoned it, as the main fortification commanded it, and all its approaches. One hundred and twenty Russian soldiers entered the camp as prisoners, their long grey coats giving to their forlorn looks, in the dim twilight of the morning, a shadowy and sombre aspect, which strangely contrasted with the gay looks and bright attire of the British. They were stolidly indifferent until told that their families should accompany them, this brought out some little expression of emotion.

Thus fell the towers which were the out-works of the main fortification, as already shown. The strong batteries on the island of Prästo were still engaged with the *Leopard*, *Hecla*, and a French steamer: the ships stood out. The three steamers did not appear to make much progress in the reduction of Prästo. The blockships, at the range of 3000 yards, leisurely cannonaded the long barrack or fortress. Once more the white flag floated from the Russian ramparts, and this time its meaning was a general and unconditional surrender. General Bodisco, the governor, perceiving that all hope of successfully resisting the force brought against him had vanished, surrendered himself and the garrison prisoners of war. The *Leopard*, *Hecla*, and their French consort, while engaged severely with the island of Prästo, so took up their position that every shot which went over the fortification on the island, "plumped" into the fort of Boomar, the citadel of the place. An officer on board the *Leopard* thus describes the part taken by this little steam squadron, especially by his own ship:—"We anchored at half-past nine o'clock, and beat to quarters at forty minutes past nine. We were all ready. The admiral came down on the main deck, and made a short speech to the men, who, by the way, fought with nothing but trousers and a sleeveless

flannel on. Fire! and a broadside from the ships went slap into the devoted forts; a few trees intervened between us, so we could only see the roof. Broadside after broadside continued to be discharged, and I suppose we fired a dozen or so before they replied, and this dozen (we afterwards heard from one of them) killed and wounded sixty of them: at last they opened. I heard the shot strike our side and pitch close to us. Well, the fire was kept up with great rapidity from our six main deck 32's, two 84's, and two 68's—all shell. It continued for about an hour and a half. I went up the main deck occasionally, and looking through the port, could see the shot ricochetting towards us, and go slap into our sides. One shot came right through, and rolled across the main deck. This lasted, as I say, an hour and a half; not an accident took place on board, though how they escaped I know not, for the old *Leopard* had twelve shots through her hull, the maintopmast shot away, and a great hole in both sides of her foremost funnel. One large paddle-box boat, on the starboard side, got struck by a 32-pound shot; first cutting the ridge-rope, it passed through both sides of the boat, passed over the deck, carried away an iron stanchion two inches thick (its own breadth of it), cut another ridge-rope, and went on its way as though nothing had happened. The shot that took away our topmast was a 32-pounder; it cut the starboard topmast rigging, went clean through the maintopmast above the cap (fourteen inches solid pine!) drove splinters three feet long up and down it, right through the centre; it went clean through the mainroyal yard and sail, stopped up in the port-topmast shrouds, which it also cut, and passed on its way. The splinters flew about all over the ship; the piece of iron stanchion cut a coil of rope, and struck a piece a foot thick off the edge of the paddle-box. It's wonderful what a shot will do; but not an accident occurred—no killed or wounded. I don't know about the *Coccyte*. On the white flag being hoisted, we went round to Boomar, to report to the commander-in-chief, who, with Admiral Plumridge and the French and English generals, went to treat. The *Leopard* was highly complimented by Old Charley. The poor old ship was 'the envy of all these crack line-of-battle-ships and frigates, going up to the commander-in-chief, hot out of action, the colours flying, her sides pierced with the enemy's shot, her maintopmast shot away, her poor dear old funnel smoking through two shot-holes half-way up, and her great white paddle-box boat with two holes in it you might jump through—the smoke still wreathing out of the muzzles of her guns as she steamed in close to the forts that she had given the *coup de grace* to, and caused to hoist the white flag.

Good old *Leopard*, I love her! We got cheered by the *Hecla* as she winded-to under our stern. We quickly sent down the stump of the topmast, and sent a spick-and-span new one up, plugged the shot-holes, and in an hour or two were all a-taut; but even at six o'clock in the evening, if you put your hand on the guns, you would find them still hot."

Soon after the enemy hung out the flag of truce, General D'Hilliers, with his flowing white hair and venerable countenance,—General Niel, with burly figure and handsome soldierly face,—and General Jones, with his keen countenance and thickset form, were seen near the gate of the fort; the admirals landed, and in due form the Russian general made his surrender. Two thousand three hundred men were made prisoners of war. The general-in-chief and most of his officers were very desponding, and so were many of the men; but others, having broken open the spirit casks, became intoxicated. Some of these had to be forced out of the batteries at the point of the bayonet, and one made a desperate attempt to ignite the magazine; he was instantly taken out and shot. The effect of the alcohol on others of the Russian soldiery was very different; they danced the polka through the lines of the French and British soldiery and marines, making grimaces and contortions of face which were utterly ludicrous. One fine-looking soldier, a Pole, with a cross upon his breast, walked with military mien in solitude to the shore, as if ashamed to be made a prisoner in such despicable companionship. The Finnish soldiers were in all respects superior to the Russians, physically, intellectually, and morally; as men and soldiers they gained the respect of our men: the Russians excited only their contempt, except so far as pity operated in favour of those who had families. Many of them were in that condition, and were grateful when the hope was held out to them of their wives being allowed to accompany them. It is the policy of the Russian government to encourage marriage on the part of the soldiery. We have never heard the motive for this satisfactorily explained, especially as the pay of the Russian soldier is so small, and he is often cheated, as the government well knows, even of that. The married soldiers are always unwilling to desert; this is the case also with the disloyal Poles; whereas single men, unless they have parents and sisters living, and have some hope of seeing them again, are glad to escape the tyranny of the Russian army whenever an opportunity for desertion occurs. The exception is when the soldier is a devotee, and by the sheer force of bigotry derives some enthusiasm for a service in the renown of which he considers the glory of the orthodox Church to be promoted. Some few of the prisoners

taken had been convicts destined for Siberia, who were spared that punishment as men were so badly wanted for the army. These men were separated by their captors from the other troops, and placed on board the *Benbow* prison-ship when the *Hannibal*, *Termagent*, *Valorous*, and *Dauntless*, arrived at home with prisoners. The joy of the wives of the Russian soldiers when permitted to accompany their husbands was very great, and the conduct of these poor women was very commendable. They were dressed very coarsely but neatly; they wore kerchiefs on their heads, like the humbler class of females in Lancashire and the West Riding of Yorkshire, but by no means resembled the latter in feminine appearance; their faces were large, coarse, and bronzed, and bore a general resemblance to the German broom-girls whom we are accustomed to see in London. The way in which the victors received the garrison of Boomar is well expressed, in the off-handed way characteristic of our tars, by an officer who wrote from on board one of her majesty's ships to his friends in Dublin:—"The officers (Russians) begged to be allowed to write to their wives and families that they had left behind: of course they got permission. Indeed they were well treated; taken down to the gun-room, got wine, tea, coffee: in a word, we were all hand-in-glove with the men who a few short hours before would have shot or sabred us like dogs—such is war! We came down to the fleet at Led Sund, to put our prisoners on board the *Hannibal* to go to England. The *Hecla*, *Sphinx*, &c., brought down the rest. We are now going back to Boomar: we will take the guns out of the forts and blow them to Old Nick. It will be a grand explosion. We put our prisoners on board the *Hannibal* at five this morning, so I got precious little sleep last night; but it is war time, and we don't look for luxuries. I will write again this evening; till then, adieu."

There was great store of guns and ammunition; the provisions were so bad as to be valueless: our soldiers kicked the black loaves about, expressing their surprise how men fed upon such food could fight. The Russian soldiers would, however, have been only too thankful if they could have secured enough of such food; but they were plundered even of that, and the knout, the bayonet, or the bullet, was their doom if they murmured or demanded their rights. The prisoners were in a pitiable state from hunger, sleeplessness, fatigue, and personal ill-treatment. Their appearance greatly increased the detestation of French and British against the Russian name and nation. About £15,000 in silver rubles was found in the military chest, and a very much larger sum in worthless Russian paper. It was supposed

that more money would have been discovered, but that the garrison melted the money into bullets, or loaded their pieces with the silver coins, either to prevent the invaders from capturing it, or under a superstitious belief that, as the allies were aided by Satan, silver bullets were alone dangerous to the agents of that personage. So superstitious were the captives, that any absurdity might be credited concerning them for which superstition could account.

From the battlements of the vanquished citadel the scene was most interesting, when, before its entire destruction, the officers of the allied forces looked from them upon the pleasant country dotted with the blackened remains of burnt villages,—for Bodisco had cruelly ordered all the villages to be burnt, in which work he was interrupted by the landing of the allied troops. The sea was covered with proud ships, their flags flaunting in the breeze, and the union-jack and tri-color interlacing, in token of the amity of the nations they represented. The varied uniforms of the navies and armies of the two nations glanced to and fro, as officers and men hurried upon their respective tasks. The battered Boomar—the breached Nortike—the ruins of the broken Tsee tower—shot and shell scattered as if they had fallen in showers from heaven—presented gloomy tokens of the havoc of siege and battle. Amidst all the pomp and terror of war, the peaceful and virtuous native population, half thankful, half timid, gazed upon the terrible relics of strife so profusely scattered around them. To assure these poor people of protection, and to deter any lawless persons who might possibly have found their way among them, the allied commanders issued a proclamation which was read in their churches, and produced the desired effect:—

“We, the undersigned commanders-in-chief of the combined naval and land forces, hereby authorise the authorities of these islands to continue in the administration of their respective duties, and we rely on their doing so with zeal and circumspection.

“In times of tumult and war, it devolves upon every well-disposed citizen to do his utmost in maintaining order and peace; the lower classes must not be led away with the belief that no law or order exists, for these will be enforced with as much rigour as heretofore.

“Since the late events, which have changed the aspect of these islands, the blockade has been raised, and the public are informed that they are at liberty to trade with Sweden on the same conditions and privileges as heretofore.

“Each and every one is cautioned against holding any communication or intercourse with the enemy or Finland; and if any one is found

aiding them in any way, he will be punished most severely.

“Given under our hands, &c.

“BARAGUAY D'HILLIER

“CHARLES NAPIER.

“PARSEVAL DESCHENT

“HARRY JONES.”

It was on the 30th of August the blowing up of the fortifications commenced, the governments at home having decided not to occupy the place. The destruction of the fortification on the island of Präesto, which had been but little injured by the fire of the British steamer, was a sublime spectacle. A vast charge of powder was ignited; the ground rocked, as over the heavings of an earthquake; two terrible reports rapidly succeeded, and a mass of ruin, smoke, and flame ascended into the air. As the dense cloud which overhung the scene of the explosion passed away, the fortress had disappeared, except two low blackened walls, and a pile of smoking timber, and incumbent rubbish. On the 2nd of September, the great tower of Boomar was blown up. It was already night when the explosions took place; six successive shocks were felt; and the gloomy stronghold was lifted up and hurled in fragments to the earth. The timber of the ruins burned with great fury, illuminating the harbour, and flinging upon fleet and country a lurid light. About midnight the flames reached a magazine which had not been emptied of its contents when a new and fierce explosion followed, shells and rockets flew hissing through the air, marking their flight with long trails of fire. A portion of the centre tower had been left for Admiral Chads to make gunnery practice upon; he brought the *Edinburgh* to within 500 yards, and discharged upon it seven broadsides, making a wide breach, and knocking many of its embrasures to pieces. He experimented with broadsides at 1000 yards; but the effect was not such as would lead to the belief that, at that distance, ships could conquer forts. Finally, the Aland Isles were swept of the last remains of Russian power, and the people were left to enjoy their new-born liberty.

The scourge which fell upon the allied fleets and armies of the Euxine did not leave those of the Baltic unscathed. Sir Charles Napier's regulations were, like everything performed by that extraordinary man, marked by ability and judgment, and to his care and precautions the fleet was indebted, while pestilence walked the decks as well as the neighbouring shores. The French troops at Aland suffered very severely; many brave men sunk in silence,—

“Unknelled, unconfined, and unknown,”—

who, full of lusty life, eagerly sought distinction, and longed hand to hand to encounter their country's foes.

When the tidings of the capture of Åland and the destruction of the Boomar forts reached St. Petersburg, there was great popular consternation, and the family of the czar was represented to have been in great dismay, with the exception of the Archduke Constantine, whose rage against the allies almost amounted to madness, and who proposed various impracticable measures of retaliation. The government press did not attempt to deny the disaster, but was ordered to soften down its details in such a way as not to disquiet the people of the capital. We subjoin the account which appeared in the columns of the *Invalide Russe*, and afterwards in the other St. Petersburg journals. It purported to be a report from Lieutenant-General Rokassovsky, commander of the troops in Finland, but in the language of the Honorary Counsellor Westorius, formerly superintendent of the Magazine of Provisions of Åland. This Counsellor Westorius represented himself as having been on the island during the siege, hiding himself among the trees and rocks to watch the result; and having finally made his way to Finland, he communicated to General Rokassovsky what had occurred.

"In consequence of the bombardment of the principal fort of Åland, on the 21st of June last, by three English ships of war, the commander of Åland ordered the construction of a fresh land battery on the south-west coast of the Bay of Lumpar, which was effected in the course of the month by the soldiers of the garrison of Åland, under the command of Captain du Kransold, chief of the detachment of artillery of the island. At the same time there were sent from the fort five guns of the rampart, for which the workmen had made new carriages under the orders of Sub-lieutenant Pistchouline, of the artillery garrison of Åland, and in accordance with the directions of Captain du Kransold. When this battery was ready, a certain number of picked men, taken from the Finland battalion, of the line No. 10, from the garrison of artillery of Åland, were ordered to work the battery, under the command of Lieutenant Schimanovski and Sub-lieutenant Pistchouline. Detachments of the 3rd and 4th companies of the battalion of grenadier riflemen, under the command of Colonel of the Guard de Furnjelm, adjutant of the governor of Åbo, were ordered to defend this battery. Ultimately, after the entry of the Anglo-French fleet, to the number of more than thirty vessels, into the Bay of Lumpar, it was demolished, the guns were destroyed, and all the men were sent to the principal fort, and a portion of the riflemen were stationed in the three towers. All this was entirely completed on the sixth of August.

"According to the statement of M. Westorius, the garrison of each tower was composed

of about ninety men of the Finland battalion of the line No. 10, and about twenty-five men of the artillery and engineers, with three officers; and, in addition, in the tower C were Captain of Artillery de Tesche; Lieutenant de Salberg, of the battalion of the line; Ensign de Bolfras, and Sub-lieutenant Couradi, of the battalion of grenadier riflemen. In the tower U, Lieutenant of Artillery Zvereff, Second Captain de Mélar, and Sub-lieutenant de Bluhm, of the battalion of the line. Also in the tower Z, the Lieutenant of Artillery Chatelain, and Captains de Knoning and Pérémilowsky, of the battalion of the line.

"At the same time—that is to say, during the month of June—according to the instructions of the commandant, there was constructed, under the superintendence of the head of the engineers, in the principal fort, a masked earth battery covering three Paixhan guns, all the openings being walled round, internal as well as external, the latter not being armed with guns.

"During the construction of the battery of Lumpar four pieces of the garrison of field artillery of Åland, under the command of Captain of artillery Schvétoff, were divided into two detachments, one of which took post at the limit of the force of Schvétoff, and the other near Mougstekt, each supported by detachments of grenadier riflemen. There existed on these two points old batteries in ruins, which the soldiers reconstructed. In the night between the 5th and 6th of August these four pieces were taken from their positions and placed in the fort, with men to work them and troops to defend them. In the evening of the 7th of August, twenty-four artillery horses were sent to Gerad, the officer of the crown at Åland, that they might be fed by the inhabitants.

"Such was the situation of the fortifications when, on the 24th of July, there arrived seven of the enemy's vessels in the Bay of Lumpar. This number successively increased, and amounted in a few days to more than thirty. At the same time the enemy surrounded the fortifications on the other sides. His vessels remained quietly at anchor, and were only occupied in sounding until the 7th of August. On that day it was remarked that the enemy's vessels were being towed into the Bays of Lumpar and Wargata, and it was presumed that troops intended for land were on board, and this idea was confirmed the next day; for at two o'clock in the morning the enemy landed troops upon two points—viz., to the west of the village of Ivanwik, and to the east of that of Hutta. The riflemen advanced from these points in large masses, and the two troops assembled together at Finby, situated three versts from the fortifications. There they

bivouacked, and the head of the French troops took up his position in the village.

"According to probable reports which reached me on the same day as the landing of his troops at Aland, the enemy began the assault upon the tower C, but was repulsed with loss. He then began to construct his batteries and to bring his guns to the siege by means of rollers placed in a particular manner. Subsequently, in the night between the 8th and 9th of August, he opened a fire upon the tower, endeavouring at the same time to erect a new battery nearer to it, but what he had succeeded in raising during the night, was destroyed at daybreak by our balls. Eventually, having discovered an appropriate position, where he was sheltered, the enemy constructed a battery, and when it was finished he fired day and night upon both sides of the tower, with a view to make a breach, so that it was seriously and dangerously damaged in every part. Upon this the garrison which defended it, foreseeing probably the impossibility of holding out much longer, decided upon returning to the principal fort, but was prevented by the enemy, who unexpectedly made an assault upon it, surrounded it, and cut off all retreat. Both officers and soldiers (as I have heard) were desirous of forcing a passage at the point of the bayonet, but they could not overcome the advantage of superior numbers, and were forced to surrender. A few hours afterwards the tower, which was much shaken, tumbled to pieces. Among its officers, the Artillery Captain de Tesche was wounded with a bayonet in the leg, and Ensign de Bolfras, of the battalion of grenadier guards, received injury on the shoulder, from a blow with a sword.

"After the capture of the tower C, the enemy raised batteries against the tower U, the bombardment of which was commenced on the 12th of August, and was continued without intermission during three days. That tower, in which two large breaches were made by the balls, without reckoning the other damage done to its interior by shells, having only the means of firing four times more, was at length forced to capitulate.

"I am not aware of the cause of the reduction of the tower B. I only know that the garrison capitulated on the 15th of August, at eleven o'clock in the evening.

"I have not received precise information as to the reasons for the capitulation of the principal fort, but the following are the reports which I have collected upon the subject, the authenticity of which, however, I do not guarantee. While the French troops bombarded the towers, the Anglo-French fleet in the Bay of Lumpar kept up an irresistible fire against the principal fort, doing serious injury to its interior, overthrowing the roofs and chimneys, and destroying the embrasures.

The garrison of the fort surrendered on the 16th of August. It is said that the cause of this surrender was that, after having lost the tower, it was no longer possible for it to repulse simultaneously the attacks by land and by sea, and that it was destitute of the means of silencing the enemy's powerful artillery. Before the reduction of the principal fort, its garrison was so exhausted by the watches and the incessant operations it had effected during several days, that it was not in a condition either for further action, or for offering a longer resistance. It is said that on our side the number of killed was fifty-three, and that of the wounded eighty-six, and that the enemy lost from 500 to 600 men. The garrisons of the principal fort and of the three towers were embarked in Anglo-French vessels. Such of the prisoners as were to be sent to England were dispatched on the 17th of August, and the others, among whom were General Bodisco and his wife, were sent to France on the 18th of August. It was also reported that, with the consent of the enemy's chief officers, the wives of some of our officers have accompanied their husbands."

On the 21st of August a number of the ships left Led Sund, and steamed for Hango. Within a week, Sir Charles Napier and General Baraguay d'Hilliers followed, and a bombardment of the fortifications there was expected. The Russians, however, being well aware of the superiority of the allied forces, and fearing to be made prisoners of war, blew up the forts at Hango in presence of our ships, and retired to Abo. The allies pursued the fugitives to that place; but finding there a garrison, including those who had joined it from Hango, of nearly 18,000 men, and a powerful flotilla of gun-boats, they contented themselves with a demonstration, which the Russians described as an unsuccessful attack. The St. Petersburg organ of the chancellerie thus described it:—"On the 22nd of August five of the enemy's steamers entered the archipelago of Abo, and attacked seventeen gun sloops of the second battalion of the flotilla of the west, which, with a few small steam tugs, were at anchor near the island of Russöel, and blocked up the channel leading to Abo. The enemy opened a sharp cannonade at a distance of 2000 sagues. His balls, shells, and bombs, for the most part, went beyond the sloops, which waited quietly until the enemy approached good range, and did not open their fire until then. The cannonade lasted more than two hours and a half, during which time we had three men killed, and eight wounded; among the latter were three men of the naval militia of Finland. The enemy retired, having one of his steamers in tow, because of the damage it suffered."

"In his report of this affair, the naval captain of the first rank, Abouloff, commander of the western brigade of the rowing flotilla, bears testimony to and particularly praises the coolness and the excellent dispositions of Captain Kryganieff, the captain of a corvette, and eulogises very highly all the officers, acknowledging also the zeal of the crews.

"His majesty the emperor has deigned to express his satisfaction to the officers, and to confer twelve marks of honour of the military order upon the crews."

Our own officers sent home a very different account of the affair.

"Reconnaissance of the enemy's gun-boats and steamers at Abo.

Duke of Wellington, Led Sund, August 27.

"SIR,—Having received information that Russian troops and gun-boats were among the islands, I sent Captain Scott with a small squadron to find them out, and I beg to enclose his very able report.

"Captain Scott threaded his way through the islands in a most persevering manner, as their Lordships will see by the chart I send; his ships were repeatedly on shore, and the *Odin* no less than nine times, before they discovered the enemy's gun-boats and steamers, lying behind a floating boom, supported on each side by batteries, and a number of troops, covering the town of Abo, where they have collected a large force.

"I take this opportunity of bringing under their Lordships' notice the very great exertions of the surveying officers, Captain Sullivan, assisted by Mr. Evans, master of the *Lightning*, and Commander Otter of the *Alban*; and I have no hesitation in saying that it is owing to their exertions this fleet have found their way, with comparatively little damage, into creeks and corners never intended for ships of the line; day and night have they worked, and worked successfully. Commander Otter is an old officer, and well worthy of promotion; and Captain Sullivan, and his assisting-surveyor, deserve the protection of their Lordships.

"I have, &c.,

"C. NAPIER,

"Vice-Admiral & Commander-in-chief."

"The Secretary of the Admiralty, London."

(ENCLOSURE NO. 1. IN SIR CHARLES NAPIER'S LETTER.)

Her Majesty's Ship Odin, Led Sund, August 25.

"SIR,—I have the honour to state that, in pursuance of your orders, dated the 18th of August, I proceeded with her majesty's ships *Odin*, *Alban*, *Gorgon*, and *Driver*, under my command, towards Kumblinge, and the islands east of it.

"Having procured a pilot at Dagerby, we felt our way on with boats and leads, through

a most difficult and intricate navigation, in the course of which every ship has been on shore (*Gorgon* and *Odin* frequently), but, we hope, with no further injury than that done to the copper in various places.

"At Kumblinge and the adjacent islands, I was unable to obtain any information of troops or gun-boats, but learnt on Sunday, at Asterholm, that a small fast steam-boat, from Abo, was in our immediate vicinity.

"Rather than return to your flag without intelligence, I resolved to attempt a passage to Abo, and on Monday, at daylight, leaving the larger ships at anchor, I took all the masters in the *Alban*, surveyed and buoyed off a passage for ten miles to Bergham, and then returned for the other ships, but the *Gorgon* grounding delayed us for that night.

"On Tuesday we made our way in safety into the comparatively main open track to Abo, beyond Bergham; at two, p.m., observed a small steamer watching us; and at three, p.m., several gun-boats moving a body of troops from the point (one and a-half miles to the north-west) up to the chain across the narrow entrance to the harbour.

"Having approached to within 3000 yards, the *Alban* stood in to sound. The entrance of the harbour was closed by two impediments; the one in front appeared to be a chain laid on a floating platform, the other of stakes and booms, between which the gun-boats were stationed at regular intervals, and the steam-vessels (four in number) were under the shelter of the points.

"About four, p.m., the *Alban* fired the first shell, which burst over one of the gun-boats. I then commenced firing, and was followed at intervals by the *Gorgon* and *Driver*, but with little or no effect, that we could discover, except that of fully answering my purpose in drawing a return from the masked batteries and gun-boats. Only one of the former, at the end of the boom, mounted a gun or guns of large calibre and long range, but which was concealed from our view by a point of land. The others—three in number—about one mile to the west of the boom, as far as we could judge, did not, in any one case, mount more than five, or less than three, small guns. A fort, of apparently eight or nine large guns, at a distance, constructed to enfilade both passages, fired repeatedly, but the shot invariably fell a very short distance beyond the south end of Little Beckholm.

"As my object was not to attack Abo, but to examine its defences, I contented myself with firing a shot occasionally at the gun-boats, or whatever looked like a masked battery. In the meantime, Commander Otter, in the most zealous and gallant manner, after going as close as it was prudent in the *Alban*, pulled in with

his gig, sounding just within range of the gun-boats and batteries, which were all the time keeping up a constant fire.

"The sum of the information I have been able to obtain with his assistance, and that of Commanders Cracroft and Hobart, amounts to this:—seventeen row-boats, two guns each, and about twenty oars on each side; four steam-vessels (all small), two having the flag with cross anchors in it; and another was observed steaming away through the channel to the eastward of Beckholm. Three (if not four) masked batteries, and another I think in course of construction, for the position of which I refer you to the very clear delineation executed by Commander Otter.

"The channel appears to be very narrow, and the thick woods were evidently full of soldiers. We learnt that our arrival had been anticipated (as we expected, knowing that we had been watched by a steamer for some days), and that 4000 additional troops had been sent on the previous day, and 5000 more were expected to arrive on the following day; that there were six steamers—five small and one large (the latter we did not see)—and eighteen boats and two guns, and eighty men, besides soldiers in each.

"The weather was so bad on Thursday that I was detained under Bergo, and went into Bomarsund this morning; when, having communicated with Captain Warden, and received his despatches, I proceeded to join your flag.

"I have only to add my very anxious hope that my proceedings may meet with the approbation of the commander-in-chief.

"I have, &c.,

"FRANCIS SCOTT, *Captain.*"

"*Vice-Admiral Sir Charles Napier, K.C.B.,*

"*Commander-in-Chief.*"

Such was the true nature of the operations before Abo. It was evident that the incapacity of the fleets to do anything at Abo mainly arose from the want of a gun-boat flotilla. This became a subject of fierce discussion subsequently at home; at the close of the season, when operations in the Baltic were no longer practicable, the attention of naval men and the public was seriously directed to this deficiency in our fleet. The few gun and mortar boats with the fleet were found efficient, but it was supposed they were susceptible of much improvement. This subject was taken up by the *Morning Herald* very earnestly, and the following critique was offered upon this description of naval preparation. The results proved its soundness; but it is to be deplored that the hopes held out of furnishing the fleet for another campaign in the Baltic with so powerful an auxiliary force were not realised, although some addition was made to this arm of the service. "The success, as well as the

indisputable utility of the mortar-boats, both in the Baltic and the Black Seas, have warranted a large increase in this description of vessel for war purposes. We have now about twenty-six afloat, and as many more building in various places in England and Scotland. About sixteen of the latter, we hear, are to be fitted with slings, as recommended by Captain Julius Roberts, formerly of the Royal Marine Artillery division at Portsmouth; but we have heard that the old inexpensive plan of fitting the mortars in solid beds has not been so much eclipsed by the plan of slinging the mortars, as zealous encomiasts of Captain Roberts prognosticated; in fact, it has been contended that the old plan has proved not a whit inferior, and that the French mortar vessels have turned out quite as efficient. We have been informed, however, that the mortar beds of the French vessels are more substantial than ours, and the mortar carriages are of solid cast iron. An error was committed in our first mortar vessels fitted with sling mortars, by limiting the tonnage to too small an amount. This error, we understand, has been corrected in the new vessels. We have stated that fifty-two mortar vessels have been built and are in course of construction. We presume that, should the experimental iron mortar fleet at Portsmouth prove equal to its requirements, we shall have 100 mortar vessels equipped by next March. At all events, we understand that more than 100 13-inch mortars are being manufactured under contract for the Ordnance department."

It is appropriate here to present the reader with some account of Abo. "The city of Abo, pronounced *Obo* (the Finnish name is *Turtu*), contains about 14,000 inhabitants. It has four or five barracks, some of them built of wood, which in time of peace have in them from 3000 to 4000 Russians, as the Fins call all soldiers. The town is defenceless as to forts and fortifications. There is an old Swedish palace at the mouth of the river, called the *Slott* (palace or castle), now used as a prison and barrack; but it has no guns or defence except its walls, strongly grated with thick bars of iron. The low buildings in front appear much older than the two long wings. There has been a moat in front, from the river to the sea to the right; but it has little water, and resembles a large ditch. Behind the *Slott* is a bridge, half a mile long, made of piles, and connecting the island of Runsalla with the main-land. Runsalla was given by the government a few years ago to the town; it is one of the very few islands off the Finnish coast upon which the oak grows; it is divided into lots, which are sold for building villas upon; but the purchaser may not cut down an oak, even if it interferes with his view or his building,

as they are reserved by the crown for ship-building, though they are nearly all rotten. Opposite Runsalla is the island of Beckholm, where large ships anchor and discharge into lighters, as there is not water enough in the river for vessels drawing more than twelve to fourteen feet. Passenger steamers proceed up to the lower bridge, though they sometimes get aground in the river when the water is low, as it is when there is an east wind."

After the reconnaissance at Abo, Sir Charles Napier in person effected a complete reconnaissance of Sweaborg, with the intention of attacking it, if the nature of the force under his command afforded any hope of conquest. Sir Charles came to the conclusion that the means at his disposal, and the time of year, were obstacles to the success of the undertaking which could not be surmounted. To attack Sweaborg with ships alone, every man acquainted with its fortifications knows would have been an act of desperation, not warfare. Sir Charles informed the Admiralty that he believed the place pregnable if attempted with "gun-boats, rockets, Lancaster guns, 13-inch mortars on the islands, and a vast supply of shots, shells, and rockets in addition to the ships. Whether this attack," writes the gallant and skilful admiral, "would succeed or not it is impossible to say. We must calculate upon ships being set fire to by red hot shot and shells, of which they would have abundance, and, whether successful or not, it is evident the ships would be in no condition to meet the Russian fleet afterwards; and if the attack were made at this season of the year (October), when you cannot depend on the weather for five days together, I do not know how many would be lost. There were not two days, the whole time I lay at Nargen, in which I could have attacked such a fortress as Sweaborg: even had I had the means to destroy it, it would have required a week."

It was no fault of the daring chief who commanded our Baltic fleet that he was, in the middle of October, without means to accomplish those purposes upon which his valour and the nation's wish were set. Entreaty and remonstrance followed one another from him to the Admiralty without any effect. Sir James Graham, and his first naval lord, Admiral Berkeley, with their satellite lords of the Admiralty, had too much conceit, and too little patriotism, to make any effort to supply him opportunely with force of the kind requisite to subdue such important works. We defer to another chapter a more particular account of the close of the operations in the Baltic naval campaign of 1854, in which we shall review the whole of those operations, and discuss at large the question between Admiral Napier and the Admiralty—here only

observing that never was a public servant more unjustly used, and never did a brave officer and noble-hearted man merit from his government and his country more hearty thanks for having effected so much under circumstances so inauspicious. He brought home his fleet without losing a single ship; had he heeded the directions of Sir James Graham and his board, that fleet must have been inevitably sacrificed. He was expected by "the board" to accomplish at an unfavourable season what they had in a more suitable season forbidden; to carry into execution orders contradictory and irreconcilable; and to achieve, without armaments adapted to its accomplishment, the destruction of the greatest naval arsenals in the world, sheltering within them powerful fleets, which would have sallied out against his ships when damaged by the batteries, which it were vain, with them only, to assail. We shall fully expose all this in another chapter, in the hope that our doing so may not only promote the vindication of a great man, who has been exposed unjustly to official insult and revenge, but also in the hope that it will promote the security of all public men who, like Sir Charles Napier, are true to the honour of their country and their profession, and who are exposed to similar injustice. Nothing will more encourage our admirals and generals than the conviction that their reputation is under the protection of a grateful country, against the intrigue or vengeance of unfaithful or incapable ministers.

A more particular account of Sweaborg and Helsingfors, at which we have in preceding pages repeatedly glanced, is desirable. Helsingfors is the city which the fortifications collectively called Sweaborg, built on several islands, defend. A large fleet can here ride at anchor in safety in the severest weather; and so long as the Sweaborg fortifications can resist, safe also from the fleets of a superior enemy. Several times in our pages we have preferred accounts by lady travellers to others, where scientific or military details were not requisite, because ladies write with less of party-feeling and invidious nationality, and their descriptions are less encumbered with unpopular and technical phraseology. The following description by a lady of her visit to these places, previous to the breaking out of the war, will interest our readers:—

"In the prefecture of Nyland is the town of Helsingfors, a town very pleasantly situated in a fertile peninsula, with a safe and deep harbour. The population, which is rapidly increasing, is now about 16,000. It has become the capital of the principality, a position it will probably continue to occupy. It was regularly rebuilt since 1815. It has two forts—that of Braberg and that of Ulricaborg. In

order to make its harbour one of the best in the Baltic, its basin has been dug out of the solid rock. The space thus artificially made for vessels was forty yards long, fifteen wide, and four deep. Since the fire which destroyed Abo in the year 1827, the university of that place has been transferred to Helsingfors, which is thus increasing in importance every day. Helsingfors is approached through islands of rocks, some of them only tenanted by fishermen, others massively fortified, especially that called *Sweaborg*, which is the Cronstadt of this Finnish capital. Nor does the likeness end here; for the town itself, clean and handsomely built, recalls St. Petersburg upon the first aspect.

"The fortress of Sweaborg is about a league from the town, and, in consequence of the present war, has become an important locality. It is one of the most important of the Russian strongholds in the Baltic. Were it destroyed, the allegiance of the Finnish population would be by no means a matter of certainty. The Swedes look with bitter regret to this rock, of which the Russians are so justly proud. It is in reality a masterpiece of modern military architecture. It is, properly speaking, a collection of seven islands, protecting and guarding a magnificent port. There are points where the ramparts, cut in the solid rock, are fourteen yards high. They are, however, turfed over, to protect them from the effects of shells. In the splendid new edition of *Malte Brun*, just published in Paris, we find the following characteristic remark:—'English travellers who affect to admire nothing on the continent, cannot but allow the Russian grandeur of the work of Ehrensward.'"

Marshal Ehrensward, thus alluded to, was the officer who planned the extensive and formidable defences of Sweaborg. The number of fortified islands before Helsingfors is seven, some of them connected by bridges. When reconnoitred by Sir Charles Napier, the forts mounted 1000 guns, and garrison accommodation existed for 12,000 men. If a sufficient land force had co-operated with the fleet, Sweaborg and Helsingfors could have been reduced, and the fleet then sheltered behind those island-batteries destroyed. The troops landed at Åland were too few for such an enterprise, and too many to remain in occupation of the Åland islands, they were therefore sent home soon after the destruction of the forts at Bomarsund. The practicability of military operations in Finland, and the probable results of a military campaign there, have been much discussed ever since the close of the Baltic campaign of 1854. When the Russians conquered Sweaborg and Helsingfors from the Swedes, it was by land operations. General Monteith translated from the manu-

script of a Russian officer who was then present the following account, which will throw some light upon such discussions at present:—

"In the year 1808, Sweaborg was in the hands of the Swedes, and was considered impregnable, as some consider it now. The garrison was composed of above 7000 men, partly Swedes, partly Fins. In the beginning of the month of March, the Russians commenced the siege of this place, with eleven battalions, four squadrons, and four field batteries. The transport of the guns of the besiegers was a matter of the greatest difficulty. The heavy artillery had to be brought on sledges from Russia. During the whole of the time that the siege was carried on, the number of artillery never exceeded forty-six pieces of cannon, of which sixteen were mortars. The Russians kept the place in a continued state of alarm, by constant attacks, during the whole of March and part of April, and the *morale* of the officers and men, on the part of the besiegers, began to deteriorate. At length, on the 5th of April, Count Cronstedt, the Swedish commander, agreed to an armistice, and a convention was agreed upon between him and De Suchtelen, the Russian chief-engineer, that the truce should be continued until the 3rd of May, and that if, by that time, the fortress were not effectually relieved by the arrival of at least five ships of the line, it should be given up to the Russians. The relief never arrived, and the Russian general took possession of the place. At the time of its capture, it contained 58 pieces of brass ordnance, 1975 iron guns, 9535 cannon cartridges, 3000 barrels of powder, 10,000 cartridges, 340 projectiles, nearly 9000 stand of arms, with other weapons, two frigates, six xebecs, a brig, six yachts of war, twenty-five gun-boats, fifty-one others, called yawls, fifty-one barques, sloops, &c., twelve transports, an immense depot of naval stores, and considerable magazines."

A recent writer, of sagacity and military information, thus treats the whole subject of land operations by an assailing army in Finland:—

"It may be assumed for certain that, although in the forty-six years since Sweaborg was taken, the fortifications have been greatly improved, the resources of besieging armies have improved in the same ratio. Sweaborg was then considered impregnable against an attacking force, as it is now. It yielded, nevertheless, after two months' siege, to a small army, not remarkably well provided with *matériel*. It was attacked on the land side only, and had at the time a considerable naval force in the harbour. The Russians who took it were scarcely sufficient in number to occupy it, and to superintend the disbanding and sending away of the Swedish garrison. Taking these facts into consideration, is it at all likely that Swea-

borg would be able to resist, at the present time, the combined action of an efficient force by land, while the most powerful navy in the world was thundering at it from the sea? It is the opinion at St. Petersburg, that even Cronstadt is not impregnable against a sea force alone, and this is felt still more strongly with respect to Sweaborg. Assisted by a land force, the capture of Cronstadt or of Sweaborg by the fleets would be certain. Aland being taken from the Russians, and depots of troops established which could easily communicate with Sweaborg during the winter, a strong position might be held in Finland until the time for commencing naval operations again returned. This, however, it is to be hoped, is the lowest point at which success will stop. It is confidently anticipated by many, that the fleets alone are sufficient to capture the fortresses, in which case the detachments of troops which are being sent out will be needed only to occupy the garrisons, and hold possession of the country. If Finland is once wrested from the Russians, it should, of course, never be returned to them, but should revert to Sweden, its real proprietor."

The policy of separating Finland from Russia must speedily engage the attention of statesmen. The Northern or Western question—for it may be designated either—will speedily assume proportions of equal magnitude with the Eastern question. The position of Russia in the Baltic is as formidable to European liberties as her position in the Black Sea, and might become even more immediately menacing. The junction of Finland with Sweden, or the creation of that territory into an independent kingdom, is a political desideratum. The officials are all pro-Russian; the intelligent classes are desirous of a union with Sweden; the masses of the people eagerly wish for an independent nationality. Finland occupies a relation to the Northern question, such as the Dacian provinces do to the Eastern question. There exists, on the part of Norway, a great jealousy to the acquisition of Finland by Sweden as a province; because, in the federation of the two Northern states at present, an equality of political influence is maintained, but the possession of Finland by Sweden, as a province of her own, would disturb the balance of power between the two states. If Finland were joined to the federation, not as a province of Sweden but as an independent state, the federal union of the three countries would form a barrier against Russian aggression, in north-western and western Europe, of formidable force. Such a union of states, in alliance with France or England, might set Russia for ever at defiance. If the balance of European power was ever worth any sacrifices for its maintenance, to obtain from Russia the cession of Finland is now imperative.

The country itself is fertile, producing corn and timber, the latter of excellent quality for ship-building; a superior breed of cattle supplies the inhabitants with abundance of meat, milk, and butter. Fish abounds in the lakes and on the sea-shores, which the hardy fishermen catch and cure in great quantities, and which they export, together with corn, butter, hides, and timber. Tar, pitch, and game of every description, are also exported—the two former commodities to remote places. The people are brave and manly in spirit; valour is considered one of the chief virtues, while cowardice is contemned as a grovelling vice. Often in her history has Finland been defended by her sons with dauntless courage, and when it was not, as it ultimately became, a fertile and generous land. There is manliness enough in the people to retain their freedom if it be once recovered. It is not necessary that the country severed from Russia should become, according to a simile from one of its own ballads—

"Like a rootless pine, propped by its neighbours;"

but as another simile from the same source presents the picture—

"Steadfast as a mountain clothed with pinewood."

The brave Finlanders never yielded to Russia until overcome by overwhelming numbers, and still more fatal treachery. The Grand Duchy of Finland (its former designation) contains a million of inhabitants, and Europe does not possess a population more industrious and moral. It is partly washed by the waters of the Baltic, partly by those of the Gulf of Bothnia; and its towns are generally provided with dockyards, ship-building being a part of the commerce of the country. Helsingfors, Abo, Uleaborg, Gamla Karleby, Ny Karleby, Jacobstad, Wasa, Björneberg, Christianstad, Borgo, and Louisa, are all commercial ports of increasing importance.

The Fins are generally supposed to be the most ancient tribe or nationality inhabiting the Baltic shores. The literature of the country is interesting. The genius of the Finnish poetry and mythology differs from that of Sweden, Norway, and Denmark. The woods of Finland, and the shores of her many lakes, are peopled with imaginary beings who listen to the god of song, with his lyre framed from the wood of the sighing birch-tree; while wood-nymphs, fanned by the goddess of summer, offer their applause. Of this character are the traditionary tales and myths of Finland, yet the people are not superstitious; they do not allow the traditionary fancies handed down to them from remote generations to interfere with reason or religion. They are a sensible and unostentatiously pious race; they can distinguish between the sober dictates and testimo-

nies of Christianity, and the traditionary ideas derived through their poetry and mythology from generations long faded away. Such is the land which Russia has despoiled, where conscription and oppression have done enough to quench the manhood of a people, but which have failed to divest the Finlanders of their courage and love of freedom. Western Europe may by a bold, wise, and generous procedure, attach to their interests and policy this noble nation.

In the land transactions recorded in this chapter, Brigadier-general Jones distinguished himself in command of the British, some account of him will, therefore, be appropriate. On September 17, 1808, he was appointed second lieutenant of Engineers, and in June of the following year, first lieutenant; second captain, November 12, 1813; captain, July 29, 1825; brevet-colonel, November 11, 1851; colonel, July 7, 1853; three days after he was appointed brigadier-general, and charged with the command of the British forces dispatched against Bomarsund. On his return from his services in the Aland Isles, he was promoted to the rank of major-general. As he will again come under notice in the Crimea, with still higher rank, it is only necessary to notice further here that his services have been for nearly half a century very active and useful. He took part in the unfortunate expedition to Walcheren, in 1809, as a lieutenant of Engineers. In the Peninsular campaign, from 1810 to 1814, he was engaged in constant duty, and took part in the sieges of Cadiz, Tarragona, Badajoz, and St. Sebastian. At the last-named place he led the forlorn-hope in the first assault, and was wounded. He took part in the passage of the Bidassoa, and the operations at Bayonne; and fought at the battles of Vittoria, Nivelle, and Nive. When the British troops entered Paris, in 1815, he was appointed the commanding engineer in charge of the fortifications on Montmartre.

For a considerable time previous to the Aland expedition, Colonel Jones had charge of the East India Company's establishment for engineer cadets, at Chatham. Few officers possess more experience in his own arm of the service, during war or peace, than General Jones.

In the above records of the proceedings of the Baltic fleet, the name of the *Hecla* war-steamer has been particularly conspicuous. This little sloop was commanded by Captain

Hall, well known throughout the navy by the *soubriquet* of "Nemesis Hall," a name conferred upon him on account of his daring exploits on board a ship of that name in the Chinese war.

Captain William Hutcheson Hall entered the navy in 1811, on board the *Warrior*. He afterwards joined the *Lyra*, *Iphigenia*, and *Morgiana*, and rendered various services that were appreciated by the Admiralty. In 1823 he was appointed to the *Parthian*, and soon afterwards nearly lost his life in an effort to save a drowning shipmate, who had fallen overboard. When the *Parthian* was paid off he entered the *Blonde*, under the command of Lord Byron. Several other ships had the benefit of his services in succession before he was appointed to the *St. Vincent*, on board of which he continued two years. In 1822 he was made master. On the breaking out of the Chinese war he took rank as lieutenant in the Hon. East India Company's ship *Nemesis*. His services were so gallant and skilful on board her, that his time was counted as service in the royal navy; and in 1841 he attained the rank of commander. In 1844 he was made post-captain. At the breaking out of the present war he was placed in charge of the *Hecla*, which he commanded with such spirit and discretion as to draw upon him the applause of the whole fleet, and the approval of the Lords of the Admiralty. On the return of the fleet he was appointed to the *Blenheim*, and was afterwards second captain on board the flag-ship *Victory*.

Captain Hall is a man of science, especially in nautical matters, and is famous for his contrivances on board ship. He is the patentee of the anchor which bears his name, and the iron bilge-tanks now used in the navy owe their origin to him. In 1847 he was elected a fellow of the Royal Society. On the 30th of April, 1845, he married the Honourable Hilare Caroline, daughter of the late Viscount Torrington.

The captain is as humane as he is gallant and daring. His conduct in risking his life to save a shipmate proves both features of his character. His benevolence is also attested by his constant endeavours on shore to form sailors' homes, in which he has been successful. He has been chairman of the directors of the Sailors' Home Institution, to which our tars are so often indebted for shelter and counsel.

CHAPTER XXVII.

OPERATIONS OF THE BRITISH SQUADRON IN THE WHITE SEA.—BLOCKADE.—ATTEMPT TO REACH ARCHANGEL, AND ENGAGEMENT AT THE MOUTH OF THE DWINA.—BOMBARDMENT OF THE MONASTERY OF SOLOVETSKOI.—DESTRUCTION OF KOLA, IN RUSSIAN LAPLAND.

"There is no rock too desolate, no shore too inhospitable, no region too remote for Russian ambition to desire, and Russian cunning and treachery to make a means of fresh acquisitions."—*Christian Weekly News*.

OF the White Sea little is known in western Europe, yet Russia has a considerable commerce there. Dutch, Swedish, Norwegian, Danish, and Finnish ships, carry a considerable trade with its ports, especially with Archangel. British ships also derive profit by commerce with this distant region, although the interest which English people feel in these regions is confined to traders. The White Sea is a great gulf, into which the waters of the Arctic Ocean flow. From the North Cape the shores turn eastward, bending to the south. In the 41st degree east longitude and 68th north latitude, the coast reaches the opening called the *Bielœ-Moré*, or "White Sea." It is crescent in shape, curving westward to the 32nd degree east longitude, and dipping southward to the 63rd degree north latitude. The entrance from the Arctic Ocean is about 100 miles wide, and formed by the peninsulas of Kaninskair and Kola; 44,000 square miles are comprised in its area. This sea is frozen half the year, and sometimes for eight months together there is ice-upon its surface. There are several gulfs upon it, such as that of Dvinskæ and Oreskai. It is of great depth, and in fine weather easily navigable, except from the frequent recurrence of fogs, which, even in the best seasons, tend to make its navigation insecure.

The chief town in all the region washed by the White Sea is Archangel, a city dedicated to the Archangel Michael, and the capital of the province of Archangel. It is the chief port in northern Russia, and was once the only outlet for whatever trade Russia possessed. Ivan, surnamed the Terrible, founded this town in 1583. The population numbers about 25,000, and is rapidly (for a Russian town) increasing, as foreigners are encouraged to settle there by the Russian government, and northern Germans avail themselves more extensively of this encouragement than do any other nations. There is a garrison fluctuating in number. Many government officials also reside there, and the government offices, chambers, barracks, and gymnasium, give an imposing appearance to the streets. The situation is low and unpleasant, on the northern bank of the river Dwina, about forty miles from its disembogement. A canal communication with Moscow is of great importance to its commerce, especially as the canal communication between Moscow and Astracan,

and other countries and provinces to the east, is very extensive. Caravans convey commodities of various kinds from Siberia, and bring back in return those wares and luxuries imported at Archangel. The country around is sterile and uncultivated; it is probably altogether one of the least desirable residences ever chosen by civilised men. Before the present war about 500 foreign vessels entered the roadstead every year, about five miles below the town, where a bar, consisting of a sand-bank, prevents ships of large draught from ascending the river.

The city is somewhat oriental in its general appearance, and might at first sight pass for Turkish. The houses are built of wood, the streets narrow, running parallel with the river, and intersected most irregularly with lanes—dingy, filthy, forlorn-looking sinuosities as can well be conceived. For the few summer months the streets are tolerable, as the wooden houses are then gaily painted; but the fogs, mists, and snow soon deface the decorative attempts to appear gay, and scarcely has the winter asserted its sovereignty when the old dingy hues spread themselves over everything, except where the superincumbent snow hides all defects.

While the gallant Sir Charles Napier with his gigantic fleet was in the Baltic, blockading its ports, and spreading alarm along its shores, a very small squadron was dispatched to blockade the White Sea, and do what it could to make the power of western Europe felt even there.

In June the *Eurydice* steam-ship, 26 guns; the screw corvette *Brisk*, 16 guns; and the *Miranda*, 15 guns, entered the White Sea, and cruised about in quest of Russian ships of war or merchantmen. The *Miranda* alone boarded no less than 300 ships, capturing such as fairly came within the category of prizes; yet no blockade was declared until the year was so far advanced as to make its declaration then of little consequence to Russia. The Western governments were probably influenced in that delay by a consideration for the interests of their own merchants, especially the British, whose dealings with that region considerably exceeded those of the French. Partly the delay arose from a desire to avoid inflicting any injury upon Sweden, Norway, and Holland, with which nations the allies were in amity, and

whose ships were extensively engaged in the commerce of the Arctic Sea. A strict blockade of the Russian Arctic ports would be felt over the whole of northern Russia most severely, and cause injury and suffering from Archangel to Tobolsk, and even southward to St. Petersburg; Moscow and north-eastern Russia would also be sensible of the injury inflicted by such a proceeding.

The best record of the operations of this little squadron is found in the following communication of an officer of the *Miranda*, as reported by him upon the return of his ship to England in September, some time in advance of the other ships of the squadron. His communication is an epitome of the whole procedure of our ships up to the time of the *Miranda's* orders to return:—

"*Miranda* left Sheerness on the 3rd of May, under sealed orders; anchored at Spithead on the 4th, at six, P.M.; left Spithead on the 6th, at one, P.M.; on that day chased several vessels, and proceeded again under sealed orders; returned to Spithead again on the 15th; on the 17th victualled the ship; on the 19th left Spithead; anchored in the Downs on the 21st; at two, A.M., weighed anchor, and run through the Gullstream; proceeded north on the 24th; at eight, P.M., ran for Lerwick Harbour; anchored at eleven, P.M., on the 26th; left Lerwick Harbour on the 8th of June; anchored in Hammersfort* Bay, having worked through the Sound on the 10th of June; steamed through Rolfsø Sound for sea; on the 19th of June, chased and captured the Russian schooner, which was afterwards released. On the 22nd of June, stood in for anchorage under Cross Island; left Cross Island on the 24th; on the 26th, anchored (with a strong current running towards Archangel) off the mouth of the river Dwina; at ten, P.M., in Archangel Bay, we were employed in boats boarding several vessels. On the 5th of July, we weighed, and proceeded for the Murman Channel, off Dwina River, leading towards Archangel Bay; on the 9th, anchored near Tetrina, got under weigh, and proceeded for anchorage at Cross Island; on the 18th, rounded the island of Solovetskoi; when about 1000 yards distant from the shore, our first lieutenant observed a number of soldiers, with several fieldpieces, in the woods. His glass and eye are first-rate. A gun was fired to dislodge them, which they quickly returned with shot, grape, and canister—a sharp shower. Lots of them struck the ship. We kept up a sharp fire from the starboard broadside guns. The enemy retired into the brushwood in their rear. We then anchored off Solovetskoi monastery at about midnight. On the next morn-

ing, the 19th, saw the soldiers employed throwing up temporary batteries. Our ship, with the *Brisk* in company, hoisted a flag of truce, and fired a blank gun. The *Brisk* sent a boat on shore with a flag of truce. The Russians sent a boat off to meet the flag of truce. The boat then returned on shore. At twenty minutes past eight weighed anchor, hauled down flag of truce, and opened fire on the enemy's battery with long gun, firing shot and shell, which was pretty smartly returned by the battery, and also from two towers of the monastery, and musketry from the shore. The *Brisk* also opened fire soon after. About twenty minutes past nine, a round shot from the battery killed King Marshall, an ordinary seaman and man of colour, formerly a Krooman, from Sierra Leone. Another shot wounded Stephen Hart, fracturing his right arm close to the shoulder. We then opened fire from 12lb. howitzers, and also from the tops and gangways, to dislodge the enemy from their cover of trees and bushes. At twenty minutes past eleven the enemy were seen deserting their batteries. They shortly again returned to their guns, and were again driven away by the precision of our firing. We then commenced shelling the monastery from our pivot gun, at the same time keeping up a heavy fire from our broadside guns, also with small-armsmen on battery and cover. We then proceeded, easily steaming up the inner passage, to outflank the battery, and also to close on the monastery. We then commenced firing red hot shot on the monastery; silenced the fire of the enemy at about six, P.M., on the evening of the 19th. On the 31st, landed at Shayley Island, destroyed all the public buildings by fire, together with nine guns found on shore. We coaled on the 29th of July near Cross Island. On the 23rd of August, our master, Mr. George Williams, succeeded with the boats to buoy a passage up to Kola. At thirty minutes past six, A.M., we anchored off Kola in five fathoms water. We shortly after observed a flag of truce coming off from the fort; we hoisted flag of truce in return. Our third lieutenant, Mr. C. W. Buckle, went away in the gig to meet the flag of truce with a letter, in which, we understood from the quarter-deck officers, an immediate surrender of the fort, garrison, and government property was demanded. We could see the different forts with the men at their guns. We were kept at quarters during that night. No answer being returned in the morning, we hauled down flag of truce, and opened fire with grape and canister, to dislodge musketry from the batteries and stockades. Our ship was got up within 250 yards of the battery. Our first lieutenant, Mr. John F. C. Mackenzie, and Charles W. Manthorp, mate, accompanied us

* Hammersfort is the boundary city and harbour of Norway nearest to the confines of the Russian territory.

in command of the shore party. On landing, our gallant first lieutenant headed our party of blue-jackets and marines, who trotted up sword in hand to dislodge the enemy from the ruins of the batteries, and to seize their guns immediately. Upon our pulling in shore, the enemy opened a sharp fire upon us from different parts of the towers and the monastery. Our ship continued fire to cover us. It was about thirty minutes past two when we landed, headed by Lieutenant Mackenzie, who was the first into the battery, which we found completely destroyed by the ships' fire. The enemy were going off beyond double quick time. We took on board one of the battery guns, which had been broken by a shot from our ship; all the other guns were completely buried in the ruins. All the government stores were destroyed. Our first lieutenant did honour to his little clan of the *Miranda*. During our fighting the enemy had been busily employed taking up all the buoys our master, Mr. Williams, had laid down for coming up the river, and he had all his work to go over again, to buoy the channel for our going down again. By half-past seven, A.M., on the 24th, we had destroyed the whole of the town. It was a tremendous scene of destruction; the buildings, stores, and monastery all in flames; and each bell, as their stupendous beams burnt through, fell to the bottom of the tower, tolling its last knell. There were seven bells. We made Flamborough Head light on the 22nd of September, and called at Yarmouth. We have a Russian boy, about ten years of age. He was taken out of a fishing lugger, which had been deserted by her crew. The poor little fellow was found locked up in the hovel called a cabin, and if not taken must have been starved to death. It appears he had neither mother nor father. The crew of the *Miranda* have been remarkably healthy."

In the above admirable outline of the operations of the squadron everything is related with candour, as a collation of all the accounts, British and Russian, prove. Without following precisely in his track,—as some deviation will assist in placing the whole more compactly before our readers, and because the *Miranda* did not take an equally prominent part in every incident,—we shall keep his journal in view in narrating the following details. Having arrived at the mouth of the river Dwina, the squadron found a formidable enemy within the shoal which crosses it—a Russian 16-gun brig, two steamers, two schooners, and nineteen gun-boats, each of these carrying two 36-pounders. Storms prevented anything from being attempted for several days, but when the weather became calmer, it was found that the British ships drew too large a draught of water to be able to

cross the shoal and reach the enemy. Some merchantmen coming down from Archangel gave an account of the formidable preparations in progress to receive the British ships, if they should ascend the river. It was alleged that, having steamed up the first half of the distance, it would be necessary for the squadron to encounter a powerful fort, called Navjorin, armed with eighty guns of large calibre; should this obstacle to their progress be vanquished, the squadron, before arriving at Archangel, must encounter a series of batteries, on salient points of the river's banks, mounting guns more numerous and of heavier metal than the little fleet possessed. Troops also were stationed in positions enabling them to direct a fire from musketry against the men on the yards or decks of the steamers. A telegraph erected on a light-house was actively used by the Russians, and no doubt signalled up to Archangel all the movements of the ships. The destruction of this light-house and telegraph was not difficult; a few shot and shell sent it in ruins over the heads of the occupants. This was the first exploit of the White Sea squadron; and the *St. Petersburg Journal* occupied a whole column in denouncing the barbarity of the British, in thus injuring a peaceful instrument of commerce, leaving the mariner unprotected in the boisterous and gloomy *Bielœ Moré*. There was a serio-comic vein in these lamentations, which betrayed the annoyance felt in Russia at the activity of an enemy that could penetrate those icy waters, and perform operations of war in the intricate shallows and sinuosities of their shores. On the 4th of July, while the boats of the steamers were taking soundings, several troops of horse-artillery opened fire upon them from the shore; the gun-boats and the large steamers approached the shoal, and threw red hot shot and shell, but did not venture out from behind their barrier. They were promptly driven in by the fire of the boats and ships; and then the broadsides of the latter swept the shore, dismounting the guns, and causing the enemy to provide for his safety by a speedy retreat. As it was impossible for the squadron to reach Archangel, they steered off to seek a better sphere of operations elsewhere, but bitterly disappointed that their hopes of a fair open sea combat with the ships and gun-boats of the enemy was not conceded to them by Russian valour. The spirit of the fleet at this juncture may be better conceived by a specimen of the correspondence which reached home. A young midshipman wrote as follows:—

Her Majesty's Ship —, White Sea, July 6.

"The — is now anchored off the bar of the river Dwina. The Russians have been making a great display of their force for the

last two or three days, such as firing guns, and rowing their gun-boats about, and their steamers getting up their steam, but none of their fine vessels have yet showed their figure-heads on this side of the bar. For the last one or two days we have kept ourselves in readiness to weigh at an instant's notice; the two steamers always keep their fires banked, so that they may be able to get up their steam quickly and take us in tow, should it fall calm, and the gun-boats, taking advantage of the calm, come and attack us. The day before yesterday was quite calm, and oppressively hot. It was as hot as a summer's day in England, and every one was crying out for duck trowsers and white waistcoats, and some wanted to bathe. To-day the sun is hot, but there is a little breeze to oppose it, which makes it very comfortable, and nice and cool, but in no way cold. I forget now whether I told you of our little prize—a little schooner, which we found on the coast in our way here. She is a beautiful-looking little thing, but, unluckily, very leaky; we are trying to stop her leaking now by caulking her afresh. All the caulkers of the three ships have been at work on board of her for the last three days, and have almost finished her. We have got the skipper and mate on board of us as prisoners; the rest of the crew are on board the *Miranda*. It does not look as if we should see much service if we continue in this way, standing still, and doing nothing."

The departure from the mouth of the Dwina, in quest of ships or forts of the foe, where some enterprising feat might be performed, was hailed by the officers and men with joy. The following brief extract from the journal of an officer on board the *Eurydice*, well expresses this feeling:—

"July 7. — Last night, about ten o'clock, without any one expecting it, the captain ordered the hands to be turned up, and the ship to be got under weigh, and the *Brisk* to take us in tow. Before long we were going through the water at the rate of five or six knots an hour, with fore and aft sails set. At ten o'clock this morning, we cast off from the *Brisk*, and made sail, and at about one, P.M., we arrived at a place called Cross Island. Our prize, the *Volga*, is anchored close alongside of us, and the *Brisk* a little way a-head. We have sent the boats away to get some water, but they have not returned yet, and it is coming on to blow. It is now six o'clock, and the boats have returned, except one (the pinnace)."

At Cross Island, their arrival at which the above extract records, the little squadron remained several days, picking up information from various vessels boarded by their boats, and, acting upon the information thus obtained,

they sailed for another island, called Solovetskoi, at the entrance of the Gulf of Onega. Here a number of fieldpieces were in position, which opened fire upon the *Brisk*, and afterwards upon the *Miranda*, and was answered by the fire of both ships. Many of the Russian artillerymen fell, and others supplied their places, and renewed the fire; and when the numbers of the gunners and artillerymen were thinned by shell and grape from the ships' guns, infantry soldiers worked the pieces with more courage than alacrity or effect. At last they retired along the shores of a narrow creek, and the ships took up a position in front of the monastery,—a strong, castellated building, commanded by the abbot, who had been a military man, and still held a military commission within the precincts of the monastery. A flag of truce was sent on shore by the commander of the squadron, demanding the unconditional surrender of all military stores and appurtenances of war, and of the monastery. The archimandrite, or ecclesiastical and military governor refused, and a heavy fire opened on both sides, which closed with the day, if day at that season may be said to close in those high latitudes. On the morning of the 19th of July the *Miranda* and *Brisk*, which had anchored off the monastery during the night, opened upon a sand battery which the Russians, with strenuous labour, had erected during the interval. The monastery, which was flanked by two strong towers, as well as the battery, replied to the ships; and the Russian infantry came within good musket range, and directed a steady fire upon the ships. The chances of victory for several hours seemed equal, but the bitter little *Miranda* threw in a vertical fire of red-hot shot upon the monastery, and it was soon on fire, and the artillerymen abandoned the guns upon the towers. Having completely silenced the defence, the English drew off, and attacked various other places in the group of islands, and on the main shore; sometimes satisfying themselves by silencing forts or batteries, sometimes burning with shell and hot shot government stores and buildings, and frequently landing and consigning all public property to destruction. In these sea raids private property was scrupulously respected. The Russian journals did not so represent the conduct of the British; everything bad and barbarous was attributed to them; they were denounced as sacrilegious and inhuman. Whole sheets of the St. Petersburg newspapers were filled with pompous declamation concerning the degradation of England by the indiscriminate destructiveness of her marine. They piled Pelion upon Ossa, and overwhelmed us with mountains of sonorous writing. The following is a specimen our readers cannot fail to peruse with

interest; it will afford them a view of the easy facility of falsehood which the Russian scribes and their employer, the Russian government, have attained:—

“On the first occasion, it is true, the bombardment was not of long continuance. The assailants soon launched a boat, carrying a flag of truce, and bearing a written demand for the surrender of the convent, with its guns, arms, standards, and military stores, not forgetting the garrison—that is, the invalids—who were its inmates. But the Archimandrite Alexander, the superior of the convent, who had formerly filled the office of a military chaplain, and who, up to 1853, had been archpriest of the Marine Cathedral of Solombal, sincerely loved and respected by all who knew him, was not wanting in his duty as a faithful son of Russia and a worthy chief of that illustrious monastery. He rejected the dishonourable requisition of the enemy, and defended himself bravely according to the extent of the means at his disposal. After the rejection of their summons, the English commanders, for nine consecutive hours, maintained a tremendous fire on the sacred edifice, which was so protected by Providence as to sustain only inconsiderable damage. A battery, hastily constructed on a headland in the vicinity of the channel, and mounted with three 3-pounders, compelled the steam-frigates to quit their anchorage, and thus prevented them from making any further attempt to injure the convent, the walls of which were ancient and strongly built.

“It is evident that nothing but covetousness incited the English in this attack. Everybody has heard, through the description of travellers, of the great wealth of the convent of Solovetskoi, and the English crews hoped for a splendid prize if they could succeed in taking it. They would, nevertheless, have been egregiously mistaken in their calculations, for precautions had been previously used to place all the treasure of the convent in a place of safety.

“Nevertheless, the enemy did not go away entirely empty-handed. Four of the ship's crew landed in the little isle of Zaiatchy, one of the Solovetskoi group, and having forcibly effected an entrance into the wooden church, they broke open the sacred door of the altar, tore the consecrated cloth which covered it, plundered the poor-box, and also took away three small bells from the steeple, with which they regained their ships, which then left the channel, and steered towards the Gulf of Onega. On the 8th of July these same vessels were signalled in sight of the village of Liamitskaia, sixty-five versts from Onega. The only enemies they found here were five old men. All the other inhabitants had disappeared. Having killed two oxen, eight sheep, and several chickens, the English threw the old men three

Russian gold pieces, of five rubles each, and, loaded with provisions thus derisively paid for, they returned to their ships, which, on the evening of the same day, presented themselves before the Isle of Kiy, fifteen versts from Onega. In this island the English heroes covered themselves with new laurels. They burnt the custom-house, and also the buildings in which the *employés* and servants resided. By the light of this conflagration they directed their triumphant march to the convent of St. Croix, founded in that island by the venerable patriarch Nicoa. In this ancient but poor convent they found nothing in the shape of booty, but, to recompense themselves for their ineffectual attempt against Solovetskoi, they wished by any means to carry away something from St. Croix. They took, therefore, from the treasury ten gold pieces of five rubles each, also several articles appertaining to the poor brotherhood, and joined to this glorious booty a bell weighing six pounds, half-a-dozen old brass cannon, completely useless, having been kept for 200 years as antique specimens, and fifteen rampart muskets of a similar kind. Such were the precious and glorious trophies taken by the English in their campaign against the monastery of St. Croix. Soon, however, they awoke to a perception of the merits of the cannon, and, as if indignant at their blunder, they broke one in pieces, threw three into the convent well, and the remainder into the sea.

“Nevertheless, it must not be believed that they can always thus act with impunity against the inhabitants of the coasts. Desiring one day, in the village of Pouschlakhta, to make up the complement of the fresh provisions which they had taken in that of Liamtsa, they were disembarking under cover of their guns, and commenced, as is their usual custom, by opening a discharge of musketry upon the peasants. These latter, however, to the number of twenty-three, directed by two old soldiers who had re-entered the military service, and commanded by the government secretary of Volkoff, in conjunction with the chief of the district of the domains of Kholmogory, were not intimidated, but, on the contrary, so well returned the enemy's fire, that five were killed on the spot, independently of the wounded, while our compatriots were uninjured. At length, the smallness of their number having been discovered, they were obliged to beat a retreat, which they effected with order, retiring step by step, but still maintaining a resolute defence. The English, too fatigued to pursue them further, to revenge themselves for this resistance, set fire to the village, consisting of forty houses and a church, and then regained their ships, carrying with them a great portion of the effects of the inhabitants. The next day they burnt, near

the village of Luzma, three fishermen's vessels, laden with wheat—a worthy finale to all their naval exploits of this description.

"Such are become the glorious actions of English sailors in these days!"

Unfortunately we have little information from any English source of the details of the cruise during the latter part of July and August; and the Russian version spread through Germany and the United States, producing an unfavourable impression of the conduct of our gallant tars. The bombardment of the town of Kola, the site of which is on the river Kola, where the Toulom forms a junction with it, is not, happily, left to Russian chroniclers. Kola is a small but important place in Russian Lapland, north-west of the White Sea. As this fortified place was contiguous to Norway, it was always a source of uneasiness to the latter, as the Norwegians knew well how Russia approaches step by step, advancing her fortified outposts—now claiming a fishing-ground, now a pasturage; and when such concessions are made, they are speedily turned into strong places, bristling with cannon, and sheltering numerous military detachments. On the 21st, Captain Lyons, in the *Miranda*, was ordered to reconnoitre the river, up which, thirty miles distance from the sea, the fortress stands; and no praise is too lavish for the spirit, enterprise, zeal, and prudence displayed by that officer. The river is in some places narrow and winding, affording ample opportunity for defence, in many salient positions, against any vessels attempting its ascent. So shallow is it, that boats only were supposed capable of passing up so high as Kola; and this circumstance gave the Russians a sense of security which they would not have otherwise entertained. Captain Lyons boldly steamed up the stream; and, when prudence dictated his so doing, he sent boats ahead to take soundings, and facilitate his farther advance. During her first night's anchorage, it was easy for the enemy to have attacked her with such advantage that it is difficult to imagine how she could have escaped destruction. On the 22nd, she made her way to within 500 yards of the town by six o'clock in the evening, where she anchored; the latter part of her ascent was very formidable—she frequently ran aground, and, as buoys had to be placed in the river to guide her return, her upward progress was slow, and full of peril. The town was defended by a battery, mounting two guns, built of stone, and faced with sods to prevent the stone from splintering if struck with shells from mortar-boats, to which the place was deemed accessible. There was also a stockade of extraordinary strength, flanked with blockhouses, and loopholed for musketry and rifles. Lieutenant Buckley was sent to

the governor with a flag of truce, to demand an immediate and unconditional surrender. This being refused, the *Miranda* opened upon the defences, and soon crushed the batteries by her rapid and precise fire. The musketry of the stockade was found more formidable than the heavy guns of the batteries, but the shells from the ship fell within the stockade, rending the pallisading, and scattering the strong woodwork in splinters in every direction, making havoc among the soldiery far greater than is usual when defending masonry against either shot or shell. The place was maintained as long as there was any barrier behind which the soldiery could shelter themselves; but all temporary expedients failed, as the more regular defences had done, for the red-hot shot set fire to the town, and, as it was principally of wood, the conflagration soon became general. At this juncture the *Miranda* grounded within a perilous propinquity to the burning town, and could only be prevented from taking fire by having water continually poured on her decks and masts; her sails and rigging were kept also continually wetted. Captain Lyons sent the pinnace and two cutters ashore well manned and armed, and a smart land conflict ensued, which issued in the enemy being driven out of the town. In fact the whole population was now gone for the women and children were sent away before the bombardment, and the whole male population armed and assisted in the defence. The destruction of the place was now completed, and a heavy chastisement inflicted upon a garrison which held itself secure from all possibility of attack by an English ship. On her descent down the river it was found that the buoys had been taken up by the Russians during the combat; and it was only after the most skilful and arduous efforts of Mr. Williams, the ship's master, that the vessel, after repeatedly grounding, again reached the sea. Although several men of the *Miranda* were wounded when they landed to destroy with their own hands what their shot and shell and the conflagration did not reach, not one was killed; and on board the ship there was no one either killed or wounded. The loss of the enemy was very severe.

Having left the Kola River, the *Miranda* rejoined the *Eurydice* and *Brisk*; and receiving fresh directions from his chief in command of the *Eurydice*, Captain Lyons steamed westward about sixty miles to Litscha inlet, in the hope of capturing a number of merchantmen. Two schooners, laden with salt fish, and four empty luggers, was the only reward of this enterprise. Other small places were visited, and similar prizes made. Captain Lyons was in and out of every creek and indentation of the shores where ship or lugger

might be concealed or captured. By the end of September the Squadron was clear of the Arctic Sea, and the Russians immediately renewed the trade. The blockade commenced too late, and was raised too soon. Half-measures prevailed at home; and it was the mis-

fortune of our brave sailors, not their fault, if they failed to effect all that was expected at home. Under the direction of a patriotic, intelligent, and spirited admiralty, they would have achieved anything possible to skill or valour.

CHAPTER XXVIII.

PREHENSIONS IN INDIA, CHINA, AND AUSTRALIA FROM ATTACK BY A RUSSIAN NAVAL SQUADRON.—OPERATIONS IN THE PACIFIC OCEAN BY THE ALLIED FLEETS.—ATTACK ON PETROPAULOVSKI.

"There is no maritime power so ambitious as Russia to seize and fortify salient positions on every sea, whence the colonies or commerce of other countries can be menaced."—*Philadelphia Bulletin*.

THE Peninsula of Kamschatka is washed by the waters of the Pacific; and is a part of that vast region of northern Asia over which the czar holds sovereignty. A minute description of this region would hardly be appropriate to our pages. The Arctic and Pacific Oceans meet at Behring's Straits; and Russia possesses thence the whole coast of the Pacific to the disembouement of the Amoor River, and the bounds of the Chinese Empire. This coast is one of the most sinuous and intricate in the world, and comprises the peninsula above-named, and the shores of the Sea of Okhotsk. On the north-western coast of this sea is situated the town of Okhotsk. The town of Petropaulovski is built on the southern extremity of Kamschatka.

It is here necessary to direct the reader's attention to the Russian possessions on the American continent. The vast region of that continent lying to the north-west, and, like the portion of Asiatic coast already described, washed partly by the Arctic, and partly by the Pacific Ocean, is also in the possession of Russia. Along the immense extent of those shores there is but one town, which is called Sitka, to which there will be occasion to refer in the course of this History.

Early in the summer of 1854, orders were given to a British and a French squadron to cruise in the Northern Pacific. The object was not to attack the Russian towns on the Asiatic or American coasts, but to watch, and, if possible, capture or destroy a Russian squadron known to be in those parts. Serious apprehensions were entertained of injury to British commerce in the Chinese and Australian waters, as the Russian ships of war were sufficiently numerous to assail and capture our merchantmen in various directions. These ships were well manned and well commanded. The British squadron was under the orders of Admiral Price. He received intelligence of the declaration of war on the 1st of May, while he was off Callao, when he issued the following instructions to his squadron:—

H.M.S. President, at Callao, May 9th, 1854.

"The Rear-admiral Commander-in-chief desires to inform the captains, commanders, officers, seamen, and marines, serving on board Her Majesty's ships and vessels under his command, that he has received directions from the Lords Commissioners of the Admiralty, to comply with the orders contained in a letter received from Her Majesty's principal Secretary of State for the Colonies, conveying the Queen's commands that we should forthwith commence and execute all such hostile measures as may be in our power, and not at variance with the orders passed by Her Majesty in Council, against Russia, and against all ships belonging to the Emperor of Russia, or to his subjects, or others inhabiting within any of his countries, territories, or dominions.

"In carrying out these instructions, the Rear-admiral desires to record his opinion that there will be much to be done upon this station by the squadron under his orders; that Great Britain has a right to expect from it a proper account of the Russian frigates that are known to be now upon the station, as well as of the numerous privateers that it is known soon will be.

"The Rear-admiral relies with confidence upon the assistance that will be afforded by each of the officers, seamen, and marines of the squadron towards fully and effectually carrying out all that their gracious Queen and country will expect of them; and as the time is now close at hand when some of the squadron may calculate upon being in action with some of the enemy's ships-of-war, he feels assured that all will unite in taking such steps as are necessary, by daily practice and other means, which, added to their characteristic bravery, will be calculated to render them not only superior to their enemy, but inferior to none in the world.

"D. PRICE,

"Rear-admiral, Commander-in-chief."

"To the Captains, Officers, Seamen and Marines, serving in the squadron on the Pacific station."

The delight of the officers and men was unbounded at the prospect of enterprise, and of rendering some service to their country. Their confidence in their admiral was complete; and under his command they would have met far superior forces without any doubt of success. The crews of the Pacific squadron did not partake of the "timid counsels" which on sea and shore so extensively paralysed the power of the allies.

When it was positively known in India that the parent country was at war with Russia there was a great outcry among certain classes of alarmists, and certain portions of the public press of that country complained of the unprotected state of its commerce. The *Hurkaru* ably reviewed those angry ebullitions of its contemporaries, and presented the precise state of affairs to the Indian and the British public. Its statements will give the reader an insight to the tone of public apprehension in India during June, 1854, and also exhibit plainly how little ground there was for it. When the tidings spread in India that a Russian squadron had appeared in the Straits of Malacca, the journal above referred to thus commented upon it:—

"A report has been brought from the Straits by the *Pekin* that the Russian fleet was off Singapore, and a facetious gentleman adds that it is on its way to Calcutta. A contemporary tells us that the czar's squadron in the Eastern seas 'consists of four or five ships, the largest a 60-gun frigate, the smallest an 18-gun corvette.' 'The squadron,' he thinks, 'should be looked after, if there be any means of doing so without danger.'

"We certainly agree with our contemporary that the Russian ships should be looked after, but we do not consider that any thought should be had regarding the danger. Risk must attend such an operation, which we feel pretty well sure will be undertaken if the Muscovite vessels be really moving in this direction; but we doubt if they would sail towards India, or even towards Europe, with a view of escaping into the Baltic. If safety be their object, they would better secure it by turning their prow towards the north-east, and seeking shelter in some part of the czar's Asiatic or American possessions; probably Okhotsk, from which place, we believe, the squadron alluded to has come.

"As for the 'means of chastising, dispersing, or capturing these ships,' should the squadron keep the sea and wage war against our mercantile shipping and commerce, we cannot admit that the English admiral does not possess them, and it strikes us that he is preparing for the trial by ordering the *Winchester* down from China to Singapore, where he has already the *Rapid* and *Rattler* sloops, the latter a screw

steamer. The *Spartan* and the *Lily* are also expected; and with these five vessels under his command we do not think that a British admiral will be deterred by any considerations of danger from looking after the Russian squadron. Our allies, the French, have several vessels in the China seas, and the East India Company can furnish both steamers and sloops, if not of any great power, still in some number. The whereabouts of this Russian squadron should certainly be ascertained at once, and its motions narrowly watched.

"As some of our mercantile friends may still be anxious upon this subject, we give a list of what we believe to be British ships of war in the Eastern seas:—

	Guns.
Winchester (frigate)	50
Spartan	26
Rattler (screw)	6
Rapid	8
Lily	12
Alligator	26
Bittern	12
Cleopatra	26
Comus	14
Contest	12
Grecian	12
Royalist	6
Salamander (steam sloop)	6
Syrix (steam sloop)	6
Serpent	12

"The above shows a force of fifteen vessels, mounting 234 guns. We have omitted the *Fox* frigate and *Hermes* steamer, being under the impression that they have been relieved. Besides these, there are some half-dozen vessels on the Australian station, and others at the Cape. The East India Company has about twenty armed steamers, and a dozen sailing-vessels, which, though all small, might still do some good service. Under these circumstances, discretion would be the best part of valour with the Russians, and we shall be surprised to hear that they have not made themselves scarce.

"The rumoured advent of the Russian squadron off Singapore appears to have caused some sensation here, for we learn that a petition to government in behalf of the mercantile community is contemplated, praying that armed steamers should be adequately equipped and dispatched for the protection specially of vessels employed in the trade with China. There are already, as we remarked the other day, several war vessels of the royal navy on the Indian station, and these would doubtless be sufficient for curbing the appetite of the Russian squadron for 'prizes.' Nevertheless, for the sake of public confidence, it would perhaps be advisable to detach one or more of our war steamers, either from Bombay or this presidency, to patrol the watery highways of the Bay of Bengal, and give timely information of any clandestine movements of the Russian

vessels, so that we may be prepared to take advantage of news of the declaration of war, which will doubtless arrive in Calcutta before it reaches the Russian commodore."

What a vast view it opens up to us of Russia's power and energy, when, from the frozen shores of Northern Asia and Northern America, she could send forth her war-ships, causing uneasiness to the two greatest maritime powers in the world, in the remotest seas where their commerce was conducted! The Bengal, Singapore, and Hongkong papers all concurred in stating that a squadron of five Russian ships, the largest a 60-gun frigate, the smallest an 18-gun corvette, was cruising in the Eastern seas, in order to capture English vessels; and all these papers described the tone of the *Hurkaru*, above quoted, as too confident. The *China Mail* stated that the Governor, Sir John Bowring, felt the danger so strongly that, in conjunction with the military and naval authorities, he was "devising plans for the protection of Hongkong." A Hongkong paper also stated that "when the *Lady Mary Wood*, in her last trip up, approached Woosung, she found the Russian ship, *Prince Menschikoff*, awaiting news from Europe; which having obtained, she started, no one knows precisely whither, but probably to some rendezvous in the north."

In Australia also great excitement was felt, under the impression that the rising cities of the "gold-lands" would be subjected to bombardment, and that the czar's naval officers would not be so squeamish about injuring private property as the allied admirals were at Odessa. The Australian settlers, however, did not content themselves with petitioning government for protection, like their Indian neighbours, but vigorously set about arming steamers, and putting their coasts in a state of defence; and had the czar's cruisers found their way thither, they would have met with daring bands of volunteers on sea and land to resist them.

Admiral Price set sail from Callao on or about the 12th of May for the Marquesas, a group of islands situated nearly in the centre of the Pacific. One of the islands, named Nukahiva, is occupied by the French, who had erected there a three-gun fort, barracks to accommodate a company of infantry, and considerable stores; the island is used by the French as a depot for their men-of-war and whalers. A French ship of war, generally a frigate, is always stationed at Nukahiva, the commander of the frigate being also *ex officio* governor of the island. Here the English ships, and also several French ships, continued during the month of June. The delay was ostensibly to gather strength, but the strength of the united squadron was sufficient to encounter any Russian force that was in these parts, or that might reasonably be

suspected of cruising in the Pacific. Had the united squadron proceeded, they would certainly have encountered the ships of the enemy and made prizes of them. The same fatal delay which characterised the governments at home, characterised their officers very generally abroad, and the command of the squadron in these seas was no exception to the rule. At last the little fleet, without obtaining much additional force, sailed northward for the Sandwich Islands, and made Honolulu their rendezvous, where the ships were watered, and ample stores of fresh provisions put on board. Here the admirals learned that, while they were loitering at the Marquesas, the Russian admiral had been before them in making Honolulu his place of rendezvous; and having gained there, from American merchantmen, full particulars of the strength and movements—or rather listlessness and inactivity—of the allies, he collected his little squadron, and sailed for the Russian settlements in Kamtschatka and America. The allied admirals found that the Russians had remained during a considerable portion of June in the harbour, or cruising about the Sandwich Islands, and only departed when the approach of the English might be calculated upon, and when it was unsafe to remain, either in quest of information, or in hope of capturing merchantmen. The strength of the Russian squadron was small: the *Aurora*, 44 guns; the *Dwina*, 20 guns; and the *Pallas*, a still smaller vessel. The first two sailed for Petropaulovski (town of Peter and Paul), in Kamtschatka, and the third for the Sea of Okhotsk, where it was anchored off the mouth of the Amoor River. The allies again loitered and lost time at the Sandwich Islands, as they did at the Marquesas, where they were closely watched by American agents. The Americans entertain a great jealousy of the French at the Sandwich Islands, in consequence of the attempts of the latter to impede the operations of the American Missionary Society. The king of these islands has a partiality for the religion and nationality of the Americans; but the French have incessantly menaced and cajoled the king and court by turns, and resorted to every dextrous artifice and intrigue to undermine American influence. Grave diplomatic correspondence between the great European and Transatlantic powers, in reference to their supposed mutual designs on these islands, has from time to time taken place. The French wish to extend a "protectorate" to them, as in the case of Tahiti; the Americans, more spirited than the British under the disastrous management of Lord Aberdeen, who was Minister of Foreign Affairs when the French seized Tahiti, declared that a French protectorate of the Sandwich Islands would be a *casus belli*. The Americans, however, were very desirous to "annex" these isles of the

Pacific, and thus justify an additional star in her national banner.

The British are unfavourable to either the protectorate or the annexation, but have opposed the latter much more heartily and much less justly than the former. Russia also looks with longing eyes to this island group. She conjectures that if her double-headed eagle could there build a nest, a predatory progeny might go forth against India and China, and against America, as fortune and events might favour. Neither England nor France has paid any attention to the Russian designs upon these islands. The czar is desirous, at a vast price, to purchase them from the king; but the United States is just as determined against a Russian occupation of the islands as against their occupation by either of the great powers of western Europe. France, however, has gained, by great expenditure and incessant missionary efforts, an influence second only to that of the United States.

At Honolulu the allied squadrons mustered their forces, and there the commanders of these squadrons remained, uselessly exchanging ludicrous courtesies with the half savage king who claims its sovereignty. As a specimen of the way the allied admirals wasted their time, the following quotation from the Honolulu newspaper will suffice. The paper is printed in English, and called the *Polynesian*; it is under American auspices—Americans always comprehend the power of the press. It is the issue of July 22nd, 1854. "An audience was given by his majesty, on Friday the 21st, to Rear-admiral David Price, and Rear-admiral Fevres des Pointes, on which occasion they were accompanied by the representatives of Great Britain and France, by the commanders of the several English and French vessels of war now in port, and by numerous other officers of the squadron, and also by Bishop Maigret, with a number of his clergy. Each admiral addressed his majesty to the effect that they visited the islands to refresh and recruit their vessels, and that they were happy to find his majesty's kingdom in a state of peace and order. They were gratified with the present opportunity of meeting his majesty, and of offering their best wishes for his prosperity. His majesty replied, reciprocating the pleasure expressed at meeting the British and French admirals, and was glad to find his islands afforded the necessary refreshments for ships-of-war, which he should be happy to welcome to his ports, of all nations. He alluded to his neutrality, which he should enforce, and which he desired to be respected. He also expressed his wish that the present war might be brought to a speedy conclusion, and that peace might again pervade the nations of Europe. His majesty availed himself of the offer of

the *Virago*, by Admirals Price and Des Pointes; and on Saturday, July 22, at eleven o'clock, embarked with her majesty the queen, Princes Liholiho and Kamehameha, Princess Victoria, the Kuhina Nui, ministers of state, members of the privy council and of the House of Nobles &c. The representatives of Great Britain, France, and the United States, and a large company of ladies and gentlemen of Honolulu, were also on board, which gave the whole excursion a social and agreeable character. The fine bands from the English and French flag-ships discoursed sweet music during the whole trip, and added not a little to the enjoyment of those on board. As the *Virago* passed out among the squadron, the yards of every ship were manned, and his majesty was saluted by both the admirals' ships at the same moment: and again on returning, the yards were manned; and every honour paid his majesty which could have been paid the greatest sovereign of Europe."

When ceremony and feasting had lost their novelty, the admirals at last sailed northward. The number of the allied ships was equal, four of each nation. The English squadron consisted of the *President*, a 50-gun frigate, Captain Burrige; the *Pique*, a 40-gun frigate, Captain Nicholson; the *Amphitrite*, a small frigate of only 24 guns, Captain Fredericks; and the *Virago* steamer, 6 guns, 300 horsepower, Commander Marshall. The French squadron consisted of *La Forte*, a 60-gun frigate, Captain de Miniac; *L'Eurydice*, a fast-sailing 32-gun frigate, one of a class which gave serious annoyance to the British navy in the last war, she was commanded by Captain Lagrandière; *L'Artimèse*, a corvette of 30 guns, Captain L'Evêque; and *L'Obligado*, brig, Captain Rosenavat.

In the British force the guns were of heavier metal, the crews more skilful, and composed of a better class of men. The French ships were of superior build, the guns more numerous, and the officers generally more scientific men.

On the 25th of July the combined squadrons left Honolulu, with the good wishes of its 15,000 inhabitants; nor did the American residents, who are numerous, withhold the expressions of their good wishes.

On the 30th the *Amphitrite* and the *Artimèse* were detached, with orders to sail to San Francisco, where it was reported that the *Dwina* was lurking in the hope of making prizes. It was also alleged that a large Russian frigate, the *Diana*, was in that harbour. Thither the detached ships sailed, and having made no captures, and encountered no enemies, rejoined the combined squadrons later in the season. They had, however, scarcely left San Francisco, when a Russian cruiser, which had adroitly

watched their movements and eluded their vigilance, entered the port, and subsequently gave chase to several British and French merchant ships without success.

The fact of war being declared was not known at Petropaulovski until the middle of July. The garrison began to prepare for defence, while the allies were lingering in port, and going in procession to his semi-savage majesty of Honolulu. The Russians were in earnest; they had a definite task before them, and they performed it with skill, energy, and singleness of purpose. The allied commanders acted like men who had received one set of orders ostensibly, and another and opposite set of orders secretly. If they had been directed from home to do nothing until the Russian ships were inaccessible, and the Russian ports put into an adequate state of defence, their conduct would be consistent, but on any other supposition their dilatoriness and want of promptitude were inexplicable.

Rear-admiral Zaniosko, the Governor of Kamtschatka, acted in all respects unlike the rear-admirals of the allies. He worked ceaselessly; within a short time his squadron returned, and were sheltered behind batteries thrown up under his orders with amazing celerity and admirable skill. Reinforcements were sent by the czar at the breaking out of the war, which marched through Siberia with extraordinary despatch, and great suffering and loss in consequence. They arrived sick, and unfit for duty, at the mouth of the Amoor, and were from thence conveyed across the Sea of Okhotsk to Petropaulovski. In a few weeks they were refreshed, recruited in health, and prepared to give the allied fleets a vigorous reception.

The town of Petropaulovski is built on the shore of a deeply indented bay. A long sand-bank runs parallel with the town, leaving only a narrow passage for vessels passing to and from the landing-place. The sand-bank so divides the bay as to make an inner and outer bay, and it completely protects the place from the immediate bombardment of a squadron. The assailing ships must pass through the narrow space left by the sand-bank, exposed to the fire of formidable batteries. It cannot fail to strike the most superficial readers or observers how skilfully the Russian government selects the position of such places as it requires for arsenals, docks, ports, and depots, and with what scientific resources the Russian engineers have fortified those positions. Until lately, the engineering talent of Russia, civil and military, was foreign; now some of the ablest military engineers in Europe are Russians by birth. In civil engineering the empire is still far behind its neighbours; British, French, and Germans, have accomplished nearly all the great works which have been completed, or planned those

in progress. The Russian government has inculcated hatred to foreigners amongst her people, but, at the same time, it has taught them to believe that the intellectual and military resources of foreigners ought to be employed for the honour and advancement of Russia. The formation of a navy was mainly due to British naval officers, particularly Scotchmen; and in the early advancement in military skill of the Russian army, British officers also greatly assisted, especially Irishmen. The De Lacys—of the same family as the British general, Sir De Lacy Evans—were among the most prominent of these Irish officers who rendered Russia effectual service. From whatever sources derived, the czars or czarinas never were in want of skilful minds to guide the naval and military energies of the country. Of late years naval engineering, as a distinct branch of science, has been greatly fostered at St. Petersburg; and on all the important positions upon the Russian coasts of the Baltic and Black Seas, in the White Sea, and the Sea of Okhotsk, men proficient in naval gunnery, and naval engineering, were stationed. Petropaulovski was well supplied with resources, material and intellectual. A brave and wise admiral resided there, as the chief city of the extensive government over which he presided; and well educated officers of engineers and artillery were distributed amongst the troops of the garrison. Every point capable of contributing to the defence was discreetly chosen and well fortified, and troops were posted so as to resist a landing wherever that was likely to be attempted.

It was far advanced in the summer when the allied fleet arrived, and the defences were at once carefully reconnoitred. The population was not more than 2000, and all the males were armed. What the number of the garrison was it is impossible to glean from the conflicting accounts which profess to afford any information. The number of guns mounted in the defence was about 144; the number borne by the ships exceeded that considerably, being 208. The two men-of-war already referred to as having sailed from the Sandwich Islands, in June, to obtain the protection of this harbour, were moored across the entrance to the inner bay, and their broadsides were so placed as to rake any vessels making way against that point. Altogether the defences were very formidable, and superior greatly to the force brought against them; for in addition to the number of guns mounted on the batteries, there were several companies of foot artillery and several troops of horse artillery in shore. One troop of horse artillery was placed in the skirt of a wood, so as to take the allies in flank, if they landed in that direction. The guns of this detachment were loaded with grape and canister, and would be able to deal a destructive fire upon any ad-

vancing force that might be landed, before any effectual attack could be made upon them.

Before the assault upon the place commenced, an event occurred of a painful nature, and which threw a damp upon the spirits of the whole expeditionary forces: Admiral Price committed suicide. There were no circumstances to lead any one to suppose that his mind had given way. It could not have been from any consciousness of incompetency, for he was an officer of experience and valour. He had expressed no fears for the result. It remains a mystery. The most reasonable surmise is that, whether from secret instructions derived from home, contempt of the enemy, or sympathy with Russia, as the great conservative power, having failed to pursue the enemy's squadron, or intercept its return to the stronghold to which it was so likely to repair, his conscience smote him that the sacrifice of life which would now be necessary to repair his neglect and want of vigour, would be put to his account at home, if not by the Admiralty, yet by the public press and the country; and, unable to endure the reproach which he foresaw would ensue upon the slaughter necessary to reduce Petropaulovski, and there conquer the ships which might have been elsewhere encountered with advantage, he resolved, rather than face the storm of public opinion, to deprive himself of life, and, to some extent, of responsibility. At all events, just as, on the 31st of August, the action was about to commence, upon a plan which he himself had commended to the French admiral, he went down into his cabin and shot himself. Had he been a Russian patriot, who unfortunately found himself in a foreign service, he could have done nothing better for his country. The death of the admiral threw the arrangements into temporary confusion. The command of the British devolved upon Captain Sir F. W. E. Nicholson, who consulted with the French admiral, and both officers agreed to pursue the plan of attack which the deceased admiral had originated. This plan was carried out in the following manner: the English frigates were towed into position, broadsides on towards the batteries. The *Virago* received the *President's* marines, which were landed in order to take what was called the Three-gun Battery, which commanded the first approaches of the ships. A body of British seamen landed with the marines, and both were supported by a detached party of French seamen. The enemy, perceiving the resolute aspect of the advancing parties, abandoned the battery, which was speedily entered, and the guns spiked. As the party returned to the steamer, they deviated from their previous track, bringing themselves under the fire of the Russian frigate *Aurora*. Meanwhile, the guns of the British frigates had dismounted

what was called the Five-gun Battery, which, being most within range of the ship's broadsides, made scarcely any resistance. The attention of both divisions of the fleet was then directed to the Fascine Battery, of eleven heavy guns. This battery was well situated for damaging the ships, having been erected on the main-land close by the water's edge. The *President*, with the French frigate *La Forte*, soon silenced this battery, but the gunners found shelter behind the slopes which descended from it to the shore, and the moment the ships drew out of range, they set about repairing the damage which had been inflicted. The ships were drawn off for the night, the crews expecting to resume the battle next day. So far the combat had been auspiciously although desultorily conducted; eighteen of the enemy's guns had been silenced, and many men slain, with very little loss to the allies—although a Russian account represents a body of troops as attacking the French sailors when the party retired from the three-gun battery, and putting them to the rout with much slaughter.
